Memorandum

To: T. A. Christensen

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket-3414, (Lead-Zinc-Copper) Contract Idm-E751
Buckskin Joe Mines, Ltd., (Buckskin Joe mine)
Park County, Colorado - Operator's Monthly Progress
Report, for the month of January, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract and the work for which payment is recommended is acceptable to the Government. No Documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report, except for the following deduction.

Withhold an amount of $500.00, pending resolution of matters prerequisite to closing the account. All authorized contract work has been completed.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: Edward W. Buel

Subject: Docket DMEA 3414 (Lead-zinc-copper) Contract Idm-8751, Buckskin Joe Mines, Ltd. (Buckskin Joe mine) Park County, Colorado -- Final Progress Report - January 1957

The last progress inspection was made by W. Pratt, Geological Survey, and E. W. Buel, Bureau of Mines, on January 23, 1957. Mr. Charles W. Jordan, manager, was present during the inspection.

The operator had been given Field Team approval to perform an additional 70 feet of drifting along the Baxter (?) vein instead of continuing the two DMEA raises another 82 feet. Amendment No. 3 provided for the transferral of funds allowable for 82 feet of raising to 70 feet of drifting.

The operator began his "new" drifting at a point 87 feet southwesterly from survey station "J" (junction of Baxter drift and crosscut). The operator has completed the 70 feet of drifting.

An examination of the 70 feet of "new" drift did not reveal the presence of any favorable mineralization along the Baxter(?) vein. A sample taken approximately 8 feet from the face of the "new" drift and in a more-conspicuously mineralized part of the Baxter(?) vein assayed only 0.01 Pb, 0.05 Zn, <0.1 Ag, and <0.005 Au.

The operator has submitted a narrative report. No final map was included with the operator's narrative report, for reasons as explained in a letter of March 7, 1957, to John F. Shaw.

The operator requests payment for 70 feet of drifting in his final MF-104's. This amount was verified during the last inspection. It is recommended that the operator be reimbursed for the Government's participation at 50 percent or $1225.00.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re- Docket 3414
Contract Ida - E 751

TO:- ~~DEFENSE MINERALS EXPLORATION~~ ADMINISTRATION.
FROM:- BUCKSKIN JOE MINES LTD. ALMA? COLO.
SUBJECT:- NARRATIVE OF WORK AMENDMENT #3 COMPLETED.

The work assigned under Amendment #3 was the extending of the Baxter drift an additional 70 feet towards the south. In a true sense this vein was not the true Baxter fissure,it having died out about a hundred feet to the north. That is the mineralization died out although the fracture continued. At a point about where the cross-cut took off towards the #2 objective.a small shear fault fracture came out of the east wall of the Baxter drift with a strike of about two degrees more towards the West than the Baxter vein. It crossed the Baxter vein and then followed along the West wall. Where this fracture came out of the the East wall it was only about an inch in width showing some lead and zinc. In slabbing off the West wall of the Baxter drift we found that in thirty feet this fracture has increased in width to eighteen inches showing some lead and zinc and fair gold and silver values. On their own account the Buckskin Joe Mines decided that with this amount of increased width and value the vein should be drifted on, this they did for a distance of forty feet. At the end of this forty feet the breast showed a well fractured vein of quartz about four feet in width with disseminated iron and some zinc and lead. On the hanging-wall there was a streak of three inches of good lead and zinc.

The main objective of them above contract was to find commercial mineralization in the area south of the Buckskin Joe that lay between them and the Orphan Boy. This fracture showing constant improvement in width and mineralization,as it was drifted on in this direction, lead us to believe that further work on the vein in this direction might lead us into a mineralized area towards the south. A request for amendment #3 was asked and granted. In driving the drift the distance of seventy feet we had about the same width of vein and mineralization for the first twenty feet. At about this point the mineralization began to fade out of the vein and at the end of the seventy feet there was only about two inches of iron showing in the breast. The only results that I can see that we obtained in doing this work is that we showed up a very strong post mineral fault with most of the movement being a lateral thrust along the hanging wall side.

Yours very truly,
Buckskin Joe Mines Ltd.
Chas. H. Jordan
Mgr & Partner.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: Edward W. Buel

Subject: Docket DMEA 3414 (Lead-Zinc-Copper), Contract Idm-E751, Buckskin Joe Mines, Ltd. (Buckskin Joe Mine), Park County, Colorado -- Progress report for November 1956

An inspection of the subject property was made by W. Pratt, Geological Survey, and E. W. Buel, Bureau of Mines, on January 7, 1957. There was no representative for the operator present during the inspection.

An attempt was made to measure Nos. 1 and 2 raises. In the absence of ladders to the top of the raises, it was not possible to measure the lengths of the raises.

As near as could be determined No. 1 raise measures ±34 feet above the top of the drift. Of this estimated 34 feet of raise, 19 feet was actually measured. As nearly as could be determined, No. 2 raise is ±24 feet, of which 14 feet could be measured, above the top of the drift. These estimated figures are in accord with those as given in the operator's narrative report for November 1956.

The operator requested permission from the DMEA Field Team to discontinue raising and to be allowed additional drifting with unexpended funds from the raising. Approval was given the operator during December to undertake additional drifting. The operator began the new drifting around the close of the year. The drift was driven a total of 28.5 feet. The drift is untimbered and measures 7 feet wide by 7-1/2 feet high.

The operator requests reimbursement for 5 feet of raising in his MF-104's for November. It is recommended that the operator be paid on the basis of 50 percent of $150.00, or $75.00

It is noted that the operator did not carry forward a rehabilitation figure of $2,500.00 on his MF-104A form.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Subject: DMEA Docket 3414 (Lead-zinc-copper), Contract Idm-E751, Buckskin Joe Mines, Ltd. (Phillips mine), Park County, Colorado. INTERIM REPORT

The Phillips mine was inspected on January 7, 1957, by W.P. Pratt, U. S. Geological Survey, and E. W. Buel, U. S. Bureau of Mines.

The new drift on the Baxter vein has been advanced 28.5 feet beyond the last inspection on October 29, 1956. The face shows alternating green and gray bedded limestone trending about N 65° W and dipping 20° SW, cut by a 2-foot shear zone containing some pyrite but no other sulfides. A miner reported that the last 6 feet contained sphalerite.

Raise No. 1 measured 21.0 feet up from the top of the drift plus an estimated 15 feet of stope, or a total of 34 feet above top of drift. The stope is in a 3-foot vein of quartz with pyrite and galena, apparently fair grade.

Raise No. 2 advanced 5 feet since the last inspection, to a total of 24 feet above top of the drift. The top of the raise exposes a 2-foot zone containing pyrite and galena.

From: Edward W. Buel and C. M. Harrer

Subject: DMEA 3414 (lead-zinc-copper) Contract Idm-E751, Buckskin Joe Mines, Ltd. (Phillips mine) Park County, Colorado
—Progress report for October 1956

The subject mine was examined on October 29, 1956, by C. M. Harrer and E. W. Buel, U. S. Bureau of Mines. An examination of the property disclosed that no work under the DMEA contract was performed during October.

During August, September and October the operator advanced a crosscut for 82 feet to explore the "Iron" vein. At the time of the DMEA inspection, the crosscut had not intersected the vein. This crosscut starts from the Baxter drift, some 170 feet southeast of survey station 85.

Additional work by the operator consisted of extending the Baxter drift for 40 feet in a S. 50° W. direction. The vein as exposed in the face of the drift and some distance back is 0.6 foot wide, dips about 80° SW, and contains principally quartz and pyrite. The remainder of the drift face has pyrite erratically distributed in a flat-dipping limestone.

The operator also drove the "Iron" vein drift to a point 160 feet southwest from the crosscut which is southeast of the Baxter drift. The face of the newly driven drift was weakly mineralized with pyrite and chalcopyrite.

The "Raise" drift near the end of the crosscut from the Baxter drift, at station J, was extended approximately 22 feet without finding any ore mineralization.

Denver 2, Colorado
September 24, 1956

To: Executive Officer, DMEA Field Team, Region III

RECEIVED
OCT 3 1956

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414 (Lead-zinc-copper) Contract Idm-E751, Buckskin Joe Mines, Ltd., Park County, Colorado--Progress report for August 1956.

Progress under the contract was examined on September 14, 1956 in the company of Charles Jordan, general partner.

Exploration under the contract for the month of August consisted of advancing two raises. Raise timbers are in place and their centerlines are now fixed. Raise No. 1 is 213.6 feet southwest of survey station 89, and raise No. 2 is 367.1 southwest of survey station 89.

During the month of August, raise No. 1 was advanced 17 feet and raise No. 2 was advanced 4 feet. Total progress for the month is 21 feet of raise.

The vein is 2.0 to 2.5 feet wide and dips 85° to vertically. The wallrock dips 20° E. The vein consists of quartz, pyrite, sphalerite and galena containing some gold and silver. The results of mine-car sampling and one composite shipment of ore are as follows:

Location	Oz./ton Gold	Oz./ton Silver	Percent Lead	Percent Zinc	Percent Copper
No. 1 raise, + 4 feet above drift	0.4	1.9	1.6	7.6	—
No. 1 raise, ± 20 feet above drift	0.32	0.6	1.1	6.4	—
No. 1 raise, ± 28 feet above drift	0.23	2.0	1.2	9.7	—
No. 2 raise, ± 20 feet above drift	0.04	0.7	1.8	2.6	—
to A. S. & R. Co., at Leadville; 1 truckload from No. 2 raise and 6 truckloads from No. 1 raise.	0.255	1.60	2.0	7.00	0.40

In addition to exploration under the contract, the operator is driving a crosscut S. 32° E., at his own expense, to intersect the "Iron vein". This crosscut starts 170 feet southwest of station 85, and will cut the same structure exposed in the crosscut southeast of the Baxter drift. The new crosscut has been advanced 36 feet.

The operator's statement of work performed during August 1956 and his forms MF-104 and MF-104A are correct.

Payment is recommended for the operator's request for 21 feet of raise at a total cost of $630.00. Government participation at 50 percent is $315.00.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Subject: DMEA Docket 3414 (Lead-zinc), Contract Idm-E 751, Buckskin Joe Mines, Ltd. (Buckskin Joe mine), Park County, Colorado

Interim report

The Phillips (Buckskin Joe) mine was examined on September 6, 1956, in company with Charles W. Jordan. The examination consisted of an inspection of the underground workings and of the surface area above the workings; no detailed mapping was attempted.

Work remaining under contract Idm-E 751 consists of two raises along the Baxter drift, each to be driven for a distance of 70 feet above the back of the drift. No. 1 raise is 205 feet and raise no. 2 is 366 feet from survey station 89. On September 6, 1956, raise no. 1 had been driven for about 30 feet and raise no. 2 for about 20 feet above the drift. Both raises hit lead-zinc mineralization of probable ore grade on the second round. The vein in raise no. 1 is 42 inches wide and in raise no. 2 is 48 inches wide. In both raises the ore continues for a vertical distance of 10 to 15 feet and the backs of both are in essentially barren vein material. Mr. Jordon states that he has shipped 47 tons of ore, mostly from raise no. 1. Work was temporarily suspended in both raises because of shortage of manpower and in deference to exploratory work elsewhere in the mine.

Mr. Jordan plans to crosscut from the Baxter drift to the Iron vein and to continue drifting to the southwest across the fault in the area of the shaft at HMC-16. He plans to carry out this latter exploration on his own initiative.

Subject: DMEA Docket 3414 (Lead, Zinc, Copper) Contract Idm-E751, Buckskin Joe Mines, Ltd. (Buckskin claim et al) Park County, Colorado - Operator's Monthly Progress Report for the month of July, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

The amount of $500.00 which was withheld from the November, 1955 voucher is to be reinstated inasmuch as the Operator has resumed work under the contract.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shea
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414 (Lead-zinc-copper) Contract Idm-2751, Buckskin Joe Mines, Ltd., Park County, Colorado -- Progress Report for July 1956

Progress under the contract was examined on August 3, 1956, in company of Charles Jordan, general partner. The writer was accompanied by S. K. Price, engineering aide.

At the time of the examination, the operator had advanced two raises approved under the contract. Raise No. 1 is centered at about 210 feet southwest of survey station 89 and has been advanced 17.2 feet above the top of the Baxter drift (24.2 above the rail). Raise No. 2 is centered at about 368 feet southwest of survey station 89 and has been advanced 15 feet above the top of the Baxter drift. Total raising to date is, therefore, 32.2 feet. The raises are stulled and consist of a manway and chute with a 4 by 8-foot cross-section.

The vein exposed in the raises ranges between 2 feet and 3.5 feet thickness, consisting of sphalerite, pyrite, galena, chalcopyrite, in a gangue of quartz and silicified limestone. The vein dips about 80° SE. Grab samples of a 7-ton shipment from raise No. 1 are reported to assay 7.6 percent zinc, 1.6 percent lead, with 0.4 ounce gold and 1.5 ounces silver per ton.

The operator's statement of work performed during July 1956 is correct. His narrative report does not mention the advance in each raise but is otherwise complete. His Forms MF-104 and 104A are correct.

Payment is recommended for the operator's request for 32 feet of raise at a total cost of $960.00. Government participation of 50 percent is $480.00.

RECEIVED
SEP 17 1956

August 24, 1956. Contract E751
Re-DMEA 3414

TO:- Defense Minerals Exploration Administration,

FROM:- Buckskin Joe Mines Ltd, Alma, Colo.

SUBJECT:- Narrative for Month of July 1956.

The month of June consisted of hiring miners that never showed up for work. A part of July was dedicated to the same thing. Finally had a miner and his helper come to work but after getting six rounds drilled and part of the timber in he had three cysts show up on his back and through the advise of his Doctor quit. As a consequence the amount of work done wasn't amounted to a great deal.

The six rounds shot in the vein showed on #1 raise about forty inches of ore. An assay of this ore showed good .40 Au 1.5 Ag 1.6% Pb and 7.6 Zn. Being of a grade to throw over the dump a contract was gotten from Resurrection Mining Co and one seven ton truck load was shipped in July.

The #2 raise also showed up with ore on the second round but mostly iron with a streak of gold lead and zinc. It At the end of the month the vein showed a width of four feet but the grade seemed to have dropped down. On this raise the back of the drift was a heavy shale which caved in on top of the ore so that a proper sample of the ore was not possible. and every thing was put over the dump.

Yours very truly,

Buckskin Joe Mines Ltd.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report, except as indicated below.

Reinstatement

Consistant with work approval dated December 20, 1955 we recommend reinstatement of $1,100.00, the amount which was disallowed from the Operator's claim for the month of October, 1955.

Withhold an amount of $500.00 pending action on the Operator's request for additional funds. If no further work is approved the amount shall continue to be held in abeyance until final settlement of the account. All currently allowable work under the contract is now essentially completed.

Basis for Payment

Amount claimed this report- - - - - - - - -	$3,216.50
Amount to be reinstated- - - - - - - - - - -	1,100.00

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-R751 (Lead-zinc-copper)
Buckskin Joe Mines, Ltd., Park County, Colorado -
Progress report for November 1955

Progress under the contract for the month of November was examined on December 8, 1955. The property was closed down and roads drifted full of snow. The mine portal was reached by wading through deep snow.

Work for the month consisted of advancing the Iron Vein drift 97.2 feet. At the end of October only 91.9 feet of drift and crosscut remained of the total of 1,175 feet allowed under the original contract and Amendment No. 1. The operators request for payment of 91.9 feet of drift is therefore correct.

About 3 feet of strong pyrite mineralization is seen at the face of the drift, with stringers of galena, sphalerite, and chalcopyrite in less abundance. A sample (M-882) was taken across a width of 2.8 feet and will be sent in for analysis.

All drifting and crosscutting, totalling 1,175 feet under the original contract and Amendment No. 1, is now completed.

Payment for 91.9 feet of drift costing $3,216.50 is justified. Government participation of 50 percent is $1,608.25. However, it is recommended that $900.00 be withheld pending resumption of work or submission of the operator's final report.

Totals on forms MF-104 and 104-A could not be checked since the forms for October were not available.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Administrative Audit Difference Statement

Date: Dec. 19, 1955
Payee's
Reference: October 1955

Buckskin Joe Mines, Inc.
Alma, Colorado

Gentlemen:

Upon examination of the above Payee's reference a difference was found which made it necessary to suspend your account accordingly:

Amount Claimed	$ 1,926.00
Difference	$ 1,100.00
Amount Approved	$ 826.00

The reason for the difference was due to:

Disallowed 44 feet of raising at $25.00 per foot as the location of the raise does not have the Government's approval.

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

N.E.Stokes

Subject: DMEA Docket 3414 (Lead-Zinc-Copper), Contract Idm-8751, Buckskin Joe Mines, Ltd., Park County, Colorado - Operator's Monthly Progress Report, for the period October, 1955

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Narrative Report, and Engineer's Report for the above period.

Only a portion of the work has been completed as authorized by the contract. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report, except for the following deduction:

Disallow the amount of $1,100.00 for 44 feet of raising at $25.00 per foot as the location of the raise does not have the Government's approval (Amendment No. 1, item 5).

Note: Attached are revised Forms MF-104 and MF-104A for September, 1955 for which no payment is involved.

REGION III

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-E751 (Lead-zinc-copper)
Buckskin Joe Mines, Ltd., Park County, Colorado
Progress report for October 1955

Progress under the contract for the month of October 1955 was examined on November 3, 1955, in the company of Charles Jordan and Ed Snell, manager and superintendent respectively.

During the month the raise to the shaft at location EMS-16 (see map with contract) was driven 44 feet to a connection. The old shaft was found to be 4 x 6 feet in cross-section and untimbered. While the shaft was inaccessible for examination above its bottom, it appears to be about 50 feet deep, with stringers of galena, sphalerite and pyrite visible in the shaft walls for a considerable part of its depth. The mineralized zone appears to cut off about 2 feet below the top of the raise.

Drifting was started on the iron vein and was advanced 24 feet from the crosscut in a S. 34° W. direction. The vein is principally pyrite with some galena and sphalerite.

Mr. Jordan reports advance for the month as 23.6 feet of drift on the iron vein and 44 feet of advance in the raise.

Drifting 23.6 feet along the iron vein, Item 4 under amendment No. 1 of the contract, is therefore allowed at a total cost of $826.00. Raising 44 feet, under Item 5, amendment No. 1 of the contract, at a total cost of $1,100.00 is disallowed on instructions from the office of the Executive Officer, DMEA Field Team.

On forms MF-104 and 104A, Item 2 should be Item 4, and the totals could not be checked since the forms for September were not available.

Payment of $413.00, which is 50 percent of the total expenditures for drifting ($826.00), is recommended for approval.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

TO:- DEFENSE MINERALS EXPLORATION.

RE- DMEA Docket 3414
Contract E-751

FROM :- BUCKSKIN JOE MINES LTD.

SUBJECT:- NARRATIVE MONTH OF OCTOBER.

The month of October showed about 4 feet in the raise drift and 19.6 feet on the Iron vein the remainder of the work done for the month was putting up a raise of 44 feet to make a connection with the shaft at #2 target. What a job this turned out to be with cost running way above the $25.00 allowed per foot. This was due mostly to the fact that the raise passed through at least 33 feet of fault breccia that was just ground and chewed to pieces. The main part of the fault breccia was greatly altered at some points looking like a ground up shale and at others like a ground up porphry. In the upper part of the fault were large chunks of silicified white lime mixed into the mass. The vertical fracture seams ran in all directions. The big cost of the raise was due to the fact that some of the rounds refused to pull and had to be re-drilled and re-shot. When we did get a round that would pull it would take out large chunks that broke the timber, which had to be replaced. Some of the chunks were slickened on all side and looked like flying saucers. The was some chunks of very good lead and zinc ore in the upper part of the fault. To me they did not looks like fault drag but more like solutions that had worked into the fault breccia after the fault movement. It was a tough costly job but I do think that we got a world of information that could not have been gotten otherwise.

As we went up with the raise we followed a couple of the shear planes we had encountered in the cross-cut below. The were not mineralized at the cross-cut and didnot contain any mineral until we got above the fault, when they became filled with high-grade lead and zinc. The raise came up to the east of the shaft missing the connection with the shaft of about three feet. The shears in the raise had not been cut in the shaft. We also drilled holes in the wall on the back and east of the raise for about 5 feet wich showed that there were mineralized shears in that area. With the shaft, the raise and the drill holes we are positive of about 12 feet of mineralized shears. In the cross-cut we passed through 50 feet of these shears and I believe it is hight possible that this entire zone of shearing is mineralized above the fault. The raise to me proved two things. The ore solutions came in from some point to the south or up the hanging wall of the fault. The solutions came in after faulting and the shears in the cross-cut were not mineralized as the fault acted as an impervious layer cutting off the solution below the fault. I think our main ore zone will be found on the south side of the fault, in the iron vein and other fractures we encounter in the cross-cut.

Yours very truly,
Buckskin Joe Mines Ltd.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-X751 (Lead-zinc-copper)
Buckskin Joe Mines Ltd., Park County, Colorado -
Progress report for September 1955

Progress under the contract for the month of September 1955 was examined on October 5, 1955, in the company of Charles Jordan and Ed Snell, manager and superintendent, respectively. The writer was accompanied by D. R. Mac Laren, geologist of the Geological Survey, who brought the geology of the exploration program up-to-date.

The crosscut was completed for a total length of 349.5 feet and this represents an advance of 80 feet for September.

The mineralized zone exposed in the breast of the crosscut last month, at 336 feet, was explored with a 12-foot drift driven southwesterly and by slabbing the sides of this drift to further expose the structure. This exposure indicated the presence of a small replacement and not a commercial body of ore.

A drift was then started from the crosscut at a point 320 feet in from the Baxter drift and was driven southwesterly for 35 feet. It encountered a mineralized fissure with widths up to 0.8 feet, containing galena, sphalerite, chalcopyrite, pyrite, quartz and rhodonite, which assayed 3.8 percent lead, 9.6 percent zinc, 0.06 percent copper, 0.04 ounce gold and 0.5 ounce silver per ton. A raise was advanced 5 feet above the drift and below the sample location BJC-16.

The Baxter drift was also advanced southwesterly for 12 feet along a mineralized fissure reported as entering the northwest wall of the drift in the July progress report. This vein was 1.5 feet wide and assayed 1.8 percent lead, 2.3 percent zinc. 0.07 percent copper, and included 0.1 ounce gold and 0.9 ounce silver per ton. Galena, sphalerite, chalcopyrite, pyrite, quartz and rhodonite were visible components.

Progress for the month of September consisted of 80 feet of crosscut and 35.6 feet of drift under the terms of the contract. Slabbing and raising were not reported as items for payment this month.

Status of Exploration

Units of Work	Accomplished	Allowed under the contract
Drifting on Baxter vein	663.4 feet	"About" 635 feet
Crosscutting to shaft(BMC-16)	349.5 feet	"About" 320 feet
Drifting on mineralized structure near end of crosscut and under BMC-16	46.6 feet	"About" 220 feet
Raising	None	50 feet
Totals	1,059.5 feet of drifting and crosscutting	1,175 feet of drift and crosscut and 50 feet of raise

Drifting or crosscutting remaining 115.5 feet

Raising remaining 50 feet

Nine samples were taken of mineralized structures at various locations in the Baxter drift and the crosscut and assayed as follows:

Sample Data

Sample	Width	Lead	Percent Zinc	Copper	Ounces Gold	Ounces Silver	Location
H-801	0.8 feet	7.2	2.4	0.02	.10	.4	Baxter drift at sta C+10'
H-802	0.5 feet	1.5	4.8	.66	.24	4.2	Baxter drift at sta E-5' Vn between E+14' and E-20'
H-803	2.0 feet	0.5	0.6	.05	.06	.5	Baxter drift at sta F-43' Vn lenses out between F-35' and F-54'
H-804	1.7 feet	4.6	8.1	.12	.18	1.0	Baxter drift at sta F-8
H-805	1.6 feet	4.4	8.4	.10	1.10	2.8	Baxter drift at sta F+11' Vn pinches out at F+25' and F-23'
H-806	1.5 feet	1.8	2.3	.07	.10	.9	Breast of Baxter drift at sta J+47'
H-807	6.0 feet	0.2	0.1	.05	.04	1.5	F.W. component of iron vein in crosscut at J+96' to J+102.4'
H-808	0.6 feet	2.4	5.6	.01	.04	.3	H.W. component of iron vein in crosscut at sta. J+102.4 to J+103'
H-809	0.8 feet	3.8	9.6	.06	.04	.5	Raise in drift, 30' NW of J+352.5' - 12' above sill or 5' above back

Charles W. Jordan's narrative report is adequate and his total advance of 138.6 feet of drifts and crosscut is allowable since 139 feet was measured. Mr. Jordan's assignments to drifting and crosscutting however are in error. The only crosscutting is that southeast of the Barter drift which is a total of 80 feet for the month. All work on structures off the crosscut and more or less paralleling the Barter drift is considered as drifting and this totals a measured 59 feet, of which Charles Jordan has asked payment for 58.6 feet.

On form MF-104,	Crosscutting monthly total should be	$ 2,800.00
	Drifting monthly total should be	$ 2,051.00
	Crosscutting totals to date should be	$12,238.50
	Drifting totals to date should be	$24,850.00

On form MF-104A,	Crosscutting units this month should be	80 feet
	Drifting units this month should be	58.6 feet
	and other items should be corrected accordingly.	

Payment of $2,425.50 which is 50 percent of the expenditures for September ($4,851.00) is recommended for approval.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

IC-[illegible] 2424
Contract [illegible]-752

TO:- DIRECTOR MINERAL [illegible].
FROM:- [illegible] FOR [illegible] LTD.
SUBJECT:- PROGRESS REPORT OF [illegible].

The month of September has brought us close to the end of our contract and into close proximity with all of our objectives. The main objective of this exploration project primarily was to explore that area between the [illegible] Joe Lake and the Captain Bay Lake. Two of the important properties lying in this area. With this in view we set up a [illegible] such that each portion explored out of the [illegible]. The area occupied by Dr. [illegible], Dr. [illegible] and Dr. John [illegible] has been considerable also [illegible] the [illegible] zone [illegible] [illegible] [illegible]

feet this fracture has opened up into a fairly well defined vein of quartz, iron and zinc, about eighteen inches wide, rather indicating that the mineralization was coming in from the south.

At the end of August we were coming in close to the 72 target and a close watch was kept for a vein that might be dipping north and could be projected into the shaft. The cross-cut which was layed out thirty feet north of the shaft, so as to be able to turn on a vein into the shaft, showed only a series of small shears and faults breaking across the front of the cross-cut about every round. No vein was hit on the west side of where the shaft was located so it was possible that the vein dipped toward the east and the cross-cut was carried on to cross a vein on a 72 degree dip out of the shaft north. At the cross-cut. At this point we drilled into ore, on sinking, it was found a strip of lead and zinc 8 inches wide then five feet of brown gouge fault zone with shale and gouge and a three inch streak of zinc on the foot-wall. all striking and dipping away from the shaft. I then put in a 25 foot long hole into the front and hitting nothing decided that the only way we could get any information as to the ore in the shaft was to follow the original plan and connect with the shaft. We then turned off the cross-cut and drove over under the shaft. When we hit this point we found a flat fault zone coming up over our back and which if carried out over the cross-cut would be about twenty feet above the cross-cut. On the hanging side of this fault was a six inch streak of lead, zinc and iron which seems to have been deposited in and replaced the breccia of the fault. I don't know as yet but I believe that this fault is a reverse with the ore solutions coming up it and into the fractures of the lime formations lying above it. If not the the solutions came in from the south and were stopped by this fault and was why we found no ore in the heavy fracturing in the cross-cut. This same fault hit on the dip and strike would come in over the seven foot vein we cut at 100 feet in the cross-cut. The ore in the foot-wall of the fault could be due to the heavy fracturing and structure of this vein.

There are a lot of questions before us. A lot of them will be answered when we get into the old shaft at 72 target. A lot more of them will be answered when we can drive out on the vein toward the south, past this fault, that we cut in the cross-cut at the 100 foot mark. I think that our exploration program was well founded, especially with what information we had. As one watches the sounds from day to day, noting the fracturing and changing of the rock, which has become highly silicified in this area, along with some mapping has given me a decided feeling that we are just on the edge of an important mineralized area that lies south of us.

Yours very truly,
Dresden Joe Mines Ltd.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-8751 (Lead-Zinc-Copper), Buckskin Joe Mines Ltd., Park County, Colorado - Progress report for August 1955.

Progress under the contract for the month of August was inspected on September 16, 1955, in the company of Ed Snell, superintendent.

Advance under item 3 of the contract and amendment no. 1, which is a crosscut southwest, was 165 feet as reported by the Operator in his forms MF-104A.

At the time of the inspection, the crosscut had been advanced 342 feet for the months of August and September. The crosscut is now in a total distance of 342 feet beyond the Baxter drift and is driven on a brunton bearing of S. 24° E.

At 336 feet from the Baxter drift, a 6-foot vein zone was encountered with a strike of N. 60° E. The hanging wall consisted of a nearly vertical fissure. The footwall dips about 55° NW. The vein contains appreciable galena, sphalerite, chalcopyrite, and considerable pyrite, which appears most concentrated along the hanging and footwalls. The limestone country rock dips 14° SW. This vein exposure is under the target area in the vicinity of a certain shaft and sample BMC-16.

It is recommended that a geologist visit the property not later than the middle of next month.

Charles W. Jordan's narrative report, while short, appears adequate and his forms MF-104 and 104-A are complete and correct. Payment of $2,887.50, which is 50 percent of the amount claimed in August ($5,775.00) is recommended for approval.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Subject: DMEA Docket 3414 (Lead-Zinc-Copper), Contract Idm-3451, Buckskin Joe Mines, Ltd., Park County, Colorado

Operator's Monthly Progress Report for the period July, 1955.

Enclosed are the original and four copies of Form MF--104 and MF-104A, Narrative Report, and Engineer's Report for the above period.

Work has been completed as authorized by the contract. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore we recommend that payment be made for 50 per cent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Remarks:

Date of Report	Aug. 5, 1955
Date received in Field Office	Aug. 8, 1955
Date received in Regional Office	Aug. 11, 1955

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-8751 (Lead-zinc-copper), Buckskin Joe Mines, Ltd., Park County, Colorado - Progress report for July 1955.

Progress under the contract for the month of July was inspected on August 9, 1955, in the company of Ed Snell, superintendent.

Advance of the Baxter drift for the month of July is correct at 47 feet. Total advance of the Baxter drift is now 651.4 feet from the start of the contract. On July 20, 1955, amendment No. 1 to the contract was in effect and specified "about 635 feet of drifting southwesterly on the Baxter vein". The present end of the Baxter drift is 16.4 feet beyond the 635 feet specified in the contract, however, because of the inclusion of the word "about", the full advance of 47 feet for the month is recommended for approval.

The Baxter vein continued as a tight and steeply dipping structure, little more than a crack to a point 670 feet in on the contract, where it starts to widen out. At a point 639 feet in on the contract, the vein enters the northwest wall of the Baxter drift with a width of about 1 foot and a dip of 85° S.E. The vein contains some galena, sphalerite and chalcopyrite and an abundance of pyrite. The limestone dips about 21° E.

Work under the contract for the month also includes advancing a crosscut as defined in item 3 of amendment No. 1 of the contract. This crosscut was advanced 142 feet at the time of the examination. The brunton bearing of the crosscut is S. 24° E. The advance of 104.5 feet reported by Buckskin Joe Mines, Ltd., for the month of July is, therefore, accepted as correct.

A heavy sulfide zone was encountered 92 to 101 feet in on the crosscut. This zone contains visible blebs of galena and sphalerite and an abundance of pyrite.

Chas. W. Jordan's narrative report and forms MF-104 and 104A are complete and payment of $2,651.35 which is 50 percent of the amount claimed in July ($5,302.50) is recommended for approval.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

August 7, 1955.

Re-DIM # 3424
Contract L-751

RE:- DEFENSE MINERALS EXPLORATION.

FROM:- SOUTHERN JOS MINES LTD. MINE CASO.

SUBJECT:- UNDERGROUND WORK OF JULY 1955.

The month of July has been one of great interest. We succeeded in the drift on the Kinross vein to the main ore target. As mentioned in last report we were getting into an area of considerable fracturing. At a distance of about 6ft 2cot a decided fault slip came across the drift and the cone vein. It was not heavy in the drift but after we had followed about ten feet about 1ft cleved off at the point where the slip crossed the fault vein and exposed a vein of quartz and pyrite about a foot wide. This cleving off of the fault vein also shows that the main fracturing has taken place on this side, which is running about south 30 feet. The breast of the drift is off this fracturing about four feet and will have to be blasted off to put us over onto the main break.

The contract was started on the cross-cut over to the target the started. In the raise a distance of 104.5 feet. At a distance of about 30 feet a vein of quartz pyrite was crossed. At a distance of about 97 feet a fault was cross and the vein was crossed. Raise is 7feet of about seven feet. This fault was in a zone of silicified limestone which large patches of dense pyrite mixed through it. On both sides there is a fault vein of quartz and pyrite, the hanging wall being very hard. Assays taken from the footwall side of the vein has as yet no results have been received. Geologist that the assays in Kirkland Lake been as favorable. [illegible] to be drawn the assays that [illegible] Dec 1 to the Geologist [illegible] the [illegible] Kirkland Lake [illegible] which could lead to the [illegible] of [illegible].

Sincerely yours,
Secretary for Mines Ltd.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-E751 (Lead-zinc-copper), Buckskin Joe Mines, Ltd., Park County, Colorado - Progress Report for June 1955.

Progress under the contract for the month of June was inspected on July 5, 1955, in the company of Chas. Jordan and Ed Snell manager and superintendent respectively. In addition, an amendment to the contract was discussed with Mr. Jordan.

Advance of the Baxter drift for the month of June is correct and has been reported as 163.2 feet. Total advance of the Baxter drift under the terms of the contract is now 604.4 feet. Total advance was measured on July 5th as 614.6 feet.

The Baxter vein continues as a very narrow and steeply dipping structure and appears poorly mineralized. Mineralization is evident principally as pyrite with a few small crystals of galena and sphalerite. For most of this month's advance the vein has narrowed to little more than a crack. Starting at a point 580 feet in on the contract, a series of steeply dipping to vertical shears angle across the Baxter drift with a strike of N52° E. The vein remains in greenish to white and gently dipping limestone.

On June 28, progress under the contract was surveyed by G. F. Galloway of Alma, Colorado. It was found that the vein trended in an arcuate southwesterly course which would intersect the first objective. This makes an amendment to the contract necessary. Application has been made for an amendment to the contract.

The vein was not sampled as visual inspection shows very poor mineralization.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet of other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported" and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

D M E A #3414
Contract E-751

TO:- Defence Minerals Exploration.

FROM:- Buckskin Joe Mines Ltd. Alma, Colo.

SUBJECT:- Narrative for Month of June 1955.

In last month's report it was stated that the vein had narrowed down and had lost it's mineralization. For the first 140 feet of this month that condition has continued, the vein getting down to just a crack and even losing most all of its fault movement. At the end of this distance a series of slip planes started coming into the fracture from the east side, these occured about every seven feet, widening the fracture and increasing the fault movement. At the end of the month we have a sheared fracture of threefeet. At the above to this condition has continued until we now have sheared fracture zone of over five feet. There is a small amount of pyrite in the fracture seams and on the shear faces, the entire fracture being ~~hihly~~ highly silicefied. Such a condition in an intense mineralization area could result in an important ore-body.

On June 28th a survey was made by Gerald Galloway tying in the underground work with the two objectives, namely HMC 15 and MC 16. This showed that the proposed drift on the Baxter vein had turned West and was within fifty feet of HMC 15. and in direct line with this point. As a consequence the entire work plan and cross-cuts will have to be revised. This map has been submitted to the department.

At the fifty feet shaft on objective HMC 16 there is indicated an intense mineralization of lead, zinc and gold. A close study of the dump on this shaft also indicates a shearing such as described above. This point is about 150 feet further south than MC 15.

In our previous work in Loveland Mountian we have found that the zones of mineralization has followed a certain pattern, these zones being in the veins along the strike of the large dyke. The area of which we are now entering is entirely new to us. I think that when we can get over to point MC 16 , which does show mineralization and have a chance of some exploration and study we can best decide as to what further work might be warrentd on the Baxter vein.

Sincerely yours,
Buckskin Joe Mines Ltd.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-E751 (lead-zinc-copper), Buckskin Joe Mines, Ltd., Park County, Colorado - Progress Report for May 1955

Progress under the contract for the month of May was inspected on June 6, 1955, in the company of Ed Snell, mine superintendent. Advance during May was 140.7 feet as reported by the operator on his Forms MF-104 and 104-A. Total advance under the terms of the contract is now 441.2 feet. At the time of inspection, June 6, 1955, the Baxter drift had been advanced 465 feet under the contract.

The Baxter vein continues as a very narrow and steeply dipping structure with pinch and swell characteristics and is in thin bedded and gently crenulated, greenish to white limestone which dips about 13° to the east. The Baxter vein or fissure dips from 75° east to vertical. To date, the vein contains a very low content of galena, sphalerite and chalcopyrite which is irregulary distributed as small stringers and blebs in quartz and calcite, with pyrite. The vein is described as follows, assuming the start of the contract as 0 + 0 feet:

Between 0 + 320 feet and 0 + 324 feet the vein is about 1.5 feet wide, composed chiefly of quartz, with narrow streaks and blebs of galena and sphalerite and disseminated pyrite.

At 0 + 352 feet, the vein is 1.5 feet wide and is made up of quartz, some pyrite, and very little galena or sphalerite.

Between 0 + 362 and 0 + 377 feet the vein varies in width from 0.5 to 1.8 feet and contains small amounts of galena and sphalerite, with pyrite as blebs and stringers. The vein pinches out at either end.

At 0 + 388 feet the vein is one foot thick and contains very little galena, sphalerite or chalcopyrite and is not worth sampling.

At 0 + 401 feet, the vein is about one foot thick and contains very little galena, sphalerite and chalcopyrite.

At 0 + 407 feet, the vein is 1.5 feet thick and consists chiefly of quartz and contains very little galena, sphalerite and chalcopyrite.

At 0 + 416 feet, the vein pinches down to about 0.1 foot but can be readily followed as such to the present face at 0 + 465 feet.

The vein was not sampled as visual inspection shows only sparse mineralization consisting of galena, sphalerite and chalcopyrite.

Advance under the contract should be mapped by the Geological Survey as a basis for supplemental exploration since drifting under the contract is about half completed.

Chas. W. Jordan's narrative report and Forms MF-104 and 104A are complete and payment of $2,462.25, which is 50 percent of the amount claimed in May($4,924.50) is recommended for approval.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

GPO 872894

June 8, 1956.

D M E A. #5414
Contract E-751

TO:- Defense Minerals Exploration.

FROM:- Buckskin Joe Mines Ltd. Alma, Colorado.

SUBJECT:- Narrative for Month Of May 1956.

For the first 100 feet of drift this month we have found about the same physical conditions in the vein that we have had since starting the contract. There has been a small vein of zinc and lead in the vein most of the time varying from a couple of inches up to eighteen inches in width. The country rock and the vein proper has shown considerable silicafication for this distance. In the last forty feet of advance there has been a decided change in both the vein and the country rock. The lead zinc streak has completely cut out, the fracture has narrowed down to about eight inches in width containing some quartz and iron. The country rock has lost its silicafication and there is every indication that the fracture has passed out of the ore shoot. At 371 feet from the point of beginning the vein showed an eighteen inch streak of quartz and iron with some spots of lead , which we thot might show gold values and which we sampled with the following results:- Au 0.06 Ag 1.2.

Although ore shoots and conditions often vary and there is never an absolute pattern that can be followed on all veins in the same mine there often is a certain characteristic that seems to exist in each particular mine and district. As mentioned above it is not absolute but where it does show up that certain characteristic I feel that it does form a basis on which to act. On the seven different veins which we have worked on the north side of Loveland mountian, with the exception of one vein , we have never had ore of a commercial size except on certain contact horizons, also the same vein in the same contact horizon does not necessarily mean that there will be ore on that contact. In other words there seems to be certain ore shoots in the veins that make on these contacts. When the vein is in an ore shoot and not on the contact it shows characteristics similar to what we have had for the first four hundred feet of the drift. When the ore shoot cuts out the vein shows similar characteristics as we have at the present time in the breast. What I mean by all of the above is that I feel the first four hundred feet of drift warrants further exploration , above and below the drift. I also don't look for much of a change for the better in the vein for the next hundred or two hundred feet.

Sincerely yours,
Buckskin Joe Mines Ltd.

Subject: DMEA 3414, Contract Idm-E751 (Lead-zinc-copper), Buckskin Joe Mines, Ltd., Park County, Colorado - Progress Report for April 1955.

Progress under the contract for the month of April was inspected on May 4, 1955, in the company of Ed Snell, mine superintendent. Advance during April was 134.5 feet as reported by the operator in his narrative report and forms MF-104 and 104A. Total advance under the terms of the contract is now 300.5 feet. Actual measurement on May 4, 1955, gives a total advance of 315 feet.

The results of sampling during March indicates low values in lead, copper and zinc. The locations and results of sampling are as follows:

Sample	Feet Width	Ounces per ton Gold	Ounces per ton Silver	Percent Lead	Percent Zinc	Percent Copper	Location* and Description
--	0	--	--	--	--	--	0 + 160 feet. Pinch out of vein.
H-784	1.7	0.3	1.7	1.5	6.5	0.15	0 + 165 feet. Vein and sample are 1.7 feet wide.
H-785	2.4	0.23	2.7	1.7	13.1	0.38	0 + 170 feet. Vein and sample are 2.4 feet wide.
H-786	2.5	0.11	0.8	3.9	10.05	0.05	0 + 175 feet. Vein and sample are 2.5 feet wide.
H-787	1.4	0.06	0.6	0.7	1.2	0.05	0 + 180 feet.

* Samples are located from the start of the contract which is taken as 0 + 0. Samples are taken southwest of the start of the contract.

The average of 123 cars sampled by the operator from a portion of the vein, 170 to 200 feet in on the contract, was 0.12 ounce gold and 1.6 ounces silver per ton, 1.4 percent lead and 5.2 percent zinc.

The vein was sampled by the applicant at 0 + 255 feet, over its width of 1.5 feet and assayed 0.06 ounce gold and 1.9 ounces silver per ton, 3.6 percent lead and 10.1 percent zinc.

The Baxter vein continues as a narrow, steeply dipping structure with pinch and swell characteristics and is in greenish to white limestone which dips about 17° to the east. To date, the vein contains irregularly distributed and generally low content of galena, sphalerite, chalcopyrite, pyrite, gold and silver, with vein quartz and calcite and is described as follows from the start of the contract:

At 187 feet in, the vein was 0.5 feet thick and contained small quantities of galena, sphalerite, pyrite and chalcopyrite. Dip is 80° E.

At 197 feet in, the vein was 0.4 feet thick and almost barren.

At 244 feet in, the vein was weakly mineralized and almost barren over its width of 0.3 feet.

At 261 feet in, the vein was 0.8 to 1-foot thick with galena, sphalerite, pyrite and chalcopyrite occurring more or less banded with quartz and calcite. Dip of vein 30° E.

At 287 feet in, vein pinches to 0.1 foot and appears barren.

At 292 feet in, vein is 0.7 feet thick and contains blebs of galena-sphalerite-pyrite in quartz.

Between 297 feet and 315 feet, the present breast, the vein is between 0.9 and 1.5 feet thick and dips 70° to 75° E. It contains abundant galena, sphalerite and pyrite, with some chalcopyrite evident. The vein is becoming wet.

Chas. W. Jordan's narrative report and forms MF-104 and 104A are complete and payment of $2,353.75, which is 50 percent of the amount claimed in April ($4,707.50) is recommended for approval.

Advance under the contract should be mapped by the Geological Survey to make certain that exploration is presently on the Baxter vein and to determine whether supplemental exploration is indicated.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

DMEA # 3414
Contract X-751

TO:- Defense Minerals Exploration Administration.

FROM:- Buckskin Joe Mines Ltd. Alma, Colorado.

SUBJECT:- Narrative for Month of April 1955.

The drift along the vein during the month of April has shown very little difference from the two previous months reported. The breast has shown alterating hard and soft conditions and there has been a slight increase in the amount of water encountered. These soft conditions in the breast has made it difficult to pull the entire round drilled and is about the reason in the drop of almost 18 inches in the average length of round pulled for the month. These soft spots boot-legging out.

There has been a small streak of ore showing in the vein for most of the month. About the 20th there was an 18inch streak of fair looking ore which we sampled with the following results. Au 0.06 Ag 1.9 Pb 3.6 and 10.1% Zn. The gold is considerable lower than we have usually had in previous operations and the lead is somewhat higher. As far as I can distinguish we are still drifting in about the same horizon in the formation. There could have been a raise of three or four feet on the hanging wall side, which at present is a heavy shale wall. The most difficult thing to understand is the change in the dip of the vein. When we first started the vein very definitely dip towards the West. It then straightened up to almost vertical and now seems to have turned and is dipping towards the East. In a seven foot drift one doesn't see much and exploration with a raise at some later date might show what has occured.

Very truly yours
Buckskin Joe Mines Ltd.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-K751 (Lead-zinc-copper), Buckskin Joe Mines, Ltd., Park County, Colorado - Progress Report for March 1955.

Progress under the contract for the month of March was inspected on April 5, 1955, in the company of Ed Snell, mine superintendent. Twenty-seven days were spent in advancing the Baxter drift. Advance during March 1955, was 147 feet as reported by the operator in his narrative report and Forms MF-104 and 104-A. Total advance under the contract is now 166 feet. Actual measurement on April 5, 1955 gives a total advance of 183 feet.

The galena, sphalerite and pyrite showing 24 feet in from the start of the contract, and noted in the February inspection, was small. The fault followed in the Baxter drift remained tight and unmineralized to a point 160 feet from the starting point of the contract. At this point the fissure widens from a tight unmineralized crack to a possible ore zone continuing beyond the end of the drift as of April 5, 1955. The mineralized zone, containing abundant galena, sphalerite and pyrite and possibly some copper, gold and silver, was 1.7 feet wide at 165 feet in from the starting point of the contract; at 170 feet it was 2.4 feet wide; at 175 feet it was 2.5 feet wide; at 180 feet it was 1.4 feet wide, and at 183 feet, the end of the drift, it was 1.4 feet wide. The mineralized zone trends S. 40° W., and dips 80° S.E. Green to white limestone dips about 22° S.E. to junction with the footwall of the mineralized fissure. Limestone on the hanging wall of the mineralized fissure is contorted and appears to dip 8° S.E. The mineralized fissure occupies the center of the Baxter drift. Samples were cut across the mineralized zone at 5-foot intervals.

Charles W. Jordan's narrative report and Forms MF-104 and 104A are complete and payment of $2,572.50, which is 50 percent of the amount claimed in March 1955 ($5,145.00) is recommended for approval.

In Mr. Jordan's Forms MF-104 and 104-A, drifting #2 means drifting under the second item in the contract. In his MF-104A Form he has included the contract items 1 and 2 in the unit column instead of the unit of measure, feet.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE: Berk.

Signature W.M. Ingver Title Executive Officer Date APR 15 1955

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

DMEA # 3414

Contract E # 751

TO :- Defense Minerals Exploration Administration.

FROM :- Buckskin Joe Mines Ltd. Alma, Colorado.

SUBJECT :- Narrative for Month of March 1955.

The driving of the drift on the Baxter vein during the month of March progressed very nicely. We had an average of 5.3 feet per round for the twenty seven days of operation. The ground has as usual been very good only needing a small amount of picking down after each round. From my observation there has been very little variation in the horizon of exploration , the beds at times turning up then bending back down again. I don't think the horizon in the formation has changed over four feet in the 150 feet which we have driven since starting, unless some fault not recognizable to me has occured. As mentioned in previous reports we have found a great difference in meneralization at various ~~points~~ horizons in the Peerless shale formation and as a consequence our work so far has not hit any of these favorable horizons, which as a consequence will have to be explored at a later date.

During the entire month the vein has shown considerable mineralization. This mineralization has varied from a width of about eight inches up to a width of 40 inches. In the 40 inch width there was about 30 inches of well mineralized ore then about ten inches of thinly mineralized quartz. Under present market conditions selectively mining the good ore is not in the picture but we thot that we might be able to get the entire breast to carry up to a low mill grade that might return a few dollars per ton over cost of transportation and milling and as a consequence found it advisable to sample a few days production. The assays on this material ran 0.06 Au 1.5 Ag 1.5 Pb and 5.0 Zn. Due to the high transportation cost from here to leadville it would show a red of about $1.50. It takes a very good streak of 30 inch ore to carry a five foot breast.

Very truly yours,
Buckskin Joe Mines Ltd.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-E751 (Lead-zinc-copper)
Buckskin Joe Mines Ltd., Park County, Colorado -
Progress report for February, 1955

Progress under the contract for the month of February 1955 was inspected on March 2, 1955, in the company of Ed Snell, mine superintendent. Mr. Chas. Jordan was contacted later.

The first round in advancing the Baxter drift was drilled February 14 and mucked out on the 25th. Full time advance of the drift was delayed by drift enlargement, maintenance in the mine, and advancing air, water and ventilation lines. Total advance during February was 19 feet as reported by the operator in his narrative report and forms MF-104 and 104A.

A steeply dipping (60° - 70°) fault with no apparent lead, zinc, copper or pyrite mineralization was followed southwesterly in the Baxter drift from the last cross-cut west (Sta. 89). At a point 11-feet back from the start of the contract for exploration under D.M.E.A., this fault splits, with one branch paralleling the Baxter drift and the other trending southwesterly into the drift wall. There was no significant mineralization of either split. At a point 6-feet beyond the start of the contract the fault structure again splits with one limb paralleling the Baxter drift and the other trending southwesterly into the drift walls.

At the time of examination, the breast of the Baxter drift had been advanced 24 feet under the contract and was in banded white and green limestone with galena, sphalerite, pyrite and possibly copper sulfides prominent in the footwall zone along the northwest side of the drift and considerable pyrite evident along the hanging wall split along the southeast side of the drift. Whether this show is a small, local concentration or the beginning of an ore body could not be determined at this time.

Charles W. Jordan's narrative report and forms MF-104 and MF-104A are complete and payment of $332.50 which is 50 percent of the amount claimed in February 1955 ($665.00) is recommended for approval.

In Mr. Jordan's forms MF-104 and 104-A, rehabilitation is understood as rehabilitation of the Key Test adit and drifting #2 means drifting under the second item in the contract. In his form MF-104A he has included the contract items 1 and 2 in the unit column instead of the unit of measure, feet.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report:—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

March 8, 1955.

DMEA #3414
Contract E-751

TO :- Defense Minerals Exploration Administration.

FROM:- Buckskin Joe Mines Ltd. Alma, Colo.

SUBJECT:- Narrative for Month of February 1955.

As anticipated in my last report for January we have had considerable trouble in cutting additional width in the Baxter drift to accomodate the wider cars and the Air Tramer. We also encountered the same difficulty in putting in the ventilating line along the back of the drift, as there were low spots that had to be shot out. The greater part of the month was spent in making this additional room and installing the ventilating line. We also had to raise the back of the drift on the first round of holes in the breast so as to accomodate the mucking machine, which takes an additional foot of head room over hand mucking. With all of these items to over come we only got four rounds of advance drilled during the month which made a total of 19 feet of advance on the second item of the contract.

Most of the minable ore which we have encountered in the past have come from two shale contact points in the Peerless formation. The first contact point is just above the top of the Cambrian quartzite the second contact point is just about 21 feet above the first contact horizon. This area of 21 feet between the two contact points has very seldom contained ores of a commercial width, although they are of a commercial grade. It is also of interest the fact that we seldom have ores of a commercial grade in the vein unless we are in an ore shoot.

The last 100 feet of the Baxter vein, before we started this new work, contained only some iron and a few spots of zinc. The breast at the time of starting showed only about an inch of this same material. On the third and fourth rounds there appeared in the breast about a foot of lead and zinc ores that had all the appearances of being of a good commercial grade. At the present date this ore is still with us.

It is difficult to estimate at what point in the formation, although the Peerless is definitely indicated, or at what horizon in that formation does the present drift lie. If it happens to be, and it very likely could be, in the 21 feet between the contact points there is a fair chance that we might have commercial ore both above and below us.

Very truly yours,
Buckskin Joe Mines Ltd.

From: C. M. Harrer

Subject: DMEA 3414, Contract Idm-E751 (Lead-zinc-copper) Buckskin Joe Mines, Ltd., Park County, Colorado - Progress report for January 1955

Progress under the contract for the month of January 1955 was inspected on February 14, 1955, in the company of Ed Snell, mine superintendent.

Item 1 of the contract, consisting of rehabilitation and repair of approximately 500 feet of the Key Test adit, 200 feet of snowshed, replacing timbers east of the Key Test shaft, and repairing track and pipe lines has been satisfactorily completed. At the time of inspection, the bottom of the drift on the Baxter vein, at the start of the contract, was being blasted and cleaned up preparatory to advance under item 2 of the contract.

The breast of the Baxter drift remains as the start of the contract and 53.4 feet southwest of an unmarked roof plug with bent nail, known as station 89, at the junction of the last crosscut on the Baxter vein and the Baxter drift. The operator will place a roof plug at the start of the contract.

Charles W. Jordan's narrative report and forms MF-104 and MF-104A, are complete and accurate and payment of $1,250.00 which is 50 percent of the amount claimed in January 1955 ($2,500.00) is recommended for approval.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 83-38475

DMEA # 3414
Contract Idm-2751

To. Defense Minerals Exploration Administration.

From - Buckskin Joe Mines Ltd.

Subject:- Narrative for Month of January 1955.

The number 1 item on the above named contract consisted of Rehibilitation and repairs to 500 feet of the Key Test adit and repairing track and pipe line. As outlined in the contract this entire project was accomplished during the month of January. The snowshed was pushed back and reinforced. The adit repair didnot only consist of retimbering but the sides had to be shot out for about fifty feet in length and three feet in width. This additional three feet in width was done in the solid while the other part of the adit was under the old stope and had to be supported while the solid was blasted out. This made it a rather touchy job. During the entire month of January the weather was terrible being below zero every night. It made it difficult for the men as there is a decided draft into the adit at this point. This cold was a disadvantage in the work but there was also a compensation from it that was greater. The adit passes through about 200 feet of this old stope gob, which has caved to surface. The extreme cold froze this gob solid and it held just like solid ground. There was no trouble due to dribbling and caving which generally happens in shooting around an old gob. This job was a difficult one to estimate but due to the above we were able to go through in about a third of the time antisipated.

We have installed additional ties in the track where needed. We have replaced the entire pipe line from the receiver up to the Baxter drift. Installing three inch pipe the entire distance. At the intersection of the Baxter Cross-cut with the drift we have installed an additional air receiver. The pipe was taken up from off the floor and hung on plugs drilled into the back.

The one big trouble we have had and which was not given a consideration in the contract was the width needed along the cross-cut and drift for the larger equipment such as cars and air-tramner. It is surprising how many places had to be shot off in order to work this equipment. This was especially true along the Baxter drift. I think before we get all of this drift cleared we are going to be held up about ten days in getting the drilling started in the drift.

Yours truly,
Buckskin Joe Mines Ltd.

Chas W. Jordan Partner & Mgr.
