Re: Docket DMA 1792

Dear Mr. Smith:

In order to qualify for Government assistance, a formal application should be submitted on the required form. This is done in order to establish a standard procedure for handling all applications and to obtain as much information as possible to expedite the processing of applications.

It appears from your undated material addressed to Mr. James Boyd, that you are applying for a Government loan. Therefore, enclosed you will find one copy of Form MF-100 (General Technical Data), and five copies of Form MF-101 (Application for Government Loan). These forms should be answered completely and sent to the writer for consideration of a loan.

In the case of an application for a loan to rehabilitate an old mine it is essential that sufficient geological data and information be submitted to justify the loan. Ore reserves data with maps showing location in the mine, grade and tonnages are necessary.

In such a case the known ore reserves must be sufficient in tonnage and grade to amortize the loan during a given period.

In case you cannot supply such information, the project will not qualify for a production loan, but still might form the basis of an exploration project, whereby the government would contribute half the cost in case the project is approved.

Application for Exploration aid is made on the enclosed Form MF-103.

Very truly yours,

J. B. Gowen
