
CUT AND FILL RELATIONSHIPS OF SANDSTONE, SILTSTONE, AND SHALE ON THE EAST EDGE OF COON MOUNTAIN, TEXAS

These channel deposits are in the basal part of the Coon Mountain sandstone member of the Pueblo formation and here occupy approximately the stratigraphic position of the Saddle Creek limestone member and the upper part of the Waldrip shale member of the Pueblo formation. Both the Saddle Creek limestone member and the Waldrip No. 3 bed of Drake in the Waldrip shale member have been removed here by the cutting of the channel
