DATE		

July 22, 1958

Memorandum

To: F. L. Kncuse, Defense Minerals Exploration Administration

From: W. P. Williams, U. S. Geological Survey

Subject: Review of field examination report, DMEA 5034 (thorium-uranium-rare earths) Empire Explorations, Inc., Buffalo claims, Lemhi County, Idaho

After separate field examinations, the examining geologist and engineer render a split decision concerning the merits of the applicant's property.

The examining geologist believes that further exploration is warranted on the property. A 90-foot adit, driven by the applicant, exposes a northerly striking mineralized shear zone that is about 75 feet wide and has been traced for 7,500 feet. Samples taken by the examining geologist assayed near 1 percent combined thorium and rare earth oxides.

The examining engineer on the other hand believes, on the basis of an examination in 1951, that not enough new work has been done on the property, that the property does not warrant exploratory work, and that the application should be denied.

The large shear zone represents a strong geologic structure that could furnish large tonnages of ore if the zone is sufficiently mineralized. The examining geologist recommends approval of a modest project consisting of six bulldozer trenches, to be followed by drilling should the trenching prove promising.

I agree with the recommendations of the examining geologist as stated in his report.
