December 9, 1954

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection, Docket No. DMEA 3143 (cobalt-copper), Calera Mining Company, Blackbird Mine, Lemhi County, Idaho, Contract No. Idm-E645

The inspection was made December 4, 1954 by A. L. Service and V. Z. Johnson who were accompanied by the Operator's geologist, Richard Cribbs. Snow made chains necessary on conventional vehicles to get to the mine.

Stage I of the contract is almost completed; surface trenching was exceeded in September and 8,576½ feet of diamond drilling has been completed in 21 holes. The contract provides for 8,700 feet of diamond drilling but the 123½ feet which remain cannot reach the targets to be explored.

Stage I of the project has been successful. The Operator's geologist has estimated possible ore in three zones with work units about as follows:

Black Tail zone (Extension of Brown Bear)	1,250 ft. trench 2,955½ ft. diamond drilling	90,000 T/100' depth	0.80% Co 2.0 % Cu
Old Gold Zone	4,250 ft. trench 4,099 ft. diamond drilling	30,000 T/100' depth	0.42% Co 0.70% Cu
Indian Quartz or Dandy Zone	Little trenching 1,003 ft. diamond drilling	Questionable	

Underground diamond drilling is recommended as the next step to explore the Indian Quartz zone. Mine openings on the 6850 and 7100 levels would make it feasible to crosscut, by diamond drilling, the zone indicated by trenches 540, 580 and 587, as well as surface holes 45 and 47—all near coordinates 15,500 N, 5,500 E. The near surface results to

date indicate a wide zone that is weakly mineralized; however, further exploring at depth might show higher copper cobalt concentration. A few holes from underground stations would give more information about this zone before undertaking or abandoning the proposed 7100 crosscut.

Underground work, Stage II, was advanced 180 feet in the 7400 northwest drift since the inspection of November 3, 1954. Two switching stations were used to shorten the length of tram. Heavy timbering was required along with 32 feet of spiling near coordinates 17,800 N and 3000 E as this northwest drift enters a broken mineralized zone. Dilution and delay in assay returns were the reasons for not sending the muck as ore although samples of the muck assayed 0.40% Co and 0.93% Cu through a 60-ft. interval of the above advance.

The entire drift has been well timbered for a permanent haulage level and the drainage ditch has been improved. The cross sections are still large - 9x11 feet.

The total contract units completed to November 1, 1954 are about as follows:

Drift	435 feet
Crosscut	220 "
Normal timbering	650 "
Heavy "	70 "
Spiling	70 "
Framing	148 sets
Diamond drilling, Stage I	8576½ feet
Diamond drilling, Stage II	98 "
Assays, Stage I	2300
Assays, Stage II	150
Reaming, Stage I	370 feet

The workmanship is good, and the rate of advance is improving.

Memorandum

To: DMEA Field Team, Region II

From: Howard B. Nickelson, Geologist, U. S. Geological Survey

Subject: Interim Inspection, Docket No. DMEA-3143 (cobalt-copper), Calera Mining Company, Blackbird Mine, Lemhi County, Idaho, Contract No. Idm-E645.

The property was visited on November 22, 1954, accompanied by Mr. Don Kellum, geologist, Geological Survey.

The project was discussed with Mr. Richard Cribbs, chief geologist, and the examiners visited the DMEA drift. Mr. Cribbs stated that the DMEA surface work has been completed. The drift is being worked 3 shifts per day; average advance is 10 feet per day. The drift is following a fault and is timbered in order to hold the heavy ground.

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection, Docket No. DMEA 3143 (cobalt-copper), Calera Mining Company, Blackbird Mine, Lemhi County, Idaho, Contract No. Idm-E645

The inspection was made on November 3, 1954 with Messrs. Whitley and Cribbs, engineer and geologist, respectively, for the Operator.

Some surface trenching at the Operator's expense has been continued after that provided in the DMEA contract was completed in September 1954. The Operator has completed about all the surface diamond drilling scheduled under Stage I of the contract. During October, holes S-45, S-46 and S-47 were drilled to test the more favorable outcrops on the Indian Quartz claim. These holes were drilled with inclinations of -44° to -54° with depths of 532 feet, 479 feet, and 547 feet, respectively. Drilling indicated wide, mineralized zones but the concentrations of ore minerals are insufficient to be classified as ore. Detailed logs and location sketches are being prepared by the Operator who now is dubious of the feasibility of the proposed 1200-ft. crosscut from coordinates 15020 N, 4760 E on the 7100 level. Surface hole No. 48 had been drilled 190 feet from near coordinates 5000 E, 17950 N to test the mineralization below trench No. 735. Probably one more hole will be drilled in this garnet-schist zone, most of which will be at the Operator's expense.

The project crosscut on the 7400 level was turned to drift about 157 feet in a N. 20° W. direction since the inspection of October 4, 1954. Regular timber sets were placed at 5½-ft. centers through the 8x10-ft. cross section during the period. The face at the date of this inspection was in a shear zone where spiling and doubling-up sets may be required.

At 318 feet in this project heading 2½ feet of 0.8% copper and 1.0% cobalt was exposed, and at 333 feet in this heading 1.7 feet of 1.14% cobalt and 1.04% copper was found. An attached sketch shows the relation of the present face to surface exploration.

Three shifts are employed in the project drift where advance is somewhat hindered by the large timber sets being used as well as by the long tram and poor ventilation.

The total contract units completed to date are as follows:

Drift	256 feet
Crosscut	220 feet
Normal timbering	450 "
Heavy timbering	50 "
Spiling	50 "
Framing	100 sets
Diamond drilling, Stage I	7700 feet
Diamond drilling, Stage II	98 feet
Assays, Stage I	1600
Assays, Stage II	86
Reaming, Stage I	1000 feet
Trenching	864 hours

Stage I trenching and diamond drilling are nearly completed.

The workmanship and core recovery are good. Engineering and geologic supervision are thorough.

Spokane 2, Washington
October 13, 1954

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA 3143 (cobalt-copper), Calera Mining Company, Blackbird Mine, Lemhi County, Idaho, Contract Idm-E645

The inspection was made on October 4, 1954 with Mr. Cribbs, geologist for the project.

Surface diamond drilling on the Indian Quartz claim has been started to establish a target for the proposed 7100 crosscut northeast, Stage II of the contract. Hole No. S-44, the first hole on the Indian Quartz claim, was at 461 feet with 75 to 100 feet remaining to cut the target zone. A broken zone was encountered between 229 and 234 feet in Hole S-44, drilled SW at about -45°. Surface indications have not been too favorable on the Indian Quartz claim. Core recovery has been satisfactory, about 75%.

The northeast crosscut on the 7400 level, the authorized crosscut in Stage II of the contract, has been advanced a total of 218 feet in a north 32° east direction to cross a broken zone, but is now being directed northward toward the ore zone outlined by surface drilling. Timbers were required and placed in an 8x10-ft. excavated cross section. No spiling was required for September's advance.

A measuring point, USBM tag No. 177, was placed at 132 feet in the northeast crosscut. Timber sets at 5½-ft. intervals were at 212 feet or about 6 feet from the face on the date of this inspection.

Three shifts are employed at the face but a cycle has not been established. The cross section and timber sets are large so that a round is missed on the shift which places timbers. The workmanship is good, but the Operator does not appear to be doing the crosscutting for the agreed unit cost of $35.53/ft. for excavation, plus $7.00/ft. for timber and about $2.50/ft. for timber framing.

September 27, 1954

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection, Docket No. DMEA 3143 (cobalt-copper), Calera Mining Company, Blackbird Mine, Lemhi County, Idaho, Contract Idm-E645

The inspection was made on September 11, 1954, with Mr. Cribbs, geologist for the project.

Trenching (the first item in Stage I of the contract) has been completed, 2187 feet of diamond drilling from the surface had been done, and 131 feet of crosscut had been advanced since the inspection of May 29, 1954.

Trenching for a total of 864 hours has exposed only a few new gossans that were not known very early during the project. The past month's trenching was done in the so-called Hanging Wall or Indian Quartz zone, Operator's coordinates 5500 E, 1600 N. Some copper and cobalt mineralization is present, but the area does not appear to be favorable for ore bodies. The Operator's geologist is preparing logs of all trenches.

Two ore structures have been indicated by the surface diamond drilling. Holes S-38 and S-39 cut the north structure at points about 160 feet apart along its dip with 5 feet of 0.83% Co with 0.19% Cu, and 7 feet of 0.45% Co with 2.08% Cu. Assay returns are not available for holes S-40, S-41 and S-42 which were drilled to extend the same zone.

The northwest drift on the 7400 level was abandoned in bad ground and a N. 30° E. crosscut has been advanced 131 feet from near the same point from which the drift was started. Car samples from an ore zone crosscut at about 30 feet assayed 0.35% Co and 1.12% Cu, and where crosscut at 60 feet the car samples assayed 0.04% Co and 0.12% Cu.

Spiling and heavy timbers were required for about 21 feet of the advance (30 to 51 feet in the crosscut). The cross section is about 8x10 feet to allow 8-ft. posts and 6-ft. caps.

Total contract units completed and accepted as of the August 1954 invoice are as follows:

Drift	105 feet
Crosscut	98 "
Normal timbering	185.3 "
Heavy timbering	49.5 "
Spiling	49 "
Framing	51 sets
Diamond drilling, Stage II	98 feet
Diamond drilling, Stage I	5265.5 "
Assays, Stage I	1212
Assays, Stage II	59
Reaming, Stage I	582 feet
Trenching	834½ hours

The workmanship is good and underground progress is improving.

1201 N. Division St.
Spokane 2, Washington
July 9, 1954

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection, Docket No. DMEA 3143 (cobalt-copper), Calera Mining Co., Blackbird mine, Lemhi County, Idaho, Contract Idm-E645

The inspection was made on July 5, 1954 with Mr. Cribbs, the Operator's geologist.

Eighty-seven hours of trench bulldozing was done during June to complete an additional 500 feet or more of trench on the Old Gold claim and also in the area about 500 feet north of the project 7400 drift. The overburden in the latter area was about 14 feet thick, requiring considerable bulldozing to reach bedrock. A trench depth of only 2 to 5 feet was required to expose bedrock on the Old Gold claim.

There were no strong oxidized zones exposed by this month's excavation.

During the period, surface diamond drill holes Nos. S33, S34, S35, S36 were completed and hole No. S37 was at 150 feet so that a total of about 1,540 feet was drilled since the last inspection. A total of 3,113 feet has been diamond drilled from the surface to date.

Diamond drill hole No. 35 had a compound core-sludge sample taken at 369 to 373 feet on the minus 59° incline which assayed 0.53% cobalt and 1.22% copper. The attached sketch shows the location of this sample in relation to the 7400 drift north and proposed north crosscut. Hole No. 34 drilled into the same zone was barren, which suggests irregular pods of ore and the necessity for numerous drill holes.

Diamond drill holes Nos. 36 and 37 intersected cobalt mineralization which assayed 0.26% and 0.21%, respectively, under the gossans exposed near the old prospect shaft.

Detailed logs and assays are submitted with the Operator's monthly reports.

Total contract units completed to date are as follows:

Drift	105 feet
Normal timber	95.3 "
Heavy timber	28.5 "
Spiling	28 "
Framing	33 sets
Underground diamond drilling	98 feet
Surface " "	3113 "
Trenching	669 hours
Assays	450

The workmanship and engineering supervision is good.

Self-potential surveys are being made over the geo-chemical highs to limit surface trenching.

STANDARD FORM NO. 64

Office Memorandum • UNITED STATES GOVERNMENT

TO : DMEA Field Team, Region II DATE: June 6, 1954

FROM : V. Z. Johnson, Mining Engineer, Bureau of Mines

SUBJECT: Routine inspection, Calera Mining Co., Blackbird Mine, Lemhi County, Idaho. Contract Idm-E645, Docket No. DMEA-3143 (cobalt-copper)

The inspection was made on May 29, 1954 with Mr. Cribbs, geologist. The project trenching area is now nearly bare of snow.

About 1,000 linear feet of bulldozer trench has been completed since the inspection of May 9, 1954. Two diamond drill stations and about 795 feet of diamond drilling was completed during the period to develop what appears to be two ore zones, as suggested on the accompanying sketch. Hole No. 33 now in progress may provide sufficient information to direct the most feasible direction for advancing headings on the 7400 level which have been suspended in heavy ground.

The trenching for the period was completed in the areas of geochemical highs in the garnetized schists north of the old shaft at 18600 North and 3200 East. One strong gossan was exposed which seems to have been the structure which encouraged the prospect shaft. A 6-foot sample, V.J. 13, was taken in the quartz exposed at this point.

Cores with specimens of cobalt minerals were cut in each hole drilled; and the sludge assays were good. Assays and logs are being prepared to accompany the operator's monthly report.

Total contract units completed to date are as follows:

Drift	105 feet
Norman timber	95.3 feet
Heavy timber	28.5 feet
Spiling	28 feet
Framing	33 sets
Diamond Drilling	1573 feet
Trenching (2,800 ft.)	475 hours
Assays	80

Core recovery will average about 60 percent. Supervision and project workmanship are satisfactory.

May 24, 1954

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection, Calera Mining Co., Blackbird mine, Lemhi County, Idaho, Contract Idm-E645, Docket No. DMEA 3143 (cobalt-copper)

The inspection was made on May 9, 1954 with Mr. Nickelson, geologist for the U.S.G.S., and Mr. Cribbs, the Operator's geologist.

About 1200 linear feet of bulldozer trench has been completed since the inspection of April 5, 1954, and 680 feet of diamond drilling in three holes was completed during the period. The locations of the completed trenches and drill holes are shown on the attached sketch.

Operator's logs indicate that the ore zone from 90 to 200 feet below surface is about 35 feet wide in the richer core where there are assays of 3.9% cobalt and 4.9% copper surrounded by a lower grade zone. Holes 29, 30 and 31 are drilled to determine the attitude of what is thought to be one ore lens. Trenching to the east has not been encouraging to date; however, when melting snow no longer makes the banks unsafe to sample, more definite information may be had concerning cobalt enrichment which is not always easily recognized.

Dozer trenching has been done to bedrock. Diamond drill core recovery is about 50%, which is satisfactory because the sludge is carefully saved and sampled.

Total contract units completed to date are as follows:

Drift	105 feet
Normal timber	95.3 "
Heavy timber	28.5 "
Spiling	28 "
Framing	33 sets
Diamond drilling	778 feet
Trenching (1720 feet)	357 hours
Assays	71

Underground work will be started in a few weeks when the most feasible direction for the 7400 north drift and other work can be determined.

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection, Calera Mining Co., Blackbird Mine, Lemhi County, Idaho, Contract Idm-E645, Docket No. DMEA 3143 (cobalt-copper)

The inspection was made on April 5, 1954 with Mr. Cribbs, the Operator's geologist. There was four feet of snow in the project area.

About 520 linear feet of trench had been completed since the inspection of March 11, 1954. Trenching is done by D-7 caterpillar bulldozer, operating on two shifts. It has been necessary to trench to an average depth of 12 feet for bedrock that has not been disturbed by creep. Occasional segments of trench are 14 feet deep. Mr. Cribbs was asked to minimize depths between geochemical highs so that the hours of bulldozing allowed under the subject contract would not be exhausted in one area.

The gossan reported at co-ordinates 2420 E, 18040 N in the previous inspection report is the strongest exposure to date. A log of the trench being prepared by the Operator will give an analysis on this gossan and other patches of oxides, arsenides, and sulfides which are now exposed. The attached sketch gives the approximate location of the trenching.

There was no underground excavation completed during the period. Several timber sets that were placed in the northwest drift during February's advance have been reinforced with stulls and spreaders to keep this drift open. Larger posts (12x14 inch) which were placed near the face of the drift have not broken.

During the period, two diamond drill holes were completed nearly normal to the northwest drift, as is shown by the accompanying sketch. The hole to the west is 28 feet deep, penetrating broken schist in which about 25% of the core was recovered. There were a few specks of sulfides in these cores. The hole to the east is 70 feet deep, penetrating the shear zone. The rock is badly broken and there were no ore minerals recognized in the cuttings or sludge. There was no core recovery - caving at the hole's collar prevented the seal necessary to reverse the water's flow. The Operator uses reverse circulation whenever possible.

The explanation for no ore minerals in the cuttings from the hole to the east is that the ore bodies usually occur in pods and this hole was in a barren portion of the fault.

The above diamond drilling results and the high timbering costs which were experienced during February have caused the Operator to delay drifting. He is anxious to have more of the surface trenching and drilling completed so that the costly underground excavation can be located to the best advantage. A diamond drill subcontractor is scheduled to commence work at the property about April 20, 1954.

Total contract units completed to date are as follows:

Drifting	117 feet
Trenching (600 ft.)	230 hours
Spiling	30 feet
Normal timbering	98 feet
Heavy timbering	30 feet

The workmanship is satisfactory.

Spokane 2, Washington
March 18, 1954

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, Bureau of Mines

Subject: Routine inspection, Calera Mining Co., Blackbird Mine, Lemhi County, Idaho, Contract Idm-E645, Docket No. DMEA 3143 (cobalt-copper)

The inspection was made on March 11, 1954 with Mr. Cribbs, geologist.

Stage I, surface trenching, has been started. About 30 hours of bulldozing has resulted in about 80 linear feet of trench, 3 to 15 feet deep, in a gossan that had been noted as a geochemical high at coordinates 2420 E, 18040 N. The gossan is about 40 feet wide. The minerals present are mostly iron oxides with some quartz and arsenide stains. The relation of the gossan to underground work is indicated on an attached sketch No. 1.

Underground exploration on the 7400 level encountered broken faulted rock about 20 feet from the project's starting point, which retarded the past month's progress although the Operator had three shifts at the face during most of the month. This drift had advanced 104 feet since the inspection of February 3, 1954. Ninety-eight feet of timbering was placed during the period, and of this timber 30 feet required spiling and 30 feet was doubled up or required booms and cribbing to be classed as heavy timbering. The attached sketch No. 2 indicates the structural features which made this timbering necessary.

Although the drift has been driven in the footwall of an ore zone, 21 samples averaged 0.02% cobalt and 0.07% copper. Attached is a copy of the Operator's sample data.

At his own expense the Operator drilled a 50-foot hole in advance of the present face and intends drilling two holes normal to the drift under the DMEA project. The Operator believes these holes may indicate better ground conditions for excavation and will request a change of plan in the near future. Elsewhere in the mine the Operator has found it advantageous to abandon numerous headings, and there are indications that the project drift may not be satisfactorily located; for example, it may be better to immediately crosscut the ore zone and drift in the footwall. Underground excavation is now held up pending the results of diamond drilling.

Total contract units completed to date are as follows:

Drifting	117 feet
Trenching	30 hours
Spiling	30 feet
Normal timbering	98 feet
Heavy timbering	30 feet

Project workmanship is satisfactory. Blocking is difficult on the damp schist. Posts now in use are about 10 inches in diameter and larger posts (12 to 14 in.) were recommended to Mr. Soderberg, mine superintendent.

Spokane 2, Washington
February 19, 1954

MEMORANDUM

To: DMEA Field Team, Region II

From: V. Z. Johnson, Mining Engineer, U. S. Bureau of Mines

Subject: Initial inspection, Calera Mining Co., Blackbird Mine, Lemhi County, Idaho, Contract Idm-E645, Docket No. DMEA 3143 (cobalt-copper)

The inspection was made on February 3, 1954 in company with Mr. Soderberg, the mine foreman.

Stage I, surface trenching and diamond drilling, of this contract, dated December 9, 1953, will not be undertaken during the winter months. The contract allows a drift and crosscut on the 7400 level to be advanced under Stage II prior to completing Stage I. It is stipulated that this drift start at coordinates 17290 N and 3025 E on the Brown Bear Claim where Plane No. 1 cuts the 7400 level and be driven north. Project work north of this plane started on February 1, 1954.

Underground development during the processing of the contract indicates deviations from the above specifications are necessary. The Operator encountered a wide fault zone with strong copper and cobalt mineralization while driving to the point at which Government participation was proposed. It was impractical to advance in the mineralized zone itself so that the drift was advanced in the footwall of this structure, as is shown on attached tracing of Operator's map. Plane No. 1, which is the boundary between DMEA and Operator's workings, was reached about 60 feet west of the point where the contract specified the participation drift should start; and at the time of this inspection about 13 feet of advance had been completed in a north 25° W. direction instead of to the north as stated in the contract.

The attached sketch shows some favorable samples taken from core and cuttings in this faulted zone by drilling at the Operator's locations and at his expense. The Operator requested permission to continue drifting in the footwall, following the general trend of this structure, and that he receive Government participation in diamond

drill holes, on 100-foot centers, to be drilled near horizontal and crosscutting the zone. This procedure will be less expensive than drifting as specified under the contract because the footwall drift will not require the heavy timbering that retarded the Operator's advance in this zone. A contract amendment to permit this location of drift and attendant diamond drilling should be prepared if the Operator's above proposal appears to violate the subject contract.

The project drift is being advanced by two shifts of three men each and is scheduled to complete a round-out round-in cycle per shift. Four to five feet are advanced in each round with 7'x7½' cross section untimbered or 7½'x8½' where timbered, requiring 26 holes drilled by jackleg.

The workmanship is satisfactory.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Project No. D.M.E.A. 3143
Contract No. Ide-8043

Dear Mr. Heisenbottom:

We enclose herewith, the maps and assays covering the advance of the Defense Project No. 3143, for the month of December, 1954.

During the month, work was carried on only in Stage II of the project and consisted of the driving from the surface of the 1507 Drift Level. The reading continued to indicate that a badly fractured schistose material that required the driving of spilling on both sides and the back of the drift. In order to give these capacities to the employees, this work was carried on only by a day-shift crew. A total of eleven sets of spiled drift timber were placed.

Traces of Cobalt and Copper mineralization were found by the assaying of the seven samples that were taken.

Very truly yours,

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Mr. H. A. Weissenborn
Executive Office - Defense
D.M.E.A. Field Team
South 15th Avenue Street
Spokane, Washington

Dear Mr. Weissenborn:

We enclose herewith the copy and diamond drill logs covering the activities of the D.M.E.A. Project No. 3143 for the month of November, 1954.

The work of driving the 7400 Drift North continued to be problematic due to three drift breaks. Total advance in the heading amounted to 191 feet for the month, all of which was in a fresh carry ground and required the standing of drift timber. Heavy ground necessitated the driving of spiling in 35 feet of this advance. Thirty eight sets of timber were placed in the 7400 Drift North, and two sets were placed in the 7/7/53 and 7/7/47 Ore Transfer Stations.

A total of 36 samples for sampling were taken from the mineralized exposures.

Surface Diamond Drilling was conducted during the first part of the month. Hole S-48 and S-49 were drilled in the Garnet Schist to intersect a zone that contained Sebultite at the surface. No ore was intersected in the holes.

Very truly yours,
Calera Mining Company
Blackbird Division

R. H. Douglas, Manager

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

I certify that the above bill is correct and just and that payment therefor has not been received.

Date Oct. 5, 1954 *Payee Calera Mining Company

Per [signature] Title [signature]

*When a voucher is signed or receipted in the name of a company or corporation, the name of the person writing the company or corporate name, as well as the capacity in which he signs, must appear. For example: "John Doe Company, per John Smith, Secretary," or "Treasurer," as the case may be.

→ NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

Pursuant to authority vested in me, I certify that this account is correct and proper for payment in the amount of:

$ 11032 24

Signature [signature]
(Authorized Certifying Officer)

Date 10/28/54 Vou. No. 1322

(See other side)

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E645 in accordance with the terms of the contract.

Signature 1S/ Verdo J. Johnson Title Mining Engr. Date 10/19/54

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature 1S/ Stephen W. Zoldok Title Mining Engr. Date 10/19/54

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Project No. D-Spo. 3143
Contract No. IDI-2645

Dear Mr. Weissenborn:

We enclose herewith the maps and diamond drill logs covering the activities of the Blackbird Project No. 3143 for the month of September, 1954.

Trenching continued during the month on the hanging wall zone. Work was done on 6 trenches, exposing approximately 1200 feet of bedrock. Several pods of mineralization were found. ± 40'/ea

Work on the 7400 Drift North was continued with the advance amounting to 114 feet for the month. The standing of drift timber continued and 21 sets were stood. The direction of the 7400 Drift North has been changed to a N22°W bearing.

Diamond drilling was completed in the Garnet Schist north of the Brown Bear zone. Only three of the seven holes drilled in this area intersected mineralization of ore grade. Drilling is now in progress on the Indian Charts Claim east of the Chicago zone.

Very truly yours,

CALERA MINING COMPANY

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket No. D.M.E.A. 3143
Contract No. Idn-E645

Dear Mr. Weissenborn:

We enclose herewith the maps and diamond drill logs covering the activities of the D.M.E.A. Project No. 3143 for the month of August, 1954.

At the first of the month, trenching was started on the Indian Quarts zone and continued in this area most of the month exposing approximately 2,100 feet of bed rock. Several small zones of cuddification were found by this operation.

98 hrs
± 21 hrs

Diamond drilling was done in three surface holes, namely S-40, S-41, S-42. The S-42 incompleted. Several zones of mineralization were intersected by this diamond drilling. Total diamond drilling for the month amounted to 1,185 feet.

The driving of the 7400 Drift was resumed and this heading was advanced 98 feet on the D.M.E.A. account. In an effort to find firmer ground this drift was turned on a N.30°E. bearing at a point 125 feet from the old face. A 20 scale geological map of this work is enclosed.

Very truly yours,

CALERA MINING COMPANY

UNITED STATES
DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS EXPLORATION ADMINISTRATION

~~WASHINGTON, D.C.~~
So. 157 Howard Street
Spokane 4, Washington

August 23, 1954

Memorandum

To: DMEA Field Team, Region II

From: Howard B. Nickelson, Geologist, U. S. Geological Survey

Subject: Docket No. DMEA-3143 (cobalt-copper), Calera Mining Company, Blackbird Mine, Lemhi County, Idaho, Contract No. Idm-E645

Mr. Cribbs, company geologist, was contacted on August 5, 1954, and the recent work was discussed. He stated the crosscutting operations had again begun on the 7100 level.

The drilling is still continuing. The inspector was pressed for time and did not make an examination of the property. The geologic data are well explained in the operator's progress reports.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Ref Docket No. D.M.E.A. 3143
Contract No. idm-E645

Dear Mr. Wolesenborn:

We enclose herewith the reports covering the activities of the D.M.E.A. Project No. 3143 for the month of July, 1954.

Trenching continued intermittently during the month. A trench approximately 1,100 foot long east of the Chicago zone was nearly completed.

Surface diamond drilling continued in the garnet schist. The holes drilled in this area have all intersected a highly siliceous zone that contains low-grade cobalt and copper mineralization. The zone strikes about N30W and dips about 55° to the NE.

The 7400 Drift North was started at the end of the month on a line N30E from the 17,290N coordinate. There was no advance north of the D.M.E.A. boundary.

Very truly yours,

DIAMOND DRILLING RECORD

By R.E. GRIEBS

Date JULY, 1954

Hole No. S-37 Mine

Level SURFACE

Location 8th TRENCH

Bearing 55°W

Dip -59°

Length 405

Departure of Collar 3,492'E

Elevation 7,922

Depth From — To	Assay Value % Co.	% Cu.	Oz. Au.	FT	% C.R.	Geology and Remarks
0-6½						NX FRAGMENTS OF SCHISTOSE QUARTZITE
0-3				3	27	ABOUT 80° TO CORE, GREEN DIKE? WITH SMALL
3-6½				3½	40	CARBONATE SPOTS 2½-3'.
6½-10				3½	6	SAME WITH MINOR GARNETS.
10-24½						ALTERNATING BANDS OF GARNET SCHIST
10-14½				4½	42	AND SCHISTOSE QUARTZITE SEVERAL INCHES WIDE
14½-19½				5	54	AND ABOUT 80° TO CORE. GREENISH BROWN DIKE?
19½-24½				5	52	WITH SMALL CARBONATE SPOTS 18½-20'. MINOR
						SHEARING AT 18½'.
24½-49						SCHISTOSE QUARTZITE WITH A FEW
24½-29½				5	32	NARROW GARNET SCHIST BANDS 80° TO CORE. GREEN
29½-34				4½	73	SCHIST 2" WIDE AT 49'. FAULT AT 33'.
34-38				4	48	GREEN MICACEOUS ALGHIS FRACTURES AT 33'.
38-41				3	47	HEMATITE? IN FRACTURES 33-34½'.
41-46				5	68	
46-49				3	100	
49-60						BX SAME AS ABOVE. BROWN STAINED
49-53½				4½	78	QUARTZITE 58-59'. MINOR LIMONITE IN FRACTURES
53½-60				6½	66	53½-59'. FAULT AT 54½ AND HIGHLY
						FRACTURED (FAULT?) 59-60'.
60-65				5	40	FRACTURED QUARTZOSE GARNET SCHIST AND
						QUARTZITE. QUARTZ HEMATITE? MINERALIZATION AT 63'.
65-70				5	54	FRACTURED QUARTZOSE GARNET SCHIST
						GRADING INTO SCHISTOSE QUARTZITE.
70-75				5	32	FRACTURED SOFT EASILY WEATHERED
						SCHISTOSE QUARTZITE. (POSSIBLY DIKE?)
75-92						QUARTZOSE GARNET SCHIST ALTERNATING
75-80				5	52	WITH AND GRADING INTO SCHISTOSE QUARTZITE.
80-85				5	70	A NARROW BLACK DIKE? WITH CARBONATE XLS.
85-92				7	46	AT 84'. FRACTURED 76-80, 84-85, 86-92.
92-96				4	40	CONTORTED AND MODERATELY BRECCIATED A
						WITH SOME QUARTZOSE GARNET SCHIST.
96-106						QUARTZITE. QUARTZOSE GARNET SCHIST 96-97,
96-100				4	75	105½-106. BLUISH HEMATITE IN SCHISTOSE QUARTZITE
100-106				6	98	100-101, 105-105½. MINOR LIMONITE IN
						FRACTURES. CHLORITE SCHIST AT 97' AND
						101-102'. CHLORITE SCHIST IS 20° TO CORE AT 102
						AND CONTAINS GARNETS NEAR THE
						QUARTZITE.

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E645 in accordance with the terms of the contract.

Signature /S/ Oscar Z Johnson Title Mining Eng Date 7/14/54

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /S/ Stephen W Zoldok Title Mining Engr Date 7/14/54

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket No. DMEA 3143
Contract No. idm-E545

Dear Mr. Weissenborn:

We enclose herewith the reports covering the activities of the D.M.E.A. Project No. 3143 for the month of June, 1954.

Trenching was continued with the D-7 bulldozer for a total of 87 hours of bulldozer operation. The 763 Trench was opened up and approximately 350 feet of bedrock was exposed. The overburden in the western part of this trench was found to be approximately 20 feet deep. ±4' hr

Surface diamond drilling was completed for the present in the area northeast of the Brown Bear Ore Zone and was started in the garnet schist approximately a thousand feet east of the previous drilling. The first hole in the garnet schist intersected low grade cobalt mineralization.

Very truly yours,

CALERA MINING COMPANY

6/8/54		0-5				5	2	NX QUARTZOSE SCHIST
		5-8				3	3	QUARTZITE
		8-28						SCHISTOSE QUARTZITE WITH SCHIST ZONES
		8-10½				2½	20	UP TO AN INCH WIDE AND ABOUT 60°
		10½-13				2½	68	TO THE CORE. MINOR LIMONITE STAINS ALONG
		13-14½				1½	47	FRACTURES. A ¼" QUARTZ VEIN WITH MINOR LIMONITE
		14½-18				3½	94	40° TO CORE AND HIGH ANGLE TO STRUCTURE
		18-23				5	78	AT 17½'. RATHER FINE GRAINED SCHISTOSE
		23-28				5	56	QUARTZITE 22-25'. SMALL FAULT AT 25'.
6/13		28-33½				5½	85	BX SCHISTOSE QUARTZITE WITH NARROW
								SCHIST ZONES ABOUT 70° TO CORE. MUCH OF
								CORE MODERATELY BRECCIATED AND HEALED
								WITH LIMONITE. FAULTED 30½-32½.
		33½-48½						HIGHLY SHEARED SOFT SCHIST
		33½-38½				5	47	ALTERNATING WITH FRACTURED SCHISTOSE QUARTZITE
		38½-43½				5	24	MINOR QUARTZ-BIOTITE STRINGERS AND MINOR
		43½-48½				5	30	LIMONITE HEALING OLD FRACTURES.
		48½-54				5½	70	SCHISTOSE QUARTZITE 80° TO CORE. FIRST
								2" OF CORE IS BRECCIA HEALED WITH LIMONITE,
								LAST 2" IS FAULT.
		54-58				4	60	FRACTURED FINE GRAINED INTERCALATED
								SCHIST AND QUARTZITE. LAST HALF OF
								CORE IS HIGHLY FRACTURED AND SHEARED.
		58-63				5	80	FRACTURED SCHISTOSE QUARTZITE WITH
								SOME NARROW SCHIST ZONES AT HIGH
								ANGLE TO CORE. QUARTZ-LIMONITE MINERALIZATION
								60-60½' AND MINOR LIMONITE THROUGHOUT CORE.
		63-65½				2½	40	HIGHLY FRACTURED AND SHEARED SCHIST.
		65½-68				2½	72	HIGHLY FRACTURED AND SHEARED SCHIST
								WITH SOME QUARTZ-CARBONATE MINERALIZATION
								LAST ½' CORE IS SCHISTOSE QUARTZITE WITH SEVERAL
								QUARTZ STRINGERS.
		68-73½				5½	91	HIGHLY SHEARED SOFT QUARTZOSE SCHIST.
								SCHISTOSE QUARTZITE 68-68½ AND 73-73½'.
		73½-89½						SCHISTOSE QUARTZITE 45-60° TO CORE.
		73½-77½				4	100	SCHIST 77-79½, 82½-83½, AND 84½-85½. SCHIST
		77½-81½				4	"	IS NEARLY PARALLEL WITH CORE 77-79½' AND
	X 557	81½-85½	TR	.02		4	85	IS SHEARED AT 79' AND 85-85½'. MINOR
		85½-89½				4	33	QUARTZ STRINGERS.
		89½-93				3½	0	NO CORE.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /S/ Stephen W Zoldok Title Mining Eng Date 6/17/54

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket No. DMEA 3143
Contract No. 16h-E645

Dear Mr. Weissenborn:

We enclose herewith the reports covering the activities of the D.M.E.A. Project No. 3143 for the month of May, 1954.

Trenching was continued with the D-7 bulldozer, for a total of 225 hours of bulldozer operation. New bedrock exposed by this work during the month amounted to 2,500 feet. The average depth of overburden removed amounted to nine feet.

Diamond drilling was continued in the area northeast of the Front Door Ore Zone. Ore has been intersected in three of the core holes that were drilled during the month. The mineralized zone is trending approximately N45°W and appears to consist of small ore pods plunging NW. The logs of the core holes S-30 and S-31 are enclosed.

Very truly yours,

CALERA MINING COMPANY

Per [signature] Title Vice-President

*When a voucher is signed or receipted in the name of a company or corporation, the name of the person writing the company or corporate name, as well as the capacity in which he signs, must appear. For example: "John Doe Company; per John Smith, Secretary," or "Treasurer," as the case may be.

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

Pursuant to authority vested in me, I certify that this account is correct and proper for payment in the amount of:

$ 4418.34

Signature [signature] (Authorized Certifying Officer)

Date 5/14/54 Vou. No. 1155

(See other side)

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E645 in accordance with the terms of the contract.

Signature /S/ Verdo Z Johnson Title Mining Engr Date 5/13/54

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /S/ Stephen W Zoldok Title Mining Engr Date 5/13/54

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Mr. A. E. Weissenborn
Executive Office - Region 2
D.M.E.A. Field Team
South 157 Howard Street
Spokane 4, Washington

Dear Mr. Weissenborn:

Re: Docket No. D.M.E.A. 3143
Contract No. idm-E643

We enclose herewith the reports covering the activities of D.M.E.A. project No. 3143 for the month of April, 1954.

Work with the D-7 bulldozer was continued and operated on a two-shift basis for a greater part of the month. Total time for the bulldozer operation amounted to 265 hours for April. ±7'/hr

700 ft

Bulldozer work was continued in the 798 Trench, making a total of over 1300 feet of bedrock exposed in this trench. Average depth of overburden was a little over 10 feet.

Bulldozer work was started in the 844 Trench and the 874 Trench. Overburden at the western end of the 844 Trench reached a depth of over 12 feet, whereas, the overburden along the 874 Trench averages approximately 9 feet in depth. A total of 1,120 feet of bedrock was exposed by the opening of these two trenches. Observation of the newly exposed bedrock revealed only minor mineralization.

Surface core drilling was started by drilling the first hole, S-29, at a minus 45° in the 786 Trench which was dug in 1953. The results of the balanced sludge and core assays from the first hole drilled were 39 feet of 1.19% cobalt and 3.38% copper. In an effort to determine the extent and dip of the mineralized zone, another core hole, S-30, is being drilled on the same vertical plane at minus 60° dip.

Very truly yours,

CALERA MINING COMPANY
BLACKBIRD DIVISION

Signature /S/ Stephen W Zoldok Title Mining Eng Date 4/21/54

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Mr. A. E. Weissenborn
Executive Officer, Region II
D.M.E.A. Field Team
South 157 Howard
Spokane 4, Washington

Dear Mr. Weissenborn:

Re: Docket No. D.M.E.A. 3143
Contract No. IDM - E 645

During the month of March, the 7400 Drift was advanced 11 feet. Since the zone of faulting continued to be present in the heading, advancing of the drift was most difficult and necessitated the driving of spiling with each set of timber that was stood.

It was decided in the early part of the month to stop driving the drift and diamond drill at the face of the 7400 Drift North. One hole was drilled on the line of the drift in search of firmer rock. This was not charged to the D.M.E.A. account. A 70 foot hole drilled eastward from the drift and a 28 foot hole drilled westward from the drift did not intersect ore. A week poor coring ground was encountered in all three of the diamond drill holes.

On March 9, surface trenching was started on the 798 Trench. As of April 1, approximately 600 feet of bed rock has been exposed. The average depth of overburden was found to be approximately 10 feet, and the maximum depth of overburden was found to be 20 feet. The trench intersected a favorable appearing mineralized zone containing many small pods of gossan. This exposed gossan is approximately 800 feet north of the 7400 Drift North face. The bulldozing operation for the month amounted to 92½ hours of work.

Very truly yours,

CALERA MINING COMPANY

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

COBALT, IDAHO

March 4, 1954

Mr. A. E. Weissenborn
Executive Officer, Region II
D.M.E.A. Field Team
South 157 Howard
Spokane 4, Washington

Dear Mr. Weissenborn:

Re: Docket No. D.M.E.A. 3143
Contract No. IDM - E 645

During the month of February, the 7400 Drift North was advanced 94 feet in waste. At approximately 15 feet past the D.M.E.A. boundary, a large north striking fault was encountered, and west of this fault very bad ground was found that consisted of sheared and faulted schistose quartzite and altered dike material. Standing of drift timber was started at 10 feet past the D.M.E.A. line. To date, 27 sets have been stood, consisting of 38.8 feet of normal drift timbering, and 17.0 feet of spiling, making a total of 84.3 feet of drift timbered during the month.

The work was started in this heading on a two-shift basis; then on February 8, three shifts were started and continued throughout the month.

Very truly yours,
