I visited the Hilltop mine on Wednesday afternoon, August 29, 1973, and found it to be deserted. There did not appear to have been any mining activity there since my last visit on September 13, 1972. There obviously has been no production subject to the Government's lien which extends until December 24, 1974.

Lemhi County, Idaho
Contract 2178

The Hilltop mine was deserted when I visited it on Wednesday, Sept. 13, 1972. The shaft collar was still blocked by a suspended skip and some ground had sloughed around the collar. There was no indication of any activity at the mine since my last visit on Sept. 16, 1971. Obviously there has been no production in the last year. The Government's lien on future production from the mine extends until Dec. 24, 1974.

Re: OME-6316 (silver-gold)
Clemens A. and Arthur Lombardi
Hilltop, et al., claims
Lemhi County, Idaho
Contract 2178

Dear Mr. Lynch:

Mr. Clemens A. Lombardi, 110 North Main Street, Anaconda, Montana, should have all the information concerning the amount of Government financial participation in the cited OME contract. The Government mailed an audit Report of Review to the Lombardis on June 13, 1966, wherein there is tabulated the various costs of the contract and the amount, plus interest at 6¾ percent per annum, due the Government on any production from the property prior to Dec. 24, 1974.

Should Mr. Lombardi not be able to find his copy of the Report of Review, please have him give you written permission to obtain the desired information. Upon receipt of this permission we will forward to you the contract details.

Sincerely,

Willard P. Puffett

The Hilltop mine was deserted when I visited it Thursday, Sept. 16, 1971. Painted signs near the shaft and on some of the buildings indicated that the property belonged to Gold Star Mining Company. Perhaps this is the name of the company that leased the property as reported by Clemens A. Lombardi on form MME 63, dated Jan. 13, 1971 (I did not receive a copy of the lease).

Ground near the shaft collar has sloughed into the shaft and it does not seem possible that any work had been done in the shaft since my last visit on Aug. 26, 1969. A bulldozer had recently traversed the road to the mine and along an access road west of the mine. I could not determine the purpose of this work.

I doubt that there has been any production from the property during the past two years. The Government's lien on future production extends until Dec. 24, 1974.

Contract 2178

Gentlemen:

Thank you for returning the two MME 63 forms and the copy of a Lease Agreement.

We would like to point out that in any future lease agreements it should be stipulated that the Lessee shall first pay royalty to OME out of the proceeds from the sale of any minerals or metals produced from the property. This royalty provision on production is set forth in Article 6 of the subject contract.

This agreement of lease made and entered into this 25 day of August, 1969, by and between _____, hereonafter designated as Lessor(s), of Anaconda, Montana, and GOLD STAR MINING COMPANY, an Idaho Company, hereinafter designated as Lessee.

WITNESS: That the lessor, for and in consideration of the rents, covenants, agreements, payments, and royalties hereinafter reserved and by the lessee to be paid, kept, and performed, has granted, let, and demised, and by these presents does grant, let, and demise unto the lessee the following described property, for the purpose of conducting a Lode Mining Operation situate in Lemhi County, Idaho.

PATENTED CLAIMS	SURVEY NO.	BOOK NO.	PAGE NO.
Alex Stevens No. 2	3198	30	78
Rose Bud	1680	R	72

UNPATENTED CLAIMS	BOOK NO.	PAGE NO.
HILLTOP No. 1	3	39
HILLTOP No. 2	3	40
HILLTOP No. 3	3	41
HILLTOP No. 4	3	42

To have and to hold the demised premises for the purpose of mining and for no other purpose, for the term of Ten years from the date hereof, to expire at 12:00 O'clock P.M. on the 25 day of August, 1980, unless sooner forfieted or determined through violation of any agreement, covenant, or condition hereinafter contained, to be kept and performed by the lessee.

A period of 30 days to be set up as an exploration time, in which the lessee can determine if values are present in sufficient amounts to justify a mining venture and also to determine if other factors such as marketing the concentrates, freighting cost, methods of recovery of concentrates, equipment needs, all prove amendable to a profitable mining venture as near as can be ascertained in the 30 day exploration period.

Further, that said lessee shall determine at the end of the 30 day period whether said lessee desires to continue and shall notify said lessor by registered letter of his intentions. If the decision is to continue then the following shall apply. If the decision is to terminate then this agreement shall be deemed at an end effective with the mailing date of the registered letter.

In consideration of this lease, the lessee does hereby covenant and agree severally and jointly with the lessor as follows:

1. To enter upon said premises here demised within 90 days after the decision is made to continue and thereafter to work the premises in a manner necessary and appropriate to good and economical mining, so as to take out the greatest amount of ore reasonably possible with due regard to its safety, development and preservation as a workable deposit. Provided, however, that in the event circumstances or management decision causes a delay in the actual development of the property, then said lessee shall pay to the lessor the sum of ~~Six Thousand Five Hundred~~ FIVE THOUSAND EIGHT HUNDRED & NO/100 ~~Dollars~~ $ ~~6000.00~~ on the following terms and conditions: PAYABLE July 1, 1970.

said payments to apply against any overriding royalties as hereafter defined and to continue as long as this lease is in effect. All work, construction and installation of improvements are to be subject to the inspection and approval of a representative of the lessor.

2. To work and mine the premises as aforesaid steadily as the seasons permit, and to do all work in a workmanlike, minerlike and substantial manner.

3. To at all times fully comply with the provisions of the laws of the State of Idaho, specifically including all workman's compensation laws.

4. To cause or permit no timer standing on the premises hereby leased to be cut or injured in any way or for any purpose except for uses in the improvement and operation of the mining on said premises; to cause or permit no buildings or structures of any kind to be erected or to remain on the premises except such as are necessary for the actual working of the mine or deposit and housing of equipment, concentrates, tools and workmen, and to return the premises in as good condition as they are at the present time, ordinary wear and tear and fire along, excepted.

5. To allow the lessor, or any duly authorized agents, directors, or representatives at any and all time (a) to enter and visit all parts of the leased premises and the workings thereon for the purpose of inspection and taking of assay samples, (b) to take samples from any concentrates awaiting shipment, (c) to have surveys made of the workings by the lessor's surveyor and assistants whether under or above ground, or both, as often as the lessor, or any duly authorized agent shall so order, and also furnish to lessor copies of blueprints of all surveys or maps made by the lessee; and generally to facilitate in every way such inspection, surveys, and sampling, as above provided.

6. To keep the premises and every part thereof at all times free and clear of mechanics' or miners' liens or other liens, encumbrances, or liabilities; to settle pay and discharge on or before the 15th day of each calendar month, all indebtedness and liabilities incurred by the lessee prior to the last day of the preceding calendar month for work done, services rendered, or material furnished with regards to the premises.

7. To assume all responsibility for and save the lessor harmless from any and all accidents to lessee, themselves or any of their employees, sublessees, licensee, agents, associates or visitors on the property of the lessor, as herein leased.

8. To ship all ore concentrates with reasonable diligence after mining, unless a stock-piling agreement is made between the lessor and lessee, but it is agreed that all ore extracted from the leased premises shall be shipped in the name of lessor and lessee and shall be sent to and treated at a mill, smelter, sampler, or reduction works satisfactory to both parties.

9. Lessee furthermore agrees that if he discovers in working the premises any side veins, cross veins, spurs, or feeders, they shall at once notify the lessor and said side veins, cross veins, spurs or feeders shall be and remain the property of the lessor, but they shall be included in this lease.

10. To pay and deliver, or cause to be paid and delivered to lessor, as a rental or royalty on all ores extracted and shipped or sold from the premises, the following royalty, the rate of 7½ % (SEVEN + ONE HALF %) net smelter returns. In arriving at the net returns for the purpose of this division, as herein provided between the lessor and the lessee respectively, all costs and charges of maintaining, preserving, and protecting the property, excepting only taxes on the premises, all costs and charges of mining, development, transportation and other charges of every kind, whatsoever incurred in connection with maintenance, operation and mining of the premises shall be excluded and charged against lessee solely. Actual costs and charges of the smelter only shall be deducted in reaching net smelter returns.

11. This lease is personal to the lessee and neither the lease nor any interest of any lessee therein or thereunder shall be assigned, transferred, or granted (whether in the form of a sublease or otherwise) during the term hereof, without the consent in writing of the lessor first thereto had and obtained, excepting the lessee shall have the right to assign in whole to a corporation to be formed to do business in the State of Idaho and, upon such assignment, said corporation shall become the lessee hereunder and Gold Star Mining Company shall be released from all personal obligations hereunder. Except for the assignment to said corporation, it is hereby understood and agreed that the lessee shall not otherwise assign this lease or without first obtaining written consent of the Lessors, which consent will not be reasonably withheld.

12. To comply and take all necessary action, incur all necessary expense and otherwise to timely do everything required by the laws of the United States of America and the laws of the State of Idaho for the maintenance, preservation and perfection of those premises hereinabove described and demised.

13. The lessee does hereby covenant and agree that in case they fail to commence work on the premises as aforesaid, or to work and mine the premises with diligence and in a workmanlike manner, or to keep them clear and safe condition, or to allow inspection sampling, or survey thereof, or to furnish true information regarding them according to the conditions herein, or to render quarterly statements as provided for herein; or to keep them free of liens, or to make monthly settlement for work, services and materials, or assign or sublet any and all conditions, covenants, or agreements herein expressed or implied, then and in that case the term of this lease shall at the option of the lessor expire, and it shall be lawful for the lessor, or its duly authorized agent to declare this lease void and of no effect thereafter, and with or without the process of law, and with 60 days notice to the lessee to enter on and take possession of the premises, and dispossess all persons occupying them; and in such case, and also at the expireation of this lease by the terms hereof, the lessee hereby agrees to surrender, yield, and deliver to the lessor, its successors, or assigns, quiet and peaseable possession and enjoyment of the premises and all buildings and other improvements thereon, provided, however, that in the event the lessor considers the lessee to be inviolation of any of the terms and conditions of this lease, the lessor shall notify the lessee in writing by Certified Mail of such violation and the lessee shall have 60 days from the date of such mailing to correct said alleged violation.

14. The lessee shall have, at the conclusion of 10 years from the date of this agreement, the option to renew said lease for a period of 10 years and must advise the lessor of his intentions to do so 30 days prior to the expiration date.

15. It is further mutually understood and agreed that should the lessees desire to obtain an exploration contract through the Department of the Interior, Office of Minerals Exploration, the Lessors will sign the owners consent thereto, or joint with the Lessees in obtaining same.

16. That at all times any machinery, tools and other improvements shall remain the property of the lessee, and should this lease be at default at any time, a 60 day period shall be given to remove said machinery from the property, beginning at the end of the 60 day grace period defined in Paragraph 13 above.

17. That the assesment work on the above discribed claims for the assesment year of 1969 is to be completed by the Lessors.

18. That a buy out price of this lease and property is as follows:

This agreement shall be binding and enforceable by the respective successors, heirs, executors, administrators, and assigns of the parties hereto.

From: Field Officer, Region I

Subject: Royalty Inspection
OME-6316 (Silver-Gold)
Clemens A. and Arthur Lombardi
Hilltop, et al., Claims
Lemhi County, Idaho
Contract 2178

En route from Sheridan, Montana, to Salmon, Idaho, September 21, 1966, it was learned at the Railway Cafe in Leadore, Idaho, that the Hilltop mine has been closed down all summer and that no ore has been shipped since August 1965. The Lombardis were reported as being in the area during the summer only over the Labor Day weekend.

Approved by OME Executive Officer or Alternate:

Signature D.K. Mackeen Title Field Officer, Reg. I Date NOV 15 1965

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS (Cont.)

Dr E measured 20 ft. but final 3 ft are narrower than contract specifies.
Dr W measured 47 ft but final 36 ft has not been mucked out and rail has not been installed as contract requires. When Operator certifies that Dr W has been mucked out and rail has been installed additional footage will be approved

12. Withhold $43.00 due Operator pending mucking and putting rail in Dr. W and to partially offset over payment for 3 ft in Dr E and 14 ft in Dr W

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

MONTHLY NARRATIVE REPORT

For Month of October 1965
Contract Starting Date: 5/15/64
Docket No. OME-6316
Contract No. OME -------2178
Contract Amount $86,670.00
50% Gov't Participation
For Gold and Silver

From:
Clemens A. and Arthur Lombardi
c/o John L. McKeon, 126 Oak St.
Anaconda, Montana

To:
Office of Minerals Exploration
United States Department of the Interior
So. 157 Howard Street
Spokane, Washington 99204

On November 3, 1965 Bill Hand in the company of Mr. Donald MacLaren of the Spokane office of OME inspected the work being conducted on the 300 Level of the Hilltop Mine.

Work was interupted owing to a lack of funds and the remotness of the area. Labor and supplies were hard to aquire.

Footage for the month amounted to 19.6 feet determined by measuring from reference point "F" and subtracting from that value the footage or distance to the face the previous month.

The vein continues to be a foot to eighteen (18) inches of white gouge which is highly altered between to black dolomitic walls which are interbedded with quartzite.

The results of three (3) samples are posted on the accompanying Plan Map. Two are from the west and one for a check of possible values on the east. The results do not indicate commercial ore and metal trends are not detectable.

Approximately thirty-four (34) feet advance is required to complete the authorized sill work.

Respectfully submitted,

John L. McKeon, Attorney-in-Fact

Memorandum

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: Interim Inspection Report
OME-6316 (Silver-Gold)
Clemens A. and Arthur Lombardi
Hilltop, et al., Claims
Lemhi County, Idaho
Contract 2178

The subject property was visited November 3, 1965, and the OME work was inspected and measured in the company of Bill Hand, consultant for the Operator. The last inspection was made November 10, 1964, although an attempt was made to visit the property January 9, 1965, but snowdrifts blocked the access road. The property was visited August 29, 1965, but when I arrived I was advised that Hand was in the mine mapping and measuring the advance. Clemens Lombardi who was running the hoist and one of the miners had several questions regarding contract requirements and it was necessary to explain again why we had been obliged to return vouchers and hold up payment. Rather than duplicate Hand's work it was decided that the available time would be better spent explaining the contract and vouchering requirements and to accept Hand's measurements.

A letter from Hand dated October 18, 1965, indicated that work might have been discontinued some time in September or October so the Operator was advised that an inspection would be made November 3. Actually, I was able to get a day ahead of my schedule and started for the mine on the 2d. At Leadore I met Clemens Lombardi who said he wanted to accompany me underground but that he would not have any one else to run the hoist until the next day. As I had set the inspection for the next day and wanted him to accompany me underground, we agreed to meet at the mine the next morning.

The morning of the 3rd Lombardi appeared at the mine with a young chap who was not qualified to operate the hoist. However, Lombardi had seen Hand who promised to come up that morning. While waiting his arrival, I asked why work had been stopped and was told in effect that most of October it had been necessary to repair the shaft and that no OME work had been done. I checked the shaft both going down

and coming up. A few new timbers had been installed, but they did not look new enough to have been put in since early summer. Parts of the shaft are still in pretty bad shape and I do not consider it too safe.

A nail in the back of the crosscut indicated the start of OME work. The crosscut measured 125 feet to the face and cut a vein at 116 feet. Track was laid to the face and rails of turnouts east and west could be seen. The vein was followed easterly for 20 feet, but the last 3 feet narrowed to little more than 2 feet. One round had been shot out of the back about 5 feet from the crosscut but was not mucked out. Since the east drift was stopped, the back has caved leaving about 1.5 to 2 feet of sloughed material covering the track. Hand assured me that he saw this drift when it was mucked out and that the track had been laid to within about 3 feet of the face. As he has had considerable difficulty getting his pay from the Operator, I see no reason to doubt him.

The drift west has been driven 47 feet but has not been mucked out beyond the slusher ramp. The rail of the turnout is covered by spillage from the slusher, but a little shovel clearing showed it to end 11 feet from the crosscut. When Hand made his August 29 measurement, the drift west had been driven 25 feet and was mucked to the face. The miners and Lombardi both assured me that rail would be laid to that point before the next round. See also my letters of February 10 and June 18, 1965, to the Operator on the subject of rail.

When the unmucked drift and lack of rail was reported to Lombardi, he said that he had not checked the work but had taken the miners' word for it. I told him that in the future I would approve no voucher unless it included a signed certification that the drift was mucked out to the face and that a specified number of feet of rail had been laid and that even then I would recommend a withholding of part of the funds due until I could have an opportunity to make an on-site check. I called his attention to the two letters cite above and explained that I could not visit the property every month adding that since he had twice vouchered incompleted work I was left with no other course. Although I did not bring up the subject to Lombardi, there are so many reports in the area of his miners having to file labor liens to collect their pay and they have been so erratic in their work performance that I am reluctant to approve full payment of any more vouchers. If you believe this intent to withhold is extreme, please advise me.

The vein has an average strike of N. 85° E. and a dip of 70° South to vertical. It ranges in width from a few inches to 2 feet and

is mostly crushed quartz and wall rock with a heavy clay seam on the hanging wall. The wall rock is limestone that has been sericitized and kaolinized near the vein. Near the west drift face is a hard rock dioritic in appearance that may represent a dike, but because of the deep muck in the drift, its relationship to the sedimentary beds could not be determined. A sample taken in the west face assayed trace gold and 0.4 ounce silver per ton, trace lead, 0.6 percent zinc over a width of 1.6 feet.

Summary of advance and approved vouchers

Work item	Measured	Acceptable	Previously accepted
X-Cut N	125	125	122.4
Drift E	20	17	20.0
Drift W	47	11	25.0
Total	192	153	167.4

Thus, there has been approved for payment 167.4 feet, of which a total of 153 actually meets contract specifications. Presumably, the next voucher will claim 192 or more feet of drifting and crosscutting which will be acceptable if a statement that the drift has been mucked out and rail laid. This should permit correction for the 14.4 feet presently overpaid.

Lombardi said he had hired new miners and that they were to resume work November 4, 1965. Therefore, no amendment granting a recess is requested at this time.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

MONTHLY NARRATIVE REPORT

From:
Clemens A. and Arthur Lombardi
c/o John L. McKeon, 126 Oak St.
Anaconda, Montana

To:
Office of Minerals Exploration
United States Department of the Interior
So. 157 Howard St.
Spokane, Washington 99204

For Month of August 1965
Contract Starting Date: 5/15/64
Docket No. OME-6316
Contract No. OME ---- 2178
Contract Amount $86,670
50% Gov't Participation
For Gold and Silver

Work continued on this Contract during the month of August. While continuous effort was expended throughout the month, tie-ups were numerous owing to unforseen contingencies.

Work was confined to drifting some twenty-eight (28) feet east and west on the East-West structure encountered during the month of July. Future work will be limited to extending the West drift seventy-five (75) feet making an overall strike length on the structure opened up by drifting for a distance of one hundred twenty (120) feet.

In so doing an anticipated favorable area will be cut which should somewhat establish if the vein will be productive.

As is indicated on the attached "Brunton Plan Map - 300 Level - Hilltop Mine", the vein being drifted on contains a semi-talcy gouge between a foot and a foot and a half wide that is stained at times with Iron Oxide. As will be noted, it does not contain commercial ore at this area.

For the most part the walls are thin bedded black dolomite. However, the north wall of the east drift is far lighter colored which might indicate the beginning of the gray limestone that overlays the presumed productive black dolomite members.

In the extreme west end of the west drift quartz is present in the walls but it appears to be quartzite rather than vein quartz. This might be explained by the presence of a quartzite member in the black dolomite.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

MONTHLY NARRATIVE REPORT

From:
Clemens A. and Arthur Lombardi
c/o John L. McKeon, 126 Oak St.
Anaconda, Montana

To:
Office of Minerals Exploration
United States Department of the Interior
So. 157 Howard St.
Spokane, Washington 99204

For Month of July 1965
Contract Starting Date 5/15/64
Docket No. OME-6316
Contract No. OME -------2178
Contract Ammunt $86,679
50% Gov't Participation
For Gold and Silver

Work for this month was confined to the 300 Level of the Hilltop Mine and was composed of crosscutting and drifting as per the contract.

A Potential mineral bearing structure was encountered at about 120 feet on about July 15 or 16 and was inspected by W. M. Hand on July 20 although he called at the Mine at roughly noon July 10 but the structure was ~~not yet~~ cut. The August 2 inspection showed the vein opened up for a strike length of 22 feet.

The vein or structure strikes roughly east and west and is standing almost vertical where cut. It would appear to conform to the geochemical anomaly encountered just north of the Hilltop vein. It is expressed by a varying fault gouge from one inch to one and onehalf feet. The gouge shows alteration from dark ground dolomite to white paste and it can not be assured that it is not of igneous orign.

One sample was taken on July 20 as per the accompanying map; values are listed below. The material sampled was a brown to red jasper (a replacement quartz in the walls) and showed galena and sphalerite. Sample Width -- 0.4 feet, gold- 0.6 oz. per ton, silver - 3.8 oz. per ton, lead - 3.3%, zinc - 0.3%, Sample No. 4804.

As per W. M. Hand's instructions, the crosscut was extended one round to attempt to be sure that the entire vein was cut once the structure showed. One round was taken to the East to check for any "close in ore" but the major emphasis was placed on drifting west in the hope of finding ore in the area marked on the map "especially favorable (?)" since in so doing those same dolomite members would be encountered that produced ore on the Hilltop vein.

Advance amounted to 30.6 feet of crosscut and 17 feet of drift. The latter being 22 feet of strike length less 5 feet of crosscut width.

As was reported in last month's report work was necessarily suspended on the underground phase of the work owing to a mishap in the shaft.

The shaft was caught-up and made operable on about June 17 and underground work was resumed until June 24 when the air compressor had to be repaired. An air compressor was brought to the property as a replacement on June 27 and work was immediately resumed.

The work is being done (rock breaking) by a Mr. Donald Holmes and his partner from Butte, Montana. Mr. Clemens Lombardi is assisting.

An inspection of the work was made by W. H. Hand on July 1 and a print of the Brunton Plan Map is attached. The rock continues to be a black dolomitic limestone. No structures have been crossed. As of this writting approximately 28 feet of crosscut remain to be driven.

It is interesting to note that the diamond drill hole on which the crosscut is driven has changed its position and is in the face about waist high.

Advance reported for this month is 36.8 feet which is a distance measured approximately center-line of the crosscut.

Owing to some slabs caused by breaks to the joints and bedding planes it seems that several sets of timber will be required in the near future.

Respectfully submitted,

John L. McKeon, Attorney-in-Fact

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Re: OME-6316 (Silver-Gold)
Hilltop, et.a., Claims
Lemhi County, Idaho
Contract 2178

Dear Mr. MacLaren:

This will acknowledge receipt of your letter of June 18, 1965. I am enclosing herewith an additional copy of the monthly narrative report as your requested.

I have consulted with the Lombardi brothers in regard to the statement contained in your letter: "Please advise me if I am correct in assuming that track has been laid to the end of the 55-foot total advance claimed in your May voucher."

The answer to this is yes, track has been laid to the end of the 55-foot total advance claimed in the May voucher.

I trust that this will suffice.

Very truly yours,

JOHN L. McKEON

SUMMARY OF WORK FOR THE LAST TWO WEEKS OF MAY

DATE

5-14 A. Inspected Mine

1. Mr. Holmes, his brother and I inspected the Hill-Top mine and all of the equipment.

2. Maped all of the work that has to beedone in order to resume operations.

Note: Mr. Holmes and his brother work for the A.C.M. We feel that they are qualified to do the work.

5-15
5-16 No Work

5-17
5-1 B. Hoist

1. Replaced starter
2. " plugs
3. " points
4. Checked all cable and frame.

5-19,20,21
C. Galleass Frame

1. Tightened all the rods.
2. Checked the bucket.
3. Greased the frame

5-24 D. Compressor

1. Removed compressor to Anaconda.

5-25,26,27,28,
2. Needed a complete overall.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

On May 31, 1965 an inspection trip was made to the Hilltop Mine by W. M. Hand. However, owing to a misshap in the shaft, the shaft was inoperatable and no actual inspection of the working place was made.(by him)

Therefore, attached is a print of the workings as last inspected and the crosscut footage indicated is previously unreported advance.

Your attention is called to the apparent difference between the reported total advance of fifty-five feet (55) and the scalèd distance as shown on the attached map. This is due to the minor variation in indicating the location of the ground line on the contract composite map and its real place. The fifty five feet is actual measured advance.

Owing to sustained snow conditions and the fact that the above referred to contract (this contract) has been recessed until May 15, 1965, no work at the Hilltop Mine was accomplished during the month of April.

As of this writting, the road has been cleared in part by a dozer.

It is acknowledged that under the tge terms of the recess of contract that work must be resumed on or before May 15, 1965.

It is further acknowledged that the advance reported for the Month of January must include the installation of track and be accompanied by a geologic map of the work accomplished.

Respectfully Submitted,

John L. McKeon, Attorney-in-Fact

Anaconda, Montana

On December 30 an inspection of the area was made by the writer. Owing to snow conditions, the Hilltop Mine was not accessible so no visit to the actual property was made. Then too, the writer was advised that underground work was forced to suspension pending reopening the road.

People familiar with the area inform that there is more snow present at the property and surrounding area than there was all last winter and the several winter seasons preceeding. Owing to the gusty winds that continually transport both new snow and old, it is doubtful if much can be accomplished in the way of contract work until at least two months pass.

The adjacent property to the North has a similar problem; the operator there relates that work may have to be suspended. It is difficult to say even the approximate snow depth because of drifting (drifting) but banks five feet high are not uncommon where it has been dozed out of the road. An estimate would be in the area of twelve inches on the level.

The writer does not know if the ammendment to the contract which allowed a ressess was signed and returned to OME or not. In the event it was, it is necessary to establish at this point that underground work was begun even though no advance was accomplished.

As was mentioned in one of the first narrative reports, the crosscut was driven by means of a slusher whereby the muck was scraped into a waiting car and transported to the station. Work on the crosscut in December was moving the track ahead to the face and resetting the slusher. Mr. Clemens Lombardi has so informed me. He further states that the compressor has been positioned, the hoist made operational and other incidental items taken care of.

Monthly Vouchers and Progress Reports will not be submitted this month.

Re spectfully su bmitted

John L. McKeon, Attorney-in-fact

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Work this month was confined to finishing the dozer trenches and sampling the mineralized showings they contained. Results af the assaying are a part of this month's report.

Although the above is all the work that was done that was applicable to the contract, field work in the form of maps was expanded and hours of the writer's time was consumbd in interpreting the findings. The text of these findings along with a print of the mapp9ng will be submitted later when time for printing can be had. The print will also indicate the sample locations.

In general the anomalies were confirmed and were caused as follows:

Anomaly I — A series of more than four closely spaced East-West Vns.
Anomaly II - One East-West Vn.
Anomaly III- Apparently by and Igneous Dike.

Anomaly IV - By an East- West Vn.
Anomaly V - By the old Hilltop Vn which is and East-West Vn.
Anomaly VI - By and East - West Vn.

Owing to the fact that the bed ~~rock~~ rock in the areas of the dozer trenches was hard limestone, a nice slick bottom on the trenches were not possible. It was easy however to spot the viens by geochemical means. At the south end of C-trench a winzed ~~M~~ vien was showing. The trench went right through it. Yet in the cut, the bed rock was so irregular and hard that the vien did not show in the cut but its presence was readily detected by geochemical sampling ~~k~~in the trench bottom.

With such very poor vien expressions in the tranches, it is not possible for the writer to suggest sinking a shaft on any one. Then too, the field work and library research strongly indicate that only a very select few of the limestong and ~~dolemant~~ dolomite members are favorable for ore deposition. As such, thoughts have turned to suggesting a more extensive plan of exploration from the Hilltop shaft underground. When the studies are complete, we will submit a request for contract ~~ammendent~~ ammendment.

Work has begun on assembling the needed men and machinery for the Hilltop Shaft work.

m

During the month of November 1964 a deisel air compressor was moved to the mine. While it was not started and operated in the writers presence it appeared to be a very serviceable machine. It was manufactured by the Chicago Pnewmatic Tool Co. and was completely factory built. It is powered by a Catipillar Engine. It is a late model design.

Also, a 1948 Chevrolet truck, about a 2 ton capacity, was added to the mine plant.

For drilling, an Ingersoll Jack Leg rock drill was provided. This machine has a weight of about 70 pounds and had every appearence of being ready for work.

Blasting agents are also at the site and made ready for work.

Mr. Clemens Lombardi has spent considerable time in Lead Ore, Idaho and at the mine assembling the necessary "gear". It is my understanding that the title to the hoist has been cleared and at present no attachment or lien prevails.

The snow conditions at the mine are about five inches. Access was easily gained by use of a 4-wheel drive vehicle. The writer inspected the property on November 30 in the morning.

Every effort is being made to complete the work at the earliest possible moment.

Respectfully submitted,

John L. McKeon, Attorney-in-Fact

Memorandum

To: Chief, Division of Exploration Operations

From: Acting Field Officer, Region I

Subject: Interim Inspection Report
OME-6316 (Silver-Gold)
Clemens A. and Arthur Lombardi
Hilltop, et al., Claims
Lemhi County, Idaho
Contract 2178

The subject property was visited November 10, 1964, and the two trenches were visited. No one was at the property and there was no evidence of any preparation to resume Project 2 work underground. About 45 minutes were spent on the property but that evening in Dillon, Montana, this project and another near by were discussed with William M. Hand, consultant for the Operators. The last inspection was made September 26, 1964.

Throughout most of the 2 trenches there is about 3 to 4 inches of snow obscuring the bottoms and most of the sides. The trenches range in depth from about 3 feet to 10 feet. Ridges of very hard white limestone limited the feasible depths of bulldozing. The sides of the shallower portions of trench were obscured by snow and in the deeper portions the walls showed no evidence of mineralized structure. In the latter areas the walls were composed of small-to-medium-sized angular pieces of grey limestone, probably the result of weathering in place.

Hand has found that geochemical anomalies over the known Hilltop ore zone are surprisingly low and has abandoned the idea of core drilling mentioned in his letter and outline dated respectively September 6 and 7. He has done considerable geologic studying of the ore occurrence at the Hilltop, preparing sections independently from those presented by Shockey. He asked if OME would consider drifting southerly in the zone of ore making beds from the 300 level to search for parallel veins suggested by geochemical anomalies even though there is no positive indication of their outcrops at the surface. I told him that I doubted that any further amendment would be considered until Phases 1 and 2 of Project 2 were completed; if neither phase indicated promising parallel structures, his proposed

crosscutting, without more justification, would be nothing more than prospecting, but if parallel veins of promise were indicated, his proposal might possibly be considered. He agreed and feels that the next move is up to the Operators.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and ~~four~~ three copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and ~~four~~ three copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

Anaconda, Montana

Work this month was confined to Project 1 ~~of~~ Phase 2 and phase 3. On the first much time was consumed in establishing an analyist who qualified as a "commercial assayer". It was found that the assayers in this area do not include soil analysis in their work. As per the attachment to the original of this report, the samples were run and copy of the report ~~wa~~ is attached. To further establish that the qalification of "commercial assayer" is satisfied, the assaying concern's literature and answering letter are attached to the original.

On Project 1 Phase 2, as per the work authorization of September 15, effotts were immediately made to hire a D8 or equivalent dozer. It was learned as early as August 15th that such a machine was available from the Silver Moon Mine near Gilmore, Idaho only a short distance from the Hilltop. When correspondence brought no results, the writer went to Gilmore to see about the tractor. It was learned that the machine had been moved to a road job in the interm and would not be available for at least three weeks.

Other tractor leads were parsued in the area only to be told that no promises could be made for at least four weeks. On September 27th a tractor was moved from Dillon, Montana to the Hilltop Mine.

As of the writting of this report, October 4, trench "E" has been dozed and trench "C" has been dozed. Upon inspection, the writer feels that an additional eight (8) to ten(10) hours of dozer work will complete the trenching.

Results of the work hamebeen diwappointing. Structures are so weak and ~~xxxxx~~ small that they can not be seen. Geochemical methods will detect them but only for short distances and then only feebaly. At this ~~xxx~~ stage it is doubted if they can be or are ~~xxxxx~~ worth sampling. Pending completion of the dozer work, it may be necessary to request a ressess of the contract so that a reassessment of the program can be made.

The writer has been at the mine September 29th and 30th, October 1,3 and 4 watching the work and collecting additional information.

To date no samples have been taken.

Respectfully submitted,

John L. McKeon, Attorney-in-Fact

Memorandum

To: Chief, Division of Exploration Operations

From: Acting Field Officer, Region I

Subject: Interim Inspection Report
OME-6316 (Silver-Gold)
Clemens A. and Arthur Lombardi
Hilltop, et al., Claims
Lemhi County, Idaho
Contract 2178

The Hilltop mine was visited September 26, 1964. No one was at the property and no work was being done. That evening William H. Hand, Mining Engineer, was interviewed in Dillon. He had just located a dozer to do the trenching and expected it to be started within the next few days. The last inspection was made July 22, 1964.

On the way to the property the deputy sheriff in Leadore said that the hoist, the compressor, and other equipment at the Hilltop mine has been attached for bills reportedly unpaid by the Operators. He wanted to know what the Government policy regarding paying an Operator might be, under those circumstances. I told him that when an Operator completed a piece of work in accordance with contract specifications, the Government was obliged by the contract to reimburse him 50 percent of the cost specified in the contract and that it did not consider itself liable to a third party for its financial or legal problems with the Operator.

It is obvious that underground work cannot be resumed until the attachments are lifted. The Operators' credit, at least for the time being is not too good, but it is Hand's opinion that if they will pay in advance, they will probably be able to start the dozing and, if winzing is then justified, they might be able to rent the necessary equipment.

According to the Thermo-Fax copy of the enclosed letter of September 27, 1964, dozing was started September 29.

Spokane, Washington

For the month of August 1964
Contract Starting Date 5/15/64
Docket No. OME-6316
Contract No. ---- 2178
Contract Amount $86,670
50% Gov't Part. $43,335
Gold and Silver

From:
Clemens A. and Arthur Lombardi
c/o John L. McKeon, 126 Oak St.
Anaconda, Montana

Work this month was limited to Project 1, phases 1 and 2. Most of the work was accomplished last month, more particularly the field work.

Mike McClure, the analyist remained in Lead Ore, Idaho to complete the analysis on the remaining samples until August 3rd. On August 4th he returned to the Hand Mine at Argenta (near Dillon) where the field notes were put in office form.

This included transferring the field notes from a 40 scale map to 100 scale map, establishing contours on a forty scale map so that sections (cross-sections) could be made of the anomalous area.

Proposing dozer cuts to traverse the high areas, also posting them on plan and preparing the maps for printing.

The maps were completed and printed about August 13. The work was done by Bill Hand and Mike McClure his assistant.

Immediately upon completion of the above, work was begun to assemble an assay lab complete with fire assaying and chemical analysis for gold, silver, lead and zinc as well as copper. Because of his maticulus efforts in soil analysis, Mike McClure was chosen to be the assayer and work was begun to review the rudiments, set up the necessary chemical standards, become reaquainted with proceedure and make the other detailed preparations.

On August 15, 1964 Hand and McClure motored to Lead Ore, Idaho hence into Gilmore where a search was made of a D8 tractor or equivalent that could be hired to do the dozer work. Such a machine was located and inspected. It was later found to be available at a commencerate price. On the ~~say~~ same day Hand and McClure drove to the Hilltop Mine and by use of lath, staked out the proposed dozer cuts.

Subject to OME approval or ammendment, the doper work is ready to commence.

It is regretted that on August 27, MaClure was layed-off owing to the highly uncertain future of the program in the eyes of Hand. As of this writting he is still available.

Respectfully submitted,

William M. Hand

William M. Hand, engr.

Memorandum

To: Chief, Division of Exploration Operations

From: Acting Field Officer, Region I

Subject: Interim inspection report
OME-6316 (Silver-Gold)
Clemens A. and Arthur Lombardi
Hilltop, et al., Claims
Lemhi County, Idaho
Contract 2178

The Hilltop mine was visited July 22, 1964, and the progress of the work was discussed with William H. Hand, Superintendent, The last inspection was on June 11, 1964.

About June 28, attachment of the hoist necessitated discontinuance of the crosscutting on the 300 level. Settlement of the attachment is expected to be made soon.

Soil sampling was started July 11, and Phase I sampling had been completed. The office map was partially completed at a scale of 1" = 40'. There appears to be 5 and possibly 8 anomalies worth further soil sample investigation. Because of the size of the office map, no data was copied therefrom, but copies at a smaller scale will be submitted with the July voucher.

A field laboratory has been set up in a portion of a barn at Leadore. This was visited and Mike McClure of Argenta, the assayer, outlined the procedure he was following whereby he first separated the heavy metals and then lead in ppm from the samples.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

REMARKS *(Cont.)*

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

This report will be followed shortly by the Operator's Monthly Voucher and the Operators Progress Report. This is necessary because the sample results are not completely posted on the map being prepared.

The property, Hilltop Mine, Texas District, Lemhi County, Idaho, was inspected by the writter on July or rather June 29 at which time the underground workings were mapped and a check was made of the prevailing snow conditions. At that time excessive snow was present on the northern protected slopes ~~to~~ and it was deemed advisable to postpone soil sampling, Proj. 1, Phase 1, for at least 15 days.

Upon inspecting again on July 11 it was found that the ground was sufficiently void of snow to permit the program to begin. At that time it was also learned that the underground work had terminated due to a legal involvement and to date is still pending. On this date, some 20 samples were taken by the writer as a field test for the methods postulated. It was determined that with minor variations everything was practical.

On July 13, Denis Charpentier from Dillon took up residence at the mine to begin the sampling. A local fellow Larry Stout of Gilmore was hired as an assistant to Denis Charpentier. This two man team remained in the field until July 26, except for Saturday and Sunday July 18 and 19th. The writter also assisted in sampling.

Then too, on July 13 Mike McClure who resides near Dillon, Montana and more specifically Argenta motored to Lead Ore with complete field gear to make analysis for total heavy metals and lead both in parts per million of total metals or metal as distinguished from available metal.

He chose for his field labe, a building in Lead Ore. Here by subjecting a given volume of the fine portion of the sample to a potassium pyrosulfate fusion which he later disolved and diluted to a given volume, he determined the total heavy metals present and the total lead in units of parts per million. He followed a standard procedure altered only to fit the needs of the project. This method is referred to as the dithizone method. As of the writing of this report July 29, Mr. McClure is still in Lead Ore finishing the soil analysis that were required over and above what this OME contract allowed. While a final accounting of the number of samples is lacking at this time, it is estimated that well over 650 samples were taken.

It was found upon attempting to interpret the results of the sampling that sample spacings of 50 ft. by 300 feet left much to be wishedfor in the way of sufficient information. Narrowing the spacings to 150 feet by 50 feet ~~improved~~ improved this deficiency. Even then I note that some of the 100' by 50' spacings were poorly chosen. Soil sampling was terminated July 25 at about 5:00PM.

It is conceeded and admitted that the work above discribed was under the direct supervision and direction of the writer who is fully responsible for any errors.

PART 3
MONTHLY NARRATIVE REPORT
for
Month of June 1964
Underground-Project 2, Phases 1 & 2

OME 2178
Docket - [redacted]E-6316
Lombardi Bros.
Anaconda, Montana
Hill top Mine - Lemhi County
Idaho.
Starting date: May 15, 1964

In order to accomplish the necessary underground work in the main Hilltop shaft it was necessary to do preparatory work. This consisted of repairing the shaft by placing about 10 sets of timber. Track of 20 lb. per yard rail had to be laid from the station to the work face on the 300 level. Owing to the existance of rotted timber bridging a stope from the 400 level, the old stope had to be caught up. Air and water pipe lines had to be replaced and repaired where necessary as well as extended to the working faces. An air compressor with capacity of about 600 cubic feet of free air per minute displacement was installed on the surface and connected to the air line.

It was learned that when it became necessary to use the existing skip pocket on the 300 level to handle muck from the cross cut, the timber had deteriorated to such an extent that virtual replacement was necessary. In addition, the automatice skip dumping arrangement on the surface was found to be out of order and was repaired.

During this month, valves in the air compressor required replacing and hoist required repair. True, these are minor jobs but the accessibility of parts in these somewhat remote areas possess a problem of delivery which can be very time consuming.

As of this writting no further "tie-ups" are anticipated.

Project 2, Phase 1 was undertaken. 38.4 feet of advance was accomplished in crosscutting on the diamond drill hole. In crosscutting, the work was done by drilling the face with an IR Jackleg rock drill using 7/8" hex steel with an integral chisal bit. Air is supplied through one (1) inch hose and water through a ½ inch water hose. Air is transmitted from the shaft through a 1½ inch steel air line and water through a ½ inch plastic pipe.

Explosives for the drilled holes are prepared mixes of ammonium nitrate primed by one stick of dynamite. No. 6 blasting caps on fuse are used to detinate the primer.

Broken muck is scraped from the face onto an inclined loading ramp under which is place a mine car on the track. The two drum scraper hoist is powered by a 5 HP air motor which pulls a scraper bucket with a width of about 24 inches. 3/8 inch steel (wire rope) is used on the scraper. The mine care into which the muck is scraped has a capacity of about 8 cubic feet.

Broken rock loaded into the mine car was hand tramed for a distance of about 75 feet to the above mentioned open stope where it is dumped for gob. The stope is now filled and the muck has to be tramed to the shaft where it is hoisted to the surface for disposal.

Measurement of the Crosscut Advance is accomplished by establishing a reference point at a convenient distance back from the face prior to initial breaking of rock. In this pahse, a piece of pointed wood was driven tightly into an old boot-leg 21.0 feet back from the face.

Advance is determined by measuring the distance from the reference point to the face with a metallic cloth tape graduated in feet and tenths of feet and subtracting from that value the previously measured distance.

Thusly , on June 1,64 Dist. from Ref. Pt. to face was ----- 37.6 ft.
On July 1, 64 " " " " " " " 76.0
June advance was the Difference or ---------- 38.4

Measurement data from the above was secured from an engineer's field book in the possession of Bill Hand, 30 S. Arizona St. Dillon, Montana and is available for inspection by the Government at any time.

Geologic mapping is a modified Butte Method. As far as possible, mapping will be on 40 scale and probably limited to Brunton compass work. No transit lines are anticipated owing to the lack of existing stations. Crosscut guide lines are ~~anticipated~~ also by Brunton . Guide lines are established by placing two points at some convenient distance apart from which strings with weights are hung and sighted along.

The cross cut described in Project 2 Phase 1 was to be guided by following an existing diamond drill hole. After advancing the face some 10 to 12 feet it was found the hole dipped below the track level. As such, it can no longer serve as a guide. This unforseen contingency was overcome, it is believed, by establishing a line on which to drive the crosscut on N20°E or thereabouts. It is hoped that the values indicated in the D. D. Hole came from a reasonably steep structure that will expose itself in the crosscut.

Project 2, Phase 2 which calls for diamond drilling on the 500 level has been prepared for work by repairing the shaft and air and water service to that level.

The hole will be drilled as per ammmendment in spotting.

Progress on Project 1 - Surface

All the necessary reagents and apparatus have been assembled for the surface project. This refers to the soil sampling and analysis. Owing to the fact that all subsequent phases are dependent upon the first, much interest and effort has been expended to get the project in motion.

On June 11, 1964 a Brunton line was run from the northwest corner of the Alex Stevens Claim to the southwest corner to determine its location. At that time it was noted that five and six foot drifts of snow covered much of the ground. Then too, it was noted that some of the accumulated snow was of recent origin owing to the cold spring and early summer. As of this writting, snow conditions that would permit soil sampling are estimated to be about July 10, possibly before. Snow still lingers on the north exposures above an elevation of about 8500 feet. Most other areas are tolerably ~~bear~~-bare.

It is anticipated that the sample grid will be laid out and sample stations staked and marked by the use of a Brunton compas. Forthe 24 inch soil auger holes, a gasoline powered auger drill will be provided.

Upon completion of a soil sampling program in the Dillon, Montana area it was learned that a great many holes encountered bedrock in less than 24 inches. Owing to the high relief of the area to be sampled, it maybe necessary ask for an ammendment so that the samples can be taken from that zone immediately below the humus . It would certainly seem reasonable that soils would be poorly developed and extremely thin.

To assist in studying the area, areal photos of the 660' is 1" scale has been secured. Perhaps they will be of some help in laying out the sample grid lines.

The Montana Bureau of Mines and Geology have had success in studying metal deposition by determining minute amounts of mercury in the soil. Should it be determined that such a study will be of value here, no hesitation will be made to use it.

The lead content of the samples will be determined fromthe fine fraction of the sample by the dithizone method for lead content which will exclude zinc and copper. It is presently planed to supplement the lead-only determination by that of total heavy metals because of the geochemical mobility of zinc. Should the lead-only determinations disclose information inferior to that of the other and ammendment may have to be made to change the methods.

It is anticipated that this narrative report will be the longest of those that you will recieve since it outlines the procedure that probably will be used. The future reports can be shorter. However, it is hoped that these reports will be in such a form that those in the office have a reasonably good idea of what's being done in the field.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection
OME-6316 (Silver-Gold)
Clemens A. and Arthur Lombardi
Hilltop, et al., Claims
Lemhi County, Idaho
Contract 2178

Although this contract is technically in default pending the return of Amendment No. 1, the Hilltop mine was visited on June 11, 1964. William H. Hand, Consulting Engineer-Geologist, was present and requested clarification of various items in the contract and relative to the preparation of vouchers, progress reports, etc. Currently, he is locating claim corners and laying out a geochemical grid. The soil sampling probably cannot be started for 3 weeks or so because of residual snow -- in fact, there were mixed rain and snow flurries during the interview.

Pete Kesl who has contracted to do the underground work was also present. The northerly crosscut on the 300 level has been advanced about 50 feet, but coud not follow along DDH No. 1 as required by the contract, page 4, "Exhibit A." The drill hole was collared about 2.5 feet above the floor and, although starting nearly horizontal, it began to bend downward and went below the floor of the crosscut at about 15 feet. Kesl was told to continue the crosscut on the bearing established while he was following the drill hole and that if an amendment were necessary to permit this, one would be prepared. Hand said he had put in line points at the bearing of the drill hole.

Regarding the Project 2, Phase 2, 500 level drilling, Hand asked if the hole could be drilled with a heavier machine using EX size bits. He was told that as long as the drilling specifications for size were exceeded there would be no problem but that the contract price for the X-ray drilling would not be increased.

As the interview was ending, Arthur Lombardi, one of the Operators, came in. He was told that until OME received the executed copies of Amendment No. 1, the contract was in default and no vouchers would be accepted for payment. He said that the amendment had been mailed the previous week; however, it had not arrived by Saturday's mail (June 6). Upon my return to the office, I found that it had been received June 8, after my departure for the field.
