MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

This property was inspected December 11, 1957, accompanied by Mr. M. W. Hutchinson, company geologist.

The 2000 level north crosscut had been driven approximately 2,822 feet northeasterly. The face of the crosscut was in unbleached Wallace formation. No significant mineralization had been cut since the last inspection. No. 19XCN crosscut was cut at Sta. 2032 + 123 ft. on the west side of the main northeast crosscut to a depth of 25.2 feet, for a diamond drill station. A sideswipe 13 feet long, consisting of about 494 cu. ft., was cut at the crosscut. Thirty-five rock bolts were used in the crosscut.

The west drift face was about 1,488 feet west of the main crosscut and was in bleached Wallace formation. No. 27 WS crosscut was driven southerly 17 feet at Sta. 2031 + 119 feet for a diamond drill station. A 12-ft. sideswipe consisting of 456 cu. ft. was driven at the crosscut.

DDH No. SM2003, drilled S. 17½° E. from 3E South crosscut in the 2000 East drift, was completed to a depth of 736 feet without cutting any important mineralization.

DDH No. SM2004 from the 20 WS crosscut, bearing S. 8½° W., was drilled to a depth of 601 feet and did not cut any significant mineralization.

DDH No. SM2005 was being drilled northerly from 20 WN crosscut and will bottom at about 600 feet.

The main crosscut was timbered from Sta. 2019 + (9.7 to 19.7 ft.).

The following survey data is taken from company transit surveys and the distances checked and confirmed at the time of the inspection.

2000 Level Tail Drift

No change.		103.3 ft.

2000 Level North Crosscut

Previously reported distance from shaft station to SM2030		2,202.94 ft.
SM2030 - SM2032	N 56° 28' 30" E	286.70
SM2032 - SM2034	N 56° 28' 30" E	236.84
Sm2034 to face		96
		2,822.48 ft.

Sideswiping Car Transfer at SM2032 + 123 ft. on south side

13'x4'x9.5'	494 cu. ft.

at SM2031 + 119 ft.

12'x4'x9.5'	456 cu. ft.

2000 Level West Drift

Previously reported distance from main crosscut to SM2029		962.37 ft.
SM2029 - SM2031	N 82° 48' 00" W	264.55
SM2031 to face		261
		1,487.92 ft.

Diamond drill stations

19XCN on west side at SM2032 + 123 ft.	25.2 ft.
27 WS crosscut on south side at SM2031 + 119 ft.	17 ft.

2000 Level East Drift

No change.

Rock bolts

	North Crosscut	West Drift	East Drift	D.D. Stations
Previously reported	2,372	1,283	313	14
October	361	489	—	34
November	684	666	—	35
	3,417	2,438	313	83

Total - 6,251 bolts

The status of the contract at the time of the inspection was:

Date of contract: October 21, 1954
Termination date: August 1, 1959
Amount of contract: $1,435,880.00
Amount spent: 775,653.56 (thru Nov. 1957)

	Authorized	Completed
Surface plant	$45,500.00	$43,893.22
Surface core drilling	3,000 ft.	2,244 ft.
Underground diamond drilling	25,000 ft.	2,721 ft.
Assays	1,000	13
Crosscutting and drifting		
Tail drift)		103.3 ft.
North crosscut)		2,822.48 ft.
East drift)	15,820 ft.	137.5 ft.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ W. E. Weissenborn Title Exec. Mgr. Date Jan. 6, 1958

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit this form under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - November 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

Progress on the Silver Mountain 2000 level during November included 234.8 feet of crosscutting, 206.1 feet of drifting, 25.0 feet of sideswiping (950 cubic feet) and 1200.0 feet of diamond drilling. A total of 1385 rock bolts were installed. 684 of these were in the Northeast crosscut, 666 in the West drift and 35 in No. 19 Crosscut North.

The Northeast crosscut advanced 209.6 feet to a point 2727.6 feet from the 2000 level station and the West drift advanced 206.1 feet to a point 1395.1 feet from the main crosscut. No. 19 crosscut North was driven 25.2 for a diamond drill station and 13.0 feet of sideswiping (494 cubic feet) for car transfer was done, both in the Northeast crosscut. 12.0 feet of sideswiping (456 cubic feet) for car transfer was done in the West drift.

As shown on the attached geologic map the advance in the Northeast crosscut was in the same type of rocks as in September and October but showed some bleaching. During most of the month, advance in the West drift was in bleached Wallace rocks. Neither heading exposed mineralization of significance.

Diamond drill hole No. SM2003 was completed to 736.0 feet for an advance of 234.0 feet and hole No. SM2004 was drilled 601.0 feet southerly from 20 W. South crosscut. No significant mineralization was encountered in either hole. The logs are included with this report.

Hole No. SM2005 is now being drilled northerly from 20 W. North crosscut and had reached a depth of 365.0 feet at the end of November.

Yours very truly,

M. W. Hutchinson

M. W. Hutchinson
Geologist

MEMORANDUM

To: DMEA Field Team, Region I

From: D. R. MacLaren and R. D. Sample, Geologists, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The above exploration project was visited and inspected on November 21, 1957 by the writers. Mr. N. W. Hutchinson, company geologist, accompanied the examiners through the 2000 level and explained the pertinent geological features along the main northwest crosscut and along the east and west drifts off the crosscut.

Crosscutting continues in a general N. 56° 30' E. direction through the thin-bedded calcareous, and greatly contorted beds of the Wallace formation. The total advance is now approximately 2,700 feet from the shaft or 1,600 feet from the east and west drifts. The ground near the face is becoming more firm and fewer roof bolts are required to hold the back and sides. Mr. Hutchinson believes that it will require about 1,900 feet additional advance on this crosscut to cut the Deadman fault zone.

The west drift which, according to company geologists, is within or very close to the Paymaster fault zone continues along the approximate contact between the St. Regis and Wallace formations in a general N. 82° W. direction and has advanced to about 1,300 feet from the main northwest crosscut. Diamond drill stations spaced about 200 feet apart are being cut along this west drift and diamond drilling is being carried on simultaneously with the drifting. No significant structures or mineralized areas have been found by the diamond drilling to date.

There has been no advance of the east drift since the initial advance of about 100 feet. This east drift is now being used for car storage and Mr. Hutchinson states that there is no immediate plan for continuing the drift.

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. 6732 in accordance with the terms of the contract.

Signature /s/ John A. Bardill Title Metallurgist Date November 27, 1957

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Wissenborn Title Exec. Officer Date Dec. 2, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver Mountain Project - October 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

Progress on the Silver Mountain 2000 level during October included 407.4 feet of crosscutting, 214.0 feet of drifting, 27.6 feet of sideswiping (852 cubic feet) and 1478 feet of diamond drilling. A total of 884 rock bolts were put in. 361 of these were in the Northeast crosscut, 489 in the West drift, 9 in 3E South crosscut, 10 in 20 W South crosscut and 15 in 21 W North crosscut.

The Northeast crosscut advanced 357.4 feet to a point 2518.0 feet from the 2000 level station. The West drift advanced 214.0 feet to a point 1189.0 feet from the main crosscut. Three diamond drill crosscuts were completed. In the West drift 20 W South crosscut and 21 W North crosscut were driven 22.3 feet and 19.2 feet respectively. In the East drift 3 E South crosscut was driven 8.5 feet. 9.8 feet of sideswiping (384 cubic feet) for car transfer was done in the Northeast crosscut and 9.3 feet (298 cubic feet) in the West drift. 3.5 feet of sideswiping (80 cubic feet) was done in 20 W South crosscut and 5.0 feet (90 cubic feet) in 21 W North crosscut.

As shown on the attached 50 scale map of the Northeast crosscut, the advance in this heading was all in thin bedded, unbleached rocks of the Wallace formation. These rocks continued to be considerably sheared and crumpled. No mineralization or structures of importance were exposed.

During most of the month advance in the West drift was in unbleached purple St. Regis rocks. However, near the end of the month this drift passed through a rather strong northwesterly striking fault beyond which the rocks have all been bleached and have shown occasional small disseminated specks of tetrahedrite.

Diamond drill hole No. SM2001 was completed to a depth of 600 feet for an advance of 276 feet and hole No. SM2002 was drilled 700 feet in a southerly direction from the face 14 W South crosscut. As shown in the attached logs of these two holes no significant mineralization was encountered.

Hole No. SM2003 was started southeasterly from the face of 3E South crosscut in the East drift and had reached a depth of 502.0 feet at the end of October.

Yours very truly,

M. W. Hutchinson

M. W. Hutchinson

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

This project was inspected October 25, 1957, accompanied by Mr. M. W. Hutchinson, company geologist.

The 2000 level North Crosscut had been driven approximately 2,428 feet from the station since the start of the contract. The face was in Wallace formation. No important mineralization or structures had been cut since the last inspection. A 15-foot section was timbered between Sta. SM2028 + 40 feet to 55.4 feet. A car transfer was side-swiped at approximately Sta. SM2030 + 37 feet.

At the end of the East Drift an 8.5-foot crosscut was driven to the south for a diamond drill station. The drill had been set up and hole No. SM2003 had been drilled to a depth of 84 feet bearing S. 15° E. The hole will probably be drilled to a depth of about 650 feet.

The 2000 level West Drift had been driven about 1,127 feet from the main crosscut. The face of the drift was in unbleached St. Regis formation. No significant structures or mineralization had been intercepted.

Two diamond drill stations, 14WS and 20 WS, had been cut south from the drift and one station, 21WN, had been cut toward the north.

Diamond drill hole SM2001 was drilled southerly from diamond drill station No. 7W south crosscut to 600 feet. At roughly 300 feet the bleached St. Regis formation was cut. At 524 feet a strong 3-inch, high grade stringer was cut. There is still some doubt which is the Paymaster fault.

Diamond drill hole No. SM2002 was drilled from 14W crosscut bearing S. 13° W. to a depth of 700 feet. No mineralization or structure of consequence was encountered.

The following survey data is taken from company transit surveys, The distances between survey stations were checked and confirmed at the time of the inspection.

2000 Level Tail Drift

No change		103.3 feet

2000 Level North Crosscut

Previously reported distance from shaft station to SM2026		1,760.91 feet
SM2026 - 2028	N 56 - 28 - 30 E	236.09
2028 - 2030	N 56 - 28 - 30 E	205.94
		2,202.94
SM2030 to face		227
		2,427.94 feet

Timbered from SM2028 + 40 ft. to 55.4 ft. 15.4 feet

Sideswiping Car Transfer at SM2030 + 37.5 ft. on east side

4' x 5' x 12' = 240.0 cu.ft.

2000 Level West Drift

Previously reported distance from main crosscut to SM2025		509.72 feet
SM2025 - 2027	N 82 - 49 - 00 W	194.45
2027 - 2029	N 82 - 48 - 00 W	260.0
		962.37
SM2029 to face		165
		1,127.37 feet

Diamond drill stations in 2000 Level West Drift

Center of Station 14 WS at SM2027 for drill hole No. 2002

Crosscut 17 feet

Center of Station 20 WS at SM2029 + 35 feet

Crosscut 22.3 feet

Center of Station 21 WN at SM2029 + 65 feet

Crosscut 19.2 feet

Additional sideswipe 9' 3" x 8 x 4 = 296 cu. ft.

2000 Level East Drift

No advance in drift.

Center of Station for diamond drill hole SM2003 to the south at the end of the drift.

Crosscut 8.5 feet

Rock bolts

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. 6732 in accordance with the terms of the contract.

Signature /s/ John A. Lardell Title Metallurgist Date Oct. 31, 1957

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ Wing G. Agnew Title Acting Exec. Date 11-5-57

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver Mountain Project - September 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

Progress on the Silver Mountain 2000 level during September included 349.3 feet of crosscutting, 314.7 feet of drifting, 23.3 feet of sideswiping (924 cubic feet) and 324.0 feet of diamond drilling. A total of 642 rock bolts were put in, of which 251 were in the northeast crosscut, 377 in the west drift and 14 in No. 7W diamond drill crosscut.

The main northeast crosscut was advanced 332.2 feet to a point 2160.6 feet from the 2000 level station. The west drift was advanced 314.7 feet to a point 975 feet from the main crosscut. The second diamond drill crosscut (14W south crosscut) was completed with an advance of 17.0 feet. 11.8 Feet of sideswiping (487 cubic feet) for car transfer was done in the northeast crosscut and 11.5 feet (437 cubic feet) in the west drift.

As shown on the attached 50 scale map of the northeast crosscut, rocks exposed in this heading during the month were predominately thin bedded unbleached Wallace argillites with occasional narrow bleached bands. The rocks were generally sheared and somewhat contorted, and it was necessary to timber a 15.4 foot section of the crosscut.

In the west drift, advance began at the approximate contact between bleached Wallace and bleached St. Regis rocks and continued for about 120 feet in bleached St. Regis. The drift then passed into more massive unbleached St. Regis beds and continued in these purple rocks for the remainder of the month. No mineralization of significance was exposed in either the northeast crosscut or the west drift during the month.

Diamond drill hole No. SM2001 was started southerly from the face of 7W south crosscut and had reached a depth of 324.0 feet at the end of September. A log of this hole will be submitted with the report for October.

Yours very truly,

M. W. Hutchinson

M. W. Hutchinson
Geologist

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

This project was visited September 12, accompanied by Mr. M. W. Hutchinson, company geologist.

The 2000 level north crosscut had been driven about 1,997 feet from the shaft station since the beginning of the contract. A car transfer was sideswiped between SM2022 + 129 ft. to 134.7 ft. on the southeast side of the crosscut.

The crosscut was timbered for 130.6 feet between SM2022 + 225.9 feet to SM2026 + 60 feet. North of the timbers the ground was good and did not require support. Northeast of SM2022 the crosscut is in unbleached Wallace formation.

The 2000 level east drift has not been advanced since the last inspection. A conference of company geologists was planned for the next day when it would be decided whether the drift would be continued.

The 2000 level west drift had been driven about 766 feet west from the north crosscut. No. 7W crosscut south was driven about 23 feet into the south wall at SM2021 + 140 feet for a diamond drill station. About 308 cu. ft. of sideswiping and 12.3 feet of crosscut comprised the whole station. No. 13W crosscut south, consisting of 480 cu. ft. of sideswiping and 15 ft. of crosscutting were cut at SM2025 + 188 ft. for another diamond drill station. These stations will also be used for car transfers when drilling has been completed. This drift went out of bleached Wallace formation about the end of August into bleached St. Regis formation and finally into purple St. Regis.

None of the new workings have disclosed any significant mineralization.

September 17, 1957

MEMORANDUM

TO: DMEA Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project was visited and inspected on September 4, 1957 by R. D. Sample, Geologist, U. S. Geological Survey and Sui Ju Kung, Mining Engineer, Taiwan Metal Mining Corporation, Chin-Qua-Shih, Keelung, Taiwan (Formosa). Mr. Kung is on an inspection tour of mining districts in western United States under the auspices of the United States Government.

Mr. Clarence Penham, mine foreman at the Silver Mountain project, accompanied the inspectors to the 2000 level where the present contract work is being done.

Progress continues on the main northeasterly crosscut from the shaft and has advanced about 1,750 feet from the 2000 level station. At approximately 1,450 feet from the station, the crosscut was turned rather sharply from the former N. 21° E. direction to a N. 56° 30' E. direction (fig. 1). The reason for this turn was to avoid the shattered and heavy ground caused by the intersection of several small faults and bedding slips. It was necessary to timber for about 50 feet through this heavy ground. Roof bolts would not hold it.

At 1,100 feet northward from the station the easterly and westerly drifts have turned off from the main crosscut into what is believed to be the Paymaster zone. This altered and mineralized zone is known to exist on the surface and upper workings of nearby mines but is hard to distinguish at the 2000 level at the Silver Mountain project. Company geologists and officials who are very familiar with this zone through years of experience state positively that the turn-off drifts are in this zone of alteration. The examiners could see nothing which would distinguish this area from

the rest of the surrounding rock. Work on the easterly drift has been temporarily stopped after about 100 feet of drifting. It may be resumed later.

Work on the westerly drift continues and proceeds in a general N. 82° W. direction. It has advanced about 600 feet from the main northeast crosscut. A diamond drill station has been cut on the south side of this westerly drift about 350 feet from the main crosscut. Diamond drilling southward from this station is expected to start soon. According to the company geologists this westerly drift is proceeding through altered and bleached Wallace formation which is the uppermost formation of the pre-Cambrian Belt series in this immediate area. It consists of wavy, thin beds of light gray calcareous quartzite and greenish gray phyllite containing an occasional pod of quartz and ankerite in a ladderlike arrangement.

As far as the examiners could see the west drift was progressing almost in line with the strike of steep dipping beds which resulted in much crumbling and shattering of the sides. Many roof bolts were required to hold these sides. No important structure, aside from the bedding slips, or mineralization are exposed in this westerly drift.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver Mountain Project - August - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

Progress on the Silver Mountain 2000 level during August included 173.0 feet of crosscutting, 272.8 feet of drifting and 5.8 feet of sideswiping (143.0 cubic feet). 678 rock bolts were put in, 207 of which were in the northeast crosscut and 471 in the west drift.

The northeast crosscut was advanced 169.0 feet to a point 1828.3 feet from the 2000 level station. The west drift was advanced 272.8 feet to a point 660.3 feet from the main crosscut. There was no advance in the east drift during August.

The first diamond drill crosscut (7W south crosscut) was completed with an advance of 4.0 feet.

As shown on the attached 50 scale map of the northeast crosscut, rocks exposed in this heading during the month continued to be predominately thin beeded, unbleached Wallace argillites. For the most part, these rocks were sheared and beds were often contorted. About 130 feet of the crosscut was timbered in one zone of more intense shearing. At the end of the month, the rocks were becoming considerably more firm and showed occasional bleached light grey bands.

The west drift continued in bleached alternating thin beds of light greenish-grey phyllite and light grey calcareous quartzite. Some of these beds contained occasional streaks and lenses of pyrite with a few specks of tetrahedrite, but no mineralization of significance was exposed.

Yours very truly,

M. W. Hutchinson

M. W. Hutchinson

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mt. Project, Shoshone County, Idaho, Contract No. Idm-E732

This project was visited August 21, 1957.

The project was shut down while the 200 HP electric motor driving the ventilation fan is being repaired. This is the third time in less than 10 days that this motor has burned out. Cause was unknown at the time.

An underground inspection will be made as soon as normal operations are resumed.

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E732 in accordance with the terms of the contract.

Signature /s/ John D. Gardiel Title Metallurgist Date August 26, 1957

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Exec. Officer Date Aug. 27, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - July - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

Progress on the Silver Mountain 2000 level during July included 238.7 feet of crosscutting, 307.4 feet of drifting and 16.7 feet of sideswipe (473 cubic feet). A total of 1065 rock bolts were put in.

The northeast crosscut was advanced 230.4 feet to a point 1,659.3 feet from the 2000 level station. The west drift was advanced 287.3 feet to a point 387.5 feet from the northeast crosscut, and the east drift advanced 20.1 feet.

A diamond drill crosscut was started in the south wall of the west drift, approximately 349 feet west of the northeast crosscut as measured around the curve. This short crosscut was advanced 8.3 feet.

5.7 feet of the sideswiping (165 cubic feet) was done in the main northeasterly crosscut and 11.0 feet (308 cubic feet) in the west drift at the site of the diamond drill crosscut. 661 rock bolts were installed in the main crosscut, 355 in the west drift and 49 in the east drift.

When work in the northeast crosscut was temporarily suspended at the end of May, the crosscut was in the process of being turned to a bearing of N. 56° 28' 30" E. The face at that time stood in a strongly sheared and broken area. Upon resuming work in the crosscut, this sheared and broken area was timbered.

The disturbed nature of the ground in the vicinity of the turn to the new bearing has resulted from the intersection of a number of faults. One strong fault, containing from 1" to 3" of soft, white and dark gray gouge, strikes almost north-south and dips 46° E. This fault strikes transversely across the tunnel, then curves sharply and strikes N. 34° E. The west wall of the crosscut almost parallels the fault for a distance of about 45 feet. A second strong fault, displaying from 2" to 3" of gouge, strikes N. 20° W. and dips 50° north-easterly. This fault intersects the first one at the bend of the crosscut. There appears to be a slight amount of offset of the first fault by the second.

On the northeast side of the complex of intersecting faults just described, the crosscut has entered unbleached Wallace rocks. The transition from bleached Wallace to unbleached Wallace is gradual. The boundary of the bleached zone has been arbitrarily assigned as shown on the accompanying map. All of the rock exposed in the northeast crosscut during July consists of alternating thin beds of gray quartzite and grayish-black argillite. The beds are wavy and undulating, and locally crumpled or crenulated.

Occasional bands, from 2" to 12" wide, of dark gray calcareous quartzite contain numerous thin parallel plates of quartz and ankerite in a ladder-like arrangement. A very fine, silvery-white variety of sericite is associated with the quartz-ankerite plates.

The west drift has exposed moderately bleached rocks of the Wallace formation. These consist of alternating thin beds of light gray calcareous quartzite and greenish gray phyllite. Mineralization consists of occasional dark gray bands containing thin parallel plates of quartz and ankerite in a ladder-like arrangement, and occasional irregularly shaped masses of quartz-ankerite. Silvery-white sericite is frequently associated with the quartz-ankerite.

No important structures were exposed by either the east or west drift during the month.

Yours very truly,

A. H. Sorensen

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket ~~No. DMEA-3406 (lead-~~ zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

This project was inspected July 11, 1957, accompanied by Mr. M. W. Hutchinson, company geologist.

The 2000 level north crosscut had been driven 1,467 feet from survey point SM2003 which is located at the north end of the station and is the beginning of the crosscut. The face was in a badly crushed zone suspected to be faulted. A considerable number of rock bolts are required to prevent extensive caving.

A fault zone about 15 feet thick with a footwall strike of N. 55°-60° W. and 80° S. dip, approximately 904 feet north of the station is believed to be the Paymaster fault. The zone is a complex of minor intersecting faults, dominated by the strong fault.

Approximately 1,103 feet north of the shaft or 15 feet north of SM2013 is the starting point for the east and west drifts having a radius of about 100 feet each. The east drift will parallel the Paymaster fault zone about 225 feet north of the fault, and the west drift will parallel it approximately 285 feet north.

The east drift had been driven about 138 feet from the crosscut. The face of the east drift was said to be in overturned beds of the uppermost St. Regis formation. Disseminated pyrite grains and veinlets of pyrite were exposed in the drift.

The west drift had been driven about 156 feet from the crosscut with the face reported to be in St. Regis-Wallace formational boundary zone. Disseminated pyrite grains were evident in the drift.

The following survey data is given to facilitate reporting future progress. The data is taken from the company transit surveys. The distance between survey stations was checked and confirmed.

2000 Level Tail Drift

Starting point of tail drift going south at SM2004 + 1.3 ft.

Sta. SM2004 + 1.3 ft.	- SM2002	S. 37° W.	35.4 ft.
SM2002	- face	S. 37° W.	67.9 ft.
Length of tail drift			103.3 ft.

July 12, 1957

MEMORANDUM

To: DMEA Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim inspection report, Docket No. DMEA-3406 (Lead-Zinc-Copper) Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project was visited and inspected on July 9, 1957, by R. D. Sample and William Prinz, Geologists, U. S. Geological Survey. All of the present workings are on the 2,000-foot level which is serviced by the 2,088-foot, 3-compartment, vertical shaft. A crosscut approximately 1,500 feet northward (see attached sketch map) has been driven at about right angles to the strike of the beds and cleavage of the St. Regis formation of the Belt Series of Precambrian rocks. At 1,100 feet northward from the shaft an easterly and westerly drift has been turned off from the main crosscut to follow along what was believed to be the Paymaster fault zone. Work on the easterly drift had been discontinued at the time of the visit, but the westerly drift, as well as the extension of the main crosscut, was continuing.

Work on the easterly drift was temporarily stopped at about 100 feet because of lack of sufficient structural or mineralized features to follow. The last drifting in this turnoff was about parallel with the bedding of the St. Regis formation and showed only scattered pods and pieces of siliceous calcite with no mineralization. The dark-gray, shaly and steep dipping phyllites of the St. Regis is very crumbly and tends to cave when the drifting is parallel to the bedding, requiring many roof bolts.

The westerly drift had extended for about 75 feet and had not quite approached the strike of the beds. No structure or mineralization was observed in this west face although the same scattered siliceous calcite pods were present along the walls and face.

The northerly extension of the crosscut was about 1,500 feet from the shaft and at the time of visit was in badly crushed and

water-soaked rock. A fault zone or water course was suspected. This face was requiring many roof bolts on the sides and back to prevent extensive caving.

Work on the northerly extension appears to be progressing satisfactorily but may be slowed somewhat if the area of caving is extensive. The work on the westerly drift may be temporarily halted in a short time unless a significant structure or mineralized area is contacted.

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E 732 in accordance with the terms of the contract.

Signature /s/ John A. Bardill Title Metallurgist Date July 29, 1957

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Executive Officer Date July 31, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver Mountain Project - June - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

During the month of June, the east and west drifts were advanced 118.2 feet and 100.2 feet from the north crosscut, respectively.

A total of 28 feet of sideswiping (1,068 cubic feet) was completed and 663 rock bolts were put in.

At the end of June, the face of the east drift was in overturned beds of the uppermost St. Regis formation. The west drift had penetrated the St. Regis - Wallace formational boundary zone about 62 feet from the north crosscut. Both drifts are in bleached rock.

Mineralization exposed in the drifts consists of occasional 1" to 2" beds of quartzite containing disseminated pyrite crystals, several $\frac{1}{4}$" to $\frac{1}{2}$" veins of massive pyrite, and occasional zones, about one foot wide, paralleling bedding or fracture cleavage, containing irregularly shaped masses of quartz-ankerite which sometimes contain traces of chalcopyrite. Thin plates of quartz and ankerite also occur as fillings in nearly horizontal joint planes.

Yours very truly,

A. H. Sorensen

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Exec. Officer Date July 30, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - May - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

During the month of May, the north crosscut was advanced 494.8 feet to a point 1428.9 feet north of the 2000 level station. Crosscutting has been temporarily halted and east and west lateral work has been started.

A total of 40 feet of sideswiping (1,282 cubic feet) was completed and 534 rock bolts were put in.

At the end of April, the face of the crosscut was in purple St. Regis rocks. These purple rocks were found to continue with the exception of occasional thin bleached bands, for a distance of 155 feet. A new bleached zone was then encountered which is continuous at least to the end of the crosscut, a distance of 344 feet.

No major faults were exposed during the month's crosscutting. The complex of intersecting faults, dominated by a strong fault which dips 80° S.W., that was described as lying 25 feet south of last month's face has been tentatively identified as the Paymaster fault.

At the 2000 level, the Paymaster fault lies in purple St. Regis rock on the south flank of a tightly folded anticline which has been overturned toward the north. On both sides of the fault, the beds dip normally from 70° to 72° S., and strike roughly E - W.

At a distance of 105 feet north of the Paymaster fault, beds are seen dipping 85° S. The relations between fracture cleavage and bedding, evidences of graded bedding, and the increase in dip of the beds, indicate that at this point the beds have been overturned and the tops of the beds face toward the north.

The axis of the anticline presumably lies at a point between the Paymaster fault and the above mentioned overturned beds. Its axis has been tentatively drawn on the accompanying map approximately 60 feet north of the Paymaster fault. The anticlinal axis is overturned, at the level of the crosscut, and dips about 80° S. as indicated by the fracture cleavage.

Approximately 250 feet north of the Paymaster fault zone the rocks consist of interbedded grayish-green phyllites and medium to rather dark gray calcareous quartzites which very much resemble bleached Wallace formation. The formational contact is tentatively placed at that locality.

A 1 inch to 1½ inch wide vein of quartz and massive pyrite containing chalcopyrite and tetrahedrite was found 324 feet north of the Paymaster fault. The vein, striking N. 85° E. and dipping 77° S., occurs in a 60 foot wide zone of semi-silicified, calcareous, gray Wallace quartzite. A 0.5 foot wide sample across this structure assayed 1.5 ounces silver, 1.96 percent copper, no lead and no zinc.

At a distance of 377 feet north of the Paymaster fault, the beds dip steeply north. From this point on to the end of the crosscut, occasional thin, black bands of crenulated Wallace argillite indicate that the beds are tightly compressed into small folds and wrinkles.

Yours very truly,

A. H. Sorensen

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. 6737 in accordance with the terms of the contract.

Signature /s/ John D. Bardell Title Metallurgist Date July 29, 1957

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Exec. Officer Date July 30, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM

From: Verne C. Fryklund, Jr., Geologist, U. S. Geological Survey

To: DMEA Field Team, Region I, Northwest District

Subject: Interim Inspection Report, Docket No. DMEA-3406 (Lead-Zinc-Copper), Hecla Mining Company, Hecla-Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

I visited the Silver Mountain project the morning of May 2, 1957, and discussed the geology with Art Sorenson, project geologist, in the afternoon.

The face was approximately 946 feet north from Station SM 2003 (see company map). As far as I can tell the entire 2000 level is in St. Regis formation. Much of it is bleached; much, including the face, has a strong purple color. The crosscut has cut a number of faults of varying degrees of importance and the ground is generally "sheared". Although there is now no timber and only a few places where there are rock bolts, I suspect that some timber will soon be needed.

There is a fairly strong fault at 900 feet. Mineralization, as was expected, consists of minor stringers of recrystallized quartzite replaced by ankerite.

May 3, 1957

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The exploration project was inspected May 1, 1957, accompanied by Mr. Hjalmar Lindfors, mine foreman.

The north crosscut had been advanced 185.5 feet beyond survey station No. S.M. 2009, for a total advance of 942 feet. The Operator has tried to hold the rock section to approximately 7'x9' but because of the loose ground the average rock section in the north crosscut is about 8'x10'. The total crosscutting to date, including the 103-ft. south crosscut for "tail track" is 1,045 feet.

During the month of April a total of 675.3 feet of crosscutting was completed in 26 working days, 3 shifts per day, with a drift crew of 3 men per shift except for a couple of shifts when a man was believed to have been absent. The average rate of advance was 26 feet per day. The exceptional advance was made possible by good ground conditions. The ground drilled and broke good with less than average powder, bit and steel consumption. The crosscut is on a course about normal to the bedding and shearing, which is the best condition for "pulling" rounds in this type of formation with no "bootlegging" of holes. The nearness to the shaft made it possible to clear the heading of smoke and dust quickly enough to allow 4 rounds per 3 shifts rather than the customary round in and out cycle.

A cost analysis was made for the crosscutting through the month of March 1957 and is presented in a separate memorandum to the Field Team.

No significant mineralization has been exposed to date. The formation is argillaceous quartzites. The Paymaster fault is expected to be reached in the next 500 feet and the rate of advance indicates this will be accomplished during the latter part of May 1957.

The status of the contract is:

Date of contract: October 21, 1954
Termination date: January 1, 1958
Amount of contract: $1,058,370.00
Amount spent: 545,934.68 (thru March 1957)

	Authorized	Completed
Surface plant	$45,500.00	$43,893.22
Surface core drilling	3,000 ft.	2,224 ft.
Shaft sinking	2,080 ft.	2,080 ft.
Pump stations	8,000 cu.ft.	8,000 cu.ft.
Shaft station	5,760 cu.ft.	5,760 cu.ft.
Skip pocket	3,216 cu.ft.	3,216 cu.ft.
Crosscutting and drifting	8,415 ft.	1,045 ft.
Sideswiping	36,000 cu.ft.	315 cu.ft.
Underground core drilling	15,000 ft.	none
Timbering	1,600 ft.	none
Rock bolting	1,152 bolts	350 bolts

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - March - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

During the month of March, the north crosscut was advanced 254.4 feet to a point 258.9 feet north of the 2000 level station, and the tail drift south of the station was advanced 92.3 feet to a completed length of 103.3 feet.

The excavation for installation of a substation and battery changing and charging was completed. A switch and siding was also installed in the north crosscut and was completed. At month's end, work had started on forming the dams and doing the other concrete work necessary on the 2000 level.

Crosscutting is well underway and should progress steadily from this point on with the operation on a three shift, six-day per week basis.

As indicated on the accompanying 50-scale geologic map, dark purplish-gray argillite typical of the St. Regis formation is present in the end of the tail drift and also in a wide band north of the shaft. Because of only slight variations in the bleached rocks in the lower portion of the shaft, it was earlier believed that the shaft was all in Wallace formation. With the greater exposures of typical purple St. Regis in the lateral work now, however, it is considered most likely that all of the work thus far on 2000 level is in the St. Regis formation and that the normal Wallace-St. Regis contact, obscured by bleaching and strong shearing, lies above the level within the lower one-third of the shaft.

The section of strongly bleached, sericitic rocks in the shaft area is bounded by purple rocks to the north and south of the station along fault contacts. In the tail drift south of the station, the fault marking the sharp contact between bleached and unbleached rocks strikes N. 55° W. and dips about 70° to the northwest. North of the station, the change in color from greenish-gray to purple is more gradational but for the most part occurs at a fairly strong fault and shear zone which strikes northwesterly and dips about 50° to the southwest.

The strong persistent shearing and bleaching have obliterated most of the original bedding features. In the few areas where weak, somewhat crenulated color banding, and partings suggestive of bedding can be seen, it appears that the beds vary in dip from 0 to about 30 degrees, but for the most part are nearly horizontal. Bedding features at the face of the north crosscut as shown on the map, and in further crosscutting since April 1 show a southerly dip of the beds and indicate that the heading may have crossed through the axis and into the north flank of the syncline.

A few $\frac{1}{4}$ to $\frac{1}{2}$ inch wide quartz-carbonate veinlets are present in the bleached areas and in one of these near the face of the north crosscut, a few specks of galena, pyrite and chalcopyrite were observed.

The geology will be mapped currently on 50-scale and a geologic map showing each month's work will accompany the regular monthly report.

Yours very truly,

H. E. Harper

H. E. Harper
Chief Geologist

Signature /s/ W. E. Weissenborn Title Exec. Mine Date July 30, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ W. E. Weissenborn Title Exec Officer Date 9/17/57

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

RECEIVED MAY 27 1957 D.M.E.A.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver Mountain Project - April - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

During the month of April, the north crosscut was advanced 675.2 feet to a point 934.1 feet north of the 2000 level station. Nine feet of sideswiping (315 cubic feet) was completed and 182 rock bolts were put in.

Crosscutting continues on a three shift, six-day per week basis.

The work done during the month was entirely in the St. Regis formation. The rock consists of soft, fissile, highly sericitic phyllites containing numerous, thin, resistant quartzite beds intercalated.

Bedding for the most part strikes from N. 65° E. to E-W, and occasionally slightly north of west. The dip is from 70° to 80° S. Fracture cleavage dips from 80° to 85° S.

The bleached zone which had been penetrated to a distance of 60 feet by the end of March continued for a total width of 135 feet.

The crosscut then passed through a 175 foot long succession of medium to light greenish-gray bands alternating with dark purplish-gray bands. The alternating bands are a few feet to 15 feet in width and are apparently conformable to the bedding. It is uncertain whether the greenish bands are primary green bands or are the result of hydrothermal alteration. The contacts between the bands are for the most part gradational but some sharp contacts coincide with faults.

After passing through the zone of alternating green and purple bands, the crosscut then traversed a 385 foot bleached zone consisting of badly sheared, soft, fissile, greenish-gray rock. At month's end, the face was again in dark purplish rock containing frequent 1 inch to 3 inch beds of white quartzite.

The purplish rock at the face seems somewhat firmer than the highly sheared rock in the 385 foot bleached zone. The presence of an increasing number of white quartzite beds may indicate that the crosscut is getting into the more quartzitic portion of the middle St. Regis formation, which is generally more favorable toward ore-deposition than is the upper St. Regis.

The dominant structural feature thus far encountered is the large syncline whose axis is intercepted by the crosscut 225 feet north of the shaft. Where bedding dips steeply, it is a strong factor in determining the attitude of many of the faults. This apparently accounts for the fact that the majority of the faults seen in the north crosscut dip toward the south, whereas in the more gently-dipping beds in the vicinity of the shaft, the faults dip in conflicting directions.

Three rather strong faults were encountered during the month. The first, dipping 70° to 80° S. occurs 488 feet north of the shaft. It is in purple rock in the hangingwall of the 385 foot bleached zone. It is actually a 5 foot zone of intense shearing bounded by two parallel faults.

The second fault, which may be the strongest of the three here described, is located well within the 385 foot bleached zone. This fault dips 77° S. and contains from 1½ to 3 inches of soft, dark gouge.

The third fault actually is a complex of intersecting faults dominated by a strong fault which dips 80° S. This fault-complex lies in purple rocks in the footwall of the bleached zone.

Mineralization consists of ¼ inch to 1 inch wide quartz-ankerite veinlets associated with faults and irregularly shaped, scattered quartz-ankerite "pods". The highly contorted pods are conformable to the disturbed fracture cleavage and have apparently been formed by filling of spaces caused by the deformation. There is no silicification adjacent to the pods.

Similarly shaped pods of granular pyrite occur in a manner similar to the quartz-ankerite pods. Most of the pyrite pods are independent of the quartz-ankerite, but a few pods are combinations of quartz-ankerite-pyrite. Pods of both types occur in both bleached and purple rock. The pods frequently contain a little chalcopyrite, galena, black sphalerite, tetrahedrite, and specularite.

The quartz-ankerite veinlets contain the same assorted sulphides in small but variable amounts. The veinlets are identical to the quartz-ankerite pods except that they are conformable to faults and are presumably continuous for some distance.

The carbonate was designated "ankerite" because qualitative chemical tests showed that it contains much ferrous iron and some magnesium. The iron is in excess of magnesium. No siderite has been found.

Occasional, scattered, cubic crystals of pyrite from $\frac{1}{4}$ inch to $\frac{1}{2}$ inch in size are seen in the green phyllitic rocks.

Thin quartzite beds intercalated in phyllite sometimes contain disseminated pyrite and chalcopyrite. Some such beds, although small features, are mineralized strongly enough to be termed "veins".

Assays were run on five samples, the results of which are shown on the accompanying 50-scale map. Although none of the metallization seen thus far is of itself important, it is conceivable that some of the veinlets may represent the peripheries of more strongly mineralized structures, e.g., the veinlets sampled at SM #31 and SM #32.

Yours very truly,

Arthur H. Sorensen

Contract I&m-E732, Hecla Mining Company
Monthly operating report for April 1957

The subject operating report has been processed and forwarded to the Disbursing Officer for payment.

A disallowance of $1,750.00 has been made covering costs claimed for 350 rock bolts at $5.00/bolt. The contract provides for 960 feet of rock bolting at $6.00/linear feet. A recommendation has been forwarded to the Washington office for the purpose of an amendment to clarify the rock bolting item in the existing contract. In the event an amendment is approved, the Operator may reclaim this item upon receipt of his signed copy of the amendment.

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim audit, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The contract calls for an interim audit and it has been suggested by the DMEA Operating Committee, with concurrence of the Contract and Audit Division, that the audit be made after 300 or 400 feet of crosscutting from the shaft has been completed. As of March 19, 1957, 270 feet of crosscutting had been completed and by April 1, 1957, it was indicated that well over 300 feet would be completed.

The Operator usually has the previous month's costs computed by about the 15th of the current month; therefore, it is suggested that the audit be made during the latter part of April 1957 if the auditor's schedule will permit.

It is indicated that the true costs for crosscutting during the first 300-400 feet may be hard to ascertain because crosscutting in the beginning stage and some of the finishing work on the station, sump, etc. are being done concurrently. However, if the costs through March 1957 do not reflect a representative cost for crosscutting, the audit may be extended to include April 1957 costs. It is indicated that about 800 feet of crosscutting will be completed by May 1, 1957.

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The exploration project site was inspected March 19, 1957 accompanied by the miners.

The 2000 level station timbering had been completed since the last visit on February 20, and crosscutting was in progress. The crosscut had been extended 103 feet south of the station for tail track, etc. and the north crosscut had been driven 167 feet, making a total of 270 feet of crosscutting to date. The incline from the north end of the pump sump to the crosscut level was "holed" about 70 feet north of the station. Sideswiping along the north crosscut about 80 feet north of the stations for electric and motor rooms was started.

A block of purple quartzites is exposed in a large portion of the present north and south crosscuts. There is evidence of considerable folding and faulting. The crosscut is over the minimum size of 8'x8' due to overburden in the fractured ground. The back of the crosscut is 12 to 14 feet high in one place. Rock bolts with head boards have been placed in lieu of standard timber sets and they appear to be holding the ground. It is possible some timber may have to be placed later.

The Operator invoiced 15.5 feet of crosscutting and drifting for February 1957 and it was paid at the present agreed price of $47.21 per foot; however, if the present proposal to explore additional targets is approved, the agreed unit cost will be $43.92 (subject to audit) and payment at the present price will be adjusted downward.

Status of the contract is:

Date of contract: October 21, 1954
Termination date: January 1, 1958
Amount of contract: $1,058,370.00
Amount spent: 529,566.98 (thru Feb. 1957)

	Authorized	Completed
Surface plant	$45,500.00	$43,893.22
Surface core drilling	3,000 ft.	2,224 ft.
Shaft sinking	2,080 ft.	2,080 ft.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

RECEIVED MAR 22 1957 D.M.E.A.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc.". The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - February - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

During the month of February, 13 additional sets were reblocked to complete the repair work in the shaft, and the 2000 level station, pocket and pump room were completed.

Excavation during February amounted to 525 cubic feet in the station and 5711 cubic feet in the pocket bringing the total excavation for the station and pocket to 8799 and 7170 cubic feet respectively. A total of 161 rock bolts were placed in the pocket and station during the period.

Lateral work on the 2000 level was started with an advance of 11.0 feet in the tail drift and 4.5 feet in the north crosscut. This work will be shown on a 50-scale progress map of the station area which will accompany next month's report.

The geology of the shaft is shown on the enclosed 100-scale section.

Yours very truly,

H. E. Harper

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mt. Project, Shoshone County, Idaho, Contract No. Idm-E732

Final shaft measurement was made February 20, with the aid of Mr. G. Rice, mine engineer, and an assistant. Although the shaft sinking was completed in mid-December 1956, extensive shaft repairs which started December 19 delayed final measurement until repairs were completed and bulkheads removed.

The distance from the turn sheet at the shaft collar to the bottom of the last regular set of timber was 2,083.15 feet by our measurement. The Operator had reported 2,083 feet in his progress report for December 1956. The Government participates in the cost of 2,080 feet of shaft. The total distance to the bottom (high end of bench) was 2,086.07 feet by our measurement. The Operator reported 2,088.3 feet to the bottom. Measurement to the lower end of the bench was not considered pertinent and was not made because of water and spill pocket partition.

Most of the shaft repairing was reported to have been done below the 1000-ft. level. During December 1956 and January 1957, 84 sets were reblocked and others relined. The shaft rode smoothly during the time of measurement, which was just after repair work was completed; however, it is too soon to tell how much the maintenance cost will be.

The contract calls for the Government to participate in the cost of a maximum excavation of 5,760 cu. ft. for the 2000 level station. More than 5,760 cu. ft. have been excavated to date and present plans indicate the completed station excavation will total about 8,000 cu. ft.

The pocket excavation and timbering were essentially completed. Gate cylinders for chute lips were being connected and pocket lining was being completed. Total excavation of the pocket is about 7,100 cu. ft. which is considerable more than the original estimate of 3,216 cu. ft. allowed by the contract. The pocket was excavated by a modified top-slice method using square-set timbering. All the ground for the width of the two hoisting compartments was excavated back to the dump track, whereas it was originally planned to excavate raise pockets using no timber.

No sump other than the shaft bottom sump and four intermediate pump stations was provided for in the contract; however, the Operator has excavated a pump room and sump two sets below the 2000 level station. Total excavation to date is about 9,000 cu. ft. and it is almost completed.

A 1152 cu. ft. spill pocket was excavated near the bottom of the shaft.

Crosscutting is expected to be on cycle early in March 1957.

The status of the contract is:

Date of contract: October 21, 1954
Termination date: January 1, 1958
Amount of contract: $1,058,370.00
Amount spent: 518,961.22 (thru Dec. 1956)

	Authorized	Completed
Surface plant	$45,500.00	$43,893.22
Surface core drilling	3,000 ft.	2,224 ft.
Shaft sinking	2,080 ft.	2,080 ft.
Pump station	8,000 cu. ft.	8,000 cu. ft.
Shaft station	1	75%
Skip pocket	1	1

Re: Progress Report Hecla-Silver
Mountain Project - January - 1957
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

During the month of January, 50 sets of timber were reblocked completing the shaft repair work to the crown set of the 2000 station.

Following this work, the remaining excavation on 2000 station was made with a total of 4,099 cubic feet of rock being removed. The five long station caps were put in place and the back of the station lagged and bulkheaded. The station was fully rockbolted and a few stulls placed to steady the ground during the cutting of the pocket.

The pocket excavation was started and 1,459 cubic feet of rock was removed. The ground is badly sheared and soft and the work is progressing slowly, but it is expected that the installation will be completed during the month of February.

A total of 86 rockbolts were placed during the period, most of which were in the 2000 station.

A geologic section of the shaft is now in preparation and will be included in next month's report.

Yours very truly,

H. E. Harper

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Contract No. IDM-E732

Gentlemen:

During November the Silver Mountain shaft was advanced 118.1 feet to depth of 2018.3 feet and timber was advanced 121.3 feet to a depth of 2009.5 feet.

A total of 25 days were worked during the period; 18 3/4 days were spent in actual sinking for an average advance of 6.3 feet per day. Two days were spent on shaft repair and the remaining 4 1/4 days were used in cutting station, pumproom and sump on 2000 level.

An eight-foot round was taken out of 2000 station three sets high and, in addition, a crosscut was driven 27 feet from the shaft timber to the west end of the station. Total excavation for this work was 4175 cubic feet.

Ten feet below 2000 level sill a room was cut for pump installation and a sump (approximately 8.5 feet wide by 12.5 feet high and 70 feet long) was driven north from the shaft. A small incline (4' x 4' x 22' long) will connect the north end of the sump with the 2000 level crosscut. About six feet of this incline remains to be driven. Total excavation for this work during November was 6134 cubic feet.

The rock is strongly sheared and difficult to hold and required the placement of 243 six-foot rock bolts in the shaft, 2000 station, and pumproom and sump.

It is expected that sinking will be completed in December.

Yours very truly,

H. E. Harper

H. E. Harper

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - December - 1956
Docket DMEA - 3406
Contract No. IDM-E732

Gentlemen:

During the month of December the Silver-Mountain shaft was completed at a depth of 2088.3 feet. Ground advance during the month was 70.0 feet and timber was advanced 73.5 feet to a total depth of 2083.0 feet.

A total of 24 days were worked during the period. The 2000 level pumproom and sump were completed with 2934 cubic feet of excavation and a two-set spill pocket (1152 cubic feet) was completed. A total of 270 rock bolts were placed in the shaft, pumproom and sump.

Shaft repair work was started on December 19 and at the end of the month 34 sets had been reblocked. Reblocking has been completed to a depth of about 1650 feet and it is estimated that approximately three weeks of January will be occupied in further shaft repair before work on the 2000 station can be resumed.

Yours very truly,

H. E. Harper

November 19, 1956

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim inspection report, Docket No. DMEA-3406 (lead-zinc-copper), Silver Mountain Project, Hecla Mining Company, Shoshone County, Idaho, Contract No. Idm-E732

Mr. Hjalmer Lindfors, shaft foreman, was contacted at the shaft site on November 13, 1956. Shaft sinking had been resumed on November 1 after a two weeks recess. Badly sheared and talcy ground conditions had broken some shaft timbers and squeezed sections out of line which made it necessary to stop sinking and make needed repairs and alignment.

The shaft had been advanced a total of 371 sets for a linear distance of 1951.5 feet. The shaft bottom was at 1962 feet. The Operator plans to sink a total of 397 sets or 2088 ± feet although the Government participation in shaft sinking under the contract ends at 2080 feet.

The shaft section from set No. 330 to 360 was retimbered and above set No. 215 some repair was made on 20 sets. Some sets in the bad ground were jacketed on both sides and some only on the west side. Use of jacket-sets was stopped on set No. 369 but rock bolting with 1"x6' bolts started on set No. 361 is being continued. To date 109 bolts have been placed.

The ground at set No. 370 is firm and has improved down to the present bottom. If present ground conditions continue no difficult support problems are anticipated when station and pockets are excavated at the 2000-foot level.

The rate of advance has dropped from 9 feet per day to about 6.5 feet, and because a pilot drift for the station will be driven on the 2000 level and a few rounds of the pocket raise will be excavated as they go by, the shaft sinking is not expected to be completed before January 1, 1957.

The status of the contract is:

Date of contract: October 21, 1954
Expiration date: January 1, 1958
Amount of contract: $1,058,370.00
Amount spent: 469,340.62 (thru Oct. 1956)

Work Items	Authorized	Completed
Surface plant	$45,500.00	$43,893.22
Surface core drilling	3,000 feet	2,224 feet
Shaft sinking	2,080 "	1,951.5 "
Pump station	8,000 cu.ft.	8,000 cu.ft.
Shaft station, 2000 level	1	none
Skip pocket " "	1	none
Crosscuts and drifts	8,415 feet	none
Sideswiping	36,000 cu.ft.	none
Core drilling, underground	15,000 ft.	none
Rock bolting	960 ft. *	none
Timbered drift	1,600 ft.	none

* $5/bolt and a maximum of 6 bolts per any 5-ft. section.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - October-1956
Docket DMEA - 3406
Contract No. IDM-E 732

Gentlemen:

During October the Silver Mountain shaft was advanced 91.5 feet to a total depth of 1900.2 feet. Timber was advanced 89.5 feet to a depth of 1888.2 feet.

A total of 27 days were worked during the period. Eleven days were occupied in actual sinking for an advance of 8.14 feet per day. The other sixteen days were occupied in shaft repair.

About 40 sets had to be reblocked in areas where the ground is strongly sheared and difficult to hold at the ends of the shaft. Part of this repair work was between 1100 and 1200 feet and the remainder in the section from 1500 feet to the bottom. Some additional repair work will be required during November.

The ventilation raise near the hoist room was advanced 27 feet to completion. The total length of the raise is 52 feet.

Yours very truly,

H. E. Harper

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project site was visited October 10. Progress was discussed with Mr. Hjalmer Lindfors, shaft foreman. Several sets have had to be reblocked and a few timbers replaced during October. The ground has become more sheared and talcy. Progress had dropped from 9 feet to about 6 feet per day. If the ground continues to be loose and talcy it will cause trouble when the 2000 level station is excavated.

A total of 353 sets had been timbered, making the total shaft advance 1856.5 feet. The shaft sinking is expected to be completed in November 1956 if ground conditions do not get worse.

Following is a tabulation of the work items authorized and completed:

	Authorized	Completed
Surface plant	$45,500.00	$43,893.22
Surface core drilling	3,000 ft.	2,244 ft.
Shaft sinking	2,080 ft.	1,856.5 ft.
Pump stations	4	3 1/
Shaft station, 2000 level	1	none
Skip pocket " "	1	"
Crosscuts and drifts	8,415 ft.	"
Sideswiping	36,000 cu.ft.	"
Core drilling, underground	15,000 ft.	"
Rock bolting	960 ft. *	"
Timbered drift	1,600 ft.	"

* $5/bolt and a maximum of 6 bolts per any 5-ft. section.

Date of contract: October 21, 1954
Expiration date: January 1, 1958
Amount of contract: $1,058,370.00
Amount spent: 449,919.12 (thru Sept. 1956)

1/ A more efficient 3-pump station system was installed by the Operator in lieu of the 4-station system originally planned. Small stations were excavated on the 500 and 1500 levels where 608 and 846 cubic feet, respectively, were excavated. The 1000 level station was made larger to accommodate permanent pumps for a 1000-ft. lift, thereby eliminating the 500 station. The 1000-ft. station was not completed when last measured; however, a total of 6,880 cu. ft. had been excavated, making a total of 8,354 cu. ft. for the 3 stations.

A Field Team letter was prepared and forwarded to Washington recommending that the total of 8,000 cubic feet for pumping stations as set forth in the contract be allowed at $1/cu. ft.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator; since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla - Silver Mountain Project - September, 1956
Docket DMEA - 3406
Contract No. IDM-E 732

Gentlemen:

Ground and timber advance in the Silver Mountain shaft for the month of September was 220.6 feet. This placed the bottom of the shaft at a depth of 1808.7 feet and the bottom of timber at 1798.7 feet. Twenty-five days were occupied in sinking for an advance of 8.82 feet per day.

No significant structures were encountered during the month's advance. The rock is bleached argillaceous quartzite with well developed vertical shearing and fracturing.

A 50 foot ventilation raise is being driven to the surface from the tunnel a short distance east of the hoistroom. This will ventilate the hoistroom and dissipate the heat from the generators. Advance on the raise during September was 25 feet.

Yours very truly,

H. E. Harper

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The exploration project site was inspected September 13, 1956. The shaft had reached a depth of 1,684 feet and 318 sets of timber, totaling 1,673 feet, had been placed.

A small (846 cu. ft.) pump station (shaft set #285) had been excavated at the 1500-foot level. The rate of advance remains a bit over 9 feet per day. The formation has become harder and steep fracture cleavages and shearing have caused the rounds to pull harder. The standard of work remains good.

Following is a tabulation of the work items authorized and completed:

	Authorized	Completed
Surface plant	$45,500.00	$43,893.22
Surface core drilling	3,000 feet	2,244 feet
Shaft sinking	2,080 "	1,673 "
Pump stations	4	3 1/
Shaft station, 2000 level	1	none
Skip pocket " "	1	"
Crosscuts and drifts	8,415 ft.	"
Sideswiping	36,000 cu.ft.	"
Core drilling, underground	15,000 ft.	"
Rock bolting	960 ft.*	"
Timbered drift	1,600 ft.	"

* $5/bolt and a maximum of 6 bolts per any 5-ft. section.

Effective date of contract: October 21, 1954
Expiration " " " : January 1, 1958
Amount of contract: $1,058,370.00
Amount spent: $ 402,048.92

1/ Although 3 pump stations have been completed, the Operator has not invoiced for them. It was initially planned to excavate intermediate pump stations on the 400,800, 1200 and 1600 levels but it was decided to have a large pump station on the 1000 level with crosscut sump and smaller stations on the 500 and 1500 levels. Although there are only 3 stations instead of 4, the total excavation for the 3 stations is greater than the total allowed for the 4 stations.

In the contract, on page 3 of Exhibit "A", last paragraph, it is stated that the Government has the option of continuing its participation in the costs of the project on a "fixed cost" basis or converting to participation in the actual costs. The conversion may be made at the Government's option when two years have elapsed from the date of the contract or when the crosscut has been advanced 500 feet from the shaft. The two-year period will be reached October 21, 1956 and the progress indicates the crosscut will be 500 feet from the shaft some time in February 1957.

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Co., Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project was last visited August 14, 1956, accompanied by the shaft foreman. The project had also been visited July 25 since the last interim report dated June 25.

The shaft had been advanced to a total depth of 1,440 feet on August 14 of which 1,430.65 feet had been timbered with a total of 272 sets.

The rate of advance continues to be exceptional at about 9 feet per day. Bench rounds of 30 holes drilled with 7' 10" steel break about 6½ feet. Room for 2 sets of timber is made with 3 blasts. Occasionally it is necessary to drill and blast a few plugs or short holes with the regular round to make room for timber when interim rounds did not break as planned. Atlas gelatin powder, 45% strength, 1-1/8"x8", "ready slit" sticks averaging about 144 sticks to the box is used. An average of one box and 107 sticks of powder are consumed with each regular round.

The regular crew on day shift includes 4 shaft miners, 1 hoistman, 1 surface man, and 1 shaft boss. There is no regular boss or surface man on other shifts although they may be called out occasionally. Electricians, mechanics, etc. are on call from Hecla shops at Burke, Idaho.

Shaft sinking may be completed by mid-November 1956. The station sump and pockets may be completed in December 1956, depending on the final design, and crosscutting will be started by January 1957.

Following is a tabulation of work items authorized and completed:

	Authorized	Completed
Surface plant	$45,550.00	$43,893.22
Surface core drilling	3,000 ft.	2,244 ft.
Shaft sinking	2,080 ft.	1,431 ft.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - July, 1956
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

The timbered advance of the Silver Mountain shaft for July was 225.4 feet. Ground advance was 220.4 feet which placed the shaft bottom at 1335.6 feet. The bottom of timber was 1325.6 feet; twenty-four days were occupied in actual sinking or an advance of 9.39 feet per day.

The concrete floor of the 1000 level substation and pump-room was poured during the first week of July and the substation panel was installed. A ringdam was constructed in the shaft above the 1000 level.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Re: Progress Report Hecla - Silver Mountain Project - August, 1956
Docket DMEA - 3406
Contract No. IDM-E 732

Gentlemen:

Ground advance in the Silver Mountain shaft for the month of August was 252.5 feet which placed the bottom of the shaft at a depth of 1588.1 feet. Timber advance for August was also 252.5 feet; the bottom of timber at the end of the month was 1578.1 feet. Twenty-seven days were occupied in actual sinking for an advance of 9.35 feet per day. A pump station (846 cubic feet) was cut on 1500 level.

No structures of consequence were encountered in the shaft during this period. The rock is greenish-gray argillaceous quartzite of the Wallace formation, becoming somewhat more quartzitic near the present bottom of the shaft. Steeply, north dipping to vertical fracture cleavage and shearing is pronounced and the rocks are strongly bleached below 1100 feet. Bedding in the dark, banded Wallace in the upper part of the shaft varied from about 40 to 60 degrees to the north and the last observed bedding was 23 degrees to the north at about 1400 feet below the collar.

RECEIVED
JUL 19 1956

1201 N. Division St.
Spokane 2, Washington
June 25, 1956

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project was inspected June 12, 1956, accompanied by the shaft foreman. The project was visited again on June 19, accompanied by Mr. George C. Selfridge, Chairman, DMEA Operating Committee, Washington, D.C., and Mr. A. E. Weissenborn, Executive Officer, DMEA Field Team, Region I, NW Dist.

On June 12 a total of 190 sets of timber (5.25 ft. c. to c.) had been placed and ground was out about 9 feet below the last set. The "creep" on the timber causes the sets to average 5.26 feet center to center. The top of the bottom wall plate of the 190th set at 999.4 feet is the sill for the 1000-ft. pump station which was being excavated at the time of the inspection. It was planned to excavate a station 20'x14'x10' high but a mud seam caused the ground to slough and the station was about 20'x18'x12' when visited June 19. Another set of shaft timber had been placed at this time and a 40-foot, 8'x8' crosscut had been driven easterly from the station for a water sump. The ground was bad and it ended up about 9'x9'.

Sinking progress has been exceptional and conditions have been very near ideal. Each crew on the three shifts mucks, drills and blasts a 6-ft. plus bench round and timbers as necessary, keeping timber 8 to 12 feet from the bottom. An average of 28 holes are drilled per round and about 1½ to 2 boxes of powder are used. Sinker drills and integral steel are employed. The complete cycle sought is 2 sets per 3-shift day. To date 11 sets in a 2-week period is the best attained.

The sinking bucket is attached to the bottom of the cage by two 27½-ft. chains. The mucker has to be moved after each timber cycle because of the lack of headroom for dumping.

Present progress indicates that crosscutting from the bottom level will be started in December 1956. Standard of work is high.

Following is a tabulation of the work items authorized and completed:

	Authorized	Completed
Surface plant	$45,550.00	$43,893.22
" drilling	3,000 ft.	2,244 ft.
Shaft sinking	2,080 "	1,005 "
Pump stations	4	none
Shaft station, 2000 level	1	"
Skip pocket " "	1	"
Crosscuts and drifts	8,415 ft.	"
Sideswiping	36,000 cu.ft.	"
Core drilling, underground	15,000 ft.	"
Rock bolting	960 " *	"
Timbered drift	1,600 "	"

* $5 per bolt and a maximum of 6 bolts per any 5-ft. section.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - April, 1956
Docket No. DMEA - 3406
Contract No. IDM-E732

Gentlemen:

The timbered advance of the Silver Mountain shaft for April was 236.5 feet bringing the total timbered advance to 663.7 feet. At month end the shaft bottom was at 674 feet. A pump station was cut on the 500 level, and the sump tank and pump were installed. Twenty-six days were worked during April.

Yours very truly,

Robert E. Sorenson

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver Mountain Project - June, 1956
Docket DMEA-3406
Contract No. IDM-E732

Gentlemen:

The timbered advance of the Silver Mountain shaft for June was 173.8 feet. At the end of June the bottom of timber was 1100.2 feet and the shaft bottom was 1115.2 feet. Eighteen days were occupied in actual sinking or an advance of 9.64 feet per day.

Eight days were occupied in preparing a 1000 level sump and pump station. A 300 gallon per minute 1000 foot head pump will be installed there and provision has been made for an extra pump on this level in case it is needed later.

Yours very truly,

Robert E. Sorenson

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA 3406 (lead-zinc-copper), Hecla Mining Co., Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project site was visited April 12, accompanied by Mr. C. E. Fisher, auditor, DMEA Contract Administration and Audit Division, Washington, D. C.

The shaft excavation had been advanced a total of 525 feet, and 98, 5'-3" sets had been placed for a total of 514.5 feet of timbered shaft. The shaft progress is very good and present indications are the district shaft sinking rate of 8 feet per day (3 shifts) set at the Crescent shaft will be exceeded. Present rate is approximately 9.5 feet per day. A cycle of 2 sets or 10.5 feet per day is the present objective but it has not been attained as a set or two is lost per 2-week period. A mud seam encountered in one round caused 2 sets of timber to be blasted out because the effect was not anticipated. The mucker was damaged when it fell to the bottom of the shaft, and two days were lost making repairs.

Mr. Fisher took several pictures of the surface plant installations and underground hoist and compressor rooms, and they will be made available to the Washington and field offices.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Re: Progress Report Hecla-Silver
Mountain Project - March-1956
Docket No. DMEA - 3406
Contract No. IDM-E732

Gentlemen:

The timbered advance of the Silver Mountain shaft for March was 241.9 feet making a total of 427.2 feet timbered. The bottom of the shaft was 441.2 feet. The ground was good all the way and practically no water has been encountered. Twenty-six days were worked in shaft sinking.

Also during March a concrete ring was poured about sixty-five feet below the collar to catch surface water. It is working successfully. No other work was done on the project.

Yours very truly,

Robert E. Sorenson

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project site was inspected March 8, accompanied by Mr. A. F. Robertson, Bureau of Mines engineer, and the shaft foreman.

The final electrical hook-ups, hoist and headframe alignment, and surface plant installations had been completed, and actual shaft sinking started February 1. The shaft had been excavated 257 feet and 47 sets (5'-3" c.to c.) placed, totaling 247 feet of timbered shaft.

The shaft sinking is on a 3-shift per day operation, and a 2-set per day cycle has been maintained for the past two weeks. The shaft foreman believes they will be able to maintain this cycle for the most part.

A bench round consisting of 21 to 27 seven-foot holes is drilled using 2 sinker drills. A 45 percent powder is used and rounds are detonated by electric delays. The benches advance an average of 6 feet per round. The ground excavation is kept 8 to 10 feet ahead of timber. A steel "Battleship" is used for protecting timber from blast and as a staging for timbering.

A Rydell shaft mucker is used and the mucking time is about 2 hours. Good ventilation is maintained, which allows the miners to start mucking 20 to 30 minutes after a blast.

The standard of work is good and the present rate of advance indicates the shaft will be completed by December 1, 1956. Following is a tabulation of work items in progress and the numbers authorized and approved:

	Authorized	Approved
Surface plant	1	1
Shaft sinking	2,080 ft.	247 ft. (timbered shaft)

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - February-1956
Docket No. DMEA - 3406
Contract No. Idm-E732

Gentlemen:

As reported by Mr. Neyman, shaft sinking went on a three shift basis in the bottom the morning of February 7th. At that time it was 27.5 feet from the top turnsheet to bottom of timber. Thirty sets were placed during the balance of February and the bottom of timber at the end of the month was 185.3 feet and the bottom of the shaft was 204.0 feet. Although ice formation gave some difficulty during the first part of the month the greater depth of the shaft now should eliminate further trouble from ice.

Two minor jobs remain to be done on the surface, a door at the entrance to the hoist room to control ventilation and some corrugated iron in the rope raise to catch drip from the surface.

Yours very truly,

Robert E. Sorenson

Re: Progress Report Hecla-Silver Mountain
Project - January, 1956
Docket No. DMEA - 3406
Contract No. IDM-E732

Gentlemen:

As previously reported, considerable delay was experienced by Washington Water Power Company in installing power lines and transformers, but power was available on January 20th. During the remainder of the month dump irons and guides were installed, ropes were placed on the drums and cages were hung. Other electrical work, which was awaiting connection by Washington Water Power, was completed and the compressors and electrical controls on the hoist were checked in operation. Actual sinking began February 1st. Operations will be on a six day, three shifts per day, basis. Sinking is progressing satisfactorily.

Since all major installations are now complete, a tentative statement of expenditures has been prepared. As previously arranged, a study of revision of some of the allocations may now be made by the Field Representative of D.M.E.A.

Yours very truly,

Robert E. Sorenson

March 21, 1955

MEMORANDUM

To: DMEA Field Team, Region I, NW District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA 3406, Hecla Mining Company, Silver Mountain Mine, Shoshone County, Idaho, Contract No. Idm-E732

Diamond drilling under the exploration project contract has been completed. Two holes aggregating a total of 2244 feet were drilled under the contract, and a third hole was drilled on company account prior to the date of the contract. Drill logs, plan and section maps of all holes were submitted with the Operator's February progress report. Cores are boxed and stored on the top floor of the Star mill building located at Burke, Idaho.

The second of the two holes drilled under the DMEA contract was drilled to a depth of 640 feet to test the rock formation at the proposed shaft site. This latest, and probably the final, proposed shaft location is on the Cyringa claim and the 640-ft. diamond drill hole was also collared on the Cyringa claim.

The Cyringa claim was not included in the Operator's property rights in the contract, but Mr. R. E. Sorenson, vice-president of the company, stated that the company has acquired the claim and prior to performing work on it had taken steps to include it in the contract. At the time the contract was signed the Operator agreed that the Cyringa claim would be included in their property rights under the contract when negotiations for acquiring the claim had been completed.

Mr. Sorenson was informed that payment for diamond drill hole collared on the Cyringa claim and any other work performed on the claim would be withheld until the property was officially included in the contract. ?

Construction of the surface plant is expected to start as soon as the weather moderates and the snow has melted.

MEMORANDUM

To: DMEA Field Team, Region I, NW District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA 3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project site was inspected April 20, 1955. There were two workmen enlarging and retimbering the old adit, rerouting the creek flow, and leveling the surface plant site by bulldozer.

Present plans are to enlarge the old adit tunnel run into the mountain near the east end line of the Cyringa claim and cut an underground hoist and compressor room. A rope raise will be excavated to the surface and the headframe and shaft collar location is outside.

Mr. Ralph Neyman, general manager for the company, has been out of the district and could not be contacted regarding the change in plans for the surface plant. The plans will be discussed in detail as soon as he returns. Discussions with other officials of the company brought up questions regarding costs to the project. On page 3 of Exhibit "A" the costs of the surface plant are set forth as total estimated cost and net cost to the project. The net cost was determined by deducting the salvage or liquidation value. The change in plans will change the estimated costs and net costs of a few items, namely, main buildings, water system, and hoist installation. It is possible that the actual costs will be lower but underground hoist and compressor rooms will have a questionable salvage value. As soon as the costs of the revised plans are discussed in detail with Mr. Neyman, any proposed amendments will be presented with recommendations. The cost of any proposed changes in the surface plant will be limited to the maximum total net cost of $45,500 to the project.

The new location for the shaft will necessitate approximately 1200 feet of crosscutting northerly from the shaft instead of 1015 feet set forth as a maximum in Exhibit "A", item 5, under Exploration Work. The surface diamond drilling was concluded, and $10,269 of this item, or enough for 217.5 feet of crosscutting @ $47.21/ft., remains unexpended, and could be made available for necessary additional crosscutting.

Initials

Work is progressing satisfactorily in view of the wet condition of the terrain due to melting snow and inclement weather.

There will be a lag in the Operator's monthly MF-104's until major items of work included in the surface plant are completed, but he will submit narrative progress reports.

Following is a tabulation of work items approved by the contract, number of units, and units completed:

	Authorized	Completed
Surface plant	$45,500	none
Surface diamond drilling	3,000 feet	1,533 feet 1/
Shaft sinking	2,080 "	none
Intermediate pump stations	4	"
Shaft station (2000 level)	1	"
Skip pocket " "	1	"
Crosscutting and drifting	8,415 feet	"
Sideswiping	36,000 cu.ft.	"
Diamond drilling (2000 level)	15,000 feet	"
Rock bolting	960 "	"
Timbering	1,600 "	"

1/ No more surface diamond drilling is anticipated.

Re: Progress Report Hecla-Silver Mountain
Project - April 1955
Docket No. DMEA - 3406
Contract No. IDM - E732

Gentlemen:

Progress of work during April was:

1. Dump Area was cleared of timber.
2. Old house moved and converted to tool shed.
3. Creek was moved west of its former site.
4. Road to site was about 1/2 completed by bulldozer.
5. Shaft collar site was prepared by bulldozing adjacent hillside.
6. Five sets of timber were placed in portal of the tunnel which will be used as entrance to underground hoist room and powder magazine.

Since none of the projects were entirely finished a statement of the account covering the work will be submitted upon completion of projects.

Work is progressing in a satisfactory manner.

Re: Progress Report Hecla-Silver
Mountain Project - May 1955
Docket No. DMEA 3406
Contract No. IDM-E 732

Gentlemen:

The progress of the Silver Mountain project work is well summarized in the following information provided by Mr. R. W. Neyman, General Manager:

"During the month of May the creek diversion mentioned in the report for April was put through a culvert where it passes through the dump area. Timber and rubbish around the site is sufficiently dry for burning and practically all of this has been cleaned up and burned. A contract was given to Zanetti Brothers for moving the Atlas building to the Silver Mountain site. This building contains a small office, a warehouse, dry, and shop, and with the exception of a small shelter for the equipment during the winter, will be adequate for the job.

At June 1 the shaft had been put down eight (8) feet to solid rock, the tunnel was widened into the hoist room site, and the crosscut off this tunnel was widened for a powder magazine. Approximately one-third of the room has been cut. This room will house the hoist, compressors and substation and a thirty-five (35) foot rope raise will be put up to the surface and our incoming power supply from the Washington Water Power Company will be taken down this raise to the substation. The power company has already placed their line to the top of the raise and we are using this line for the temporary operation of the compressor.

Zanetti has completed moving the building to the site and will start moving the headframe from the Gem State Shaft the early part of June."

Since none of the phases of the project were completed a final statement will be submitted later after completion, covering each part of the project as set up in the contract.

Yours very truly,

Robert E. Sorenson

July 12, 1955

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA 3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Property, Shoshone County, Idaho, Contract No. Idm-E732

The project site was inspected July 8, 1955, accompanied by Mr. Lee Messerly, superintendent for the company.

Work on the surface plant and shaft preparation are progressing favorably.

The shaft has been advanced 34 feet of which 25 feet or 5 sets have been timbered. The shaft collar is being poured, starting at the bottom of the third timbered set, and will be formed and poured about 10 feet above the top shaft set. Headframe footings will be formed and poured to an elevation above the shaft collar that will allow dumping into trucks.

The hoist and compressor room cut underground is about 75% completed and the rope raise has been holed. A concrete collar will be poured for rope raise.

The combination office, change house and warehouse building is completed except for the inside painting and hanging the doors. The building was moved in three sections from the Atlas property located about 3 miles southwesterly from the Silver Mountain project site. Mr. Messerly stated the building cost $2,000 and it was moved by Zanetti Bros., contractors, for $3,500. There are probably some incidental costs for moving not included in the above.

The original plans on which the contract was written have been altered some, i.e., rather than a hoist and compressor building outside the Operator elected to excavate an underground room. The cost to the contract was based on actual cost less a salvage value. It is believed the cost to the project as written in the contract may be considered a maximum. When the surface plant has been completed the costs will be

audited to determine the allowable cost to the contract. Due to some changes there may have to be some adjustment between separate items but the over-all cost will be within the amount allowed by the contract. The changes have been discussed with the Field Team and no complications regarding proper invoicing as per the contract are anticipated. If the contract will require amending it was decided that one amendment covering any changes in the work items would be drafted at the completion of the surface plant.

The present work schedule indicates the mechanical shaft sinking equipment will be placed in the shaft the latter part of September 1955 and a regular sinking cycle established by October 1955. Hoist, compressor, headframe and incidental installations are expected to be completed in the meantime.

The Operator submits a monthly narrative progress report and may invoice when major items of surface plant are completed or he may elect to submit an invoice on the surface plant after it has all been completed.

Operator is doing a good job in a workmanlike manner. The job is taking the form of a first-class installation without any unnecessary frills or costs.

Re: Progress Report Hecla-Silver Mountain Project - June 1955
Docket No. DMEA 3406
Contract No. IDM-E732

Gentlemen:

Mr. Neyman, General Manager, reports that the combination office, dry room and storeroom building is completely erected and ready for use and the shaft was sunk another 26 feet to a total depth of 34 feet and timbered with five sets of timber preparatory to placing the concrete collar through the overburden which also will serve as a foundation for the headframe. He reports the rope raise is completed and roof bolted and that the hoist room is about 75% completed and roof bolted. The water lines, fire hydrant line and sewer lines also are completed.

A right-of-way easement for a roadway between the highway and railroad track was obtained and as Mr. Neyman reports this roadway, making a more direct route to the shaft site, will be completed with muck from shaft sinking.

Subject: Interim report, Docket No. DMEA 3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project site was inspected July 21, 1955, accompanied by Mr. Wing G. Agnew, U. S. Bureau of Mines Member of the Field Team, and Mr. Lloyd Pollish, research engineer, Anaconda Company.

The combination office, change house and warehouse building was ready for occupancy.

The underground hoist and compressor room had been excavated and rock-bolted. The floor was being made ready for concrete, and rock bolts for I-beams for a traveling chain hoist had been placed. The rope raise was being made ready for a concrete collar at the surface, and an underground powder magazine was almost completed.

Forms for concrete shaft collar were near completion, and head-frame footings were staked.

Progress has been satisfactory and barring delays the shaft sinking will be in full swing in September 1955.

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA 3406 (lead-zinc-copper) Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project was visited August 29, 1955 and September 22, 1955. On August 29 a labor strike halted work on erection of the headframe by Zanetti Bros., contractors. Other work on the project was progressing, as the Hecla company was not involved in the strike.

The Zanetti Bros., by some agreement with the union, were allowed to raise the headframe, which was done September 21, and the Operator will finish placing the headframe. The concrete floor and hoist foundation had been completed in the underground room, and the collar for the rope raise had been placed.

A hoist is being installed at the Star mine in Burke, Idaho, which will replace the hoist that will be used at the Silver Mountain project. The tightening and aligning of the headframe and placing hoist and other equipment is expected to be completed about November 1, 1955.

The changes in the construction of the surface plant were discussed with Mr. R. E. Sorenson, vice-president, and Mr. Lenis, accountant. The Operator will meet with the Field Team later this month, and allowable costs of the surface plant in which the Government will participate will be determined within the maximum allowed by the contract.

Standard of work is good.

Re: Progress Report Hecla-Silver
Mountain Project-September, 1955
Docket No. DMEA 3406
Contract No. IDM-E732

Gentlemen:

As reported previously, the local strike against the Sixteen Operators delayed the subject project because Zanetti Brothers were withheld from erecting the headframe. Through a temporary contract with the Union, since that time, Zanetti has been allowed to resume work and on September 28th erection of the headfram was resumed.

A concrete ring around the rock raise collar to prevent drainage of surface water into the raise was poured. The hoist room floor and hoist foundations have been poured. Headframe alignment and installation of the Star hoist remain to be completed before sinking is commenced.

The expectation is that the Star hoist will be available about November first and should be completely installed at Silver Mountain by December first. Since alterations of the plans for surface plant have changed estimated costs of several categories set up in the contract, it will be advisable to make the necessary adjustments of these figures after more detailed costs are available. Therefore to this time no statements have been submitted to D.M.E.A., but will be submitted and discussed as soon as possible after the hoist has been installed.

Re: Progress Report Hecla-Silver Mountain Project - November, 1955
Docket No. DMEA-3406
Contract No. IDM-E 732

Gentlemen:

During November no changes were effected on the Project itself but the hoist change over in the Star Mine was completed during the Thanksgiving holiday and the Star hoist made available for Silver Mountain. Removal of the hoist from the Star was commenced immediately and installation of the hoist on the Silver Mountain property is now progressing.

Yours very truly,

Robert E. Sorenson

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim inspection, Docket No. DMEA-3406 (lead-zinc-copper) Hecla Mining Company, Silver Mountain Project, Contract No. Idm-E732

Mr. R. E. Neyman, general manager for Hecla Mining Co., and Mr. L. Messerly, superintendent, were contacted in Wallace, Idaho, on December 15 regarding the progress on the Silver Mountain project. Mr. Neyman stated they had encountered difficulties and delays in making the exchange of hoists at the Star mine in Burke, Idaho. The first load of the disassembled hoist had just arrived at the Silver Mountain project, and the Operator believed they would complete the hoist installation in January 1956. This would indicate shaft sinking would start in February 1956.

Re: Progress Report Hecla-Silver Mountain
Project - December, 1955
Docket No. DMEA - 3406
Contract No. IDM-E732

Gentlemen:

Installation of the Star doubledrum hoist progressed satisfactorily and the fan for shaft ventilation was installed in the headframe as reported by Mr. Neyman.

Washington Water Power Company worked on the extension of their highline to the Silver Mountain site and on installing a sub-station. They have since completed that work and power is now available at the site.

No other important work remained to be done and it is anticipated that sinking will be started in a few days.

Yours very truly,

Robert E. Sorenson

Re: Silver Mountain Project
Month of December - 1955

Dear Mr. Randall:

Installation of the Star double drum hoist progressed satisfactorily during December and the fan for shaft ventilation was installed in the headframe.

Washington Water Power Company are now engaged in extending their highline to the Silver Mountain site and installing a sub-station at that point. They have promised that this work will be completed by January 10, following which our electricians will make necessary connections for power transmission to the hoist room, the distributing point.

Aside from very minor detailed work no other changes were effected in December.

Yours very truly,

/s/ R. W. Neyman

R. W. Neyman

January 31, 1956

RECEIVED
FEB 13 1956

MEMORANDUM

To: DMEA Field Team, Region I, Northwest District

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA-3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract No. Idm-E732

The project site was visited January 25, accompanied by Mr. Kangus, mine foreman.

The hoist had been installed and cables strung. The shaft ventilation fan had also been installed. The dump irons were being installed at the shaft collar, and the electricians were making the final electrical hookups. The power sub-station at the mine reduces the voltage to 2300 volts which was reported will be carried down the shaft. Sinking is expected to start early in February.

Although the progress has been slow, mainly because of the delay in acquiring the hoist, the standard of work has been good.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - January 1955
Docket No. DMEA -3406
Contract No. IDM-E-732

Gentlemen:

Progress during January in diamond drill hole No. S. M. -2 was 823 feet placing the hole at 1533 feet at the end of the month.

This hole has been difficult to drill since most of the progress was in thin-bedded Wallace argillite containing many gougy fault structures and abundant shearing. One section from about 630 to 710 feet had to be redrilled because of a very bad area below the bottom of the B-X casing. The continued caving of the walls of the hole required drilling with a circulating load of bentonite below the 700 foot point. The hole was finally discontinued at 1604 feet on February third. The size of the hole where completed was B-X.

No zones of strong sulphide mineralization were found although considerable bleaching was indicated and some pyritic zones and quartz stringers were cut. The complete log of the hole together with sludge assays is in process of preparation and will be submitted with next month's report. Some assaying remains to be completed at this date.

Yours very truly,

Robert E. Sorenson

Re: Progress Report Hecla-Silver Mountain Project - February 1955
Docket No. DMEA - 3406
Contract No. IDM - E732

Gentlemen:

During February diamond drill hole S. M. No. 2 was drilled an additional 71 feet to completion at 1640 feet. A plan and section of the hole - 200 scale - and a complete log of the hole are enclosed. As shown, progress was largely in Wallace argillite except for the section 1410 - 1512 which is possibly St. Regis argillite. Mineralization in the hole is minor in amount and unimportant. Except for the section 40-45 feet where a sludge sample assayed 0.6 oz. silver, no other samples exceeded 0.1 oz. silver.

This hole was surveyed with a Trotter-Pajari instrument. You will note a rapid flattening of the hole. This is the usual experience in the Coeur d'Alene District where thin-bedded steep-dipping rocks of variable hardness are encountered. Also core recovery was not good, although a special effort was made to recover as much core as possible. Aquagel was used in the drilling water to aid in support of the friable broken walls of the hole. It appears to have been successful in eliminating much of the trouble which was plaguing the driller previous to its use.

Core recovery was poor, the hole flattened too much and the hole did not succeed in getting deep enough below the surface to reach the more favorable bleached St. Regis formation. After discussion with the Spokane office of DMEA, it was decided to eliminate the drilling of the third hole proposed in the contract and to substitute therefore a rather shallow hole under the area in which the shaft sinking is expected to be done in order to obtain some idea concerning the structures which might be encountered in shaft sinking. The hole drilled for this purpose is numbered S. M. No. 3.

A 200 scale plan and section and a detailed log of hole No. S. M. 3 is attached. Some broken sections were indicated but no strong pronounced gauge

zone was found. The indications are that the ground encountered should be reasonably good for shaft sinking with the long axis of the shaft located at right angles to the bedding. The hole was completed to 640 feet on February 4th and diamond drilling has been discontinued.

Yours very truly,

Robert E. Sorenson

SILVER MOUNTAIN DIAMOND DRILL HOLE NO. 3

Maximum depth of visible oxidation = about 120 feet.
Bleached zones = less than 50% bleached from 541 - 547 feet.
= 50% bleached from 575 - 591 feet.
= less than 50% bleached from 607 - 627 feet.
There were no visible indications of metallization.
No Core samples were taken.
Sludge samples were taken at 5' intervals and assayed for silver. The assays show trace quantities, or no quantity of silver except as otherwise noted.

Number of shifts setting up = 4 daylight shifts with 6 men working.
Number of shifts spent actively drilling into the hole = 36.6
Average number feet drilled per actively drilling shift = 17.5
Number of shifts spent reaming, inserting casing, mixing bentonite = 2
Number of shifts tearing down = 3 daylight shifts with 6 men working.

		486 - 505 Med. to lt. gray argillite, with alternating light and dark bands. The bedding makes an angle with the core axis which varies from 50° to 80°. Poorly-developed slaty cleavage cuts across the bedding. Some well-developed graded bedding occurs from 503 to 505 feet. A series of alternating bands occur in which the texture grades from comparatively coarse, light-gray, arenaceous argillite in the lower part to fine, dark-gray argillite in the upper part. The fine, dark-gray argillite then ends abruptly against the coarse base of the next overlying light-gray, arenaceous layer. The gradation is due to a gradual decrease in grain size, and increase in clay matter going up the section within the band. It is apparently due to some form of rhythmic or cyclic deposition related to seasonal variations in sedimentation. The feature is interpreted as an indication that the beds are topside-up at this depth. Very good core lengths.

January 13, 1955

MEMORANDUM

To: DMEA Field Team, Region II

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim report, Docket No. DMEA 3406 (lead-zinc-copper), Hecla Mining Company, Silver Mountain Project, Shoshone County, Idaho, Contract Idm-E732

The project site was visited alone on December 8, 1954. Hole No. 2, which is being drilled under the contract, had just been started. Hole No. 1 was started prior to the date of the contract and the cost is company account. Hole No. 2 is located by south coordinate 90,099.5 and north coordinate 156,120.6. The hole bears N. 17° 30' E. and is being drilled minus 50° dip from horizontal. Drilling is being performed by Joy Manufacturing Co.

Mr. R. E. Sorenson was contacted January 12 regarding the contract. I was informed that they were having trouble with the No. 2 hole. About 630 feet of the hole was drilled NX size and cased with BX casing and drilled to the present depth of 900 feet. An attempt will be made to complete the hole a minimum size of AX but it may be desirable because of the undue high cost to drop to EX size for the latter part of the 1500-foot hole.

Wallace argillite is the formation penetrated to date and no significant mineralization has been disclosed.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Progress Report Hecla-Silver
Mountain Project - Docket No. DMEA 3406
Contract No. IDM-E-732

Gentlemen:

Work under the above contract in December was confined to diamond drilling SM-2 hole located at coordinates 90,099.5 south and 156,120.6 east at elevation 3827.15. The hole bears N. 17° 30' E. and is being drilled -50 degrees from the horizontal. In December the hole was advanced 710 feet.

The hole has been drilled N-X size largely in unbleached Wallace argillite. Small amounts of pyrite were seen in slightly bleached areas but no other mineralization of consequence has been found. A complete log of the hole will be submitted upon completion of the hole.

Yours very truly,

Robert E. Sorenson
