INTERIM REPORT

To: OME Field Team, Region II

From: B. H. Sheahan, mining engineer, U.S. Bureau of Mines
H. K. Stager, geologist, U.S. Geological Survey

Subject: DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill mines
Inyo County, California
Contract Idm-E1125

The project was inspected October 23, 1958 by B. H. Sheahan, U.S. Bureau of Mines, and H. K. Stager, U.S. Geological Survey. The exploration was discussed with Mr. Byron Works, supervising engineer and geologist, at a conference in Bishop on October 22 and by telephone conversation on October 23, 1958.

Since the previous inspection on September 4, 1958, the operator has extended the main crosscut 425.4 feet in soft, sugary alaskite or granite. Car passes were excavated from 1011 to 1039 feet and 1270 to 1305 feet. The status of the work is shown in the following table:

Item	Crosscut (Feet)	Drift (Feet)	Timber (Feet)	Drilling (Feet)	Assays WO_3
Work allowed Stage I	900	252.4	225	1000	65
Work allowed Stage II	900	0	225	1000	45
Total allowed	1,800	252.4	450	2000	110
Work to date	1325.4	252.4	108.5	2839.6	14
Estimated expenditures to date				Total	$51,639.90

On October 27, 1958 the operator was advised to halt the crosscutting under Stage II at 450 feet (1,350 feet from point of beginning) until the location of the granite-tactite contact is established by long hole or diamond drilling. Two holes were recommended to be drilled from the face of the crosscut at 1,350 feet. The first would be on a bearing S 48° E at plus 45 degrees and the second would be on a bearing S 30° E at plus 45 degrees.

INTERIM REPORT

To: DMEA Field Team, Region II

From: H. K. Stager, geologist, U.S. Geological Survey
B. H. Sheahan, mining engineer, U.S. Bureau of Mines

Subject: DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill mines
Inyo County, California
Contract Idm-E1125

The project was inspected on September 4, 1958 by B. H. Sheahan, U. S. Bureau of Mines, and H. K. Stager, U. S. Geological Survey, accompanied by Mr. Ralph E. Shupe, operator. The exploration work was discussed later the same day at a conference in Bishop with Mr. Shupe and Mr. Byron Works, supervising engineer.

Since the previous inspection on August 13, 1958 the operator has drilled three long holes (LH 1-3) and five diamond-drill holes (DDH 4-8). Diamond-drill holes numbers 6 and 8 (fig. 1) are incomplete and cannot be deepened until casing is obtained. The status of the work in Stage I is shown in the following table:

Item	Cross-cut (ft.)	Drift (ft.)	Timber (ft.)	Drilling (ft.)	Assays (WO_3)
Work allowed in Stage I	900	252.4	225	1,000	65
Work completed	900	252.4	83.5	838.6 (706 DDH) (132.6 LH)	5
Work remaining in Stage I	0	0	141.5	161.4	60
Work allowed in Stage II	900	0	225	1,000	45

Diamond-drill holes 3, 5, 6, and 8 were drilled from the DMEA crosscut to test scheelite-bearing tactite lenses north of the crosscut and nearer the granite contact (fig. 1). Long-hole 3 was drilled from old workings north of the crosscut to test the same lenses. All of these drill holes were in scheelite-bearing tactite for almost their entire length but only DD-3 yielded core of ore grade. Three intervals from this hole were assayed, 13.8 to 14.2 feet that contains 1.22 percent WO_3; 24.6 to 25.9 feet that contains 0.95 percent WO_3; and 42.4 to 44.4 feet that contains 0.22 percent WO_3. Assays from DD-6, DD-8, and LH-3 have not been received but estimates made by use of ultraviolet light indicate the scheelite content is less than about 0.2 percent although core recovery in the mineralized zones was too poor to yield accurate results. The downward continuation of a 5-foot thick lens of ore (0.73 percent WO_3)

intersected by the DMEA crosscut at 5,230 E will be tested by a proposed drill hole (fig. 1). This ore is probably a faulted segment of an ore body that was partly mined from the old mine workings.

Based on the habits of ore bodies that have been mined at the Round Valley mine several hundred tons of ore that contains 0.5 percent or more WO_3 is indicated and several thousand tons of ore of the same grade is inferred in the area explored by the DMEA crosscut and drilling between coordinates 5,200 E and 5,400 E.

The DMEA crosscut, drifts, diamond-drill holes 1, 2, 4, 7, and long holes 1 and 2 between coordinates 5,400 E and 6,000 E indicate that although there is abundant tactite, the scheelite-bearing lenses in this area are small and of low grade. Except for a one-foot thick quartz vein that assayed 0.58 to 1.59 percent WO_3 cut by the crosscut at 5,860 E and a three foot thick tactite lens that assayed 0.79 percent WO_3 at the granite contact near the end of No. 2 drift, all of the exposures are of less than ore grade. Based on these exposures not more than a few hundred tons of ore-grade material in small, widely scattered bodies can be inferred in this area.

Conclusions and Recommendations:

The rocks cut by the DMEA workings and drill holes are more highly mineralized and geologically more favorable for the localization of tungsten ore bodies than the rocks exposed at the surface in the area between the Round Valley and Tungsten Hill mines. The work has found some ore and has indicated a favorable geologic setting for ore deposits at the level of

the DMEA crosscut beneath the Tungsten Hill mine. This area remains as the principal target of the exploration project and can be adequately tested by the work remaining in Stage II of the contract.

The engineer considers that the quantity of ore discovered by the Stage I work is insufficient to justify Stage II, but both the engineer and the geologist believe that the probability of making a significant discovery in the area of the downward projection of the Tungsten Hill deposit has been greatly improved by the Stage I work. We therefore recommend that Stage II be approved.

for B. H. Sheahan, mining engineer

Ralph E. Shupe
Round Valley and Tungsten Hill Mines
Inyo County, Calif.
Contract No. Idm-E1125

The project was inspected August 13, 1958, in company with Byron Works, Project Engineer.

An additional 37 feet of drifting were completed easterly from the end of the No. 2 drift along the granite contact. Of this, 19.4 feet are chargeable to DMEA. Some scheelite mineralization was observed in the floor of the newly completed drift near the face. A two-foot chip sample was taken across the best showing (est. 0.1% WO_3).

Diamond Drill hole No. 3 was completed August 12, 1958, to a 127-foot depth from coordinate location 4809 N and 5295 E. Minor scheelite showings were observed from 15 feet to 65 feet and at 110 feet. Granite was cut at 114 feet. As a result of the mineralization in drill hole No. 3, two adjacent drill sites were selected to more

thoroughly test the zone (Figure 1). Proposed drill hole No. 4 (Fig. 2) was changed from a previously selected site in No. 1 drift to the face of the No. 2 drift to provide tail room for the drill rods and to explore the favorable area by a shorter hole. Three long-hole drill sites were also selected in No. 2 drift, two of which are to be drilled easterly as proposed by memorandum of July 14, 1958, by R. M. Smith and B. H. Sheahan. The third long hole was selected to test along the contact in a westerly direction. Unless attractive mineralization is disclosed in the remaining drill holes, Stage II cannot be recommended.

Subject: DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill mines
Inyo County, California
Contract Idm-E1125

The project was inspected July 11, 1958, accompanied by Messrs. Ralph E. Shupe; E. J. Duncan, foreman; and Frank R. Wicks, consulting mining and industrial engineer. The project was discussed the evening of July 10 with Byron Works, the operator's consulting geologist who is employed to map the workings.

The status of the work in Stage I is shown in the following table:

Item	Cross-cut (ft.)	Drift (ft.)	Timber (ft.)	Drill (ft.)	Assays for WO_3
Work allowed in Stage I	900	252.4	225	1000	65
Work completed	900		51	239	1
No. 1 drift		115			
No. 2 drift		118			
		233			
Work remaining	0	19.4	174	761	64

The No. 2 drift was designed to explore a mineralized zone in the crosscut and in diamond drill hole No. 1 (see attached map). Owing to an abrupt change in strike of the beds, the drift did not follow the mineralized zone but was driven parallel to it. The drift has been driven in bedded limestone 70 feet beyond the projected position of the granite contact without encountering granite, thereby revealing that the setting is more favorable for ore bodies than previously inferred. It is the habit of ore bodies in the district to extend not more than 100 feet from the granite contact. As the contact is now known to be more than 110 feet from the main crosscut the geologic setting is large enough to accommodate a significant ore shoot.

We recommended that some of the drill footage allowed in Stage I be used to drill a series of diamond drill holes eastward from the No. 2 drift spaced at 15-foot intervals to depths of about 40 feet. We recommended also that from No. 1 drift 20 feet in the hanging wall of the granite contact one hole be drilled northwest parallel with the contact at an inclination of +20 degrees to a depth of 100 feet.

We informed Mr. Shupe that recently the project has been inadequately supervised, and that for the remainder of the contract only work recommended and closely supervised by his consulting geologist will be approved by DMEA.

As no ore has been found by the work to date, Stage II should not be approved.

Subject: DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill mines
Inyo County, California
Contract Idm-E1125

The project was inspected on June 25, 1958 at the request of the operator who stated that the work in Stage I is complete and that he wishes to continue with Stage II. The project was discussed with Mr. Shupe by telephone on July 1, 1958.

Stage I consists of driving 900 feet of crosscut, 252.4 feet of drifts on the best showings in the crosscut, and 1,000 feet of diamond- or long-hole drilling from the drifts and crosscut.

Work completed consists of 932 feet of crosscut, 239 feet of diamond drilling from the crosscut, one drift 165 feet long, and one drift started from the crosscut 15 feet long (fig. 1). The drifts are designed to explore scheelite-bearing tactite beds exposed in the crosscut. The first drift was started at 740 feet from the

beginning point of the crosscut and was driven about parallel with diamond drill hole 2 for 165 feet. The tactite bed that it was designed to explore was cut at 20 feet, but instead of following the scheelite-bearing tactite it was driven on to the granite contact at 100 feet into the granite for 65 feet. This drift confirms the findings in diamond drill hole 2 and the last 50 feet does not benefit the project. The second drift was collared at 610 feet from the starting point of the crosscut and has been driven 15 feet toward the scheelite-bearing tactite bed it is designed to explore. Current plans are to drift along the tactite bed to the granite contact.

The best showing in the crosscut outside of the area explored by old workings is a 5-foot thick tactite bed at 210 feet which assays 0.27 percent WO_3.

Inasmuch as Stage II is implied to be contingent upon Stage I and as the work to date has not yet found ore, Stage II cannot yet be approved. The last 32 feet in the crosscut must, of course, be disallowed. We recommend that the No. 2 drift be completed as planned, that a third drift be collared at 210 feet in the crosscut, and that the remaining Stage I drilling from the drifts and crosscut be completed. We recommend also that the last 50 feet in No. 1 drift be disallowed, and the footage be applied to drifting elsewhere.

It is reported that Ralph Shupe has purchased Palmer and Decker's interest in the mining equipment and that Palmer and Decker have no further interest in the operation although they may contract the diamond drilling.

MAY 29 8 46 AM '58

IN REPLY REFER TO:

UNITED STATES
DEPARTMENT OF THE INTERIOR
GEOLOGICAL SURVEY
Mineral Deposits Branch
4 HOMEWOOD PLACE
MENLO PARK, CALIFORNIA

May 26, 1958

INTERIM REPORT

To: DMEA Field Team, Region II

From: B. H. Sheahan, mining engineer, U. S. Bureau of Mines
H. K. Stager, geologist, U. S. Geological Survey

Subject: DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill mines
Inyo County, California
Contract Idm-E1125

The exploration project was inspected May 20, 1958 by B. H. Sheahan, U. S. Bureau of Mines, and H. K. Stager, U. S. Geological Survey. Work was discussed with Mr. A. P. Decker, superintendent, and Mr. Len Palmer, diamond driller.

The operator temporarily suspended work on the crosscut early in May and has core drilled two holes since the previous inspection. He intends to resume work on the crosscut in a few days. Attached sketch, figure 1, shows the location of drill holes. A summary log of each hole follows:

Hole No. 1---Depth: 81 ft., Inclination -14°, AX size:

Interval(ft.)	Description and Remarks
0-36	Thin-bedded limestone and tactite.
36-51	Tactite with sparse scheelite.
51-77	Tactite and hornfels--good core.
77-77.5	Fault gouge--poor core recovery.
77.5-81	Granite.

Hole No. 2---Depth: 158 ft., Inclination -4°, AX to 139 ft, EX 139-158 ft.:

Interval (ft.)	Description and Remarks
0-76	Massive tactite--good core recovery.
76-81	Tactite with sparse scheelite on fractures.
81-116	Tactite and hornfels with traces of scheelite.
116-117	Hornfels, poor core recovery.
117-139	Fault gouge(?), drilled with plug bit--very difficult drilling.
139-158	Aplite dike and fine-grained granite. Traces of copper stain on joint fractures. Poor core recovery.

The operator plans to drift toward the granite contact in the most favorable scheelite-bearing tactite lenses that are found by the Stage I crosscut and exploratory drilling. He hopes to find sufficient scheelite-bearing tactite to justify further exploration work under Stage II of the contract.

INTERIM REPORT

May 14, 1958

RECEIVED MAY 19

Docket No. DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill Mines
Inyo County, California
Contract No. Idm-E 1125

The exploration project was inspected May 5-6, 1958 in company with Len Palmer, diamond drill operator, employed by the company. Attached sketch map shows work to date.

Progress on Stage I of the contract amounts to 766 feet of crosscutting and 31 feet of timbering. Several tactite zones have been found that will probably contain scheelite mineralization toward the granite contact. The operator temporarily suspended crosscutting early in May and commenced diamond drilling in lieu of long hole drilling near a site 614 feet from the point of beginning. Core from this hole showed sparse scheelite mineralization in tactite between the interval of 36 to 51 feet. Recent reports received from the operator indicate that the hole intersected granite at 81 feet.

Results of this exploration are encouraging, since tactite zones are now exposed to a vertical depth of

400 feet and further exploration will likely disclose several other scheelite-bearing tactite zones.

A narrow quartz vein with a little scheelite was cut at 720 feet and sample analyses will be included with the next interim report.

The operator has requested an amendment to eliminate all winze work and long hole drilling and substitute 350 feet of drifting to explore the tactite zones from the main crosscut.

It is essential that some exploratory drilling be done from the crosscut and, therefore, an alternate proposed amendment is recommended. Exploration from the main winze which includes 100 feet of sinking and 500 feet of long hole drilling at a cost of $7,950.00 should be eliminated. That portion of the exploration project funds should be used for 252.38 feet of drifting from the main crosscut to more adequately explore the attractive tactite zones that are being found. The operator plans to explore the lower levels of the mine at some future time when tungsten market conditions are more favorable.

INTERIM REPORT

April 24, 1958

Docket No. DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill Mines
Inyo County, California
Contract No. Idm-E 1125

Property was inspected April 21-22, 1958, in company with A. P. Decker, superintendent.

Progress to date amounts to 696 feet of crosscutting and 31 feet of timbering. Attached assay map shows results of sampling of scheelite-bearing tactite found by the work. Operations are now on a three-shift-per-day basis and the 900 feet of crosscutting authorized under Stage I will probably be completed late in May, 1958.

The superintendent was again advised to commence exploration of favorable scheelite-bearing tactite zones toward the granite contact by long hole drilling. The Operator is tentatively planning to do this work or to request an amendment to substitute diamond drilling for long hole drilling authorized by the contract. The granite contact is probably about 50 feet north of the crosscut and this should be determined by long hole drilling.

Contract No. Idm-E 1125

Exploration was inspected March 24-25, 1958 by B. H. Sheahan, U. S. Bureau of Mines, accompanied by Ralph E. Shupe, A. P. Decker, and Frank R. Wicks.

Progress amounts to 514 feet of crosscutting as indicated on attached assay map. Tactite containing a few scattered crystals of scheelite was sampled between Stations 459 and 462. Analyses will be included with the next interim report.

The Operator was advised to further explore scheelite-bearing tactite exposed in the crosscut by long hole drilling which is authorized by the contract. Timber for ground support will be placed along 60 feet of the recent work.

INTERIM REPORT

February 28, 1958

Docket No. DMEA-4614 (Tungsten
Ralph E. Shupe
Round Valley and Tungsten Hill Mines
Inyo County, California
Contract No. Idm-E 1125

Exploration was inspected February 24-25, 1958 by B. H. Sheahan, U. S. Bureau of Mines, accompanied by A. P. Decker, Superintendent.

The crosscut had been extended 330 feet from the point of beginning on a bearing S. 81° E., and had cut several scheelite-bearing tactite bodies from one foot to twenty feet thick. Tactite, silicated limestone, and hornfels exposed by the exploration, strikes about normal to the crosscut and dips 20 degrees to 50 degrees westerly.

The Operator's monthly reports are well prepared and include a narrative description of exploration and detailed geologic maps. Work is conducted efficiently and is now on a two shift per day basis. On February 18, 1958, Mr. Shupe made a request by telephone that he desired to have the contract amended. His proposal consists of changing Stage I by cancellation of both 100 feet of winzing and 500 feet of long hole drilling from the winze

and then using these funds to drive 240 feet of drifts (with about 65 feet of the drift timbered) to explore scheelite-bearing tactite bodies that have been or will probably be exposed by crosscutting. He is now of the opinion that scheelite-bearing tactite exposed in the lower workings of the mine will definitely continue down dip for several hundred feet. At some future time, depending upon the market price of tungsten, he plans to consider sinking a vertical shaft at a location west of present workings. The drifting which he proposes could be used for car switch stations or for long hole drill stations as well as for exploration purposes.

The superintendent was advised to drill long holes northerly from three locations in the crosscut to further explore the mineralized tactite and determine the location of the granite contact.

The following check samples were taken and these represent the grade of the best exposures in the crosscut. Sample locations are indicated on attached sketch map.

Sample No.	Width feet	Percent WO_3	Remarks
S-668	1.0	1.22	P.O.B. 4'-5' S.Side x-cut, tactite.
S-704	5.0	0.73	" " " 75'-80' N.Side " "
S-705	5.0	0.10	" " " 80'-85' " " " "
S-706	5.0	0.01	" " " 85'-90' " " " "
S-707	5.0	0.03	" " " 90'-95' " " " "
S-708	4.0	0.01	" " " 95'-99' " " " "
S-709	2.0	0.01	" " " 197'-199' " " " "
S-710	3.0	0.01	" " " 199'-202' " " " "
S-711	5.0	0.27	" " " 207'-212' " " " "
S-712	3.0	0.01	" " " 227'-230' " " " "

Exploration work to date has successfully found scheelite-bearing tactite within the target area. The amendment proposed by the Operator has excellent exploration possibilities because the scheelite content of the mineralized tactite usually increases toward the irregular granite contact. The amendment should be held in abeyance until the 900 feet of crosscutting under Stage I is nearly completed since the best exploration targets for the proposed drifts could then be more carefully selected.

INTERIM REPORT
(Second)

December 3, 1957

Docket No. DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hill Mines
Inyo County, California
Contract No. Idm-E 1125

Exploration was inspected November 26, 1957 by B. H. Sheahan, U. S. B. M., in company with Mr. A. P. Decker Superintendent for the Operator.

Crosscutting as authorized by Stage I of the contract was started November 11, 1957 and 33 feet of advance was made in hornfels and tactite. Sample S-668, estimated to contain 0.8 percent WO_3, was taken from a small pod of scheelite-bearing tactite near the point of beginning of the crosscut. See attached sketch map. A supply of mine timber is on hand and will be used when needed.

The Operator has rented some excellent mining equipment for the exploration from his superintendent. He has also employed Mr. Byron Works, Engineer Geologist, of Wah Chang Mining Corporation, on a part-time basis. His monthly reports will be assembled by Mr. Don Sada, accountant at Reno, Nevada, from data furnished by his superintendent and engineer.

The crew at the property included the superintendent and two miners. The Operator plans to improve the alignment of the tunnel between the portal and the Stage I crosscut on his own account in the near future. Work completed to date has been done efficiently. Some slight adjustments in the established alignment of the crosscut may be necessary after approximately 300 feet of advance is made. This will depend upon results of the work. At that time, long hole drilling toward the granite contact will probably be recommended.

Docket No. DMEA-4614 (Tungsten)
Ralph E. Shupe
Round Valley and Tungsten Hills Mines
Inyo County, California
Contract No. Idm-E 1125

An inspection of the property was made September 11, 1957 in company with Mr. Frank R. Wicks, the operator's representative. The operator intends to commence preliminary work as soon as a crew and equipment are obtained. He plans to improve the alignment of the main tunnel prior to starting exploration work under Stage I of the contract.

A point of beginning and direction of the proposed crosscut was established at a face S 81°- 00' E. from Survey Station 7. This face is 188.58 feet along the line of the present tunnel from Survey Station 1 at the portal.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

ROUND VALLEY MINE
Ralph E. Shupe

OPERATOR'S MONTHLY REPORT
for
OCTOBER, 1958

D.M.E.A. Contract No. Idm-E-1125

The exploration adit was continued on a bearing of approximately S 64° E for a distance of 180 feet and then was turned to a bearing of S 48° E and continued for and additional 85.6 feet. This makes a total of 1350 feet from the point of beginning, and is 450 feet of the Stage 2 footage.

Another car pass was blasted out at a distance of 1265 feet to 1305 feet from the point of beginning.

Material encountered this month has been entirely granite of which almost all is badly shattered. No scheelite has been found.

Sloughing granite has necessitated installing an additional 35 feet of timber in the adit.

It appears the granite cuts off the downward extension of the metamorphics under the Tungsten Hills Mine at some elevation above the location of this exploration adit.

A final report will be submitted shortly as specified by the D. M. E. A.

Respectfully submitted,

Byron W. Works

Re: RALPH H. SHUPE
Docket No. DMEA 4614 (Tungsten)

Dear Mr. Rieker:

We enclose herewith the original and four copies of subject Operator's Report as follows:

(a) MF-104 Operator's Monthly Report & Voucher.

(b) MF-104A Operator's Unit Cost & Progress Report.

(c) Narrative, Maps, prepared by Mr. Byron W. Works, Geologist.

The above Reports cover the month of October, 1958, and constitute the Twelvth Report due to be submitted on subject Project.

Inasmuch as work on the Project has terminated with this Report, the "Operator's Final Report" will follow very shortly.

Noted

Sincerely yours,

D. A. SADA

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

ROUND VALLEY MINE
Ralph E. Shupe

OPERATOR'S MONTHLY REPORT
for
SEPTEMBER, 1958

Diamond drill hole No. 8 was collared and completed during this month. This hole was drilled for the short length of 41 feet before bad ground forced the drillers to quit. It was decided by the operator not to case the hole and continue to greater depths. The log of the hole accompanies this report.

Several assays from diamond drill hole no. 6 and long hole no. 3 were received from Bishop Assay Office:

DDH 6	25' to 30'	.012	(sludge)
DDH 6	40' to 44'	.012	(sludge)
DDH 6	40' to 50'	.102	(core)
DDH 6	56' to 60'	.006	(sludge)
LH 3	25.5' to 30.6'	.018	
LH 3	30.6' to 35.7'	.012	
LH 3	35.2' to 40.8'	.006	
LH 3	40.8' to 45.9'	.020	
LH 3	45.9' to 51.0'	.020	

The main adit face was advanced 159 feet in a direction of S 63° E in shattered granite, making a total of 1084.4 feet from the point of beginning. A total of 25 feet of timber was installed in the adit at 921 feet to 946 feet from the point of beginning.

A car pass was blasted out on the southwest side of the adit at a distance of 1011 feet to 1039 feet from the point of beginning. This will greatly facilitate handling muck from the active heading.

Plans are to continue on the present bearing to the granite-tactite contact at which point the adit will be turned left and continued on a bearing approximately the same as the first 925 feet (S 81° E).

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: RALPH E. SNUPE
Docket No. DMEA 4614 (Tungsten)

Dear Mr. Ricker:

We enclose herewith the original and four copies of subject Operator's Report as follows:

(a) MF-104 Operator's Monthly Report & Voucher.

(b) MF-104A Operator's Unit Cost & Progress Report.

(c) Narrative, Longhole, and Diamond Drill Logs, prepared by Mr. Byron E. Norris, Geologist.

The above Reports cover the month of August, 1960, and constitute the Tenth Report due to be submitted on subject Project.

Sincerely yours,

D. A. SADA

OPERATOR'S MONTHLY REPORT
for
AUGUST, 1958

D.M.E.A. Contract No. Idm-E-1125

Exploration has been confined to diamond drilling and long hole drilling during the month. A total of 132.6 feet of long holes and 427 feet of diamond drill holes were completed. The following is a list of these holes with the corresponding footages:

DDH 3	127'	LH 1	30.6'
DDH 4	44'	LH 2	51.0'
DDH 5	96'	LH 3	51.0'
DDH 6	60'		
DDH 7	100'		
Total	427'	Total	132.6'
			427.0'
Total drilling for month			559.6'

Logs of these holes accompany this report.

Several samples have been sent to Bishop Assay Office for assay. Those assays which have been received to date are:

DDH 3	13.8 to 14.2	1.22% WO_3
"	24.6 to 25.9	0.95 "
"	42.4 to 44.4	0.22 "

The sample from 801 drift sent in last month assayed 0.79% WO_3. This is a sample from the bottom ofthe drift for a linear distance of 3' parallel to the granite contact at coordinates 4850 N. and 5808 E.

DDH #6 had to be stopped due to bad ground in the hole. It is planned to reenter this hole as soon as the casing and other necessary equipment is available.

It is planned to collar a diamond drill hole near the collar of hole number 3 and drill down at approximately 30° on a bearing of N 65° E to further explore this zone.

The timber in the adit was measured and found to be 83.5 linear feet.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

OPERATOR'S MONTHLY REPORT
for
JULY, 1958

D.M.E.A. Contract No. Idm-E-1125

Work for the month has been confined to a lateral from the main drift. This is the same heading described last month as being advanced 76 feet from a point 612 feet from the point of beginning and is designated as the 801 drift. This heading was advanced 124 feet northerly to the granite contact and then an additional 31 feet of drifting was completed along the contact in a northeasterly direction for a total new advance of 79 feet.

Some scheelite is present in two places near the contact. One sample was taken in the cross-cut along the granite contact for a length of 3 feet. The scheelite is present in the bottom of the cross-cut. No assay has been received to date for this sample.

Two sets of timber were placed in the main adit during the month. These are at 5583 E. and 5625 E. coordinate.

A long hole is planned to explore along the contact from the 801 drift toward the southwest. A diamond drill hole is planned to explore to the east from the face at 5820 E. It is also planned to collar a diamond drill hole near 5300 E. in the main adit and drill in a direction of N 58° E to explore a favorable zone closer to the granite contact.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

OPERATOR'S MONTHLY REPORT
for
JUNE, 1958

D.M.E.A. Contract No. Idm-E-1125

The exploration adit was advanced 159.4' during the month for a total distance of 925.4 feet from the point of beginning. This advance was in a dark, silicated limestone and a gray colored, fine grained hornfels which does not readily exhibit bedding planes. The last 15 feet of advance was in the main granite body which apparently has been faulted toward the southeast.

A cross-cut was advanced 160 feet N 46° 16' E from a point 738 feet from the point of beginning. The first part of this cross-cut encountered bedded tactite and then black colored, silicated limestone. The last 63 feet is in the main granite body which bounds the mine to the north.

A second cross-cut is being driven northerly toward the granite contact from a point 612 feet from the point of beginning. Most of the rock encountered is thinly bedded silicated limestone. The advance here is 76 feet.

Four sets of timber were placed in the main adit for a total of 20 linear feet at 398 feet from point of beginning to 418 feet past the point of beginning.

Plans are to continue the cross-cut to the granite contact.

No new deposits of scheelite have been encountered.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

OPERATOR'S MONTHLY REPORT
for
MAY, 1958

D.M.E.A. Contract No. Idm-E-1125

The exploration adit was advanced 16 feet during the month for a total of 766 feet from the point of beginning.

Two diamond drill holes were completed during the first part of the month. These were collared in the exploration adit and drilled northeasterly toward the granite contact at approximately 60° angle to the bedding planes. The first of these holes encountered few scheelite crystals in the interval 28.5' to 52'. The second hole showed some scheelite from 77' to 81'. The first hole appears to have stopped in a granite dike instead of the main contact. The second hole bottomed in the main granite body to the north. Logs of these holes accompany this report.

The adit was advanced in banded tactite with no scheelite present. It is planned to drive this heading along on a bearing of S 81° E during June.

Diamond drill holes were used to explore the ground to the north from the adit because it was felt, and subsequently proven, long holing would not give the necessary information for reasons stated in last month's report.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

ROUND VALLEY MINE
Ralph E. Shupe

OPERATOR'S MONTHLY REPORT
for
APRIL, 1958

D.M.E.A. Contract No. Idm-E-1125

The exploration adit has been advanced 200 feet during the month of April for a total of 750 feet from the point of beginning. 31 feet of timber was placed in the adit near the granite dike and the basic dike.

Most of the rock encountered is tactite. Silicated limestone was cut for a distance of 30 feet beginning at a point 642 feet from the point of beginning.

A small amount of scheelite is present on the right (south) rib at 720 feet in from the point of beginning. It is located near a small vein of quartz and muscovite.

The sizeable tactite zones cut this month should be explored toward the granite to the north. It is believed this could best be done with diamond drilling instead of long holing. The other tactite zones encountered to date could also be explored by diamond drilling. A long hole (1) may not be able to reach far enough, (2) may not be able to continue through shattered silicated limestone, (3) may lose the return water and cuttings in fracture zones. The other alternative is to drive a drift in the tactite toward the granite and then drill east and west.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;.

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(Instructions on reverse)

(For Government use only) B. A. Shahan, Mining Engineer

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

ROUND VALLEY MINE
Ralph E. Shupe

March 31, 1958

Operator's Monthly Report

Narrative
for
D.M.E.A. Contract No. Idm-E 1125

Period March 1, 1958
to
March 31, 1958

The adit was advanced 185 feet during the month of March making the total distance from the point of beginning 550 feet.

Most of the rock encountered has been black colored, silicated limestone. A granite dike was cut for a distance of 33 feet and a basic dike was encountered for 8 feet. The ground between these two dikes as well as to the west of the granite dike is badly fractured. Two bands of tactite were cut by the adit. The first of these is about 5 feet wide and is found between the granite dike and the basic dike. A small amount af scheelite is present in this tactite along the western contact. This is not ore; it lamps like it would assay approximately 0.1 % WO3 or less. The other band of tactite is closer to the present face and is about 11 feet thick. This zone appears to be increasing in width toward the north.

A double track was laid to switch cars at a point approximately 335 feet from the point of beginning. This takes the place of the stub drift mentioned in the report for February.

Some timber will be installed between the granite dike and the basic dike.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

March 3, 1958

Operator's Monthly Report

Narrative
for
D.M.E.A. Contract No. Idm-E 1125

Period February 1, 1958
to
March 1, 1958

The adit was advanced 175 feet during the month of February. The total distance from the point of beginning is now 365 feet.

A switch and 14 feet of track were installed in the old drift intersected last month. This short section of track has served as a place to switch cars closer to the working face. Another place for switching cars is now being prepared near the present face. This will be a short stub drift driven northerly from the new adit approximately 335 feet from the point of beginning and will be designated the 500 north drift for reference.

Tactite showing original bedding was encountered to a point 293 feet from the point of beginning. The strike of these metamorphics is approximately north, and the dip has increased from approximately 50 degrees westerly to 60 degrees westerly. In approximately 7 feet horizontally, this tactite grades into a bedded, silicated, generally black colored impure limestone. In general, these beds strike slightly east of north and dip northwesterly at approximately 60 degrees. Several faults roughly parallel to those previously mapped along the adit were encountered. Most of these faults show very little displacement.

It will be necessary to install some timber in the adit, especially in that area from which the 500 north drift is begun.

Plans call for the continuation of the exploration adit on a bearing of S 81° E.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Feb. 1, 1958

Operator's Monthly Report

Narrative
for
D.M.E.A. Contract No. Idm-E 1125

Period January 1, 1958
to
February 1, 1958

The adit was advanced 70 feet during the month of January. This is a total distance of 190 feet from the point of beginning.

One of the old drifts was intersected 130 feet from the point of beginning. This drift was driven from a shaft and is approximately 3 feet lower than the adit.

Gray colored, silicated limestone occasionally containing bedded bands of tactite was encountered to the intersected drift. The remainder of the rock has been tactite. "Tactite" is arbitrarily referred to as that rock containing 50% or more of garnet. A few small faults common in the area have also been crossed. A few crystals of scheelite were found in the face 170 feet past the point of beginning. The beds strike slightly east of north and dip on an average of nearly 60 degrees westerly.

A 25 foot cut-off tunnel was driven to do away with the back-switching necessary on the old track. This was begun 80 feet in from the portal and connected with the old adit again at a previous transfer raise to the surface.

The east rib of the adit was slabbed for a distance of 30 feet beginning at a point 47 feet in from the portal and extending to the beginning of the new cut-off. This was necessary to allow more room for the air motor. The air line was also changed to follow the new cut-off. 20 lb. rail is installed in the mine from the new cut-off to the present face.

A small portable generator supplies electricity for the Wheat lamp charger and for lights recently strung along the haulage line.

Plans are to continue the adit on the prescribed bearing of S 81° E.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Operator's Monthly Report

Narrative
for
D.M.E.A. Contract No. Idm-E 1125

Period November 11, 1957
to
December 31, 1957

Preparatory work was begun November 11 and the first round on the contract adit was blasted November 15. Preparatory work consisted of laying track on the waste dump, installing water and air connections, cleaning track, installing switch at the point of beginning of the new adit, widening old adit for motor and cars, and installation of timber just before the point of beginning.

A total advance of 120 feet from the point of beginning has been made of which 40 feet was completed in November. The first 30 feet of adit was driven S79°E to get away from the old adit quicker. This eliminated the necessity of placing timber at the "Y" formed by the new adit and the old adit. Otherwise, the adit is continuing on the prescribed bearing of S 81° E.

The rock encountered has been tactitie much of which has been shattered by faulting. Original limestone bedding can usually be seen and is especially easy to see in limestone which has not been entirely replaced predominantly by garnet. The bedding strikes generally N 30° E. The dip is to the northwest and has increased from 38° near the point of beginning to 52° at the face.

One zone containing scheelite was encountered 77 feet past the point of beginning. This zone is approximately 9 feet thick of which 2 feet on the north rib assays 0.46% WO_3, and the remainder is estimated to average 0.1% WO_3 or less.

Plans call for the continuation of the adit on a bearing of S 81° E.

Respectfully submitted,

Byron W. Works

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS: Fixed Unit Cost Contract

(For Government use only) B. H. Sheahan, Mining Engineer
* (Units authorized 900 feet)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

EXPLORATION PROJECT CONTRACT NO. Idm-E 1125

RALPH E. SHUPE

Docket No. DMEA-4614

Month of: November, 1957

NARRATIVE

On November 15, 1957 stage I of subject Project was started from a point designated by Mr. Ben Sheahan, Mining Engineer, U. S. Bureau of Mines, Reno, Nevada.

The Crosscut Adit was advanced forty (40) feet on a bearing of S. 81° E. through bedded limestone from the point designated by Mr. Sheahan.

The small footage of advance at November 30, 1957 did not furnish sufficient information to require a Geological Report.

Mr. Sheahan visited the Project for the purpose of inspection on November 26, 1957.

Signed:

Ralph E. Shupe
