MF-103
(Revised April 1952)

UNITED STATES DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS EXPLORATION ADMINISTRATION

Form Approved.
Budget Bureau No. 42-R1035.2.

Mining Division
Date Rec'd.
JUL 6 - 1953
BUREAU OF MINES
~~Denver, Colorado~~

APPLICATION FOR AID IN AN EXPLORATION PROJECT, PURSUANT TO DMEA ORDER 1, UNDER THE DEFENSE PRODUCTION ACT OF 1950, AS AMENDED

Not to be filled in by applicant

Docket No. .....
Metal or Mineral .....
Date Received .....
Estimated Cost .....
Participation (Government %) .....

INSTRUCTIONS

1. *Name of applicant.*—(*a*) State here your full legal name, in the form in which you will wish to contract, and your mailing address: Shenandoah-Dives Mining Company, Silverton, Colorado

(*b*) If other than an individual, add to your name above whether a corporation, partnership, etc., and the name of the State in which incorporated or otherwise organized.

(*c*) If a corporation, add to above statement, titles, names and addresses of officers.

(*d*) If a partnership, add to the above statement the names and addresses of all partners.

2. *General.*—Read DMEA Order 1, "Government Aid in Defense Exploration Projects," before completing this application. Submit this application and all accompanying papers in quadruplicate (four copies), with your name and address on each sheet of the application and on all accompanying papers. Where sufficient space is not provided on the form for all required information, state it on an accompanying paper, with a reference in each case to the instruction to which it refers by number. Comply with all applicable instructions; or, if not applicable, so state. File the application with Defense Minerals Exploration Administration, Department of the Interior, Washington 25, D. C., or with the nearest field executive officer thereof.

3. *Applicant's property rights.*—(*a*) State the legal description of the land upon which you wish to explore, including all land which you possess or control that may be benefited by the exploration, and excluding any land or interest in land which is not to be included in the exploration project contract .....

(*b*) State any mine name by which the property is known.

(*c*) State your interest in the land, whether owner, lessee, purchaser under contract, or otherwise .....

(*d*) If you are not the owner, submit with this application a copy of the lease, contract, or other document under which you control the property.

(*e*) If you own the land, describe any liens or encumbrances on it .....

(*f*) If the land consists of unpatented claims, add to the description above, the book and page numbers for each recorded location notice.

4. *Physical description.*—(*a*) Describe in detail any mining or exploration operations which have been or now are being conducted upon the land, including existing mine workings and production facilities. State your interest, if any, in such operations. Also describe accessibility of mine workings for examination purposes.

(*b*) State past and current production, and ore reserves, if any, giving quantities and grades.

(*c*) Describe the geologic features of the property, including mineralization, type of deposit (vein, bedded, etc.), and your reasons for wishing to explore. Illustrate with maps or sketches. Send with your application (but not necessarily as a part of it) any geologic or engineering report, assay maps, or other technologic information you may have, indicating on each whether you require its return to you.

(*d*) State the facts with respect to the accessibility of the project: Access roads, distances to shipping, supply and residence points.

(*e*) State the availability of manpower, materials, supplies, equipment, water, and power.

5. *The exploration project.*—(*a*) State the mineral or minerals for which you wish to explore .....

.....

(*b*) Describe fully the proposed work, including a map or sketch of the property showing a plan (and cross sections if needed) of any present mine workings, and the location of the proposed exploration work as related to such features as contacts, veins, ore-bearing beds, etc.

(*c*) The work will start within ..... days and be completed within ..... months from the date of an exploration project contract.

(*d*) State the operating experience and background of the applicant with relation to the ability to carry out such exploration project, and also that of the person or persons who will supervise the operations.

6. *Estimate of costs.*—Furnish a detailed estimate of the costs of the proposed work (you will have to use a separate sheet), under the following headings. Add the totals under all headings to give the estimated total cost of the project:

(*a*) *Independent contracts.*—(Note.—If the applicant does not intend to let any of the work to contractors, write "none" after this item. To the extent that the work is to be contracted, do not repeat the cost of the contract-work in subsequent items.) State the cost of any proposed independent contracts for the performance of all or any part of the work, expressed in terms of units of work (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, per cubic yard of material moved, etc.).

(*b*) *Labor, supervision, consultants.*—Include an itemized schedule of numbers, classes and rates of wages, salaries or fees for necessary labor, supervision and engineering and geological consultants.

(*c*) *Operating materials and supplies.*—Furnish an itemized list, including items of equipment costing less than $50 each, and power, water and fuel.

(*d*) *Operating equipment.*—Furnish an itemized list of any operating equipment to be rented, purchased, or which is owned and will be furnished by the Operator, with the estimated rental, purchase price, or suggested use-allowance based on present value, as the case may be.

(*e*) *Rehabilitation and repairs.*—Furnish a detailed list showing the cost of any necessary initial rehabilitation or repairs of existing buildings, installations, fixtures, and movable operating equipment, now owned by the Operator and which will be devoted to the exploration project.

(*f*) *New buildings, improvements, installations.*—Furnish a detailed list showing the cost of any necessary buildings, fixed improvements, or installations to be purchased, installed or constructed for the benefit of the exploration project.

(*g*) *Miscellaneous.*—Furnish a detailed list showing the cost of repairs to and maintenance of operating equipment (not including initial rehabilitation or repairs of the Operator's equipment), analytical work, accounting, workmen's compensation and employers' liability insurance, and payroll taxes.

(*h*) *Contingencies.*—Give an estimate of any necessary allowances for contingencies not included in the costs stated above.

NOTE.—No items of general overhead, corporate management, interest, taxes (other than payroll and sales taxes), or any other indirect costs, or work performed or costs incurred before the date of the contract, should be included in the estimate of costs.

7. (*a*) Are you prepared to furnish your share of the cost of the proposed project in accordance with the regulations on Government participation (Sec. 7, DMEA No. 1)?

(*b*) How do you propose to furnish your share of the costs?

☐ Money ☐ Use of equipment owned by you ☐ Other

Explain in detail on acompanying paper.

CERTIFICATION

The undersigned, whether as an individual, corporate officer, partner, or otherwise, both in his own behalf and acting for the applicant, certifies that the information set forth in this form and accompanying papers is correct and complete, to the best of his knowledge and belief.

Dated ....., 195...

Shenandoah - Dives Mining Company
(Applicant)

By Charles A. Chase
Ex. Vice President

Title 18, U. S. Code (Crimes), Section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

U. S. GOVERNMENT PRINTING OFFICE 16—66551-1

MF-103

UNITED STATES DEPARTMENT OF THE INTERIOR
Defense Minerals Exploration Administration

Application for aid in an exploration project, pursuant to DMEA order 1, under the Defense Production Act of 1950, as amended

1. Name of Applicant.

(a) Shenandoah-Dives Mining Company
Silverton, San Juan County, Colorado.

(b) Incorporated, State of Colorado

(c) Home Office; Shenandoah-Dives Mining Company,
616 Finance Building,
Kansas City, Mo.

Officers
J. W. Oldham, President, 616 Finance Bldg., Kansas City, Mo.
E. B. Kane, Secty & Treas. 616 Finance Bldg., Kansas City, Mo.
Charles A. Chase, Executive Vice Pres., Silverton, Colo.

3. (a,b,c,d)

Exploration project in the Silver Lake Group of Claims, owned by the American Smelting & Refining Company and under lease to Shenandoah-Dives Mining Company for thirty years. Copy of lease is attached and lists all mining claims of the Silver Lake Group; the project map shows the claims where exploration work will be performed.

4. (a) Shenandoah-Dives Mining Company has been in operation since 1928 and has mined in the Silver Lake Group since 1942 as shown on map 5-b, part 1.

(b) Exhibits 1 & 2 from our annual report,(The Mine Record and a Summary of Production) plux exhibit 4-b-3 Mine Assay Record of ore excavated, are attached.

(c) Assay plan maps of Letter "G" vein, attached No. 4-c-1
Also please refer to maps under 5-b, parts 1,2,3 & 4.

(d) Shenandoah-Dives Mill is situated on oiled highway 2-1/2 miles easterly from Silverton (population 1400) in San Juan County, Colorado. Served by the Denver & Rio Grande Western Railroad. A 2 mile aerial tramway from Mill to Mine is the means of transportation for men, supplies and ore.

(e) Manpower is available in Silverton by reason of our recent suspension of Mining and Milling operations; Power is purchased from the Western Colorado Power Company, delivered to our Mill sub-station at 16,500 volts; We have ample water for Mine & Mill operations.

Shenandoah-Dives Mining Company,
Silverton, Colorado

M F 103

No. 5. EXPLORATION PROJECT

5 (a) To explore for Lead, Copper & Zinc

5 (b) supported by maps--Part 1, 2, 3, 4.

Proposed Letter "G" Exploration Project, from 4177 ML Drift.

Extend present 4177 ML drift (24 Coord.) to at least the 28 Coord. about 400 ft. to explore for a downward continuation of the Melville-Iowa ore shoot worked above on the 370 and 600 levels by Shenandoah-Dives Mining Company and by previous operators of the old workings above. Walls of this drift should be checked by diamond-drilling to be sure that the structure drifted on is the main and/or only one coming down to main level. (See plan map and 370-L drift assay record). Extending this drift will increase the distance to the Letter "G" vein less than 50 feet. The results of our work above main level require this exploration. We will leave 50 feet at the end of this drift for a switch; slab and turn west from drift and drive a straight crosscut bearing S 18° W. to the Letter "G" vein. This crosscutting, assuming an average dip from old workings above and from dips taken on the outcrop of the Buckeye and Last Chance claims, will approximate 850 feet. Total exploratory drifting-crosscutting to Letter "G" vein will be about 1300 feet.

Turn and drift on the vein westerly 1700 feet.

Raise from near the end of the west drift to the Unity Tunnel Level 500 feet above. The dog-hole crosscutting (220 ft., 4' x 6') and the Station crosscutting (90 ft., 8'x 8') are necessarily a part of the Raise project as shown on project map, part 4. The ore pass is not included in this project---to be driven after completion of Raise.

SUMMARY

1300 ft of Drifting & Crosscutting to Letter "G" Vein
1700 ft of Drifting on Letter "G" Vein
500 ft of Raise, including 310 ft. of crosscutting from Raise.

No. 5 (c) The work will start promptly when exploration project is approved and to be completed in 19 months.

5 (d) Shenandoah-Dives Mining Company has operated for 25 years under the supervision of Mr. Charles A. Chase, Executive Vice President; Mr. John Holmgren, Mine Supt., has been with the Company 20 years and will supervise the exploration work; Others of the present staff have been with the Company many years.

We ask for assistance in a large project. The first step is drifting, followed by crosscutting, and that followed by drifting; thereafter comes raising.

These last two items at first glance suggest "preparation for mining." They would not weigh heavily as such for two reasons:

1. Natural ventilation not being established, production of ore of grade to be expected would be unbearably penalized, so the raise is required;

2. Prior experience has demonstrated that mining from bottom up is enough more costly than mining from top down, in retreat, to spell the difference between profit and loss. For us to do all this horizontal work without getting such access to the upper areas prior to production would penalize the work unbearably, so the raise is required.

The text enclosed "A Fragment of Colorado Mining History," plus the typed comparison presented here,

CONDENSED HISTORY OF PRODUCTION FROM

LIBERTY BELL MINE, 2 PERIODS:

	TONS	MINE COST			OTHER	TOTAL	NET	
		DEV.	OTHER	TOTAL	COST	COST	SMELTER	PROFIT
1907-10	477,917	$.49	$2.43	$2.91	$2.85	$5.73	$6.98	$1.25
1911-15	858,446	.22	1.54	1.76	2.33	4.08	6.12	2.01

plus the three photostats presented, show the astonishing benefit from what we call "orderly mining, in retreat from top." In September, 1906, the L. B. Mine set out on a determined campaign which produced the financial results of the tabulation above.

6 - (e) Rehabilitation & Repairs: None required; our Mine Plant is in good order.

(f) No new buildings, improvements, or installations are required to get the exploration project under way.

(g) Miscellaneous: Believe everything covered in 6 - a & b.

(h) Contingencies: No allowances for contingencies have been included; Only in the case of a major break-down would we have to consider the time element of the project.

7 - (a) We are prepared to furnish our share of the cost of the proposed project in accordance with the regulations on Government participation (Sec. 7, DMEA No.1)

(b) We propose to furnish our share of the costs by:-

Rental allowance for our Mine Plant & Equipment
Materials & supplies on hand
Money for the balance, if any.

Lease

AGREEMENT WITH

AMERICAN SMELTING & REFINING COMPANY

Dated January 1, 1953

to

January 1, 1983

AGREEMENT

THIS AGREEMENT, entered into as of this 1st day of January, 1953, regardless of the actual times of signing and acknowledgment, between AMERICAN SMELTING AND REFINING COMPANY, a New Jersey Corporation, party of the first part, hereinafter referred to as Asarco, and SHENANDOAH-DIVES MINING COMPANY, a Colorado Corporation, party of the second part, hereinafter referred to as the Mining Company,

W I T N E S S E T H

THAT WHEREAS, under date of September 8, 1936, the parties hereto entered into an agreement, and under date of July 1, 1942, entered into a supplemental agreement, and at divers times since July 1, 1942, entered into further supplements and modifications thereof, for and among other things, carrying on the operations of mining, tramming, milling, marketing and accounting for ores from Asarco's Silver Lake Unit, and the additional mining properties known as the Iowa Mine referred to in said agreements; and

WHEREAS, under the above agreements as supplemented and modified, Asarco has expended a total sum of $47,580.34 toward the cost of the Silver Lake Main Raise and Crosscut, as of the date hereof, and the Mining Company has incurred a net loss of $183,900.79 as of December 1, 1952; and

WHEREAS, the parties desire to make provision for the reimbursement to Asarco of said expenditures and to the Mining Company of said net losses, by the further working of the property covered hereby; and

WHEREAS, title to the Iowa Mine has been acquired by Asarco and said Iowa Mine shall be included in the property covered hereby; and

WHEREAS, it is the intention of the parties hereto that the Mining Company shall mine and operate the property covered hereby in the same diligent manner as under prior agreements and for the purposes hereinafter specified; and

WHEREAS, it is the desire of the parties that the area above as well as below

"D" level be developed and mined, and that the former distinction as to costs and profits from above and below "D" level be eliminated;

NOW, THEREFORE, in consideration of the premises and the mutual covenants and agreements herein set forth to be duly performed by the respective parties hereto, it is agreed as follows:

Article 1. Previous Agreements Cancelled. The agreement of September 8, 1936, the supplemental agreement of July 1, 1942, and all supplements and modifications thereof are hereby superseded and cancelled as of the date of this agreement.

Article 2. Grant of Lease and Description of the Property. Asarco hereby leases to the Mining Company the property covered hereby, which lies in San Juan County, Colorado, and is more particularly described in Exhibit "A" attached hereto and made a part hereof. Any part of said property may be dropped from this agreement by mutual consent of both parties hereto.

Article 3. Term of Agreement. The term of this agreement shall be thirty (30) years from and after the date hereof, unless sooner terminated in the manner hereinafter provided.

Article 4. Manner of Work. The Mining Company shall diligently and in approved and minerlike fashion develop, mine, tram and mill ore from the above described property, shall pay and discharge all bills, costs and expenses, and shall hold Asarco harmless from any claim, suit or demand by reason thereof. The Mining Company shall use reasonable care to avoid mixing low grade, non-profitable material with better grade of ore in shipments to the mill. Until weights are determined and samples are taken, in accordance with established practice of the mine, ores mined from the property covered hereby shall be kept separate from all other ores.

Article 5. Definition of Net Smelter Returns. Net Smelter Returns shall be

defined as the calculated net value at the mill of the concentrates produced from ore mined from the above described property. The factors entering into such calculation shall be tonnage milled, head assay of the ore, metal recoveries and ratios of concentration, metal prices, freight rates and smelter schedules. Metal recoveries and ratios of concentration shall be those shown by mill records. Metal prices to be so employed shall be the average prices for the month in question as quoted in sources referred to in the applicable smelter schedules. Smelter schedules and freight rates so employed shall be those currently applicable to the concentrates produced in the mill.

After the Mining Company has exhausted its own ores, the net smelter returns shall be the actual amounts received by the Mining Company from the smelter, after deduction for the cost of transportation from mill to smelter. Any payment made by the Smelter to the Mining Company for ores or concentrates not produced from the property covered hereby shall not be included as a part of Net Smelter Returns. The phrase "not produced from the property covered hereby" refers to the Mining Company's own ore and to custom ore purchased by Mining Company and milled with ore from the property of Asarco.

<u>Article 6.</u> <u>Definition of Costs.</u> The cost hereunder shall be computed for each month and shall be applicable to the tonnage marketed during that month. It shall include only the actual out-of-pocket operating expenses of the Mining Company for developing, mining, tramming and milling incurred in the State of Colorado through the properties of the Mining Company and in the properties covered hereby, being the Mining Company's total Colorado cost in its operation of said properties, made up in detail as follows:

(a) All labor and material entering the portal for use there (mine hauling is prorated with Shenandoah-Dives Mine on tonnage);

(b) Electric and air-power used, to be prorated with Shenandoah-Dives Mine on basis of drill shifts employed;

(c) Divided supervision, to be prorated with Shenandoah-Dives Mine on basis of drill shifts employed;

(d) Aerial-tramway and milling, to be prorated with Shenandoah-Dives Mine on tonnages transported and milled;

(e) Assaying, to be prorated with Shenandoah-Dives Mine on basis of determinations made and to be prorated as to the Mill on basis of tonnage milled;

(f) All "production" taxes on ore produced from the property covered hereby, and all property taxes on the above described property of Asarco, including improvements, machinery and equipment located thereon;

(g) All property taxes (excluding production taxes on its own ore) on the property of Mining Company used in, benefiting or available for the development and/or operating of both the properties of Mining Company and Asarco shall be prorated on basis of tonnage milled;

(h) Workmen's Compensation Insurance, Unemployment Compensation, Old Age Benefit Charges, and any other charges under federal and/or state laws and regulations on all labor charged directly or prorated to said properties;

(i) Colorado management expense of the Mining Company, including clerical labor, office and miscellaneous items. Such expense shall not include legal expense arising out of any dispute between the parties hereto or any legal expenses incurred in connection with any matter not related to the operation of the properties covered by this agreement. All such expenses shall be prorated with Shenandoah-Dives Mine on the basis of mine payroll charged to said properties. Management expenses to be charged as cost shall be computed after deducting the proportionate share of such expense

applicable to the milling of custom ores, which proportion shall be based upon tonnages milled;

(j) Depreciation at the heretofore rate only upon equipment actually used in connection with the ores herein described, and not previously fully charged off, prorated with Shenandoah-Dives Mine on the basis of tonnage milled;

(k) The Mining Company's hotel operation to be prorated with Shenandoah-Dives Mine on the basis of mine payroll charged to said properties;

(l) Unforeseen expense properly chargeable, upon written agreement;

(m) Equipment purchased for Silver Lake Mine (see Article 14.)

Article 7. Working Capital Reserve Fund. Out of profits realized by the operations provided for by this agreement (see Article Eight (8), sub-paragraph (3)), Mining Company may accumulate a cash reserve fund out of twenty-five percent (25%) of the net profits in any one month. The object of this fund shall be to provide funds for and which may be expended by Mining Company, for developing, equipping, and operating the property covered by this agreement, including the Letter "G" vein. Upon termination of this agreement any monies in such reserve shall be divided between the parties, two-thirds to the Mining Company and one-third to Asarco. If, during the existence of this agreement the amount in such reserve shall be in excess of that reasonably required, such excess may be divided between the parties in the same proportions.

Article 8. Division of Net Profits. From the net smelter returns as above computed for any month, plus any premium or bonus, shall be deducted the costs for that month as above defined to determine profit. Losses incurred in any month after the date hereof shall be carried forward and applied against profits of future months.

The net profit thus derived in any month shall be applied as follows:

(1) One hundred percent (100%) to the reimbursement of Mining Company's

Net Loss of $183,900.79, as of December 1, 1952, and its possible losses thereafter,

(2) After the Mining Company has been reimbursed for its net losses as provided in (1) above, then one hundred percent (100%) of the net profit in any month shall be applied to the reimbursement of Asarco's expenditure of $47,580.34, as of the date of this agreement, provided however that the Mining Company may at its election pay the amount which would otherwise be due to Asarco under this sub-paragraph for any one month in four equal monthly installments following the month in which profits payable to Asarco are earned until the said amount $47,580.34, shall have been paid in full.

(3) Thereafter, net profits in each month, subject to provisions of sub-paragraph (1) of this Article 8, shall be divided as follows:

25% to be retained by Mining Company as a working Capital reserve fund for the operations under this agreement;

50% to be retained by Mining Company on account of its investment and management;

25% to be paid Asarco on account of its investment. Said 25% to be paid on or before the 25th day of the month following that in which earned;

provided, however, that Mining Company may, at its election, recover any monthly net losses sustained by it under this agreement, either by carry-over of such losses against subsequent profits, as authorized by sub-paragraph (1) of Article 8, or by charging such net losses against the Working Capital Reserve.

All property and rights of property in and to any and all ore mined or extracted from said premises and any part thereof shall remain and be in Asarco until Asarco shall have received its full share and payment therefor, and none of said ores shall be in any way subject to any lien, claim or demand of any other person whomsoever against the Mining Company until such share and payment shall have been received by Asarco.

Article 9. Taxes. The Mining Company shall pay before they are delinquent all

general property taxes assessed against Asarco's ownership in the above described property during the term of this agreement, beginning with and prorated from this date, and all production, severance or similar or other excise taxes. The Mining Company shall also pay before they are delinquent all taxes levied against any and all personal property, machinery and equipment placed upon the above described property by the Mining Company during the term of this agreement.

Article 10. Protection from Liens and Damages. The Mining Company shall keep the above described property and the whole and every part thereof free and clear of liens for labor done or work performed upon the above described property or material furnished to it for the development and operation thereof under this agreement while the same is in force and effect, and will save and keep harmless Asarco from all costs, loss or damage which may arise by reason of injury to any persons employed by the Mining Company in or upon the above described property or any part thereof, or which may arise by reason of injury to any persons or damage to any property as the result of any work or operations of the Mining Company or of its possession and occupancy of the above described property. A lien upon the property shall not constitute a default if the Mining Company in good faith disputes the validity of the claim, in which event the existence of the lien shall constitute a default only from and after the validity of the lien has been adjudicated.

Article 11. Insurance and Liability. The Mining Company shall provide all liability, unemployment compensation and other insurance and perform all obligations in respect to workmen's compensation, old age benefit laws and other federal or state laws and regulations, pay all costs and expenses thereof as part of cost of operation, post and keep posted full and adequate notices to that effect and to the effect that the Mining Company alone is operating said premises.

Article 12. Inspection and Books of Account. Accounts of said work and of disbursements and receipts in clear and intelligible detail shall be rendered for

each month to Asarco not later than the 25th of the succeeding month, and shall be accompanied by a check for Asarco's share of the profits if any. Asarco shall at all times have full and free access to the mine for inspection purposes, together with the right to check the handling and sampling of ores and to inspect and make copies of any and all records, books and papers relating to the operations hereunder; and to these ends the Mining Company will render all reasonable assistance. The Mining Company shall furnish duplicate pulps of samples for the purpose of check-assaying by Asarco and, in case of disagreement on assays, an umpire shall be selected by the parties. If the umpire's assay lies between the assays of the respective parties, it shall be taken as final; otherwise, the assay of the party lying between the assay of the umpire and that of the other party shall be taken as final. The losing party shall pay the cost of the umpire. One or more representatives of Asarco shall have the right to be present at any or all stages of operation. If no objection is made by Asarco within sixty (60) days from and after any operation or the receiving of any account, all objection thereto shall be considered waived.

Article 13. Arbitration. Any difference or dispute concerning any matter or thing done or omitted to be done hereunder by either party hereto shall, unless otherwise provided by controlling statutes, be referred to one arbitrator who shall be chosen by the American Arbitration Association, whose rules shall be followed. The award of the arbitrator shall be in writing and it shall be final and binding upon both parties and shall not be open to objection on account of the form of the proceeding or the award unless otherwise provided by the controlling statutes. The cost of every such reference to arbitration and of the award to be made thereunder shall be payable by such party or parties as may be directed or apportioned by the arbitrator.

Article 14. Equipment. It is contemplated that the Mining Company will from time to time hereafter purchase equipment, machinery, tools and supplies and charge the cost thereof to operations. All thereof so purchased and charged shall

belong two-thirds (2/3) to the Mining Company and one-third (1/3) to Asarco. Upon cancellation, expiration or other termination of this agreement, the Mining Company will pay to Asarco a sum equal to one-third (1/3) of the reasonable value of such equipment, machinery, tools and supplies remaining on the property which the Mining Company may elect to purchase, or will pay one-third (1/3) of the sales price received therefor if any thereof is sold. Any personal property wholly owned by the Mining Company, together with any personal property theretofore purchased and charged to operations and wherein the Mining Company shall have purchased the one-third (1/3) interest of Asarco, shall be removed from said premises by the Mining Company within nine (9) months after such cancellation, expiration or other termination.

Article 15. Unavoidable Delays. Operations hereunder may be suspended because of acts of nature, strikes, fire, flood, requirement or regulation of Government, or any other cause without regard to the foregoing enumerations, beyond the control of either party, it being agreed, however, that upon the removal of the cause of suspension the work hereunder shall be resumed.

Article 16. Merger of Existing Easements. The easement or right of way for an aerial tram line granted by Asarco to the Mining Company on June 21, 1929, and any easements for disposal of tailings by the Mining Company on mining claims belonging to Asarco shall be merged and included herein and shall expire herewith, notwithstanding any limitations of time or periodical rentals heretofore specified in said easements or rights of way. Any separate rentals therefor are hereby cancelled and superseded.

Provided, however, that any and all obligations of the Mining Company to save harmless Asarco from any and all liabilities resulting directly or indirectly from the dumping and depositing on the surface of the mining claims, or any of them, particularly the Gold and Buena Vista claims, of tailings arising from the milling operations of the Mining Company heretofore or hereafter conducted on said mining

claims, or on any thereof or in proximity thereto, shall continue after any cancellation or termination of this agreement.

Article 17. Sale of Ore and Concentrates. It is agreed between the parties that the concentrates or other products produced by the Mining Company under this agreement shall at the election of Asarco be sold to its smelters upon rates equal to competitive rates offered by other reputable smelters for similar products, freight differentials considered.

Article 18. Forfeiture Clause. The failure of the Mining Company to make or cause to be made any of the payments herein provided for or to keep or perform any agreement on its part to be kept and performed according to the terms and provisions of this agreement shall, at the election of Asarco, work a forfeiture hereof; provided, however, that in the event of a default on the part of the Mining Company, and the election of Asarco to terminate this agreement on account thereof, Asarco shall give to the Mining Company a written notice of its intention to declare a forfeiture of this agreement and to terminate the same on account thereof, specifying the particular default or defaults relied upon by it, and the Mining Company shall have sixty (60) days after receipt of such notice in which to make good such default or defaults in which event there shall be no forfeiture therefor. Waiver or failure to give notice of a particular default or defaults shall not be construed as condoning any subsequent default.

Article 19. Cancellation. This agreement may be cancelled by the Mining Company at any time upon sixty (60) days' written notice to Asarco. Upon such cancellation the Mining Company shall forthwith pay Asarco any profits accruing hereunder to Asarco, including Asarco's share of any monies remaining in the working capital reserve and shall pay all bills and other outstanding obligations of the Mining Company.

Article 20. Notices. Any notices required or permitted to be given hereunder

shall be considered as delivered forty-eight (48) hours after the same shall have been deposited in the United States mail, duly registered, with postage thereon prepaid, addressed to the respective addresses given below:

If to Asarco, Attention Mining Department
120 Broadway
New York 5, New York

and

600 Pacific National Life Building
Salt Lake City 1, Utah

and if to Mining Company Silverton, Colorado

and

616 Finance Building
Kansas City 6, Missouri

Said addresses for receiving notices may be changed by either party upon two (2) days' previous written notice to the other party.

Article 21. Assignment. The Mining Company may not assign this agreement, or lease or sub-lease any part of the above described property, without the written consent of Asarco.

Article 22. Inurement. These presents shall inure to the benefit of and be binding upon the respective successors and assigns of the parties hereto.

Article 23. Construction. Titles to the respective articles hereof shall not be deemed a part of this lease but shall be regarded as having been used for convenience only.

IN WITNESS WHEREOF, the parties have executed this agreement the day and year first above written.

RECONCILEMENT, MINE AND MILL TONNAGES:

Ore from Mine, not excavated by Company	(Dumps, 117,238 Tons) (Fills, 80,158 ") (Other, 29,597 ")		Tons 226,993
Mined, as shown above,		3,889,691	
Mined, above 1900 level, omitted from the above record,		5,193	3,894,884
Total,			4,121,877
Milled, as shown,			4,184,601
Balance called for at Mine,			-62,724
Excavated reserve reported at Mine,			99,491
Not accounted for, partly dilution,			162,215

Shenandoah-Dives Mining Company,
Silverton, Colorado

A FRAGMENT OF COLORADO MINING HISTORY

A first exhibit is in excerpts from an expression by Mr. Edward G. Stoiber of August 2, 1899, reciting a story of human achievement in twelve years that is astonishing as measured by extent of mineral property acquired, by miles of mine workings opened, and by completeness of plant and equipment provided to make the property productive. The altitude of the major work was above 12,000 ft, the approaches were forbidding: much of the heroic was in the work.

A second exhibit is in excerpts from a report from Mr. Clapp, of February, 1913, on the same property, 11 years after its sale by Mr. Stoiber, in which three comments arrest attention:

A "——the rate of 200 tons per day, the maximum that can be handled through Unity tunnel (the outlet)":

B "——the former company and Mr. Stoiber before them, both fought a losing battle in the attempt to keep their reserves of $9.00 or $10.00 ore in advance of their consumption."

C "Of lower grade ore there is perhaps 100,000 tons already exposed and the prospective tonnage is almost unlimited,——."

A third exhibit lists the production of the mine 1902-1918 inclusive. (The record of large production 1890-1901 is not available.) In parallel is shown the contemporary production of Liberty Bell mine at Telluride.

I present the material because it confirms so strikingly my conviction of the ruling importance of human temperaments in the industry. Mr. Stoiber presented for sale in 1899 an organized property producing some 200 tons daily, with miles of access workings and great reserves. Liberty Bell mine was then in its first few months of production, with 2800 ft of drifting on ore, and minimum plant and equipment; it approached production of 100 tons daily.

Silver Lake ore was better. Fourteen years later Mr. Clapp reviewed an unhappy history, saw that production in larger volume could change the picture for the future, and reported great reserves of ore in range of $6 that might be profitable. He gave 200 tons daily as the capacity of the outlet of the mine. At that time Liberty Bell was reaching 500 tons daily, and was organized to live on ore yielding less than $5 per ton; in the end the average yield from ore sales was $6.55 and dividends approached $3 million. Volume was critical (Incidentally, I never thought of any low limit of capacity of a mine level of normal size.), but, back of volume at Liberty Bell, were timely completions of two strategic developments, one in the upper area in 1906, and one in the lower area in 1910. They were key projects, for ready access for men and supplies, and efficient outlets for ore, that were never paralleled in the other mine despite crying needs; they meant so much in the final result as to dwarf the penalties of normal human error through the twenty years.

The Liberty Bell was founded, and given character, by Arthur Winslow, but the organization of its production was mine in large part.

E X C E R P T S

GENERAL REPORT UPON THE SILVER LAKE MINES

By

Edward G. Stoiber
1899

1. Location, Ownership and History of the Property:

This Property, known as The Silver Lake Mines and owned by Edward G. and Lena Allen Stoiber, is situated near Silverton, in the Animas Mining District, San Juan County, Colorado, it has been under the management of Edward G. Stoiber, since February 1887, to date.

At the time of the purchase of the property in 1887, probably not over 500 feet of work had been done on same, and there were but two claims in the group; to-day the underground workings may reach a total length of 35000 feet, and the group embraces about 100 claims.

3. Purpose of Owners in the acquisition of large acreage:

It has been the special aim of the Owners, to get together a grouping of Mineral Claims, capable of being worked advantageously as one large mining enterprise, and whose life would unquestionably be a very long one; by the judicious location of protecting claims, possible litigation has been carefully guarded against.

It is claimed for this property that it is a low grade Concentrating proposition, with the premises of practically unlimited vein area to draw from.

4. Estimated length of Vein Croppings, covered by this Property:

The Property covers about 20000 running feet of the Silver Lake Vein croppings; about 5300 running feet of the Titusville-Buckeye vein and probably a further 5000 feet of "Royal", "Professor Stelzner"

and "Whale Rochester" veins; other vein croppings known to exist, but less explored, are ignored in this estimate.

5. Vein Systems:

There are upon this property, two mineralized vein systems: The "Silver Lake" and the "Titusville-Buckeye" veins belonging to the North-West and South-East system, and the "Royal", "Stelzner" and "Whale-Rochester" veins belonging to the North and South system, and running between the "Silver Lake" vein on the North, to the "Titusville-Buckeye" vein on the South, thus making it possible to connect these vein systems by underground workings upon the veins themselves.

9. The Mine Workings and Ore Reserves:

A glance at the maps will be sufficient to show a present large underground development, representing probably in the neighborhood of seven miles of Drifting and Crosscutting, without including the Unity or Blair Mountain Tunnel workings.

Regarding ore reserves, it may be stated that a conservative measurement and estimate recently made by Mr. R. W. Hollis, places same at about 510000 Tons, equivalent to about seven years of running of the present Concentrator, which annually handles about 70000 Tons of mill ore. Mr. Hollis, having been connected with this enterprise for some 8 years or more past, as Engineer and lately as Assistant Manager, is perhaps the best possible person to pass upon this matter of ore reserves.

20. Concluding Remarks:

The "Titusville-Buckeye" vein, although showing excellent croppings, and some underground workings with ore reserves on the "Buckeye" claim, has barely been referred to; The "Nevada" claim has been mentioned only; and the territory N.W. of same on the "Silver Lake" vein, has not been referred to except by the expressed expectation of having the Blair Mountain Tunnel strike and develope it near the Animas River.

Just so the territory on the "Silver Lake" vein to the South East of Arastra Lake, i.e., the "Royal Tiger" #1, the "Homestake" and "Emma" claims, which should have an excellent future.

EXHIBIT 2

EXCERPTS

REPORT ON SILVER LAKE MINES
BY
LAWRENCE R. CLAPP, SUPERINTENDENT

FEBRUARY 12, 1913

In order to continue beyond this preliminary period other ore bodies on the Unity Level must have been opened up in that time. Assuming then that the entire program of prospecting is carried out, and, that after an expenditure of $20,000.00 we have available 117,000 tons of $9.40 ore which we will assume, will be worked out at the rate of 200 tons per day, the maximum which can be handled through the Unity tunnel, we will have

	Daily tons.	Life Mo's.	Cost	Profit
13000 tons @ $9.30	50	8.5)	$4.35	$.90
117000 " @ 9.40	200	19.5)		

Total Profit $117,000.00

The above outlook is decidedly discouraging, particularly as from present knowledge this evidently constitutes the entire amount of pay ore in the Silver Lake Mines above the Unity Tunnel. Of lower grade ore, of say, $6.00 value, there is perhaps 100,000 tons already exposed and the prospective tonnage available is almost unlimited, probably the entire Letter "G" vein from the Scranton City to the Buckeye, a distance of nearly two miles, averaging at least that value.

The future of the Silver Lake Mines in my opinion, lies wholly in the solution of the problem of making this material profitable and not in the search of better grade ore; the former company and Mr. Stoiber before them, both fought a losing battle in the attempt to keep their reserves of $9.00 or $10.00 ore in advance of their consumption. In so doing they exposed a very large tonnage of lower grade material and indicated where a still larger tonnage was probable. If this can be made available, the property has a big future still ahead of it.

To make $6.00 ore profitable, will require a total cost of not more than $4.75 per ton and a mill extraction of at least 80%. Neither of these are beyond possibility. A $4.75 cost would mean a big tonnage, the avoidance of an expensive tram, an adequate modern equipment and a high concentration ratio. An 80% mill extraction on ore of only $6.00 gross value means considerably more than our present mill is capable of. Recently, I was attracted by the remarkable success of the Minerals Separation Co's froth flotation process at the Braden Copper Company and at the Butte & Superior. I made some tests in a very crude way with a home-made laboratory size flotation apparatus. From the results obtained, it is apparent that an 80% extraction combined with a high ratio of concentration is not at all an impossibility with the method. If this is possible on a commercial scale and indications apparently point that way, to judge from the results obtained at Braden, it will mean over $1.00 per ton of difference on our present prospects, and would change a probable loss into an almost certain profit, besides making available a considerable tonnage of lower grade ore. From what I can gather from other plants, the purchase and erection of the necessary apparatus for the installation of the process at this property would not exceed $3,000.00, which would be repaid within one month of operation by the expected increase in saving.

Tonnage 1899 Corrected, and Columns 2, 3, and 5 Supplied from Company Reports.

LIBERTY BELL GOLD MINING COMPANY.

PROGRESS SECTIONS SHOWING CONDITION OF DEVELOPMENT.

SEPTEMBER 30TH 1906.

LONGITUDINAL SECTION IN PLANE OF VEIN.

HORIZONTAL AND VERTICAL SCALE 1" : 400'

Vertical Distances measured on Slope of vein.

Ore Stoped 408,282 Dry Tons from	1,259,000 Sq. Ft.
Pinched and Unworkable Vein	250,000 " "
Ore "In Sight"	316,000 Tons, Dry.
Width of Chute 4,800 ft.	
Probable Ore in Chute above Stilwell Tunnel	1,150,000 " "
Total Ore in Sight and Probable	1,466,000 Tons, Dry.
Estimated Ore beyond Chute within Property, and above Stilwell Tunnel (¼ of Possible)	300,000 " "
Total in Sight Prob. and Estim.	1,766,000 Tons, Dry.
Possible Ore within Property above Stilwell Tunnel, and in addition to the last Total	900,000 " "
Total Possible above Stilwell Tunnel	2,666,000 Tons, Dry.
Probable and Possible Ore below Stilwell Tunnel	Not Estimated.

Progress of Development for Year Ending September 30th, 1906.

Ore Mined, 92,221 Tons, dry.—Tunnelling, 292 ft.
Drifting, 2,206 ft. Crosscutting, 40 ft. Upr. 1,812 ft. Total deadwork 3,850 ft.

NOTE.—The above results are calculated on the following assumptions

Average width of Vein, = 8.52 ft. (Actual average of eight years.)
One ton in solid (dry) 18 cub. ft.
Distance between Stilwell Tunnel and 1 Level, = 964 ft.

In calculating the average width of vein, upon which the Ore in sight and other tonnage results are based, the area of pinched and unworkable vein so far developed is included within the stoped area.

CROSS SECTION THROUGH CROSS CUT O LEVEL 1.

HORIZONTAL AND VERTICAL SCALE 1" : 400

LIBERTY BELL GOLD MINING COMPANY.

PROGRESS SECTIONS SHOWING CONDITION OF DEVELOPMENT.

SEPTEMBER 30TH 1910.

LONGITUDINAL SECTION IN PLANE OF VEIN.

HORIZONTAL AND VERTICAL SCALE 1" : 400'

Vertical distances measured on slope of vein.

Ore stoped 2,680,000 sq. ft. yielding	887,696	Tons, dry.
Pinched and unworkable vein 2,150,000 sq. ft.		
Ore "in sight"	676,000	Tons, dry.
Width of shoot 6,000 ft.		
Probable ore in shoot above Stilwell tunnel	630,000	" "
Total ore in sight and probable	1,306,000	Tons, dry.
Estimated ore beyond shoot within property, and above Stilwell tunnel (1/3 of possible)	130,000	" "
Total in sight prob. and estim.	1,436,000	" "
Possible ore within property above Stilwell tunnel and in addition to the last total	400,000	" "
Total possible above Stilwell tunnel	1,836,000	Tons, dry.
Probable and possible ore below Stilwell tunnel		Not estimated

Progress of development for year ending September 30, 1910.

Ore mined 134,321 Tons, dry.
Drifting 3,951 ft. Upraising 1,423 ft.
Total deadwork 5,374 ft.

NOTE.—The above results are calculated on the following assumptions:

Average width of vein—3 ft. (Actual average of 11 years.)
One ton in solid (dry) 13 cub. ft.
Distance between Stilwell tunnel and I level 964 ft.

In calculating the average width of vein, upon which the ore in sight and other tonnage results are based, the area of pinched and unworkable vein so far developed within the limits of operations is included as if it were a part of the stoped area.

CROSS SECTION THROUGH CROSS CUT O LEVEL I.

HORIZONTAL AND VERTICAL SCALE 1" : 400'

LIBERTY BELL GOLD MINING COMPANY.

PROGRESS SECTIONS SHOWING CONDITION OF DEVELOPMENT.

SEPTEMBER 30TH 1915.

LONGITUDINAL SECTION IN PLANE OF VEIN.

HORIZONTAL AND VERTICAL SCALE 1" : 400'

Vertical Distances measured on Slope of vein

Ore Stoped 4,980,000 sq. ft. yielding. . . . . 1,746,000 Tons, dry.

Pinched and Unworkable Vein.

Ore in Sight and Probable 648,000 sq. ft. . . . . 218,000 Tons, dry.

A comparison of this section with that of the preceding year will show that large areas of what was considered probable and possible ore have now been thrown into pinched and unworkable vein. This is the result of further development and of a study and revision of the assay results and conditions of previous development; in many cases the results obtained in the driving of drifts and raises have not maintained when stoping was begun. The ore now considered in sight and probable is confined to scattered patches on the west side, to the ground in pillars and in close proximity to the main upraise, and to the extreme eastern end of the lower levels. Possible ore may be looked for below the Stilwell Tunnel and to the extreme east in the foot wall split of the vein which is not being explored.

PROGRESS OF DEVELOPMENT FOR THE YEAR ENDING SEPT. 30, 1915.

Ore Mined 173,500 tons, dry, from 442,000 sq. ft. stoped
Drifting 4,300 ft. Upraising 811 ft. Total 5,139 ft.

CROSS SECTION THROUGH CROSS CUT O LEVEL I.

HORIZONTAL AND VERTICAL SCALE 1" : 400'

I. Introduction
The State of the Company

The following is an analysis and report of the Shenandoah-Dives Mining Company of Colorado.

After nearly 28 years of operation, during which time more than 4,000,000 tons of ore having a gross value of more than $32,000,000 were extracted from the property, a huge potential still is available by development, providing additional, ample working capital is obtained to carry on.

At the present the operations at the mine and mill are suspended. The company has no outstanding liabilities of consequence. It has a fully equipped plant and facilities for carrying on a mining operation to mill 700 tons per day. It has an inventory of considerable supplies. It has upon call an operating staff personnel and skilled manpower ready to resume mining and milling. It has a mine with limited ore reserves, but available are vast exploration possibilities in an adjoining favorably leased property whose only outlet is through Shenandoah-Dives.

In addition to current assets of $86,198 as of June 30, 1954, the company has broken down ore reserves, on which operating expenses already have been paid, in the amount of 78,474 tons. The value of thi sasset is not reported in the balance sheet. Total liabilities, including $16,000 for contingencies, are $43,842.

The conservative estimate of the replacement value of Shenandoah-Dives Mining Company is a figure well above $3,000,000.

The sole capitalization consists of 3,500,000 shares of $1 par value common stock. There is no funded debt.

II. This is Shenandoah-Dives Mining Company

The Shenandoah-Dives Mining Company was incorporated under the laws of the State of Colorado in June, 1929. Capital stock, authorized and issued, 3,500,000 shares common stock, $1 per value.

General offlces of the company are located at 616 Finance Building, Kansas City, Missouri. Mine operations are near Silverton, Colorado.

The mine is located on King Solomon Mountain, approximately four miles east and one mile south of Silverton, San Juan County, Colorado. Surface claims on the main vein range from 11,000 to 13,275 feet above sea level.

Silverton is located on a branch of the narrow gauge D. & R. G. W. RR and is also served by truck and bus transportation. It is the main sub-station of the Western Colorado Power Company in San Juan County.

During the existence of the company, $928,761 has been invested in buildings, construction, and equipment. This includes the Mine Group, Mill Group, and Tramway.

The Mine

To reduce costs, it has been the company's plan to mine upward and compel gravity to reduce costs. There is no costly hoisting of ore and no pumping of water. Ore moves constantly downward until it reaches the bins at the mill in the valley two miles below.

Modern equipment was provided throughout the mine to handle large pieces of ore from the stopes, eliminating the usual costly practice of bulldozing. This modern method called for liberal chute openings, large and sturdy mine cars, and ample primary crusher. Ore is transported on an electrical railroad.

The heavy chunks of ore, blasted from the core of the high peak, are processed in the recesses of the mountain. Heavy crushers chew up to 80 tons per hour when breaking to ½ inch size. In successive operations the ore is pulverized to powder fineness.

The Mine Group, located two mile up Arrastus Gulch from the Mill Group, consists of a mine hotel building, timber shed, tram terminal buildings, and underground shops.

The hotel is a five-story building of frame construction with roof and sides insulated. It is steam heated. On the first level, there is a complete dining room and an all-electric kitchen as well as storage space for supplies. The Mine Staff offlces are located on the second level along with an employees commisary and recreation room. The third and fourth levels are sleeping quarters and baths for workers in the mine. The basement includes the heating plant and living quarters for the hotel employees.

A large timber shed provides ample space for mine timber storage and houses a carpenter shop and a complete electrical shop.

Underground, near the mine portal, there is a compressor room, blacksmith, and machine shop.

Total cost of the hotel building, timber shed, and mine and shop equipment, when built, was $274,926.

The Tramway

Transportation of the ore from the mine to the mill is down an aerial tramway, probably the finest ever erected in the Colorado area. It is 10,000 feet long and has a capacity of 80 tons per hour. The difference in altitude between upper and lower terminals is 1,400 feet. There are 47 buckets, each containing ¾-ton capacity and suspended from a 4-wheel truck. The buckets are equipped to attach or detach automatically from the traction cables at the terminals. Towers are designed with sufficient clearance to permit the handling of bulky freight.

In addition to moving the ore from mine to mill, the tram is used to transport supplies, bulky freight, ranging from timber to heavy motors, machinery and parts, and personnel.

The 200-foot steel towers are spaced to give maximum strength, service, and smooth and safe operation of the tram. Track cables are of 1¼-inch diameter and supported at each tower, forming a track on which the suspended buckets travel. The traction cable, which draws the buckets clamped to it, is of ⅞-inch diameter continuous steel cable. At the terminals, buckets are diverted from the cable to a monorail for loading and unloading.

A 200-foot Tramway Tower.

A Tramway Bucket of ore from mine to mill.

The Mill

Although originally intended to handle 300 tons of ore each 24 hours, the mill can handle 700 tons per day as a result of additions. Space is available for installing additional equipment.

The concentration methods employed are tabling and flotation. One step of the operation applies the old-fashioned pan prospecting method brought up to date. The Shenandoah "pan" is a device known as the Wilfley table which is vibrated by electric power.

The ore, ground to coarse-sand consistency, is fed in a film across the table top. Heavier, high-grade particles of gold and lead ride off the table edge into containers which are shipped to the smelters.

The flotation is used to separate the sulfides which are formed when the copper, zinc, and lead combine with the sulfur and separate from the worthless quartz.

The concentrate is trucked to Silverton and shipped by rail to Leadville, Colorado, and Amarillo, Texas.

The Mill Group consists of the main mill building, adjacent sheds, office-laboratory building, and tram terminal building.

The main mill building houses the 700-ton capacity mill and equipment, while the adjacent buildings house the sampling plant, electric-sub-station, ore bins, and other equipment and supplies needed for mill operations. These buildings are of frame construction, insulated and steam heated.

Prior to the shut down in March 1953, the custom ore bins were enlarged and additional space provided to allow for large-scale custom ore operations.

Total cost of the Mill Group was $494,944.

The office and laboratory building is a 2½-story building of frame construction with roof and walls insulated and steam heated. A complete laboratory and assay office is on the first floor while executive offices are located on the second floor.

THE MILL GROUP
Main Mill Building and Sheds
Office-Laboratory Building
Tram Terminal Building

The office and laboratory building, equipped, cost $17,915.

Cost figures shown for the buildings and construction do not reflect any cost of land. Most of the present buildings were erected during the early 1930's when material and labor costs were low.

Equipment, tools, and much of the original installations have been replaced several times during the existence of the company. As new equipment and installations were made, the costs of the old equipment was charged out of the investment accounts.

III. A Brief History of The Company Operations

For nearly 75 years, gold, silver, lead and zinc—as well as numerous other metals—have been produced in varying amounts in the San Juan mountains of Colorado near Silverton. A number of claims were located on a well-defined vein that crossed King Solomon mountain. Prior to 1925, these claims paid out more than 3½ million dollars, mostly through a high-grade operation without mechanical concentration from rich surface ores.

In 1925, a group of Kansas City businessmen became interested in the property and started to assemble tracts to do exploration work after privately investing their funds. By 1929, more than $1,200,000 of ore had been blocked out. Inasmuch as substantial capital would be required, it was decided to incorporate and start a mining venture. The company acquired 31 patented claims and 12 unpatented, covering a total of 316 acres. The Shenandoah-Dives Mining Company was chartered in July, 1929, and funds were raised through the sale of common stock and first mortgage bonds. A total of 3½ million shares of common were issued and $500,000 of seven per cent bonds.

The initial outlay for equipment was $700,000. By 1930, the total investment in property was $1,250,000. The plant was equipped and started mining, transporting, and milling with a 300-ton capacity mill during that year. Later additions more than doubled the original capacity of the mill.

It took seven years to pierce the mountain with a 1¼-mile tunnel. Actually the tunnel was started in 1926, prior to the start of the company's operations; however, it was not until 1933 that a second tunnel, started on the other side of the mountain, was connected.

At the mouth of the tunnel on the side nearer Silverton, a 5-story hotel was built to house the men employed in the mine. The hotel and mine were connected by a short underground passage that permitted men to work every day of the year in spite of snow slides and the severe winter cold of the high altitude.

When the organizers and developers of the company assembled the various properties, they realized it would require a large-scale operation with the latest type of equipment to keep down costs. So, Shenandoah-Dives was a carefully planned project. No considerable outlay was made for plant and equipment until the existence of a large amount of ore was determined through exploratory work. Once this was determined, steps were taken to develop a large tonnage and mine, transport, and mill it in the most efficient manner possible. Throughout the entire period of its operation, the company has consistently been among the lowest-cost operators in the field.

A corner in the electrical shop

But regardless of how low an operating cost, if the ore is not available because of inadequate working capital, or if the price of metals is below the level that will realize a return, there are several problems that must be surmounted. Although Shenandoah-Dives has had its share of difficulties, it stands today as one of the most modern mining properties in the nation.

Shenandoah-Dives took out nearly 4 million tons of ore with a total gross value of about 32 million dollars. In addition to its mining, the company milled a large additional tonnage obtained from other sources, including custom ore received from small producers in the area. In 1952, the last full year of operation, the company treated 94 per cent of all ore produced in San Juan County.

The American Smelting and Refining Company owns a large property known as the Silver Lake unit which is located at a considerable distance south of the Shenandoah-Dives property. The only outlet for ore in the Silver Lake unit is through the Shenandoah-Dives mine. The two companies worked closely for years. In association with American Smelting, the company drove a long crosscut from its main level to explore the Silver Lake property at greater depth. American Smelting did considerable exploration work and mined a substantial tonnage of ore. Eventually American Smelting discontinued operations and turned the property over to Shenandoah-Dives for operation under a lease agreement favorable to Shenandoah-Dives.

The source of ore for the mill has been from the Shenandoah and Silver Lake properties and by custom. The custom ore business has been very profitable to the company but because of low metal prices, possibilities for income from this source became restricted.

The period covered by the company's operations has been one of extremes in metal prices ranging from very

low during the depression years to comparatively high since the beginning of World War II up to the recent decline.

Earnings anticipated in 1929 at the time the venture was planned were not realized. Consequently no financial cushion or reserve was created for the large scale operation that was required to make the mine a paying proposition. The large operations, as found later, were started without a sufficiently safe ore reserve. Tonnage was necessarily increased as a means for survival. This created a situation that made any selection of ore as to value more difficult as the mine was crowded for maximum tonnage.

Development was difficult and costly as the productive areas were reached upward and eastward through a vertical height of more than 1,900 feet and a horizontal distance of about 7,100 feet from the portal of the main level.

The company did not have sufficient working capital to go ahead with the necessary exploration and block our reserves for future mining operations. In all, the major openings covered 90,484 feet and drill hole exploration totaled 22,850 feet—a total of 113,334 feet for development and exploration. These figures did not include nearly 3,000 feet completed in a joint participation with the government from June 15, 1953 to May 29, 1954. The expenditures for development work was well above $1,000,000, a figure much too low to provide for ample ore reserves. In 1951, a profitable year, the company spent only $52,507 for exploration, yet paid the government more than $150,000 in income taxes.

The mine has had some very productive years, as evidenced by the fact that from earnings and internal sources—depreciation and depletion—the property account was increased and $500,000 of first mortgage bonds were retired. The original bonds carried a seven per cent rate but these were extended and the interest rate reduced by the time they were cleared in 1951.

Since the closing of the mill in March 1953, the mining has ceased completely. In 1953 a contract was entered into with the government for the exploration of a 3,000-foot horizontal drift (straight level digging) and 500-foot raise (vertical digging). Under the contract, half of the estimated cost per foot was to be paid by the government. The development covered 2,988 feet up to the time work was suspended on May 29, 1954. Development work was started June 15, 1953. The company's cost on the project was $69,797. The government's participation was $70,407. The original contract calls for an estimated outlay of $211,900. The contract is under the program aimed to locate and activate mining of scarce materials. The loan is repayable on a royalty basis, if, as, and when production is started.

Following the resignation of the former president and former executive vice-president and upon election of a new executive head and policy-making committee, a complete survey was ordered on the property to be made by an independent firm of appraisers. The survey stated that it would take two months and an estimated cost of $25,000 to recondition the plant for processing ore.

The study further found a need for a regular program of development. If the mill operation is resumed it must be on the basis of exploration and development of some 2,000 feet of additional ore as a reserve.

The exploration work done under the government contract is in the area known as Letter G. It has produced "encouraging results," the survey said. But it adds that additional explorations are needed to create reserves before undertaking resumption of operations.

Continuing its findings on the Letter G vein exploration, the appraisers of the property said: "Unfortunately, there is very little data available or obtainable on which to judge the ore possibilities of the area along the Letter G vein. What records were left by the former operators as to the grade of ore, are in dollar values with no record as to the distribution of the values or the metal prices on which the values were computed. There are substantial workings scattered along the vein which reach moderate depths. Reports are available to the effect that large quantities of ore once considered too low in grade to mine are still in the mine. There is, of course, a large unexplored area between the bottom of the old workings and the present drift level.

With the type of ore and the grades found in the Shenandoah-Dives mine operation, a modest increase in metal prices and location and building up of reserves

Locomotive and Mine Cars

could return good earnings for a company with a per tonnage cost of less than $6.00.

The following table shows the number of tons of ore milled, the operating cost per ton and the average hourly wage for the last five years of full operation:

Year	No. of Tons	Cost per Ton	Average Wage
1952	149,804	$6.84	$1.82
1951	196,097	5.75	1.70
1950	202,947	5.32	1.56
1949	186,072	5.75	1.56
1948	165,283	5.78	1.52

In 1953 the mining was suspended in February. For the 2-month period, the average cost per ton on the 32,577 tons of ore milled was $6.10.

Of the total income of the company nearly half has come from gold. More than 12 million dollars of gold was produced. In the five years prior to 1953 the income from silver was almost as large as gold, with the value of the two metals aggregating nearly $3,100,000. Since 1944, the gold concentrate value has been declining while silver has increased. The market price of gold remained fixed at $35 an ounce, while silver pushed up from 71.1 cents to 90 cents an ounce.

Loading Mine Car—Chute Opening Underground.

Lead has been the largest single source of revenue in recent years. Since prices are down to the lowest level since 1946 this has been a factor in the reduced earnings. A matter of a few cents a pound could mean the difference between a good profit and a loss since a substantial tonnage of lead has been taken from the property, leased and owned. There still are large lead deposits in the area. In 1952, the lead concentrates totaled $724,000 on a market of 16.3 cents a pound, and in 1951, when lead was 17.5 cents a pound, the value was $861,000.

The situation in copper again emphasises the importance of market price. When copper rose from 21.9 cents in 1950 to 24.5 cents for 1951 and 1952 the concentrate value jumped appreciably as production was stepped up. The income from copper averaged about $67,000 a year for the ten years prior to 1950, while in the 3-year period (1950-1951 and 1952) the average was $220,000.

In recent years the income from zinc has picked up, producing a far greater total than in the early years of the mine's operations.

The net concentrate value and production breakdowns, by groups, follow:

	Value	Weight
Gold	$12,075,000	389,000 oz.
Silver	4,370,000	6,508,000 oz.
Lead	4,994,000	52,487,000 lbs.
Copper	2,619,000	21,040,000 lbs.
Zinc	2,223,000	22,545,000 lbs.

The following table shows the metal concentrates, by groups, the production, prevailing average market price and total value, for the ten years prior to 1953. Less than three months' operations were contained in the 1953 year, and the totals were not included in the following.

GOLD

1946	928,930	d 54,424
1945	853,183	16,521
1944	1,064,934	164,221

d - deficit

The 1953 report reflected the shutdown of the mine in the first quarter so the only revenues came in that period. Operating expenses for the first quarter exceeded gross revenues by nearly $30,000. In the last nine months of 1953 the deficit was about $120,000, including depreciation and depletion charges of nearly $17,500, and development expense of $52,798 in connection with the Letter G operation.

The company has undertaken drastic economics, and further retrenchment is planned to conserve the remaining assets. Since June 1, 1953 the secretary-treasurer is the only salaried officer of the company, the other officers, all representing large holdings in the company, are devoting their time without compensation. The directors and executive committee members have been serving without fees since mining operations were suspended in March 1953. Mine equipment is being maintained on a standby basis since exploration work was halted on May 29, 1954. For insurance protection a caretaker is living on the premises.

The company's claim for a refund from the government on a portion of the income taxes due for 1952 has been satisfied following application for a refund. The payment of $20,961 was made in March, 1954 and

at the same time the request for an abatement of the balance that was due also was approved by the Internal revenue department.

Since there is no income, except for a modest amount of interest on government securities owned, the deficit has continued. Including depreciation and depletion, the reported net loss for the six months ended June 30, 1954 was $72,648. More than half of the period's expenditures was due to exploration work in connection with the company-government participation contract. The deficit in the surplus account was increased by only $17,854 during the six months of 1954.

The June 30 balance sheet showed a decrease of $41,139 in net working capital from the start of 1954. This reflected payment of $34,211 in development work on the Silver Lake property as well as tramway expense, salaries and expenses at Silverton and the Kansas City office. Net current assets were $86,198, a decrease of $42,592 from December 31, 1953. Current liabilities were $27,842, a decrease of $1,453 for the 6-month period. The cash account was implemented by the refund of taxes paid on 1952 income taxes. Government securities were reduced from $49,000 to $16,000 during the six months.

The balance sheet shows total fixed assets, after reserves for depletion and depreciation, of $3,143,225. Buildings and equipment which had a cost of nearly $930,000 are carried on the books at a net figure of $108,111.

The comparative unaudited balance sheet as of June 30, 1954 and December 31, 1953, follows:

SHENANDOAH-DIVES MINING COMPANY
COMPARATIVE BALANCE SHEET JUNE 30, 1954 AND DECEMBER 31, 1953

ASSETS

	June 30 1954	December 31 1953
CURRENT ASSETS:		
Cash	$ 12,633.52	$ 11,634.19

March 26, 1958

Mr. Ed Larson
Marcy-Shenandoah Company
P. O. Box 247
Silverton, Colorado

Dear Mr. Larson:

Enclosed are the copies of the DMEA application forms you requested by telephone today. Four complete copies of the application should be submitted to DMEA, the fifth is for your files.

In our telephone conversation, you indicated that the work was to be performed on the same land subordinated under Docket No. 2991, Contract No. Idm-E558, Shenandoah-Dives Mining Company. Also, that at least a part of the work you are contemplating proposing is the same as a portion of the work remaining uncompleted under Contract No. Idm-E558.

If the above facts are correct, it appears likely that if additional work is approved, it would be necessary that it be made a part of Contract Idm-E558, since the agreement terminating that contract contained provisions of a pseudo-certification in the event of subsequent production from the property.

Very truly yours,

Memorandum

To: C. O. Mittendorf, Administrator, DMEA

From: Executive Officer, DMEA Field Team, Region III

Subject: Visit to this office by Mr. Tomlin

Mr. S. Stokes Tomlin, Jr., President of the Marcy-Shenandoah Corporation, called at this office today and discussed the possibility of DMEA work in the Silverton area. Mr. Tomlin has ideas and possibly plans for extensive development work in that area.

During our conversation, it was disclosed that he will be in Washington, D.C., on or about the 17th of December. Since Mr. Tomlin's ideas embraced such an extensive development program, it occurred to us that a discussion with you might influence his thinking to a considerable degree. Therefore, we suggested that he call upon you while in Washington.

Memorandum

To: Chairman, Operating Committee, DMEA

From: DMEA Field Team, Region III

Subject: Docket No. DMEA 2991 (Lead-Zinc-Copper), Contract No. Idm-8558, Shenandoah-Dives Mining Company (Silver Lake mine), San Juan County, Colorado - FINAL REPORT.

Enclosed are the original and three copies of a joint final engineering and geologic report, dated January 1957, pertaining to work completed under the subject contract, by D. H. Richter, Geologist, Geological Survey, and C. M. Harrer, Mining Engineer, Bureau of Mines; and transmittal thereof from E. N. Harshman and John F. Shaw, dated January 25, 1957.

The original and one copy of the Operator's final report were forwarded to the Washington Office by memorandum of February 10, 1956.

The contract was terminated by a Termination Agreement, dated September 9, 1955, which was made effective May 29, 1954, before completion of the entire amount of work provided for in the contract.

The exploration work completed consisted of 2,799.5 feet of drifting and crosscutting, at a total accepted cost of $140,814.85, toward which the Government contributed 50%, or an amount of $70,407.43.

Final payment to the Operator was processed by this office November 8, 1955 in conformance with the Report of Review of reported project costs by the Contract Administration and Audit Division, DMEA, dated October 26, 1955.

Provision for the repayment of the amount of the Government's contribution to the costs of the exploration work by royalty on production from the property was incorporated in the Termination Agreement, which, in effect, constitutes a pseudo Certification.

Dear Bill:

I am in receipt of a letter from Fred Searls Jr. (Newmont Mining Corporation) in which he states that they are not interested in acquiring the Shenandoah-Dives. That they have investigated the the situation several times and concluded that Chase was a better opperator than they, and that he broke his heart on it. I took it up with Mr. Searls rather than going thru Johnnie Wise.

Has Mac left for Brazil?

DEFENSE MINERALS EXPLORATION ADMINISTRATION
CONTRACT ADMINISTRATION AND AUDIT DIVISION

REPORT OF REVIEW

I have reviewed the Monthly Reports of:

Shenandoah Dives Mining Company
Silverton,
Colorado

pertaining to Exploration Project Contract No. Ida-2558, Docket No. DMEA-2991, including Amendment No. 1, and termination agreement dated September 9, 1955, for the months of July, 1953 to May, 1954, inclusive, covering a project for the exploration of Lead, Copper and Zinc on property known as Little G Vein, Silver Lake Mine, located in San Juan County, Colorado.

My review included an examination of the Monthly Reports (Form MP-104) and supporting documents attached thereto, comparison of the costs claimed with the contract and pertinent schedules, consultation with the Executive Officer, DMEA Field Team, and a determination of the reasonableness and propriety of the costs.

This review was made in lieu of a final audit of the Operator's accounts and records for the following reasons:

> All of the costs incurred were under a contract provision for payment by the Government on the basis of agreed estimated costs of units of work actually performed.

The review disclosed the following facts in regard to the amount paid or to be paid the contractor:

Total cost as billed by Contractor		$140,814.85
Exceptions:		
By DMEA Finance Officer	$0.00	
Herewith	0.00	0.00
Total Accepted Cost		$140,814.85

The contract calls for a 50 percent participation of exploration expenses by the United States Government. Therefore, payment to the contractor by the Government in the amount of Seventy thousand, four hundred seven, and 43/100ths Dollars

** $70,407.43 **

is considered valid and proper, provided that the Regional Executive Officer, the Administrator, or other competent official has accepted or will accept the project as having otherwise met the terms of the contract.

October 26, 1955

T. H. Bradley, Auditor.

In Re: Shenandoah-Dives Mining Co.
Docket No. DMEA-2991

Gentlemen:

I am forwarding herewith all of the copies of the Termination Agreement dated September 9, 1955 between the United States of America and the Shenandoah-Dives Mining Company. I would appreciate it if you would forward to us our copy of this Termination Agreement.

On behalf of the Company may I express our deepest appreciation for the interest and cooperation of the Defense Minerals Exploration Administration in the Shenandoah-Dives Mining Company and the community of Silverton, Colorado.

As you know, we are in the process of selling the assets of the mine and it is hoped that your past interest in the mine and in Silverton will continue with the new operation. We will, of course, give them and you every possible assistance in the hope that mining may again be carried out in the Silverton area.

At your convenience, we would appreciate it if the $500. due our company was returned to us.

Yours very truly,

IRELAND, IRELAND, STAPLETON & PRYOR

Dear Mr. Traver:

With reference to your memorandum of August 18, we are enclosing the original and five copies of an agreement for mutual termination of the cited contract.

If it meets with your approval, kindly present it to the attorney for the Operator for signature and, when completed, distribute the copies in the usual manner. Otherwise, all copies should be returned to us with your comments.

Sincerely yours,

George C. Selfridge
Chairman, Operating Committee

Death Claims Chase; State Mining Leader

Charles Albert Chase, 78, of 1470 Grant St., lately of Silverton, Colo., and one of Colorado's leading mining men, died Wednesday morning at his home after a long illness.

Chase

Services will be held at 11 a. m. Friday in Olinger mortuary, Speer Blvd. and Sherman St. Burial will be in Green Mountain cemetery in Boulder. Survivors requested that no flowers be sent.

Chase was born Nov. 4, 1876, in Hartford, Wis., but spent his early life in the roaring mining community of Georgetown, Colo. He attended the University of Colorado and was graduated with a bachelor of philosophy degree in 1898.

WAS SURVEYOR

He served as surveyor, general superintendent, consulting engineer and finally manager of the Liberty Bell Gold Mining Co., at Telluride, Colo., from 1899 to 1924.

At the same time he was consulting engineer for the U. S. and British Columbia Mining Co.; associate general manager of the Mogul Mining Co. in Terry, S. D.; consulting engineer of the Aztec Mine of Maxwell Land Grant Co., in New Mexico; manager of Primos Exploration Co., at Empire, Colo., and consulting engineer for mining interests in southern Mexico.

In 1925 he helped start the Shenandoah-Dives Mining Co., at Silverton, Colo., and was general manager and executive vice president until 1953.

For a good many years Chase was chairman of the board of the Colorado state metal mining fund, a state-sponsored agency for aiding and stimulating the mining industry in Colorado. He was a leader in the establishment of the cooperative state and federal geological mining survey of Colorado.

Chase was an honorary president of the Colorado Mining Assn., a member of the board of governors of the American Mining Congress; past chairman of the Colorado section of the American Institute of Mining Engineers; past president of the Colorado Scientific Society, and a member of the University club of Denver.

He was author of many articles in leading mining publications.

He is survived by his widow, Ruth, of Denver; a daughter, Mrs. Elizabeth Wilson of Houston, Tex.; three sons, Hamilton of Old Greenwich, Conn.; David of Lima, Peru; Charles H.. of Denver, and five grandchildren.

Memorandum

To: Chairman of the Operating Committee, DMEA

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket DMEA 2991 (Lead, Zinc, Copper), Contract Idm-E558, Shenandoah-Dives Mining Company, San Juan County, Colorado

This acknowledges your letter of August 5, 1955 in which you asked for information on the status of exploration project work under Contract Idm-E558. Undoubtedly, on the date of your letter you had not received the Field Team's memorandum of August 2, 1955, which described in some detail the "dead center" status of this project.

We have repeatedly tried to contact Ben W. Stapleton, Jr., President, by both letter and telephone, but he refuses to return telephone calls or reply to letters so that we have been unable to ascertain their intentions. We will continue our efforts and attempt to obtain consideration of a Termination by Agreement. However, we believe that a letter direct to Mr. Stapleton over the Administrator's signature might produce results more promptly. We recommend that your office prepare Termination by Agreement documents and send them direct to Stapleton for signature, or if you prefer, send them to us and I will make a personal call at his office in an attempt to obtain signature, his reasons for noncompliance, or suggestions he may have for other procedure.

Re: Docket No. DMEA-2991 (Lead-Zinc-Copper)
Shenandoah-Dives Mining Company
Letter "G" Vein Project
San Juan County, Colorado
Contract No. Idm-E558

Dear Mr. Traver:

We presume you have had no satisfactory reply to your letter of June 16, to Mr. Benjamin W. Stapleton, Jr., referring to the Owner's Consent to Lien which applies to the cited contract.

Our records show that no work was done on this project since May of 1954. We do, of course, have projects in recess which have been idle for a longer period of time than this. However, in this particular case, we do not seem to be able to obtain execution of even a simple recessing amendment.

We appreciated the fact that this company was engaged in certain negotiations relative to their property and we had no desire to be arbitrary or intolerant in our attitude. Yet, we do find it difficult to carry this project, over a long period, in a nebulous condition — neither active nor in recess.

Possibly the company now might be receptive to the idea of terminating the project by a mutual termination agreement. Such an agreement would, of course, protect the Government's interest by a clause providing for royalty payments to the Government if, later on, production should be made from the lands included in the contract.

It is our suggestion that you discuss such a settlement of the contract with the Operator or its attorney.

Sincerely yours,

W S Martin

Contract No. Idm-E558

Dear Mr. Traver:

We have your memorandum of August 2, covering the cited contract, which had crossed our letter of August 5 in the mails.

It seems obvious that the contract must be terminated in one form or another. However, it would, of course, be better to effect a mutual termination, as we outlined, if such is possible. We shall take no action until we hear further from you.

Sincerely yours,

W S Martin

Subject: DMEA 2991, Contract Idm-E558 (Lead-zinc-copper), Shenandoah-Dives Mining Company (Silver Lake group--Letter G vein), San Juan County, Colorado - Progress report from May 1954 to August 1955.

The Shenandoah-Dives mine was visited on August 2, 1955 and John Holmgren, former mine superintendent, was contacted. Mr. Holmgren stated that the property was completely shut down on May 29, 1954, and has remained so to date. At present the only personnel on the property are E. A. Larsen, former resident manager and John Holmgren, former mine superintendent, who remain as caretakers.

Mr. Holmgren had no information on the plans of the company other than that some attempt is being made to sell it. He stated that any further information would have to come from Mr. Ben Stapleton, president of the company, who resides in Denver.

August 2, 1955

Memorandum

To: Chairman, Operating Committee, DMEA

From: DMEA Field Team, Region III

Subject: Docket DMEA-2991 (Lead-Copper-Zinc), Contract IBM-2558, Shenandoah-Dives Mining Company, San Juan County, Colorado

We have been unsuccessful in obtaining any response to telephone calls or letters to Benjamin W. Stapleton, Jr., president of the company which operated the subject contract with regard to your proposed amendment to allow a recess and extend the completion date of the contract.

Briefly, the status of the contract is as follows:

1. The project has been in unauthorized recess since May 29, 1955.

2. Shenandoah-Dives failed to pay taxes for 1952 voiding their operating contract with the American Smelting and Refining Company, and that agreement has been canceled. American Smelting and Refining Company owns the property, as you know, where the exploration was performed.

3. American Smelting and Refining Company presumably is not interested in taking over operation of the property and our contract for various reasons, among them the fact that they would have to renegotiate with Shenandoah-Dives in order to operate through their property; also, any operation they might undertake would be subject to unreasonable terms by the labor union. As a result, they feel they would be unable to operate profitably as the operation has been marginal, even under past efficient management.

4. Climax Molybdenum Company is apparently not interested in taking the operations over because they would have to renegotiate with both American Smelting and Refining Company and Shenandoah-Dives in any program they might undertake. They would also more than likely have a high cost union contract to face.

Berk

5. It is a logical assumption that Shenandoah-Dives has been unable or realizes that it is useless to attempt to obtain signatures on the Owner's Consent to Lien forms for attachment to your amendment.

Under the circumstances there appears to be no other alternative than to accept cancellation of the contract for failure to prosecute operations in accordance with Article 8(b) of the contract.

effect

The Region III Field Team reluctantly recommends such action, unless the Operating Committee determines that the problem can be solved in some other manner.

Possibly you have in mind some other company such as the Newmont Mining Company that might consider looking at the possibilities of taking over the operations.

DMEA Field Team, Region III

Re: Docket DMEA 2991 (Lead-Copper-Zinc)
Contract IDM-E558
Shenandoah-Dives Mining Company
San Juan County, Colorado

Dear Mr. Stapleton:

Attempts to contact you by telephone the past ten days at your office with reference to the captioned DMEA contract have been unsuccessful.

Our letter of March 24, 1955 transmitted for your information a copy of an amendment prepared by the Washington DMEA office authorizing a recess of operations and extending the period for completion of work for one year from June 26, 1955. also enclosed were copies of Standard Form MF-203 Owner's Consent to Lien for execution by the American Smelting and Refining Company.

The action to initiate an extension and authorize the recess resulted from your request of February 17, 1955 and it is considered to your company's best interest to keep the contract in good standing.

Inasmuch as the expiration date of the contract, June 26, 1955, is only about a week away, we will appreciate receipt of the executed Owner's Consent to Lien forms or information from you as to when they may be expected. Except for these forms the Amendment is in our hands signed by the Administrator ready for submission to you for signature.

A prompt reply will be appreciated.

Re: Docket BMRA 2991 (Lead-Copper-Zinc)
Contract IBM-8558
Shenandoah-Dives Mining Company
San Juan County, Colorado

Dear Mr. Stapleton:

In reference to matter discussed in your letter of February 17, 1955 and prior correspondence, we have received from the Washington office, BMRA, an amendment prepared to authorize a recess of operations and extend the period for completion of the project work. However, before releasing the amendment we have been instructed to obtain new Owner's Consent to Lien which is necessary in conjunction with extending the life of the contract and other provisions in the amendment relative thereto.

For your information and the purpose cited we are enclosing a copy of proposed Amendment No. 2 and the original and six copies of Form MF-203 Owner's Consent to Lien which are to be executed by the American Smelting and Refining Company. The original and five properly executed copies of Form MF-203 are to be returned to this office.

Upon receipt of the new Owner's Consent to Lien forms properly executed we will then forward the amendment to you for signature by an authorized official of the company.

Very truly yours,

W. M. Traver

San Juan County, Colorado
Contract No. Idm-E558

Dear Mr. Traver:

Referring to your letter of February 23 covering the cited contract, we are enclosing the original and five copies of Amendment No. 2, which provides for the requested recess.

We call your attention to the enclosed memorandum from the Acting Assistant Solicitor, Defense Minerals, dated March 10. He points out the necessity for a new Owner's Consent to Lien, since we are extending the completion period beyond the ten year period. The new Owner's Consent to Lien forms are also enclosed.

If you approve the amendment please present it to the Operator for signature and, when completed, distribute the copies in the usual manner. However, if you are not in accord with the terms of the amendment and any proposed changes lie beyond the range of your delegated authority, all copies should be returned to us with your comments.

(Lead, copper, zinc)
(Contract IDM-E558)

Dear Mr. Traver:

As you know, we have not applied to you for a formal recess agreement under Contract IDM-E558 because we have been actively negotiating for the operation of the property by the Climax Molybdenum Company. To date, we have not received word as to their disposition to our proposal.

However, so that the files in your office may be complete please take this letter as a request for recess of operations under Contract IDM-E558 for the period from May 29th, 1954, when we ceased operations at Silverton, until June 26th, 1955. We would appreciate hearing from you as to whether or not such a recess of operations has been approved.

As soon as we are able to tell you more definitely of the plans of the corporation, we will communicate with you again. It is our hope, of course, that operations can commence very soon after the spring thaws.

Yours very truly

Re: Docket DMEA 2991
(Lead-Copper-Zinc)
Contract I4m-2558

Dear Mr. Stapleton:

Reference is made to your letter of December 16, 1954 and prior correspondence relative to the status of work under the referenced contract.

The Defense Minerals Exploration Administration tries at all times to be sympathetic to the problems of the mining industry. However, DMEA contracts cannot be approved for continuance in a vague and nebulous state, neither active nor recessed by formal agreement between the parties concerned.

It is believed to be in the best interests of Shenandoah Dives Mining Company to maintain the contract in good standing, which can be done by your requesting approval of a recess of operations for such time as is deemed necessary to resolve matters which you state are in the process of negotiation.

It is not necessary for you to divulge the confidential nature of such negotiations in order to justify your request for approval of a recess of operations.

We trust that we will hear from you at an early date.

Re: Docket No. DMEA-2991 (Lead-Copper-Zinc)
Shenandoah-Dives Mining Company
Letter "G" Vein Project
San Juan County, Colorado
Contract No. Idm-E558

Dear Mr. King:

We have your letter of December 17, regarding the cited contract, and also copies of a letter dated December 16 from the Operator's attorneys.

We are not clear as to why the attorneys request contract continuance without a formal recess agreement. Possibly, they feel that such an agreement would involve a lengthy and complicated process, whereas it is actually only a matter of simple routine.

Will you please explain to them that at all times we try to be sympathetic to the various problems of the industry and that we are quite willing to grant a recessing amendment, especially since it is our understanding that the property is being maintained in good "stand-by" condition. However, we do dislike to have contracts in a vague and nebulous state, neither active nor in recess. In fact, we do not feel that we possess the authority to give approval to such a status. Hence, it is emphatically to the Operator's own best interest to reinstate his contract via an amendment.

Please explain that we have no desire to force the Operator to reveal details of confidential business negotiations still pending. If they will merely advise us as to a date when they feel operations probably could be resumed, we shall prepare the necessary amendment here.

Sincerely yours,

Region No. 4

In Re: Docket DMEA 2991
Contract IDM-E 558

Gentlemen:

The Shenandoah-Dives Mining Company with its principal mine at Silverton, Colorado, as you know, suspended operations under the above-entitled contract. This suspension came at the close of business during the last week in May, 1954.

Since that time the Company has been negotiating actively for additional financing or other means to again commence operations at Silverton.

So that you may be continually advised as to our situation we have today submitted to one of the large mining organizations a proposal for the exploration and development work at the mine, with an option for this mining company to purchase the property. I am sorry at this stage in the negotiations that I cannot disclose the name of the company with whom we are dealing. However, they have given every indication that such a proposal would be given sympathetic understanding and consideration, and it is my feeling that there is a good possibility of negotiations being satisfactorily terminated in the early part of 1955. However, until such negotiations are complete we will not be in a position to reopen our operations at the Silverton mine. We will keep you advised of the progress of our negotiations in the hope that we may have your cooperation in the event a satisfactory arrangement is made for the development and possible sale of the mine.

We trust that, under the circumstances, this project can be allowed to continue without a formal recess agreement until the present negotiations are satisfactorily concluded, at which time it is anticipated that active operations will commence.

Yours very truly,

IRELAND, IRELAND, STAPLETON & PRYOR

Re: Docket DMEA 2991 (Lead-Copper-Zinc)
Contract IDM-E558

Dear Sir:

Your letter of Sept. 21st to Mr. Stapleton was forwarded to this office for reply.

Mine operations were suspended on May 29th. Since that time Mine equipment and facilities have been on a standby basis, as it was not anticipated that the work would be recessed for any great length of time. However, if work is not resumed by Nov. 1st (approx) we will be forced to continue suspension for the duration of the winter months.

I will keep you advised.

Very truly yours,

Subject: Docket DMEA 2991 (Lead-Zinc-Copper), Contract IDM-E558, Shenandoah-Dives Mining Company, San Juan County, Colorado

Enclosed are the original and two copies of Amendment No. 1 to Contract IDM-E558 which has been prepared and executed in conformance with advice contained in a teletype from the Chairman of the Operating Committee dated April 14, 1954 to modify the description of drifting to be performed on the letter "G" vein. Also enclosed are three sets of data relevant to the amendment.

Copies of this amendment have been given to the operator, the Fiscal Officer, Region IV, and a copy has been retained for our files.

Memorandum

To: Executive Officer, DMEA Field Team, Region IV

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMEA 2991, contract Idm-E558 (Lead-zinc-copper), Shenandoah-Dives Mining Company (Silver Lake group - Letter "G" vein), San Juan County, Colorado - Request for amendment

Enclosed are the original and seven copies of W. L. Dare's memorandum covering the above amendment request recommending approval.

Under the circumstances, the recommendation has my approval. However, I am of the opinion that the amount of footage allowed for drifting east should be left to the discretion of the Region IV Field Team and not be continued to the limit of all drifting remaining to complete unless the ore encountered in the one drill hole proves to have continuity in that direction.

Also, I believe the recommendations of the Survey geologist, who is certainly more conversant than anyone with conditions in the general area and the Shenandoah-Dives property in particular, should not be overlooked. Before contract funds are exhausted, a sufficient sum should be assigned to test by drill hole his theory of a possible offset of the Letter "G" beyond the present face of the west drift.

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Dare

Subject: DMEA 2991, contract Idm-E558 (Lead-zinc-copper), Shenandoah-Dives Mining Company (Silver Lake group - Letter "G" vein), San Juan County, Colorado - Request for amendment

Benjamin F. Stapleton, Jr., Director, and Edwin A. Larson, Resident Manager, Shenandoah-Dives Mining Company, in a letter to J. H. East, Jr., Regional Director, Region IV, dated March 31, 1954, requested an amendment to contract Idm-E558, to permit revision of the original work program.

This requested revision proposed that remaining contract drifting be completed along the Letter "G" vein east of the main crosscut rather than continuing west as originally planned. The operator's reasoning for ceasing work in the west heading is primarily because of the poor mineralization exposed in 273 feet of drifting completed in March 1954, contending that no indications exist that warrant additional drifting in the westerly direction. The proposed drifting east from the crosscut is based entirely upon the results of a horizontal diamond drill hole drilled from the crosscut in January 1954. The hole encountered 8 feet of vein material approximately 60 feet east of the crosscut that assayed 0.03 ounce gold, 2.9 ounces silver per ton, 4.6 percent lead, 0.5 percent zinc, and 0.20 percent copper.

The fact that ore does not exist at this depth along the Letter "G" vein system westerly in the area yet to be explored has not been proven. David J. Varnes, Geological Survey, who has conducted geological research in the area, was consulted and reported that the major fault planes of the Titusville or Letter "G" fault have shown the characteristic of irregular left-hand offsets along its strike. Varnes suggested drilling a long diamond drill hole southwest from the present west drift face to explore for a mineralized offset. A barren relatively strong fracture exists in the present breast; however, it does not eliminate the possibility of a mineralized offset further west and south in an area that has not been explored by diamond drilling to date.

The main problem appears to be one of economics. From information gained from Larson, the company directors, advised of the discouraging results of drifting completed in March, are in doubt as to the financial justification of continuing the project in operation, if the drifting is to be continued to the west.

The drifting east will commence in good ore as indicated by the one drill hole and will be in relatively virgin ground. For approximately 420 feet of drifting there will be 1,200 feet of back above the drift and for the next 650 feet there will be 1,300 feet of back.

Before the current metal price decline, the Shenandoah-Dives mining and milling operations had not only been the mainstay of the town of Silverton but had provided custom milling necessary to keep other smaller mines in the area operating.

Considering the future consequences of complete shutdown and also the fact that drifting east will start in ore and continue in ground with a reasonably good ore potential, the requested amendment is recommended for approval.

Memorandum

To: A. H. Koschmann GHK

From: D. J. Varnes

Subject: DMEA Docket 2991 (lead-copper-zinc), Contract Idm-E558, Shenandoah Dives Mining Company, San Juan County, Colorado. Proposal to drift east in lieu of performing balance of drifting to the west on the Letter "G" vein

I have no direct information regarding the Letter "G" vein in this vicinity, from either surface outcrop or from underground workings. This is within the area mapped by Mr. Burbank. The request to drift east appears reasonable in view of the disappointing showing to the west, and I know of no geologic reasons to believe that the eastern area would be less favorable than the western area. At this depth, the vein is, you might say, an unknown quantity for considerable distances east and west of the crosscut.

The maps accompanying the request indicate that there are two en echelon parts to the Letter "G." The arrangement of these veins is entirely in keeping with present ideas on the origin of the fissure, i. e., it is a right-handed shear zone. The Shenandoah-Dives vein zone also has such en echelon veins. If the vein to the east dies out, I would recommend putting in a diamond drill hole pointed ahead and to the left at about 45° to the trend of the drift. In fact, if the present west heading shows no vein structure, I would recommend that a hole be put in pointing ahead and to the left.

Denver, Colorado

Attention: Mr. East, Regional Director

IN RE: DMEA 2991
IDM-E 558
Shenandoah-Dives Mining Company, Silverton, Colorado

Gentlemen:

This letter is written by the undersigned, Benjamin F. Stapleton, Jr., as a Director of the Shenandoah-Dives Mining Company, and Mr. E. A. Larson, as the Resident Manager at Silverton, and is written pursuant to a resolution of the Board of Directors of the company at a meeting of the Board.

In reference to the exploration project contract set forth above at the Shenandoah-Dives mining properties, Silverton, Colorado, this letter will serve as a request for a change order under said contract as will be more fully set forth in this letter.

We are enclosing herewith copy of a progress map of the project as of March 31, 1954.

You will recall that under the project we had been drifting to the west from the cross cut on the Letter "G" Vein during the month of March. Drifting to the west was continued for a length of 273 feet. The drifting during March resulted in no commercial grades of ore suitable for mining. There were no indications during the March drifting of any better prospects further to the west.

You will recall in our report to Mr. W. M. Traver, Chief of the Mineral Resources Branch, Mining Division, Bureau of Mines, dated January 16, 1954, a copy of which report is in your hands, that we diamond drilled a hole referred to as No. 4 to the east of the cross cut, which resulted in crossing a vein of ore 60 feet east of the cross cut which assayed with a net smelter return of $11.63.

In view of the unfavorable showings during the month of March in the drifting to the west and in further consideration of the most favorable diamond drilled Hole No. 4 showing ore to the east, it is requested that as of March 31, 1954, the contract for exploration under which the company is now working, be changed and amended to provide for drifting the remainder of the contracted feet, namely 689.5 feet, to the east along the vein indicated by diamond drilled Hole No. 4.

We feel that a change order in the contract allowing for drifting to the east will prove beneficial not only to the company but to the Government as well. So that work may continue as rapidly as possible, we would appreciate it if you would do whatever is possible to expedite this change order so that drifting operations may be commenced to the east as of April 1, 1954.

Yours very truly,

Benjamin F. Stapleton, Jr.
Director

E. A. Larson
Resident Manager

BFS:em

P.S. Enclosed herewith are nine (9) photostat copies of a portion of the map "Figure 4" referred to in Exhibit "A" and attached to the contract, which shows the work completed to date, and the proposed change in the work outline.

Re: Docket DMEA 2991
(Lead-Zinc-Copper)
Contract IDM-E558

Dear Mr. Larson:

Enclosed are the original and five copies of Amendment No. 1 to Contract IDM-E558, effective April 1, 1954, which we have prepared in conformance with your request of March 31, 1954 to modify the description of work on the letter "G" vein to authorize drifting easterly and westerly to the extent dependent on conditions encountered as the work progresses.

All copies of the amendment should be signed by an authorized official of the company, the corporate seal affixed, and returned to this office leaving the date blank.

Upon return to this office and signature by the Executive Officer, DMEA Field Team, Region IV, for the Government, your copy of the amendment will be forwarded to you.

Very truly yours,

John F. Shaw

Dear Mr. King:

In re DMEA 2991 IDM E 558
Shenandoah-Dives Mining Co.

At the time of closing the above referred to exploration agreement, request was made by your office that certain open ground adjacent to our proposed crosscut and drift be taken up by mineral locations. Accordingly, claims have been located covering this ground in the name of The American Smelting and Refining Company.

Enclosed herewith are certified copies of -

Location Certificate No. 94332 - Lorraine Lode Mining Claim, and
Location Certificate No. 94333 - American Girl Lode Mining Claim

recorded September 23, 1953, in book 172, pages 359 and 360, respectively, Recorder's office, San Juan County, Colorado. Also enclosed is map showing the location of said claims.

Sincerely yours,

Charles Kentor

From: Chief, Mineral Resources Branch, Mining Division, Region IV

Subject: DMEA 2991, Contract Idm-E558 (Lead-zinc-copper), Shenandoah-Dives Mining Company, San Juan County, Colorado

Please find the original and one copy of W. L. Dare's memorandum concerning the establishment of the starting point for the subject project.

The company has not received your standard form letter transmitting and instructing them regarding progress reports and forms. They requested Dare to have the forms sent them at Silverton, Colorado.

Also, they request that checks on the contract be mailed to their Kansas City, Missouri office. You should probably advise them, if Dare is correct, about his statement to Larson concerning royalty payments on 3220 stope ore.

July 27, 1953

Memorandum

To: Chief, Mineral Resources Branch, Mining Division, Region IV

From: W. L. Dare

Subject: DMEA 2991, Contract Idm-E558 (Lead-zinc-copper), Shenandoah-Dives Mining Company, San Juan County, Colorado

Drifting under contract Idm-E558 began on July 6, 1953. A measuring plug was located at breast height in the right wall and represents a distance of 34 feet to the face where the DMEA contract work began. This plug is at a point where the company's designated July footage began and is approximately 600 feet from the 200-L raise.

At the time of the visit, no vein structure was noted in the face. The operator is using two crews for advancing the contract drift.

E. A. Larson questioned the company's responsibility of royalty payments on broken ore and old stope fill in the 3220 stopes. He was informed that because this ground was listed in the contract, royalty payments on all production were due the Government.

The operator has not received any monthly progress report forms for their first progress report and requested that eight copies be sent to the company office at Silverton. Larson also asked that all Government checks covering participation in the exploration costs be mailed to the company officials at Kansas City, Missouri.

From: Executive Officer, DMEA Field Team, Region IV

Subject: Docket DMEA 2991, Contract Mm-2558, Shenandoah-Dives Mining Company

Enclosed is a copy of an Easement and Agreement dated July 14, 1953, and one copy of Amendment to Easement and Agreement dated July 16, 1953, between Norman E. Maxwell and Shenandoah-Dives Mining Company, with respect to American Boy Mining Claim, Survey No. 7244, San Juan County, Colorado.

Please advise us by teletype if this document satisfies the requirements laid down in the letter dated July 16, 1953 from the Chairman of the Operating Committee and if we may release the contract to the operator.

Shenandoah-Dives has returned to us six copies of Owner's Consent to Lien, Form MF-203, properly executed by the American Smelting and Refining Company.

The Shenandoah-Dives Company agrees to accept the responsibility for royalty payments for the one-third interest in the American Boy Claim owned by Norman E. Maxwell. Please prepare an amendment to Contract Mm-2558, which will provide for this royalty payment.

Contract No. Idm-E558

Dear Mr. King:

Referring to your letter of July 3, 1953, regarding the above docket, we are not concerned over the matter of possible royalty payments from ores which may be encountered in the American Boy Claim. It is our understanding that this claim has little relationship to the target area and there is little likelihood that ores would be encountered therein. However, in such an event, it would be satisfactory that the American Smelting and Refining Company accept responsibility for the two-thirds interest which they own and the Shenandoah-Dives Company assume the responsibility for possible royalty payments for the other one-third interest, as you suggest.

Our main concern is the matter of right-of-way for the cross-cut tunnel in its penetration through the American Boy Claim. It very well could be that an owner of a minority interest in this claim might be in a position to create a difficult situation. Therefore, we phoned you a few days ago that the Shenandoah-Dives Company would have to furnish us with good and sufficient proof that this right-of-way matter had been resolved.

Sincerely yours,

George C. Selfridge

REGISTERED

Mr. Charles Kentor
Attorney at Law
First National Bank Building
Denver, Colorado

Dear Mr. Kentor:

Enclosed herewith is your copy of Exploration Project Contract No. Idm-E558, Docket No. DMEA-2991.

Also enclosed is one copy of Form MF-104 "Operator's Monthly Report and Voucher" and one copy of Form MF-104A "Operator's Unit Cost and Progress Report". At the completion of the first full calendar month of operation and monthly thereafter, you are required to submit five copies of the forms to Mr. W.M. Traver, U.S. Bureau of Mines, Building 20, Denver Federal Center, Denver 14, Colorado. The sixth form is for your records. Please note that the monthly report requires a narrative report which should be accompanied by maps or sketches. The narrative report must be signed by the operator. The monthly report will not be processed for payment unless accompanied by a narrative report. Additional copies of Forms MF-104 and 104A will be forwarded to you as required.

For your information and in reply to many questions that have been asked, after Forms MF-104 and 104A are received an engineer will check progress and approve your accounts, after which it will be sent to the Regional Office, Region IV, U.S. Bureau of Mines, 224 New Customhouse, Denver 2, Colorado, for auditing and vouchering. If the report is in order a check will be issued by the Treasury Department for the Government's portion of the costs.

Your attention is directed to the regulation that provides that reimbursement for the cost of work accomplished prior to the date of the contract will not be allowed. This contract is prepared on the short form under the terms of which the Government reimburses you for 50 percent of the agreed estimated costs as they accrue for units of work actually performed. Please advise this office in writing the date work actually starts under the contract.

If you have any difficulty in completing these forms and the reports, please call on Mr. Traver or this office for assistance.

Yours very truly,

From: Executive Officer, DMEA Field Team, Region IV

Subject: Docket No. DMEA-2991, Contract Idm-E558, Shenandoah-Dives Mining Company, San Juan County, Colorado

Contract Idm-E558 has been released to the operator for signature. The Washington office has requested us to make the following change in the contract, which should be added to Annex II:

> "By instrument dated July 14, 1953, as amended, Norman E. Maxwell, owner of a one-third interest in the aforementioned American Boy claim, granted the operator a 15 year easement for a crosscut mining tunnel and tracks and the necessary right of ingress and egress."

Please make the above change in your copy of the contract and attach the enclosed copy of Owner's Consent to Lien.

We will notify you when the operator has returned the executed copies of the contract.

W. H. King

Dear Mr. Kentor:

Enclosed are the original and four copies of Exploration Project Contract IDM-E 558 between the Government and the Shenandoah-Dives Mining Company.

All copies of this contract should be signed by an authorized official of the company, the signature certified by the secretary, the corporate seal affixed, and returned to this office. We will then forward you the operator's copy of the contract.

Very truly yours,

W. H. King

Dear Mr. King:

In re Docket No. DMEA-2991 -
Shenandoah-Dives Mining Company

Herewith the following documents:

1. Six copies of Form MF-203, Owners Consent to Lien, executed by American Smelting and Refining Company.

2. Two copies of Easement and Agreement, dated July 14, 1953, and two copies of Amendment to Easement and Agreement, dated July 16, 1953, between Norman E. Maxwell and Shenandoah-Dives Mining Company with respect to American Boy Mining Claim - Survey No. 7244, San Juan County, Colorado.

I trust these documents will enable your office to complete and release the Exploration Contract with the Shenandoah-Dives Mining Company.

With many thanks for your cooperation, I am

Very sincerely yours,

Charles Kentor

EASEMENT AND AGREEMENT

THIS CONTRACT AND AGREEMENT, made and entered into between NORMAN E. MAXWELL of Midland County, Texas, hereinafter called Maxwell, and SHENANDOAH-DIVES MINING COMPANY, a corporation having its principal office in Denver, Colorado, acting through its officers hereunto duly authorized, and hereinafter called Shenandoah,

W I T N E S S E T H:

1.

Maxwell hereby grants to Shenandoah the right, power and authority to construct and maintain, at the sole risk, cost and expense of Shenandoah, a crosscut mining tunnel and tracks through and across the American Boy Mining Claim, Survey No. 7244, San Juan County, Colorado, as an extension of the present drift of Shenandoah in the Melville Vein, which extension is to be constructed in an endeavor to explore what is known as the Letter G Vein; Maxwell grants to Shenandoah the right of ingress and egress through and across the American Boy Claim and through the proposed crosscut mining tunnel for all purposes incident to mining operations by Shenandoah upon claims owned or under lease by it covering the Letter G Vein and which are reached by access through the proposed crosscut mining tunnel; the easement and incidental rights here granted shall be for a term of 15 years and as long thereafter as mining operations are prosecuted by Shenandoah in the Letter G Vein necessitating the use of the mining tunnel mentioned above.

2.

Promptly following completion of the proposed mining tunnel across the American Boy Claim, Shenandoah agrees to furnish

Maxwell full information relative to any veins of mineral ore encountered in the driving and construction of the said tunnel and to furnish to Maxwell a map correctly reflecting the location, strike and dip of each such vein, together with a copy of all assays of ore taken from each such vein.

3.

If any mineral ore of commercial value is encountered and recovered in the driving and construction of the proposed tunnel, Shenandoah agrees to pay to Maxwell as a royalty on the said mineral ore, free of all cost and expense of mining and transportation to the mill, ten per cent (10%) of the gross market value of the said mineral ore as determined by sampling the ore at the head of the mill; by reason of the fact that the interest of Maxwell in the American Boy Claim is an undivided interest, Maxwell shall be entitled to receive that portion of the royalty above provided for as conforms to his undivided interest in the said claim. In addition to payment to Maxwell of the royalty specified above, Shenandoah agrees to pay such other royalties as have been heretofore reserved or created with respect to mineral production from the said American Boy Claim.

4.

If a vein of commercial ore is encountered on the American Boy Claim in the driving and construction of the proposed tunnel, it is agreed that the parties hereto shall enter into a joint operating agreement for the working and development of the vein or veins on the American Boy Claim, the terms and provisions of such agreement to be negotiated between the parties hereto promptly following any such discovery of commercial ore on the American Boy Claim. Development of any veins of commercial ore encountered on the American Boy Claim shall be commenced and prosecuted as promptly as is consistent with the primary objective

of Shenandoah in the construction of the proposed crosscut mining tunnel so that if reasonably possible, development on the American Boy Claim shall commence and proceed contemporaneously with the construction of the proposed mining tunnel; however, if the commitments of Shenandoah are such that the two operations may not be carried on simultaneously, then development of any commercial ore on the American Boy Claim shall be commenced within a reasonable time following the completion of Shenandoah's primary objective in driving a crosscut tunnel to the Letter Q Vein.

5.

Shenandoah grants to Maxwell and his duly authorized representatives the right at all safe and reasonable times to enter through the workings of Shenandoah for the purpose of inspection of all operations of every character through, upon or affecting the American Boy Claim.

6.

The covenants and agreements hereinabove shown to be kept and performed by the parties hereto constitute full consideration for this contract, the terms and provisons of which shall be binding upon and inure to the benefit of the parties hereto and their respective heirs, successors, assigns and legal representatives; however, the rights of Shenandoah under this easement and agreement shall not be transferred or assigned without the written consent of Maxwell.

WITNESS THE EXECUTION HEREOF this the 14th day of July, 1953.

AMENDMENT TO EASEMENT AND AGREEMENT

THIS AMENDMENT entered into between NORMAN E. MAXWELL, of Midland County, Texas, hereinafter called Maxwell, and SHENANDOAH-RIVER MINING COMPANY, a Colorado corporation, acting through its officers hereunto duly authorized, and hereinafter called Shenandoah,

WITNESSETH:

1. That paragraph 3 of the Easement and Agreement between the parties dated July 14, 1953, is hereby superseded and amended to read as follows:

"3.

"(a) If any mineral or ore of commercial value, shall be encountered, recovered and saved in the driving and construction of the proposed tunnel, Shenandoah shall pay to Maxwell a royalty of 15% of one-third (1/3) of the net smelter returns on all crude ore sold to a smelter, and 10% of one-third (1/3) of the net smelter returns on all concentrates. Such net smelter returns to be calculated after deducting freight, hauling, and treatment charges.

"(b) All such ores shall be sold in the name of Shenandoah, and duplicate settlement sheets shall be forthwith furnished to Maxwell. Each settlement shall be accompanied by a duplicate of the smelter returns for each lot of such ore or concentrates sold to a smelter.

"(c) Shenandoah shall indemnify and hold Maxwell harmless from any claim for royalties on such ore asserted by any owner or owners of the remaining undivided two-thirds (2/3) or other interest in said American Boy claim."

2. Except as so amended, said Easement and Agreement of July 14, 1953, shall be and remain in full force and effect.

Executed this 16th day of July, 1953.

SPECIAL DELIVERY

Memorandum

To: C. P. Mittendorf, Administrator
Defense Minerals Exploration Administration

From: Executive Officer, DMEA Field Team, Region IV

Subject: Shenandoah-Dives Mining Company, Docket 2991, (Lead-Zinc)
Silverton, San Juan County, Colorado

Mr. Kentor, the local representative of the Shenandoah-Dives Mining Company, notified us today that the American Smelting and Refining Company refused to sign the Owner's Consent to Lien form prepared by the Washington office.

They objected to being responsible for 100 percent of the royalties from the American Boy claim, inasmuch as they only own a two-thirds interest in this claim.

We recommend that a new Owner's Consent to Lien form be prepared, which would only obligate the American Smelting and Refining Company for two-thirds of any royalty due the Government on the American Boy claim. The Shenandoah-Dives Mining Company is willing to assume the responsibility for payment to the Government of the other one-third of any royalty due on the claim.

We also recommend that the Owner's Consent to Lien on this one-third royalty be waived and the contract be amended to hold the Shenandoah-Dives Mining Company responsible for this royalty.

Re: Docket No. DMEA 2991 (Lead-Copper-Zinc)
Shenandoah Dives Mining Co.
Silver Lake Mine
San Juan County, Colorado

Dear Mr. King:

Enclosed are the original and five copies of the subject contract, which has been prepared in accordance with your recommendations. If it meets with your approval will you kindly present it for signature and distribute in the usual manner.

Since the ground covered by the project is not owned by the Applicant, it must of course secure the Owner's Consent to Lien, which should be attached to the contract forms prior to distribution for signature. You will note that such Owner's Consent to Lien also contains a clause protecting the Government in the case of the American Boy Claim, number 7244, which is only two-thirds owned by the American Smelting & Refining Company. You will find these forms enclosed.

We call to your attention the statement in the report by Hazen and Varnes as follows:

> "Near the 1,400-foot point of the proposed drifting on the letter "G" vein, the work will progress onto "open" ground unless the old system of apex rights will hold valid at this time. Vertical side lines of claims would not cover the exploration drifting beyond the 1,400-foot point."

Until the above question is clarified the Government could not participate in the expense of work in such area.

Sincerely yours,

George C. Selfridge
Chairman, Operating Committee

Gentlemen:

Re: Docket DMA-2991
Defense Mineral Exploration Adm.

We have been advised of favorable action upon our application for Government cooperation in exploration in our mining property in San Juan County, Colorado.

Recent changes have been made in the Executive Department of our Company and we take this opportunity to advise you that Mr. James W. Oldham, of Kansas City, Missouri, former President, and Mr. Charles A. Chase, former Executive Vice President and General Manager in charge of operations in Silverton, have retired and are no longer connected with the Company in any executive capacities.

We have just telephoned Mr. Charles Kentor, our Denver representative, requesting that he communicate with you and advise us of any action that should be taken now or in the near future respecting the contract to be executed between our Company and the proper Government Department.

Mr. Edwin A. Larson is now in charge of Company operations at Silverton, Colorado, as Resident Manager, and we would be pleased to have you advise with him from time to time upon any matters that should have attention other than matters to be referred to the Company at this office in Kansas City.

Very truly yours,

William C. Lucas

Memorandum

To: Secretary to the Operating Committee, Defense Minerals Exploration Administration

From: Field Team, Region IV

Subject: Final Report, DMEA Docket 2991 (Lead-Zinc), Shenandoah-Dives Mining Company, San Juan County, Colorado.

Enclosed are the original and three copies of the final report on Docket No. DMEA-2991.

The proposed project consists of crosscutting 1300 feet to cut the Letter # vein, drifting 1700 feet on the vein, and raising 300 feet on the vein.

The estimated cost of the project is $211,900.00. The amount of Government participation would be $105,950.00.

We recommend that this application be approved and an exploration project contract be prepared.

Re: Docket No. DMEA 2991 (Lead-Copper-Zinc)
Shenandoah-Dives Company
Silver Lake Mine
San Juan County, Colorado

Dear Mr. King:

This refers to your letter of April 16, 1953, with which you submitted the application of the above company for an exploration project contract.

On May 15, we had advised the Applicant by telegram that we were forced to deny his application due to the deletion of lead, zinc and other minerals from our eligible list.

However, we have just been advised that applications which were received prior to May 15 may now be considered. Hence, will you please arrange for the necessary field examination and recommendations for the above proposed project. We enclose a copy of the recommendation of the commodity members of the U. S. Geological Survey and the Bureau of Mines. You will note their suggestion as to Mr. David Varnes, geologist in the Denver office.

May we request that we receive your recommendations as promptly as possible. It is our understanding that the town of Silverton, Colorado is, to quite an extent, dependent upon the activities of the applicant company, and naturally we wish to do everything which can properly be done to assist the mining communities.

Sincerely yours,

George C. Selfridge

April 28, 1953

Memorandum

Re: DMEA-2991
Shenandoah-Dives Mining Co.
Animas District
San Juan County, Colorado
$229,630
Lead-zinc

To: Mr. W. R. Griswold

From: E. L. Newcomb - O. M. Bishop

Subject: Recommendation for field referral

The applicant requests assistance to explore downdip extension of the Letter "G" vein on the Silver Lake group of claims. The proposal involves 1300 feet of crosscutting and drifting to the Letter "G" vein from the 4177 Main Level, then drifting 1700 feet westerly on the vein and raising 500 feet to the Unity tunnel level.

Shenandoah-Dives was in continuous operation from 1928-1952 and produced about 4,200,000 tons of lead-zinc-silver-gold-copper ore worth about 26,280,000. The mine recently closed down presumably because of falling metal prices and a lack of presently minable ore reserves. According to the applicant, the property produced 70% of the total ore mined in San Juan County, and 11% of the ore mined in Colorado for the period 1928-1952.

The Silver Lake group of claims have about 90,000 feet of underground workings and about 23,000 feet of drill hole exploration have been done.

For the years 1942-1952, the total mine production was 1,800,000 tons averaging .086 oz. of gold, 1.89 oz. of silver, 1.5% lead, 0.68% zinc, and 0.26% copper. Average value of the ore, based on 60% of the gross market price, is 4.99 per ton. The averaging stoping width has ranged from 9.1 feet in 1928 to 6.7 feet in 1952. Although the ore is low grade, continuous production during the last 25 years was made possible by very efficient mine management.

The proposed exploration was discussed with Mr. A. S. Burbank of the Survey, and he suggested that the application be referred to Mr. David Varnes, USGS geologist in the Denver office. Mr. Varnes has recently completed mapping in the area of the Letter "G" vein. This work has not been published, and the report is not available to us in Washington.

We recommend that the application be referred to the field for review by the Survey and Bureau members of the field team. It should be noted that the characteristics of the structures vary at depth, with changes in the nature of the volcanics, and with changes in the strike and dip of the mineralized zones. Final judgment of the proposal should be based on underground evidence on the Mayflower, Iowa and other nearby veins at the horizons to be prospected.
