

Thresholds used to calculate normalized sums, in parts per million

(Histograms show distribution of analyses of nonmagnetic fraction of panned concentrates for these metals plus boron, tin, and barium. Gold not represented because of preponderance of undetectable determinations. Boulder Batholith and Other Rocks refer to rock types predominantly underlying the drainages. N, not detected; L, lower limit of determination)

Group 1		Group 2	
Au-20	Pb-700	Mo-70	Th-2000
Ag-20	Cu-300	W-1000	La-1500
As-3000		Nb-500	Y-1500

Base from U.S. Geological Survey,
Canyon Ferry Reservoir, Clancy, East Helena,
Jefferson City, and Townsend, 1:62,500, 1980

Compiled by William R. Miller, Steve Ludwigsen,
and William R. Greenwood, 1978
