Administrative Audit Difference Statement

American Smelting & Refining Co.
Post Office Box J
Crested Butte, Colorado

Date: June 2, 1958
Payee's Reference: April 1958

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount Claimed $ 5,560.00

Difference $

Amount Approved $ 5,560.00

The reason for the difference was due to:

Withheld the amount of $500.00 pending resumption of work.

Memorandum

To: T. A. Christensen

From: Alternate Acting Executive Officer, DMEA Field Team, Reg. III

Subject: Docket No. DMEA 3866 (Lead-Zinc-Copper) Contract No. Idm-N903
American Smelting and Refining Company (Keystone mine)
Gunnison County, Colorado - Operator's Monthly Progress
Report for the Month of April, 1958.

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. All of the work for the period was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A; therefore, documentation of the costs is not required. We recommend that payment be made to the Operator for 50 percent of the amount reported on Form MF-104, subject to your verification of applicable rates and arithmetical accuracy within the report, except for the following deductions:

Withhold an amount of $500.00 pending resumption of work. Project work has been suspended and the Operator has submitted a request for an amendment to provide for the suspension of operations and extension of the completion date.

Remarks:

Memorandum

To: Acting Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: DMEA 3866 (Lead-zinc-copper) Idm-E903, American Smelting and Refining Company (Negatone mine) Gunnison County, Colo. -- Progress report for April 1958

An inspection was made of the DMEA work progress on May 5, 1958, in company with Howard Bloomfield, A. S. R. engineer.

A measurement of the DMEA drift driven under Stage II on the 2000-level along the Union vein showed a total advance of 1373 feet. This total is in agreement with that of the operator's as shown in his MF-104's for April 1958. In addition to the drifting, the operator completed three diamond drill holes of which two were authorized by the contract. The results of the drilling are given in the operator's monthly narrative report. A total of 781 feet of diamond drilling was performed of which 600 feet is allowable under the contract.

It is recommended that all work units claimed by the operator be approved for payment. Total reimbursement is $5,560.00 of which the Government's contribution at 50 percent is $2,780.00.

It was learned that the operator has suspended operations until an evaluation can be made of the DMEA exploratory work. It is recommended that a reasonable amount be withheld from the reimbursement pending resumption of the work.

Edward W. Buel

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Edward W. Buel (Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket DMEA-3866
Contract Idm-E903
April - 1958

Gentlemen:

General Remarks:

During April 80 ft. of drifting was completed on the 2000 Union Vein.

Three diamond drill holes were completed during the month to the following depths and bearing.

Hole No.	Bearing	Lat.	Dep.	Depth
20-11	N 55° E	13307.5	7395.8	356
20-12	S 55° W	13277.7	7348.0	250
20-13	S 79° 38 W	13279.9	7347.7	175

Hole No. 20-11 drilled into the footwall exposed little mineralization. Pyritization and pyrite on the joints was extensive throughout the hole. The wall rock was primarily fine grained sandstones and bleached shales. No vein structure of importance was encountered.

Hole No. 20-12 drilled into the hangingwall cut strong water courses at 4, 26, 187 and 207 ft. Slight mineralization was found at the 4 and 26 ft. depths. At 145 feet 1 ft. of Pb, Zn sulfides was cored. This being the best mineralization encountered.

Hole No. 20-13 was drilled to intersect the structure about 70 ft. north westerly on the strike. At 160 feet hole No. 20-13 encountered much water, and minor traces of Zn from 155 to 163 ft. A definite change of wall rock occurred at this point. Tracing this structure southerly by long hole drilling it is thought the intersection would be made with the drift near survey station No. 2067. This particular structure appeared to be the strongest encountered in the drilling.

General Geology:

Drifting on the 2000 Union Vein was discontinued April 22nd until the diamond and long hole drilling currently underway could be evaluated.

The present drift face is following a relatively weak structure with occasional small lenses of lead, zinc sulfides. Pyritization is strong in the wall rock which is primarily gray to light brown siltstone.

Very truly yours,

Nolan Probst, Supt.

Memorandum

To: Acting Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead, zinc, and copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado -- Progress report for March 1958

An inspection was made of the DMEA work program on the 2000-level of the Keystone mine. The inspection was made on April 14, 1958. The writer was accompanied by H. Bloomfield, A. S. R. engineer.

A measurement of the DMEA drift showed a total advance of 1,334 feet driven along the Union vein structure. The operator's MF-104's for March 1958 show a total drift advance of 1,293 feet. The footage claimed by the operator is well within the verified footage of drift. In addition to the drifting, the operator cut two diamond drill stations and completed one horizontal hole (number 20-11) for a distance of 356 feet to the northeast. This hole did not encounter anything but insignificant sporadic sulphide mineralization. At the time of the inspection hole 20-12 was being drilled and had been drilled to a depth of 30 feet.

All items claimed by the operator were verified and are recommended for payment. Total reimbursement is $3,910.00 of which the Government's share at 50 percent is $1,955.00.

Re: Docket DMEA-3866
Contract Idm-E903
March - 1958

Gentlemen:

General Remarks:

One hundred and six (106) ft. advance and two diamond drill stations were completed on the 2000 Union Vein during March. A core drill is now testing the footwall near survey station 2077 + 30 ft. Bearing of the hole is N 55° E with dip -2°. To date no important structure has been encountered in the drilling.

General Geology:

The bearing of the last 100 ft. of drift has been approximately N 25° E. This bearing has been maintained to intersect the major Union Vein structure which is thought to exist in the footwall side of the drift. Since assuming this drift bearing no major structure has been encountered, however, an occasional northerly trending veinlet has been cut. A few of these veinlets carry zinc and lead sulfides.

The wall rock is still gray to greenish cast, fine grained sandstones.

Very truly yours,

Nolan Probst, Supt.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

March 13, 1958

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company, (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of February, 1958

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the government.

All of the work was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A, therefore documentation of the costs is not required.

Reinstatement, Drifting and Crosscutting

During inspection of the January 1958, progress an error was made in measuring the drift advance, resulting in disallowance of the reported cost for two feet of drifting. All of the reported drifting for January 1958, has now been confirmed; therefore, the reported cost for two feet of drifting is to be reinstated.

Reinstate reported cost for two feet drifting at $35.00 per foot----------$70.00

Please inform the Operator of the reinstatement by means of an Administrative Audit Difference Statement.

Reconciliation with Amount Reported by the Operator on
Form MF-104 for February, 1958

Amount reported on Form MF-104, for February, 1958	$3,780.00
Amount to be reinstated	70.00
Total accepted cost	3,850.00

Government participation at 50 percent ---------- $1,925.00

Memorandum

To: Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead, zinc, copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado -- Progress report for February 1958

In company with H. Bloomfield, A. S. R. engineer, an inspection was made of the recent DMEA work progress. The inspection was made on March 3, 1958. Work progress was also discussed with N. Probst, general manager.

DMEA drifting on the 2000-level of the Union vein measured a total advance of more than 1,195 feet as authorized under Stage II.

The results of the work as described in the operator's narrative report are verified.

The operator asks reimbursement for 108 feet of drifting and crosscutting. Since the last inspection on February 3, 1958, the drift was extended more than 115 feet. Therefore the 108 feet as claimed by the operator is within the measured limits of the interim period. Payment for 108 feet of drifting and crosscutting is recommended for payment.

During the last inspection, it was learned that an error in measurement was made and that the 2 feet disallowed for drifting on the January 104's should be reinstated. It is noted that the operator on his February 104's did not make the disallowance reported to him. Therefore, his current MF-104's do not reflect any recent disallowances. It is recommended that the costs of 2 feet of drifting be reimbursed.

The cost of the reimbursement for 108 feet of drifting and crosscutting is $3,780.00 of which the Government's share at 50% is $1,890.00. An additional 2 feet of drifting, previously disallowed, is also recommended for reimbursement at $35.00. Total reimbursement is $1,925.00.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Re: Docket DMEA-3866
Contract Idm-E903
February - 1958

Gentlemen:

General Remarks:

One hundred and eight feet of advance was made on the 2000 Union vein during the month. Core drill stations are being cut at survey station 2077 + 20 ft. Bearing of these stations will be N 55° E and S 55° W.

General Geology:

The drift has been turned into the footwall to intersect the projected structure encountered near survey station 2072, near which point the heavy inflow of water forced us to leave and drift parallel to the vein structure.

The present drift face has a pattern of northerly trending quartz veinlets with minor amounts of Pb-Zn sulfides. The wall rock is fine grained, hard, gray to greenish cast sand stone.

Very truly yours,

Nolan Probst, Supt.

(Keystone mine)
Gunnison County, Colorado

Dear Mr Probst:

Form MF-104, Operator's Monthly Report and Voucher for January 1958, has been received in this office and is being processed for payment.

The reported cost for 2 feet of drifting is disallowed. Payment was requested for 98 feet of drifting, making a grand total of 1078 feet of drifting in Stage II. A measurement of the drift by the examining engineer showed a total advance of only 1077 feet.

You will be further advised of the disallowance by means of an Administrative Audit Difference Statement, which will be forwarded to you by the Finance Office, Region III.

Yours very truly,

Administrative Audit Difference Statement

American Smelting and Refining Co.
P. O. Box J
Crested Butte, Colorado

Date: February 19, 1958
Payee's Reference: January 1958

Gentlemen:

Upon examination of the above Payee's Reference a difference was found which made it necessary to suspend your account accordingly:

Amount Claimed	$	3,185.00
Difference	$	70.00
Amount Approved	$	3,115.00

The reason for the difference was due to:
Disallowance, Drifting

Reported cost for 91 feet of drifting at $35.00 per foot	$3,185.00
Acceptable costs, 89 feet of drifting at $35.00 per foot	3,115.00
Total amount disallowed	70.00

Payment for 91 feet of drifting was requested, making a total of 1,079 feet for drifting in Stage II. A measurement of the drift showed a total advance of only 1,077 feet.

Any reclaim for deductions made above must be supported by the ORIGINAL of this form.

Very sincerely yours,

N. E. Stokes

R-III-B & F Form No. 4
4-15-52 D

224 New Customhouse
Denver 2, Colorado
February 18, 1958

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of January, 1958

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report and Engineer's Report for the above period.

Stage II drifting completed during the period along the vein in the hanging wall is considered within the intent of the contract.

Except as otherwise indicated below, we consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. All of the work was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A, therefore documentation of the costs is not required. We recommend that payment be made to the Operator on the following basis, contingent on your verification of applicable rates and arithmetical accuracy within the report.

The Operator requests payment for 91 feet of drifting making a grand total of 1,079 feet for drifting in Stage II. A measurement of the drift showed a total advance of only 1,077 feet. Therefore, it is recommended that 2 feet of drifting be disallowed from that total requested by the Operator on his MF-104's for January 1958.

<u>Disallowance, Drifting:</u>

Reported cost for 91 feet of drifting at $35.00 per foot	$3,185.00
Acceptable costs, 89 feet of drifting at $35.00 per foot	3,115.00
Total amount to be disallowed	$ 70.00

Reconciliation with Amount Reported by the Operator on Form MF-104 for January 1958

Amount reported on Form MF-104 for January, 1958----------	$3,185.00
Amount to be disallowed----------	70.00
Acceptable cost for January, 1958----------	3,115.00

Government participation at 50 percent----------$1,557.50

Remarks:

Date of Report----------February 4, 1958
Date Received in Field Office----------February 13, 1958
Date Received in Region Office---------February 14, 1958

REGION III

Memorandum

Building 20
Denver Federal Center
Denver 2, Colorado
February 13, 1958

To: Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead-zinc-copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado -- Progress report for January 1958

An examination was made of the property on February 3, 1958. Work progress under the contract was discussed with Messrs. N. Probst, general manager, and H. Bloomfield, engineer.

Along the 2000-level on the Union vein the DMEA drift measured 1077 feet under Stage II authorized work. An appreciable quantity of water, 500 - 600 gallons per minute, continues to cover the track in the drift from a new fissure some 24 feet beyond the old "water-course" fissure.

The operator's narrative report adequately describes the work progress results and conditions.

The operator requests payment for 91 feet of drifting making a grand total of 1079 feet for drifting in Stage II. A measurement of the drift showed a total advance of only 1077 feet. Therefore, it is recommended that 2 feet of drifting be disallowed from that total requested by the operator on his MP-104's for January 1958. A total of 89 feet of drifting is recommended for payment, costing $3,110.00 of which the Government's share at 50 percent is $1,555.00.

Re: Docket DMEA-3866
Contract Idm-E903
January - 1958

Gentlemen:

General Remarks:

Ninety one feet of advance was made in the 2000 Union drift during January. All advance was in waste. The water encountered and mentioned in last months narrative has diminished slightly but is still slowing the drift advance. To improve the advance the drift was turned into the hanging-wall, however, another pattern of fracturing was encountered.

General Geology:

The last 30 ft. of drifting has been in badly broken ground with minor amounts of Pb, Zn sulfides scattered at random on the joints. The stronger fractures carry small kidneys of Pb, Zn sulfides.

Very truly yours,

Nolan Probst

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 3366 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Co., (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress report for the month of December, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. All of the work was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A, therefore documentation of the costs is not required. We recommend that payment be made to the Operator for 50 percent of the amount reported on Form MF-104, subject to your verification of applicable rates and arithmetical accuracy within the report.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

General Remarks:

Eighty three feet of advance was made under the above contract during December. Considerable water was encountered which has slowed the advance appreciably.

General Geology:

In the present face the fissure has widened to 3 ft. with considerable crushed quartz carrying scattered zinc and lead sulfides. Approximately 600 gal. water/min. is coming from the fissure. The country rock is light to dark grey, fine grained and moderately hard.

Very truly yours,

Memorandum

To: Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead, zinc, and copper) Contract Idm-E903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado -- Progress report for December 1957

Stage II work progress was inspected on January 8, 1958. The work progress was discussed with Mr. W. Probst, general manager, and Messrs. Bloomfield and Perrin, A. S. & R. engineers.

Along the 3000-level on the Union vein the DMEA drift has been advanced for a total length of about 1,003 feet under Stage II. A considerable amount of water, estimated at 500 to 600 gallons per minute, was seen coming from a small cavernous area in the drift face. Considerable delay in advancing the drift was experienced by the operator because of the water flow. The operator was preparing to bypass the cavernous area at the time of the inspection. Significant sulfide mineralization was again encountered in the last 10 feet, or so, of the drift.

The operator requests payment for 83 feet of drifting for December 1957. The amount of drifting claimed by the operator was verified. A total of $2,905.00 is claimed by the operator. Of this amount, the Government's share at 50 percent is $1,452.50.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket DMEA-3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of November 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. All of the work was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A, therefore documentation of the costs is not required. We recommend that payment be made to the Operator for 50 percent of the amount reported on Form MF-104, subject to your verification of applicable rates and arithmetical accuracy within the report.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: Docket DMRA 3866 (Lead, zinc, copper) Contract Idm-E903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado -- Progress report for November 1957

Work progress under Stage II of the contract was inspected on December 4, 1957. Messrs. N. Probst, general manager, and G. H. Bloomfield, engineer, were contacted during the visit to the property.

An examination of the Stage II drifting along the 2000 - level Union vein showed a total advance of about 910 feet. The vein structure as exposed in the face showed a tight structure with very little gouge and no appreciable sulfide mineralization. Mr. Probst stated that the Union vein structure has been poorly mineralized for several hundred feet. The operator has requested approval for an additional 500 feet of drifting along the 2000 - level Union vein.

The operator requests payment for 125 feet of drifting, costing $4,375.00 of which $2,187.50, at the Government's share of 50 percent, is recommended for payment.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

General Remarks:

One hundred and twenty five feet of advance was made on the 2000 Union Vein during November.

General Geology:

During the month the fissure remained tight with very little mineralization present. The wall rock remains essentially brown to greenish cast shales.

Very truly yours,

Nolan Probst, Supt.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: Docket DMEA-3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of October 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. All of the work was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A, therefore documentation of the costs is not required. We recommend that payment be made to the Operator for 50 percent of the amount reported on Form MF-104, subject to your verification of applicable rates and arithmetical accuracy within the report. In addition, the following reinstatement is to be made:

Reinstate the amount of $500.00 which was withheld from the August 1957 voucher pending performance of additional work. The project has been resumed. Please inform the Operator of the reinstatement by means of an Administrative Audit Difference Statement.

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead-zinc-copper), Contract Idm-E903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado---Progress report for October 1957.

An examination of the DMEA work program along the Union vein on the 2000-level was made on November 7, 1957. The examining engineer was accompanied by Messrs. D. H. Richter, U. S. Geological Survey and J. Papastamatiou, Ass't. Director Geological Survey of Greece. Work progress was discussed with Mr. Bloomfield, A. S. R. engineer.

A measurement of the DMEA drift on the 2000-level Union vein showed a total advance of 798 feet. The operator claims reimbursement for 104 feet of drifting, totaling 780 feet. The amount of drifting claimed by the operator is recommended for payment.

The operator requests payment for $3,640.00 of which $1,820.00 represents the Government participation at 50 percent.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

General Remarks:

One hundred and four feet of drifting was completed during October on the 2000 Union Vein.

General Geology:

The fissure averages 6 inches to 18 inches in width. Two to three inches of gouge is present. Occasional stringers of quartz, 1 to 2 inches wide appear but do not persist. Mineralization is almost entirely pyrite in the form of filling on the joints. The wall rock is bleached shales and mudstones.

Very truly yours,

Signature [illegible] Title for Acting Executive Officer Date NOV 21 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: Executive Officer, DMEA Field Team, Region III
Through: E. N. Harshman

From: D. H. Richter

Subject: DMEA Docket 3866 (Lead-zinc-copper), Contract ~~Iam-I 903~~, American Smelting and Refining Company (Keystone mine), Gunnison County, Colorado

An interim examination of the Keystone mine was made on November 7, 1957, in company with E. W. Buel, U. S. Bureau of Mines, and Mr. J. Papastamatiou, Assistant Director of the Geological Survey of Greece.

The DMEA drift along the Union vein on the 2,000 level has been advanced 123 feet, since the last examination on June 4, 1957, for a total of 798 feet under the provisions of Stage II.

The vein and structure exposed along the last 50 feet of drift is thin and relatively barren. At the face the vein, which consists of a 2- to 3-inch seam filled with clay gouge and thin bands of quartz, occupies the center of a narrow, 2-foot wide fractured zone in Mesa Verde sandstone. Only a few scattered crystals of sphalerite and pyrite were observed. The vein, at the face, strikes N 20 W and dips vertically.

The two DMEA authorized drill holes (No. 20-9 and 20-10) drilled from a station on the 2,000 level Union vein, approximately 1,110 feet northwest of Keystone-Union crosscut, have been completed. One hole, 20-9, was drilled horizontally southwest, into the hanging wall of the Union vein, a distance of 418 feet and only a minor showing of quartz and pyrite at 270 and 400 feet was encountered. The other hole, 20-10, drilled horizontally northeast, a distance of 624 feet, encountered a wide, weakly mineralized sulfide and quartz zone in the interval from 185 to 200 feet. Analyses of split core from this section are as follows:

Interval (feet)	Percent			Oz/ton
	Pb	Zn	Cu	Ag
185.0 - 187.5	0	0.5	0.1	0.8
187.5 - 190.0	0	0.3	0.3	0.4
190.0 - 192.5	0	0.2	0.2	0
192.5 - 195.8	0.7	2.4	0.3	0.8
195.8 - 197.7	0	0.2	0.05	0
197.7 - 200.0	0.7	0.1	0.1	0.6

This weak mineralized zone in hole 20-10 probably represents the northwest extension of the Keystone vein.

Subject: Docket DMEA 3866 (Lead-zinc-copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado -- Progress report for September 1957

A visit was made on October 8, 1957, to the subject property by Frank Moore, Geological Survey, and the writer. During the visit, it was learned from Nelan Probst, general manager, that no work under the contract had been performed during the reporting period. Therefore, no inspection was made of the underground workings.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

No work was performed under Stage II in the project area during September.

Under our own exploration program the 20-56-1 Raise was completed from the 2000 Level to 1850 Level, Union Vein.

Since there was no advance in the 2000 Union Drift face or additional core drilling, Forms 104 and 104A will not be submitted this month. The included map shows advance in the 20-56-1 Raise and its connection with the 1850 Level.

Following is a correction on the collar coordinates of Diamond Drill Hole No. 20-10 drilled during August:-

Collar Coordinates N12670.0 E7613.9

Please note and make correction on the September 6th cover letter.

Very truly yours,

Nolan Probst

Dear Mr. Probst:

Form MF-104, Operator's Monthly Report and Voucher, and Form MF-104A, Operator's Unit Cost and Progress Report, for the month of August, 1957, have been received in this office and are being processed for payment.

Work under the contract was not in progress at the time of the last inspection by DMEA personnel, therefore an amount of $500.00 is withheld, pending resumption of the work. The amount of $500.00 will be reinstated in conjunction with processing the next Form MF-104, Operator's Monthly Report and Voucher, submitted to this office after resumption of the work.

Enclosed is a sample copy of Form MF-104A, Operator's Unit Cost and Progress Report, which illustrates the most acceptable method of reporting on this form. It will be greatly appreciated if you pattern your future reports on Form MF-104A after the sample form. No change is required in the method of reporting on Form MF-104, Operator's Monthly Report and Voucher.

Yours very truly,

To: T. A. Christensen

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report, for the month of August, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. All of the work was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A, therefore documentation of the costs is not required. We recommend that payment be made to the Operator for 50% of the amount reported on Form MF-104, subject to your verification of applicable rates and arithmetical accuracy within the report, except for the following deduction:

Withhold an amount of $500.00 from reimbursement to the Operator pending resumption of contract work. At the time of the last inspection by DMEA personnel, project work was temporarily suspended but was expected to resume in the near future.

Remarks: Date of Report----------September 6, 195
Date Received in Field Office---------September 20, 1957

Memorandum

To: Acting Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: DMEA Docket 3866 (Lead, zinc, and copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado -- Progress report for August 1957

An inspection was made at the Keystone mine on September 5, 1957. Mr. James Perrin, A. S. R. engineer was present during the inspection.

During the reporting period DMEA hole No. 20-10 was completed. Total length of the hole is 624 feet. As seen from the drill core, the Keystone vein structure may have been encountered. The drill core displayed significant lead-zinc sulphide mineralization.

Mr. Nolan Probst said that he hopes to resume drifting under the DMEA contract soon.

The operator in his MF-104's for August 1957 requests payment for 615 feet of core drilling and 28 chemical analyses. These claimed items are verified.

It is recommended that the operator be paid for the items claimed, costing $2,913.00 of which the Government's share is $1,456.50.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

General Remarks:

Diamond Drill Hole No. 20-10 was completed August 21, 1957.

Statistics of Hole No. 20-10

Location	2000 Union Vein
Bearing	N54°30'E
Collar Coord.	N12607.0, E7613.9
Depth of Hole	624 ft.
Angle	0°0'
Date Started	7/27/57

General Geology:

The core was composed of greenish to grey cast sandstone and bleached to dark colored shales. Sections of the core was hard and quartzitic in character. Evidence of vein structure was noted at 190-200 ft. which was presumed to be the Keystone Vein. Assaying of core sections and sludge throughout the hole shows nothing of consequence. The attached sheet lists the assays taken from the hole.

Very truly yours,

Nolan Probst

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

124 New Customhouse
Denver 2, Colorado

August 22, 1957

Memorandum

To: T. A. Christensen

From: Alternate Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket-3066 (Lead-Zinc-Copper) Contract Idm-E903 American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report, for the month of July, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

Except as otherwise indicated below, we consider that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. All of the work was performed at "Fixed Unit Costs" under the short form contract on Form MF-200A, therefore documentation of the costs is not required. We recommend that payment be made to the Operator on the following basis, contingent on your verification of applicable rates and arithmetical accuracy within the report.

Hole No. 20-9 was drilled to a total length of 41[illegible] feet. The work approval dated March 20, 1957, stipulates that the hole shall be drilled for a length of 300 feet. The cost of the excess footage is to be disallowed.

At the end of July, 195[illegible], hole No. 20-10 had been drilled to a length of 112 feet and had not yet been completed. Payment for the reported drilling in hole 20-10 is to be disallowed pending completion of the hole, at which time the cost of the entire hole can be reported for payment.

Disallowance, Core Drilling

Disallow reported cost of 118 feet excess drilling in hole 20-9 at $4.60 per foot	$542.80
Disallow reported cost of 112 feet of drilling in incomplete hole 20-10 at $4.60 per foot	515.20
Total amount to be disallowed	1058.00

Reconciliation with Amount Reported by the Operator on Form MF-104 for July, 1957

Amount reported on Form MF-104 for July, 1957	$2,438.00
Amount to be disallowed	1,058.00
Acceptable cost for July, 1957	$1,380.00
Government participation at 50 percent	$ 690.00

ARTMENT OF THE INTERIOR

AUG 21 1957

REGION III
DENVER, COLORADO

REGION III

Memorandum

Building 80
Denver Federal Center
Denver 2, Colorado
August 21, 1957

To: Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: DMEA Docket 3866 (Lead, zinc, copper), Contract 16m-3903, American Smelting and Refining Company (Keystone mine), Gunnison County, Colorado -- Progress report for July 1957

The Keystone mine was visited on July 7, 1957. Data concerning the DMEA work progress were obtained from Mr. James Perrin, A. S. R. engineer.

The operator did not do any drifting under the contract during the reporting period. Diamond drilling was started from the 2160-level. The operator completed one hole (No. 20-9). This hole was drilled to the southeast and into the hanging wall of the Union vein structure. Total length of the hole is 418 feet. With exception of a superficial showing of quartz and pyrite at approximately 270 feet and 400 feet, the hole did not encounter any indications of possible ore mineralization. Another hole (20-10) is being drilled to the northeast to test the footwall of the Union vein structure and to intersect any possible extensions of the Keystone vein. At the time of the visit to the mine, the hole had been completed to about 200 feet. The projected intersection of the Keystone vein would involve a horizontal hole of at least 450 feet.

The amount of drilling claimed by the operator in his MF-104's for July 1957 has been verified. The operator, however, has overdrilled a total of 118 feet in hole 20-9. The operator was authorized by a DMEA Field Team letter, March 20, 1957, to do a maximum of 300 feet diamond drilling in an approximate S55° W direction from the Union 2000-level. The 530 feet of core drilling claimed by the operator includes 112 feet of an incompleted hole (20-10). It is recommended that reimbursement for 118 feet of incompleted hole 20-10 be withheld until the hole is completed. A total of 112 feet of incompleted hole and 118 feet of excess drilling is recommended for disallowance on the operator's MF-104's for July 1957. It is recommended that the operator be reimbursed for only 300 feet of drilling. Cost of the reimbursement is $1,380.00 of which the Government's share is $690.00

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

General Remarks:
No advance was made during July in the 2000 Union Vein Drift. Stope preparation in the 20-56 co-ordinate prevented any drifting during the first week of July. Core drilling of the hanging wall in the 20-66 co-ordinate was started and a hole of 418 feet was completed. The footwall hole at the same location was started and a total of 112 feet completed during the month. The hanging wall hole showed minor veinlets of Pyrrohotite with some quartz at 269 to 272 and 397 to 402 ft. Assay of sludge from the two zones will be reported next month. The country rock noted in the core is composed of greenish to gray sandstone and dark shale with the formation relatively free of fracturing.

Mining and milling at the Keystone Unit was discontinued July 15. During the first two weeks of July a total of 512 tons were mined from the project area with the following metal content:

Working Place	Tons Ore-Waste	Metal Content Ag oz.	Pb %	Cu%	Zn%
20-55-1 Stope	206	2.8	2.4	0.5	3.8
20-56-1 Raise	306	3.3	3.2	0.6	9.7
TOTAL	512				

Very truly yours,

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket-3866, (Lead-Zinc-Copper) Contract Idm-E903
American Smelting and Refining Company (Keystone mine)
Gunnison County, Colorado - Operator's Monthly
Progress Report, for the month of June, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract and the work for which payment is recommended is acceptable to the Government. No documentation of costs is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead, zinc, copper) Contract Idm-E903
American Smelting and Refining Company (Keystone mine)
Gunnison County, Colorado -- Progress report for June 1957

An examination was made of the DMEA work on July 8, 1957. The examining engineer was accompanied by Mr. Bloomfield, A. S. R. engineer.

Since the last inspection on June 4, 1957, the operator extended the drift on the Union vein for an additional 29 feet. Drifting under Stage II now totals approximately 676 feet.

No significant ore mineralization was seen in or nearby the present drift face.

At the time of the examination, the diamond drill crew had not arrived to do the drilling as authorized by the DMEA contract. It is believed that the crew arrived later in the day of the inspection.

The operator in his MF-104's for June 1957 requests reimbursement for 29 feet of drifting and 2 chemical assays. The amount of drifting and assays as given by the operator has been verified. It is recommended that the operator be reimbursed for $1021.00 of which the Government's participation at 50 percent is $510.50.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

General Remarks:

Drifting on the 2000 Union Vein was stopped for a period the month while 20-56-1 Rse and 20-57-1 Stope Panel was started and cleared from the sill.

Following are the advances, tonnage and grade of ore in the project area:

Working Place	Advance	Tons Ore	Tons Waste	Metal Content Ag. oz	Pb%	Cu%	Zn%
2000 Union N.Dr.	29'	20	110	0.30	0.40	0.05	0.10
20-55-1 St.		307		4.30	5.20	1.0	9.80
20-56-1 St.		191		5.10	10.0	0.80	6.70
20-56-1 Rs.	15'	94		2.60	2.10	0.50	6.70
20-57-1 St.		271		1.40	1.20	0.20	2.20
21-57-St.		256		2.60	1.10	0.50	3.60
Total	44'	1139	110				

General Geology:

The fault structure has been very tight. Little gouge is noted. Mineralisation has been sparse with the vein structure only a few inches wide. The wall rock is mudstone and sandstone.

Very truly yours,

Subject: DMEA Docket-3866, (Lead-Zinc-Copper) Contract Idm-E903
American Smelting and Refining Company (Keystone mine)
Gunnison County, Colorado - Operator's Monthly Progress
Report, for the month of May, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead, zinc, copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado -- Progress report for May 1957

An inspection was made of the DMEA work progress on June 4, 1957.

Since the last inspection of May 3, 1957, the Union vein drift was extended an additional 77 feet. The drift, under Stage II, now totals approximately 647 feet.

An examination of the drift face showed a tight well-defined structure that did not contain any significant ore mineralization.

At the time of the inspection, the operator had not started to diamond drill from the drill stations excavated during the previous reporting period. Mr. Probst, superintendent, was informed that DMEA officials were desirous of beginning diamond drilling as soon as possible. Mr. Probst said that his superiors, in Salt Lake City, were informed of the diamond drilling and that to date he had not heard from them concerning the beginning of any diamond drilling. He expected to contact them within a day or two, if he did not receive any word by them.

The operator in his MF-104's for May 1957 requests reimbursement for 76 feet of drifting and one chemical assay. It is recommended that the operator be paid for all items as claimed. Total reimbursement is $2663.00, of which the Government's share at 50 percent is $1331.50.

Re: Docket DMEA -3866
Contract Idn -5903

Gentlemen:

DEVELOPMENT WORK:

Drifting on the 2000 Union vein was mostly in waste. However, about half the footage advance was shipped as developement ore. Drifting on the 1850 Union vein exposed a well defined structure but very little ore.

Following are the advances, tonnage and grade of ore in the project area.

Working Place	Advance	Tons Ore-Waste	Metal Content Ag oz	Pb%	Cu oz	Zn%
1850 Union Dr. N.	135 Ft.	42 407	7.15	10.49	1.05	4.29
2000 Union Dr. N.	76 Ft.	232 202	6.72	2.32	0.68	11.14
20-55-1 Stope		570	7.47	5.98	1.25	9.93
20-56-1 Stope		234	5.87	7.01	0.91	8.27
Totals	211	1078/609				

GENERAL GEOLOGY:

During May a small lenticular vein of approximately two foot width was exposed. No other mineralization of consequence was found. The fault structure remains strong with minor amounts of gouge and some open fissuring developed. The wall rock is essentially gray sandstone.

Very truly yours,

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Memorandum

To: Acting Executive Officer, DMEA Field Team, Region III

Through: Albert S. Kronselman
Mining Engineer

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead-zinc-copper) Contract Idm-2903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado -- Progress report for April 1957

An inspection was made of the Keystone mine on May 3, 1957. No company representatives were present during the inspection.

At the time of the inspection, the DMEA drift, driven along the Union vein, totalled about 570 feet completed under Stage II of the contract. The newly excavated drift does not require timbering.

At a location roughly N 12660 E7600 (see operator's 2160 Drift North map), two diamond drill stations were cut in preparation for drilling horizontal holes to the northeast and southwest. Each station measures approximately 9 by 14 feet with the longer dimension normal to the 6-foot-wide drift.

An examination of the face showed a well-defined structure which displays good sulfide mineralization, principally, an marmatite. Average width of the sulfide mineralization is about 1.5 feet. The mineralization is reported by the miners and Mr. Probst, general manager, as extending about 50 feet back from the drift face. The structure, near the face, strikes N. 40° W. and dips 80° SW. The miners reported that no pronounced sulfide mineralization was detected in the footwall adjoining the mineralized part of the Union vein.

The operator in his MF-104's for April requests reimbursement for 89 feet of drifting, 2 drill stations, and 6 chemical assays. It is recommended that the operator be paid for all items claimed. The cost of the project for April is $3,333.00 of which the Government's share at 50 percent is $1,666.50.

Re: Docket DMEA-3866
Contract Idm-E903

Gentlemen:

GENERAL REMARKS:

Two diamond drill stations were cut in conjunction with the drifting. Advance in the drift face was mostly in ore.

Following are the advances, tonnages and grade of ore in the project area.

Working Place:	Advance	Tons Ore	Tons Waste	Metal Content Ag Oz	Pb %	Cu %	Zn %
1850 Union Dr. N.	146 Ft.	0	432				
2000 Drill Stations	17 Ft.	0	50				
2000 Union Dr. N.	89 Ft.	270	70	14.88	3.32	0.60	11.76
20-55-1 Stope		722	0	6.88	3.69	1.16	8.29
20-56-1 Stope		133	0	5.55	7.60	0.87	8.60
Totals	252	~~1075~~ 1125	552				

GENERAL GEOLOGY:

The fault structure remains fairly strong with gouge and open fissuring present. Drifting has been mostly in ore with the vein averaging 2 to 4 Ft. in width. The wall rock is predominately greenish cast sandstone and dark shales.

Very truly yours,

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Edward W. Buel

RECEIVED JUN 7 1957 D.M.E.A.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: T. A. Christensen

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866, (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report, for the month of March, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made on the following basis, contingent on your verification of arithmetical accuracy within the report.

On checking our records we are unable to find the locations and results for two of the 27 assays reported for January 1957, therefore the cost of two assays is to be disallowed from the March, 1957 voucher.

<u>Disallow</u> the reported cost of two samples assayed for Lead, Zinc and Copper, at $3.00 per sample--------$6.00

Reconciliation with Amount Reported by the Operator on Form MF-104 for March, 1957

Amount reported on Form MF-104 for March, 1957	$2,305.00
Amount to be disallowed	6.00
Total accepted cost for March, 1957	$2,299.00
Government participation at 50 percent	$1,149.50

Remarks

Memorandum

To: Acting Executive Officer, DMEA Field Team, Region III
Through: Albert S. Konselman ASK
Mining Engineer

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company, (Keystone mine), Gunnison County, Colorado--Progress report for March, 1957.

The Keystone mine was inspected on April 1, 1957, by the writer and Mr. Stanley Kung, Point IV Trainee. Except for the miners engaged for the DMEA drifting, there were no company representatives present during the inspection.

The operator reports a drift advance of 65 feet for the reporting period. Total units of drifting completed under Stages I and II, as reported by the operator, is 932 feet. Of this amount 450 feet of drifting was completed under Stage I.

An examination of the face of the drift showed a tight structure, about 2" in width, that strikes N. 13° W. and dips S. 57° W. The face did not display any pronounced ore mineralization. At a point approximately 6 feet from the face the vein structure contained conspicuous sulfide mineralization. Some ore material was exposed by the recent drifting. Extent of ore material is discussed in the operator's narrative.

It was learned from Mr. Bloomfield, A.S.R. engineer, that a diamond-drill station will be cut in the DMEA drift at a point approximately N. 12700 and E. 7600 (see operator's map accompanying MP-104's).

In addition to the 65 feet of drifting reported by the operator, 10 chemical assays were obtained.

It is recommended that the operator be reimbursed for 65 feet of drifting and 10 chemical analyses. March's DMEA work total $2,305.00 of which the Government's share at 50 percent is $1,152.50.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

RECEIVED MAY 6 1957 D.M.E.A.

DMEA DEPARTMENT OF THE INTERIOR APR 24 1957 REGION III DENVER, COLORADO

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RE: Docket DMEA - 3866
Contract Idm-2903

Gentlemen:

General Remarks:

Drifting on the 2000 Level Union Vein was suspended for a short time during March when it became necessary to interrupt power to our ventilating fan to this drift face. Advance in the drift face was in ore & waste. Following are the advances, tonnage and grade of work in the project area.

Working Place	Advance	Tons Ore	Tons Waste	Metal Content Ag Oz	Pb %	Cu%	Zn%
18-53-1 X Cut.	85'		294				
1850 Union W Dr.	42'	87	35	0.99	0.32	0.07	0.80
2000 Union W Dr.	65'	122	159	6.76	1.22	0.70	6.49
20-55-1 Ms.	11'	125		1.08	1.29	0.09	1.72
20-55-1 St.		238		2.86	1.12	0.43	9.66
20-56-1 St.		85.		6.93	6.62	0.59	5.64
21-57-1 St.		137		2.55	0.09	0.45	3.00
Total	203	794	488				

General Geology:

Drifting encountered a lense of ore which entered from the hanging wall. Within 20 Ft. of drifting the lense pinched to several inches. No drilling has been done in the hanging wall to determine the extent of the lense to the South. The Fault remains fairly strong with several inches to 1 foot of gouge developed. Mineralization is recently weak. Wall rock is predominately greenish quartz sand stone.

Very truly yours,

Nolan Krobst, Supt.

Memorandum

To: E. A. Christensen

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket-3866, (Lead- inc-Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report, for the month of February, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

All of the work was performed at "Fixed Unit Costs," as specified in the short form contract on Form MF-200A. No documentation is required, therefore we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

DENVER, COLORADO March 27, 1957

Memorandum

To: Executive Officer, DMEA Field Team, Region III
Through: John F. Shaw
Supervising Mining Engineer

From: E.W. Buel

Subject: Docket DMEA 3866, (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company, (Keystone mine), Gunnison County, Colorado--Progress Report for February, 1957.

The work progress under the DMEA contract was inspected on March 4, 1957, by the writer. There were no mine representatives present during the inspection, other than the miners engaged for the drifting.

The DMEA drift was driven 85 feet since the last inspection of February 11, 1957. Total length of the drift driven under Stage II of the DMEA contract measures 426.0 feet.

An examination of the face and back of the recently driven drift revealed that the vein is but superficially and erratically mineralized with lead, zinc, and copper sulphides.

It appears as though the mineralization is progressively becoming leaner as the drift is extended away from the DMEA raise area. 1/ The raise area has resulted in the production of ore-grade material.

The operator reports in his MF-104's for February, 1957, 117 feet of drifting and 14 chemical analyses. The operator's claims have been verified.

It is recommended that the operator be reimbursed for 117 feet of drifting and 14 chemical analyses. Total expenditures for February's DMEA work total $4,137.00 of which the Government's share at 50 percent is $2,068.50.

Edward W. Buel
Edward W. Buel
Mining Engineer

1/ A telephone call by the operator on March 11, revealed that the drift encountered a significant showing of ore mineralization.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RE: Docket DMEA - 3866
Contract Idm-E903

Dear Sir:

General Remarks:

Drifting on the 2000 Level Union Vein during the month was mostly in waste. Drifting was resumed for a short period on the 2160 Level Union Vein - this advance was in low grade ore. Stope preparations continued in the 2055, 2056 and 2157 Project Area ore blocks.

Working Place	Advance	Tons Ore	Tons Waste	Ag Oz	Metal Content Pb %	Cu%	Zn%
2000 Union Dr.	117 Ft.	133	354	4.8	3.0	0.4	6.2
2160 Union Dr.	60 Ft.	249		5.0	0.8	1.0	2.1
2055-1 Stope		570		1.8	1.4	0.3	3.9
2056-1 Stope		377		4.4	5.9	0.6	4.3
2157-1 Stope		26		2.6	0.9	0.4	2.6
	Total	1355	354				

General Geology:

Little movement is evident on the 2000 Level Union Vein. The wall rock is fairly tight, selectification of the shales and sandstones is becoming more pronounced. SILICIFICATION (?)

Mineralization is sparse - that present is finely disseminated and lies near the fault.

Very truly yours,

Nolan Probst, Supt.

To: Executive Officer, DMEA Field Team, Region III
Through: E. N. Harshman

From: Donald H. Richter

Subject: DMEA Docket 3866 (Lead-zinc-copper), Contract Idm-E 903, American Smelting and Refining Company (Keystone mine), Gunnison County, Colorado
INTERIM REPORT

An interim examination of the Keystone mine was made on February 11, 1957, in company with E. W. Buel, U. S. Bureau of Mines.

The DMEA drift on the 2,000 level has been advanced 156 feet, since the last examination on January 8, 1957, for a total of 341 feet since the start of the contract.

The vein and structure is apparently becoming thinner and the sulfide mineralization more spotty as the drift advances. At the face of the drift the vein consists of a 4- to 6-inch quartz and clay gouge zone in a 2- to 3-foot sheeted or shear zone. A few small spotty areas of sphalerite, galena, and pyrite were observed. The vein, for the last 100 feet of drift, strikes approximately N. 47° W. and at the face dips 66° SW.

Re: DMEA 3866; Pb-Zn-Cu;
Contract Idm-E903
American Smelting & Ref. Co.
Keystone Mine
Gunnison County, Colo.

~~Memorandum~~

To: W. R. Griswold, DMEA

From: O. M. Bishop, Branch of Base Metals

Subject: Interim Report of January 14, by Walden P. Pratt on referenced property.

This Interim Report suggests the possibility that operators are not measuring, sampling and currently recording in map form the dimensions and grade of mineralized ground. Although the 2,000 level drift had been advanced 135 feet on the vein since the last inspection and the 150-foot DMEA raise from the 2,160 level to the 2,000 level had been completed the Interim Report gives no information that assays exist of these sections but rather describes the vein sulfide mineralization in the drift as erratic, and notes that the raise (also on the vein) was tightly lagged so that the walls could not be examined. Mr. Pratt writes, "The vein was still good ore in the floor of the 2,000 level; a grab specimen showed very good coarsely crystalline galena with interstitial chalcopyrite."

It can hardly be over-emphasized that the purpose of exploration is positive information in recorded form that can guide present and future actions. Often ore widths or grades submarginal with existing prices and technology cannot be evaluated at a future date because of failure to measure and sample or properly record such data.

I recommend that DMEA seek assurance that proper records of exploration results are being made as the work progresses.

Memorandum

To: T. A. Christensen

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866, (Lead-Zinc-Copper) Contract Idm-E903
American Smelting and Refining Company (Keystone mine)
Gunnison County, Colorado - Operator's Monthly
Progress Report, for the month of January, 1957

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

We consider that the Operator has complied with the intent of the contract and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone mine), Gunnison County, Colorado - Progress report for January 1957

The subject property was inspected on February 11, 1957, by D. Richter, Geological Survey, and E. W. Buel, Bureau of Mines.

Since the last inspection of January 8, 1957, the drift was extended 156 feet, making a total of 341 feet driven under Stage II of the subject contract.

The operator reports in his MF-104's for January 1957, 138 feet of drifting and 27 chemical analyses. An examination of the DMEA workings and sample data verify the operator's reimbursement claims.

Reimbursement to the operator is recommended for 138 feet of drifting and 27 chemical analyses. Total cost of the DMEA work during January 1957 is $4,911.00 of which the Government's share at 50 percent is $2,455.50.

RE: Docket DMEA - 3866
Contract Idm - E903

Dear Sir:

General Remarks:

A total of 138 Ft. of advance was made during the month of January. Nearly all drifting was in ore. A total of 567 tons was milled with a metal content of Ag 7.1 Oz, Pb 3.2 %, Cu 0.5 %, Zn 9.8 %. 27 tons was discarded as waste.

In stope block 2056 in the project area 236 tons of ore was mined with the following metal content Ag 3.7 Oz, Pb 5.0 %, Cu 0.5 %, Zn 4.0 %.

General Geology:

The drift vein has been irregular in width - varying from 2 to 5 ft. Little gouge has been developed as a rule the walls have been fairly tight. Wall rock is essentially hard, greenish cast sandstone.

Very truly yours,

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Through: E. N. Harshman EWH

From: Walden P. Pratt

Subject: DMEA Docket 3866 (Lead-zinc-copper), Contract Idm-E903, American Smelting and Refining Company (Keystone mine), Gunnison County, Colorado. INTERIM REPORT

The Keystone mine was visited on January 8, 1957, by W. P. Pratt, U. S. Geological Survey, and E. W. Buel, U. S. Bureau of Mines, to inspect progress on the 2,000 level under DMEA contract.

The DMEA drift on the 2,000 level has been advanced 185 feet since the start of the contract, or 135 feet since the last inspection on December 5, 1956. The vein and adit trend about N 45° W for roughly the last 100 feet, and the vein dips 70° SW at the face. Sulfide mineralization is erratic: the face shows a 3-1/2-foot zone of quartz and chlorite with pyrite and spotty galena and sphalerite, but the operator stated that the material extracted for a length of about 15 feet, up to a point 10 feet back from the face, was hauled as ore. Assays on this section were not yet available in the company office.

The DMEA raise from the 2,160 level was completely cribbed and the walls could not be examined. Mr. Nolan Probst (manager) reported that the lower 100 feet of the 150-foot raise followed the vein and that at the top of this portion the vein was 1-1/2 feet thick and contained good sulfides; above this point the raise went into the footwall because of a surveying error on the lower level, and reached the 2,000 level about 8 feet out in the footwall. The vein was still good ore in the floor of the 2,000 level; a grab specimen showed very good coarsely crystalline galena with interstitial chalcopyrite.

From: Edward W. Buel

Subject: Docket DMEA 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company, (Keystone Mine), Gunnison County, Colorado -- Progress report for December 1956

An inspection was made of the DMEA work on the subject property on January 8, 1957. The inspection was made by W. Pratt, Geological Survey, and E. W. Buel, Bureau of Mines. There was no company representative present during the inspection.

A measurement of the drift showed that the drift was driven for a total of 185 feet from the start of the contract under Stage II. The starting point under Stage II drifting was established at a point 69 feet beyond A.S.R. survey station No. 2053. The increase of drifting totals 135 feet since the last inspection.

The operator's narrative report and MF-104's are correct, except for Drill Station units and unit costs which were omitted on the MF-104A. It is recommended that the operator be paid for 121 feet of drifting and for 25 (map shows 30 samples) sample analyses. Reimbursement totals $4,310.00 of which the Government's participation at 50 percent is $2,155.00.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket DMEA - 3866
Contract Idm - 8903

Dear Sir:

General Remarks:

Drifting continued on the 2000 level Union Vein on a single shift basis. 121 ft. advance was made during December. All rock from the drift heading during December was waste. A total of 514 tons was discarded.

A stope block, designated as 2056 block, is being prepared for mining. This block adjoins and extends S.E. of the recently completed 2156 Union Veinraise. 500 tons of ore was mined from this block and contained the following metal content: Ag - 3.3 Oz, Pb - 2.3 %, Cu - 0.5%, Zn- 4.9 %.

General Geology:

The fissure continued moderately strong. Scattered mineralization in a zone 2 to 4 ft. wide still persists. Development of gouge on either wall has been slight.

Very truly yours,

From: Edward W. Buel

Subject: DMEA 3866 (Lead, zinc, copper) Contract Idm-2903,
American Smelting and Refining Company (Keystone mine)
Gunnison County, Colorado -- Progress report for November 1956

An examination was made of the Keystone mine on December 5, 1956, by the writer in company with G. H. Bloomquist, engineer.

The operator began work under Stage II of the DMEA contract. This work consisted in extending the 2000-level drift on the Union vein for a total distance of 50 feet. The drifting under Stage II did not require any timbering.

Starting point of the drift under Stage II is 112 feet beyond A. S. R. survey station #2048.

An examination of the drift heading indicated that the vein was not of commercial grade. The vein displays conspicuous lead-zinc sulphides, pyrite, and rhodochrosite.

The operator reports the analyses of 5 samples taken from the drift. Sample data are shown on the assay and progress map submitted by the operator to accompany the monthly narrative report.

The operator's MF-104's and narrative are correct, and the operator requests reimbursement for $1450.00, of which the Government's share at 50% is $725.00. It is recommended that the operator be reimbursed for the Government's share of $725.00.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RE: Docket DMEA - 3866
Contract Idm-E903

Dear Sir:

General Remarks:

Drifting was resumed on the 2000 level Union Vein Nov. 15. Work was started and is still being carried on a single shift basis. Drift back is being taken down adjacent to the top of 2156 Rse. in preparation for stoping. Upon completion of this work drifting will be put on a two shift basis.

Forty one (41) ft. of advance was made during this period - no ore was produced in the drifting.

General Geology:

The fissure continues moderately strong. Some mineralization is present with the zone from one to three feet wide.

Very truly yours,

REGION III

Memorandum

Building 20
Denver Federal Center
Denver 2, Colorado
November 21, 1956

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shea
Supervising Mining Engineer

From: Edward W. Buel

Subject: DMEA 3866 (lead-zinc-copper) Contract Idm-8903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado. —Progress report for October 1956.

An examination was made of the subject property on October 23, 1956. The purpose of the examination was to inspect the work progress on the raise and to determine the location of exploration drifting under stage II of the contract.

It is to be noted that September's progress report of October 26, 1956, states that the operator advanced the raise for a total of 165 feet. This statement should be changed to read "...for a total of 165 feet up until the end of the month, or for a total of 195 feet at the time of the inspection."

The operator reports an advance of the raise of 30 feet during October. An inspection of the raise verified the amount of raise. The operator's narrative and MF-104's are correct.

It is recommended that the operator be reimbursed for 30 feet of raising as given in his MF-104's. Total costs of the work performed during October were $1,170.00 of which the Government's share at 50 percent is $585.00.

Edward W. Buel

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W. M. Davey Title Executive Officer Date NOV 26 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RE: Docket DMEA - 3866
Contract Idm-E903

Dear Sir:

General Remarks:

Thirty feet of timbered advance was made in the Union Drift Raise during October. Connection was made with the 2000 level October 13. One hundred fifty-three tons of waste was extracted from the raise during the month. All advance was in waste during October.

General Geology:

As mentioned in the last letter the raise was flattened in dip to connect with the 2000 level. Upon connection it was found our plotting of the dip to insure the connection was in error. An error inadvertently insurred in the survey of the 2160 Level Union Drift had thrown our plotting 15 ft. into the footwall. Had we followed the fissure a proper connection and a complete section of the vein would have been exposed between the 2160 and 2000 levels.

Very truly yours,

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company, (Keystone Mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of September, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

October 26, 1956

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: Edward W. Buel

Subject: DMEA 3966 (Lead-zinc-copper) Contract Idm-2903,
American Smelting and Refining Company (Keystone mine)
Gunnison County, Colorado -- Progress report for September 1956

The operator completed 53 feet of raising during September under the subject contract. An inspection of the Keystone mine on October 23, 1956, verified the work advance.

The operator mined 93 tons of ore subject to Government royalty payments. The grade of the ore was not available.

The project raise has been advanced for a total of 165 feet. A total of 200 feet of raising is allowed under the contract. The raise is timbered for 165 feet.

The face of the 2000 level drift on the Union vein was inspected to determine the location and feasibility of the 2000 feet of drifting and crosscutting allowable under Stage II of the contract. It was decided by the operator and the examining team that drifting under Stage II should be conducted from the face of the 2000 level drift on the Union vein.

The operator reports the analyses for 13 samples taken from the raise during the advance for September. Sample data are shown on the assay and progress map submitted by the operator to accompany his monthly narrative report.

The project work completed during the subject period agrees with the specifications given in the contract. The $2,106.00 total costs reported on the MF-104's for September are approved. Reimbursement to the operator of 50 percent of the approved reported costs or $1,053.00, is recommended.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Docket DMEA 3866
Contract Iom-2903

Dear Sir:

General Remarks:

Fifty-three (53) feet of timbered advance was made in the Union Drift Raise during September. Ninety-three tons of ore and 129 tons of waste was extracted during this period.

General Geology:

As mentioned in last months letter the raise was being flattened in dip to intersect the 2000 level above. At the point we left the hanging wall of the fissure 18 inches of ore was showing. The raise is being driven entirely in waste since our position on the fissure is between the hanging and foot wall ore veins.

Very truly yours,

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket DMEA 3866 (Lead-Zinc-Copper) Contract Idm-E 903, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of August, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: R. L. Bohmer

Subject: DMEA 3566 (Lead-zinc-copper) Contract Ldz-2903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado -- Progress report for August 1956

The progress reported this period under the subject short-form contract -- 32 feet of advance in the 21-56-1 Raise on the Union vein -- was verified during an inspection of the Keystone mine on Sept. 12, 1956.

On the date of inspection, the project raise had been advanced to a height of approximately 125 feet above the back of the 2160 level drift; 112 feet of this distance was timbered. The operator previously has reported and been reimbursed for 80 feet of the latter distance. The 32 feet of timbered raise that the operator reports for the August period, therefore, is valid and proper. The August advance is posted on the plan and section maps that accompany the operator's report.

The advance of the project raise was curtailed somewhat during the reporting period due to an unusually high turnover of the contract labor employed in this heading. The project heading was halted during the period while the operator completed a sublevel crosscut from the raise to locate the true footwall of the Union vein zone. The crosscut was extended 39 feet from the raise and a test hole was drilled some 7 feet beyond that point. A series of reverse-dipping mineralized shears were intersected by the crosscut but neither a major structure nor a definite footwall to the zone was encountered.

The operator reports the analyses for 14 samples taken from along the August advance of the project raise. The locations, chemical analyses, and other data for these new samples have been posted on the assay map that accompanies the operator's report.

During August, 282 tons of exploration ore from the 21-36-1 Raise -- averaging 2.2 oz. Ag, 1.4% Pb, 0.5% Cu, and 2.4% Zn -- was concentrated in the Keystone mill. This production is subject to Government royalty.

The project work completed during the August period conforms to the specifications stipulated in the contract. The $1,296.00 total costs reported on the operator's MF-104 form for this period -- equivalent to 32 feet of timbered raise at the agreed upon unit price of $39.00 per foot plus the analysis of 14 individual samples at $3.00 each -- are approved. Reimbursement to the operator of 50 percent of the approved reported costs, or $648.00, is recommended.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported, with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RE: Docket DMEA 3866
Contract Idm-E903

Dear Sir:

General Remarks:

Thirty-two (32) ft. of advance was made in the Union Drift raise during August. In this period 282 tons of ore and 14 tons of waste was extracted.

General Geology:

39 ft. of footwall crosscut (mentioned in the previous letter) did not reveal any major footwall structure. A reverse dipping shear pattern was present thru the entire X-Cut. Mineralization was almost totally absent in the X-Cut.

The raise is being flattened in dip to intersect the ore shown on the level above.

Very truly yours,

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866 (Lead-Zinc-Copper) Contract Idm-E903, The American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of July, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

August 29, 1956

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw JFS
Supervising Mining Engineer

From: R. L. Bolmer

Subject: DMEA 3866 (Lead-zinc-copper) Contract Ida-8903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado -- Progress report for July 1956

The progress reported this period under the subject short-form contract -- 45 feet of advance in the 21-56-1 Raise on the Union vein -- was verified during an inspection of the Keystone mine on August 7, 1956.

On the date of inspection, the 21-56-1 Raise had been advanced to a point approximately 90 feet above the back of the 2160 level drift; 80 feet of this distance was timbered. The operator previously has reported and been reimbursed for 35 feet of the latter distance. The 45 feet of timbered raise that the operator reports for the July period, therefore, is valid and proper. The July advance is posted on the plan and section maps that accompany the operator's report.

The project raise was started on a streak of high grade sulfide mineral which was believed to lie along the true footwall of the Union vein zone. In this vicinity, the zone is as much as 40 feet in width. The sulfide streak, as exposed during the July advance of the project raise, steepened considerably and deviated from a straight-line projection to a mineralized section of the vein opened along the 2000 level Union drift (see operator's current progress map and sections). The latter mineralization is known to lie along the true footwall of the zone. The operator has started a short sublevel crosscut into the footwall of the sulfide streak followed by the raise to determine, if possible, its true location within the zone. It is probable also that test holes will be drilled into the hanging wall of the sulfide streak before project raising is continued.

The operator reports the analyses for 12 samples taken from along the July advance of the project raise. The locations, analyses, and other data for these 12 new samples have been posted on the assay map that accompanies the operator's report.

During the month of July, 284 tons of exploration ore from the 21-56-1 Raise -- averaging 2.2% Ag, 2.2% Pb, 0.7% Cu, and 4.4% Zn -- was concentrated in the Keystone mill. This production is subject to Government royalty.

The project work completed during the July period conforms to the specifications stipulated in the contract. The $1,791.00 total costs reported on the operator's MF-104 forms for this period -- equivalent to 45 feet of timbered raise at the agreed upon unit price of $39.00 per foot plus the analysis of 12 individual samples at $3.00 each -- are approved. Reimbursement to the operator of 50 percent of the approved reported costs, or $895.50 is recommended.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Re: Docket DMEA 3866
Contract Idm-E903

Dear Sir:

General Remarks:

Forty-five (45) ft. of advance was made in the Union Drift Raise during July. In this period 264 tons of ore was extracted.

General Geology:

The raise has been driven to follow the best ore, this has gradually steepened the section until it appears we are now on the hangingwall of the fissure. During the last 10 ft. of advance the vein section has pinched to 12 inches.

At the point toward which we are driving on the 2000 Union Vein the ore lies on the footwall of the fissure. A projection between this point and the 2160 Level Union vein shows our present position in the raise to be well in the hanging-wall of the fissure.

A small cross cut is being driven in the footwall in an attempt to locate our position within the fissure.

Very truly yours,

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 1066 (Lead-Zinc-Copper) Contract Idm-E983, American Smelting and Refining Company (Keystone mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of June, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-208A, therefore, we recommend that payment be made for 90 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Subject: DMEA 3366 (Lead-zinc-copper), Contract Idm_E903, American Smelting and Refining Co. (Keystone-mine), Gunnison County, Colorado--Progress report for June 1956

The progress reported this period under the subject short-form contract--35 feet of raising on the Union vein from the 2160 level of the Keystone mine--was verified during an inspection of the property July 9, 1956.

The 21-53-1 project raise was started June 5, 1956 at a point along the 2160 level Union drift approximately 96 feet northwest of the 21-53 W. crosscut. On the date of inspection, the raise had been advanced 49 feet above the rail in the Union drift or 41 feet from the back of that drift. The raise had been timbered to a height of 35 feet above the back of the drift. This latter footage is the amount of raising progress that the operator correctly reports for the June period.

The raise was driven on the true footwall of the Union vein zone. It was excavated to an overall cross section of approximately 5 by 15 feet. The center of the excavated section was supported with 8- by 8-inch cribbing that had been preframed on the surface from creosoted railroad ties. This center compartment was approximately 52 by 42 inches in the clear inside the timber. It was provided with a ladderway, platforms, and a timber slide and served as access for water and compressed air lines. The outside of the cribbing on either end of the manway compartment was tightly covered with 3- by 8-inch lagging. The remainder of the excavated section of the raise to either side of central timbered manway was not otherwise supported and served as waste

pass compartments. Each of these outside compartments was approximately 5 by 5 feet in cross section and was provided with a draw chute at the drift level. Some 325 tons of ore averaging 2.9 oz/ton Ag., 2.7% Pb, 0.5% Cu, and 5.0% Zn, which had been recovered from the 41 feet of raise driven during the June period, was concentrated in the Keystone mill.

Also during the June period, the 2160 level Union drift was advanced an additional 32 feet on the operator's account to a point some 185 feet northwest of the 21-55 W. Crosscut. The initial 135 feet of this drift (to a point 39 feet beyond the raise) was completed under stage I of the contract. The vein, as exposed along the June advance of the Union drift, continued mineralized over widths ranging from 5 to 7.5 feet. During the month, some 186 tons of ore from this heading averaging 3.0 oz/ton Ag, 1.6% Pb, 0.4% Cu, and 3.3% Zn were concentrated in the Keystone mill.

The analyses of 11 additional samples (4 from the Union drift plus 7 from the 21-58-1 Raise) are posted on the operator's June progress maps bringing the total reported thus far to 92. This period the operator claims reimbursement for 12 analyses bringing the total number claimed thus far to 65.

The project work reported by the operator for the June period was completed according to the specifications stipulated in the contract. The $1,401.00 total costs reported for this period on the operator's MF-104 forms--equivalent to 35 feet of timbered raise at the agreed upon unit price of $39.00 per foot plus 12 chemical analyses at $3.00 each--are approved. Reimbursement to the operator of 50 percent of the approved reported costs, or $700.50, is recommended.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RE: DOCKET DM A 3866
REPORT Idm-5903

Dear Sir:

General Remarks:

35 ft. of raise was driven on the Union Vein during June. 325 tons of ore was extracted from the raise during the month. During the same period 186 tons of ore was extracted from the drift which was advanced 32 ft. on our account.

General Geology:

The raise is located 8 ft. north west of survey station 5144. At this point a definite split in the vein was apparent, however, raising was started and has continued on the footwall split. Vein widths have been in excess of 4 ft. with numerous veinlets trending toward the hanging wall split.

Very truly yours,

Nolan Probst, Supt.

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866 (Lead, Zinc and Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone Mine) Gunnison County, Colorado - Operator's Monthly Progress Report for the month of May, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: R. L. Bolmer

Subject: DMEA 3866 (Lead-zinc-copper) Contract I&m-5903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado -- Progress report for May 1956

The progress reported for the May period under the subject short-form contract -- 119 feet of drifting northwesterly along the Union vein on the 2160 level of the Keystone mine -- was verified during an inspection of the property June 5, 1956.

At the close of the April period, the project drift along the Union vein extended 16 feet northwesterly from the 21-55 W. crosscut. On the date of the latest inspection, the breast of this heading had been advanced an additional 149 feet to a point 165 feet northwest of the crosscut. The 119 feet of drifting which the operator reports for the May period, therefore, is valid and proper. This footage completes the 450 feet of combined drifting and crosscutting authorized under Stage I of the contract. The final 30 feet of drifting along the Union vein was non-project work completed at the operator's own expense so as to provide the needed tail room for loading from the authorized Stage I raise on the Union vein. The raise will be started midway along the 2160 level project drift on the Union vein and will make connection with an existing 2000 level Union drift.

A revised summary of the project progress reported to date under Stage I of the contract is given below. Project drifting started February 6, 1956 from the then existing breast of the 2160 level north drift along the Keystone vein at a distance 82.5 feet inby the point designated "Drill Steel" on the operator's current progress map. Project drifting along the Union vein is measured from the north rib of the 21-55 W. crosscut.

Period	2160 N. Dr. on Keystone vein	21-55 W. xc to Union vein	S. Dr. on Union vein	Total reported advance
Feb. 56	78'			78'
Mar. 56	61'	49'		110'
Apr. 56		127'	16'	143'
May 56			119'	119'
Total	139'	176'	135'	450' *

(* Max. footage of combined drifting and crosscutting authorized under Stage I)

The Union vein exposed during this period remained strong and well mineralized. The single, 3- to 5-foot stretch of massive sulfide mineralization, which is exposed within the vein zone along the south-eastern sections of the project drift, continues for a distance of some 90 feet north of the 21-55 W. crosscut at which point it splits into narrower foot and hanging wall branches separated by a 4- to 6-foot horse of weakly mineralized sandstone. Only part of the hanging wall split is exposed within the northern limits of drift. The two branches of mineral apparently had begun to consolidate near the breast of the heading.

A total of 26 channel samples have been taken from along the mineralized portion of the Union vein zone as exposed to date on the 2160 level. The locations and analyses of these samples are posted on the operator's progress map. An unweighted average of the widths and analyses of these samples is given below.

Width	Grade			
4.8 feet	4.5 oz./ton Ag	4.8% Pb	1.0% Cu	7.0% Zn

The exploration ore, which was recovered from the 2160 level project headings on the Keystone and Union veins, is summarized below. This ore, which is subject to the Government's percentage royalty, was commingled and concentrated with the company's total production from the other sections of the mine.

Period	Weight* (tons)	Average Grade ** oz/ton Ag	%Pb	%Cu	%Zn
Feb. 56	256	3.5	0.4	0.5	2.5
Mar. 56	194	1.1	0.7	0.2	1.6
Apr. 56	100	2.2	1.4	0.3	2.7
May 56	779	3.4	3.3	0.8	5.1

* Based on adjusted ore factor

** Based on corrected grab sample assays

A preliminary metallurgical balance for the total tonnage of crude ore milled at the Keystone operations during the period May 1-31, 1956 is listed below. The 6,535 tons of crude ore concentrated during this period was derived from all the operating sections of the mine. It includes the 779 tons of exploration ore recovered during the period from the project drift on the Union vein.

Product	Dry Tons	Assay				% Recovery			
		Oz./ton Ag	%Pb	%Cu	%Zn	Ag	Pb	Cu	Zn
Heads	6535.0	5.50	2.25	0.87	5.48	100.0	100.0	100.0	100.0
Pb Concs.	379.8	79.62	33.30	11.26	6.87	84.2	91.2	74.9	7.3
Zn Concs.	608.7	3.32	0.22	1.84	51.87	3.6	0.9	11.1	87.2
Tails	5546.5	0.66	0.21	0.14	0.36	10.2	7.9	14.0	5.5

The project work reported by the operator for the May period was completed according to the specifications stipulated in the contract. The $4,225.00 total costs reported for this period on the operator's MF-104 Forms -- equivalent to 119 feet of drifting at the agreed upon unit price of $35.00 per foot plus 20 assays at $3.00 each -- are approved. Reimbursement to the operator of 50 percent of the reported approved costs, or $2,112.50, is recommended.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W. M. Davey Title Executive Officer Date JUN 20 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

CONTRACT NO. [illegible]

Dear Sir:

Attached are five copies each of Mr. Probst's letter to Mr. Traver of June 9th, Operator's Unit Cost and Progress Report, Operator's Monthly Report and Voucher, and Progress Maps covering the 2160 level development on the Union vein at the Keystone Mine for the month of May.

The following is the grade of the development ore produced for the month:

Zone	Au oz.	Pb %	Cu %	Zn %
[illegible]	1.4	3.3	0.9	5.1

Royalty payments on development ore production to date under this contract will be made shortly by separate letter.

Very truly yours,

F. V. RICHARD

RE: DOCKET DMEA 3866
CONTRACT Idm-E903

Dear Sir:

General Remarks:

119 ft. of drifting along the Union Vein was done during the month of May. This brings the total drifting and crosscutting to 450 ft., thereby completing the Stage I drifting. The 779 tons of rock taken from the drift during the month was sent to the mill as ore.

General Geology:

The vein generally became softer with a change of wall rock from shale to sandstone. During the last 50 ft. of drifting a horse of sandstone waste split the vein. In the split zone the hangingwall segment of the vein is near vertical in dip. The footwall portion of the vein retained its normal dip. In the present drift face the vein has consolidated.

Vein width has averaged about 4½ ft.

Very truly yours,

Nolan Probst

Nolan Probst, Supt.

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866 (Lead-Zinc-Copper) Contract Idm-E903
American Smelting and Refining Company (Keystone Mine)
Gunnison County, Colorado--Operator's Monthly Progress
Report, for the month of April, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-400A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Through: John F. Shaw
Supervising Mining Engineer

From: N. L. Bolmer

Subject: DMEA 3866 (Lead-zinc-copper) Contract Idm-8903, American Smelting and Refining Co. (Keystone mine) Gunnison County, Colorado -- Progress report for April 1956

The progress reported for the April period under the subject short-form contract -- 143 feet of combined crosscutting and drifting on the 2160 level of the Keystone mine -- was verified during an inspection of the property May 8, 1956.

During the period, the 2160-55 W. crosscut was advanced 125 feet on a course of S.70°W. to and somewhat beyond its intersection with the Union vein. A drift started northwesterly along this vein had been advanced 18 feet from the crosscut by the end of the period.

The 2160-55 W. crosscut was driven in sandstone to Sta. 2141 + 90'. The final 99 feet of the heading was in black shale. Both the sandstone and shale are members of the Mesa Verde formation. The crosscut intersected the true footwall of the Union vein zone in the vacinity of Sta. 2142. The footwall section of the zone contained a series of narrow veinlets each containing from 2 to 5 inches of massive sulfides in a gangue of vuggy quartz. A wider, highly mineralized section of the zone was crosscut between Sta. 2142 + 18' and + 23'. It apparently forms the true hanging wall of the zone in this area. Although the crosscut was continued some 26 feet farther into the hanging wall, it encountered no additional mineralization.

The bedding adjacent to the Union vein strikes S. 65° W. (about parallel to the crosscut and dips 15° to 18° SE. The highly mineralized hangwall section of the Union structure strikes N. 55° - 60° W. and dips 58° to 64° SW. This section contains fairly massive patches of lead, zinc, copper and iron sulfides and bands of rhodochrosite. The gangue is similar to the black shale wall rock but contains numerous quartz veinlets. Post-mineral shearing along the structure has formed considerable clay gouge.

On the date of inspection the Union drift has been advanced to a point 30 feet beyond the ℄ of the crosscut. At this distance the mineralized streak had narrowed to about 3½ feet. Its sulfide content, however, appeared more massive. Lower grade mineralization extended for some distance into both walls. A check sample, HLB-139, taken across 3.2 feet of the main mineral streak exposed in the breast of the drift assayed 11.0 oz. Ag, 4.9% Pb, 9.8% Zn, and 2.8% Cu.

The project progress reported to date under Stage I of the exploration contract is summarized below. Project drifting started February 6, 1956 from the then existing breast of the #160 drift N. on the Keystone vein at a point 82.8 feet into the point designated "Drill Steel" on the operator's current progress map.

Period	Drifting along Keystone vein	Crosscutting to Union vein	Drifting along Union vein	Total reported advance
Feb. 1956	78'			78'
March 1956	66'	44'		110'
April 1956		125'	18'	143'
Totals	144'	169'	18'	331'

A metallurgical summary of the company's milling operations for the period April 1-30, 1956 is given below. The 3,308 tons of crude ore that was milled during this period was derived from all operating sections of the Keystone mine. It includes 100 tons of development ore averaging 11.2 oz. Ag, 1.4% Pb, 2.7% Zn, and 0.3% Cu which were recovered from the project headings on the Union vein and which are subject to Government royalty.

Product	Dry Tons	ASSAYS Ag-oz.	Pb%	Cu%	Zn%	METAL CONTENTS Ag-oz.	Pb-Tons	Cu-Tons	Zn-Tons	RECOVERIES - Per Cent Ag	Pb	Cu	Zn
Heads	5308.0000	7.27	2.34	1.15	5.81	38591	124.1368	60.8284	308.2973	100.00	100.00	100.00	100.00
Pb Concs.	323.6818	98.15	35.27	13.65	4.99	31765	114.1304	44.1665	16.1468	82.3	91.9	72.6	5.2
Zn Concs.	522.3870	4.33	.25	1.24	50.16	2264	1.3296	6.4638	262.0406	5.9	1.1	10.6	85.0
Tails	4461.9912	1.02	.19	.23	.67	4562	8.6748	10.1981	30.1099	11.8	7.0	16.8	9.8

The project work reported by the operator for the April period conforms with the provisions of the contract. The $5,023.00, total costs, reported for this period on the operator's MF-104 forms -- equivalent to the completed 143 feet of combined drifting and crosscutting at the agreed upon unit price of $35.00 per foot plus 6 assays at $3.00 each -- are approved. Reimbursement to the operator of 50 percent of the approved reported costs, or $2,511.50, is recommended.

This period, the operator reports and claims reimbursement for a total of 6 assays on its MF-104 forms; however, the location and analyses of only 2 new samples have been posted on the current progress map. During the last inspection, a number of additional new samples and assays from the project headings had been posted on the mine maps. The failure to post this data on the project progress maps probably was due to the recent change in engineering personnel at the mine and will be called to the operator's attention. To date, the operator actually has reported the analyses of 56 samples taken from along project headings but has claimed reimbursement for only 33.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RE: DOCKET DMEA 3866
CONTRACT Idm-8903

Dear Sir:

General Remarks:

143 ft. of drifting and crosscutting was done during the month of April. The Union vein was cut at a distance 120 ft. normal to the Keystone vein. 100/tons was sent to the mill as ore with 479 tons discarded as waste.

General Geology:

Vein width averages 3 to 4 ft. wide. Bearing and dip corresponds closely with the Union vein exposed on the level above. Numerous vertical and near vertical veinlets were cut in the 15 ft. preceeding the exposure of the Union vein.

Very truly yours,

ORIGINAL SIGNED BY
NOLAN PROBST

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone Mine) Gunnison, County, Colorado - Operator's Monthly Progress Report for the period March 1956.

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. No documentation is required for work performed under contracts prepared on Form MF-200A, therefore, we recommend that payment be made for 50 percent of the amount reported by the Operator on Form MF-104, contingent on your verification of arithmetical accuracy within the report.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shea
Supervising Mining Engineer

From: R. L. Delmar

Subject: DMEA 3866 (Lead-Zinc-Copper), Contract Idm-3903, American Smelting and Refining Co. (Keystone mine), Gunnison County, Colorado -- Progress report for March 1956

The progress reported for the March period under the subject short-term contract -- 110 feet of combined drifting and crosscutting on the 2160 level of the Keystone mine -- was verified during an inspection of the property April 9-10, 1956.

On the date of inspection, the 2160 adit level of the Keystone mine had been extended a total of 224 feet from its existing breast at the start of project operations. The initial 138 feet of this advance was as a drift (2160 N. Dr.) along the Keystone vein; the remainder was in a crosscut (2160-55 W. RC) directed toward the Union vein. A total of 188 feet of the above advance was completed through March 31, 1956, 78 feet of which has been reported previously (Feb. 1956) for reimbursement by the operator. The 110 feet of advance that the operator is reporting for the March period, therefore, is valid and proper.

The only other project work reported for reimbursement this period is the analysis of 18 samples taken from along the northwesterly exposures of the Keystone vein. Actually 19 individual samples were taken from 9 locations along the March advance of the project heading. These were assayed for silver, lead, copper, and zinc. The sample data and assay results are posted on the progress map that accompanies the operator's March report.

The Keystone vein weakened and its mineral content decreased along the northwesterly extension of the project drift. The operator's request to start the authorized crosscut to the Union vein earlier than stipulated in the contract was approved by the DGGA Field Team. The Union crosscut was turned from the Keystone drift in the vicinity of Survey Sta. 21-40 (see March progress map). At this point the main mineralized streak within the structure had narrowed to a width of about 8 inches. It was composed chiefly of quartz and contained minor amounts of sulfides. The turn-off for the Union crosscut exposed a number of parallel shears west of the main sulfide streak which probably represent the true hanging wall of the Keystone structure. These parallel shears were narrow and vuggy. Two of them contained a few inches of massive sulfides and, on the date of inspection, were still making appreciable amounts of water. The Union crosscut is being driven on a course of S. 72° W. The Union vein zone, as exposed directly above this section on the 2000 level of the mine, ranges up to 40 feet in width. The operator was advised to extend the 2160-55 W. crosscut through the full width of zone to the true hanging wall of the structure. The project heading then would be continued northwesterly as a drift along the most promising exposure within the zone.

The operator reports that 194 tons of rock broken during the March advance of the 2160 N. Dr. was milled as development ore and that 177 tons was discarded as waste. All of the 116 tons of rock excavated in the 2160-55 W. crosscut during March was discarded as waste. The development ore that was sent to the mill contained an adjusted metal content of 228.3 oz. silver, 1.4046 tons lead, 0.3814 tons copper, and 3.1943 tons zinc. The adjusted average grade of this material was 1.1 oz./ton Ag, 8.7% Pb, 0.8% Cu, and 1.6% Zn. The metal content of the development ore, after corrections to reflect the operator's average mill recovery for the March period, will be subject to Government royalty.

The $3,886.00 total costs reported for the period on the operator's MP-104 forms -- equivalent to the completed 110 feet of combined drifting and crosscutting at the agreed upon unit price of $35.00 per foot plus 12 assays at $3.00 each -- are approved. Reimbursement to the operator of 75 percent of the approved reported costs, or $1,943.00, is recommended.
50

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

DOCKET NO. DMEA 3866
CONTRACT NO. Idm-E903

Dear Sir:

Attached find five copies each of Form MF-104A, Operator's Unit Cost and Progress Report; Form MF-104, Operator's Monthly Report and Voucher, and Progress Maps.

General Remarks:

During the month, 59 feet of drifting was done on the Keystone Vein and 51 feet of crosscutting toward the Union Vein.

From this drifting, 194 tons was sent to the mill as ore and 177 tons discarded as waste.

General Geology:

There was a gradual weakening of the Keystone Vein with continued drifting. At the point where crosscutting toward the union vein commenced, the Keystone Vein had narrowed to 8 inches which was predominately quartz with little sulfides present. The sandstone beds adjacent to the vein at this point were tight and quite hard.

Very truly yours,

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 3866 (Lead-Zinc-Copper) Contract Idm-E903, American Smelting and Refining Company (Keystone Mine) Gunnison County, Colorado - Operator's Monthly Progress Report, for the period February, 1956

Enclosed are the original and four copies of Form MF-104 and MF-104A, Narrative Report, and Engineer's Report for the above period.

Work has been accomplished as authorized in the contract and payment is recommended for 50 percent of the amount as reported on Form MF-104, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

The $2,775.00 total costs reported for the period on the Operator's MF-104 forms - equivalent to the completed 78 feet of drifting at the agreed unit price of $35.00 per foot plus 15 assays at $3.00 each are approved. Reimbursement to the Operator of 50 percent of the approved reported costs, or $1,387.50.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

RECEIVED
APR 12 1956

Through: John F. Shaw
Supervising Mining Engineer

From: R. L. Belmer

Subject: DMEA 3866, Contract Idm-2903 (lead-zinc-copper), American Smelting and Refining Co. (Keystone mine), Gunnison County, Colorado - Progress report for February, 1956

The initial progress under the subject short-form contract was inspected on March 13, 1956. The inspection was made with Nolan Probst, superintendent of the Keystone Unit, and R. K. Kilpatrick, a staff geologist for the company.

The authorized starting point for Stage I exploration was the existing northwesterly breast of the 2160 adit level of the Keystone mine. A reference point (80d spike driven in final drift set) had been established at a point 62.5 feet outby this breast during an earlier inspection of the mine on January 19, 1956. Previous stope preparation work had left considerable debris in certain sections along the northwestern end of the level. It was necessary to clean up and rehabilitate these sections before the authorized extension of the level could commence. The necessary preparation work was started January 24, 1956. This date is considered the start of project operations. All of the preparatory work was performed at the operator's expense. In addition to rehabilitating the northwestern end of the level, the operator extended electrical power to this section of the mine and established a new transformer station. An electric fan was installed and ventilation pipe was extended to near the existing breast. The necessary preparation was completed and the authorized project drifting was started on February 6, 1956.

The progress reported by the operator for the February period - the northwesterly extension of the 2160 level for a distance of 78 feet as a drift along the Keystone vein - was verified during the latest inspection. On that date, the heading had been advanced a total of 113 feet. No timber support had been required within this distance. The advance during the month of February is indicated correctly on the MF-104 forms and on the other data comprising the operator's progress report for that period. The conditions

encountered during the period are described adequately in the operator's narrative. All of project work during the period was performed according to the specifications stipulated in the contract.

The only other work reported for reimbursement this period is the assaying of 15 channel samples taken along the project heading. Actually 34 individual samples were taken and assayed from 14 locations along the first 78 feet of the project drift. The general procedure was to sample the newly exposed breast of the heading after each succeeding round. The central or more highly mineralized zone within the exposed Keystone structure was sampled separately. The hanging and/or footwall of this central zone, when exposed in the drift, also were sampled individually. The 14 sample locations are indicated on the map that accompanies the operator's progress report. The 34 samples each were assayed for silver, lead, copper, and zinc. The assay results are posted on the operator's map. These results indicate that the mineralized zone within the structure ranged in width from 1.0 to 6.1 feet and averaged about 2.5 feet. At no point along the first 78 feet of the project drift did the mineralization approach ore grade.

The contract does not authorize the assaying of any samples under Stage I but does allow 400 assays under Stage II. The 650 feet of combined drifting, crosscutting, and raising to be performed under the first stage ordinarily would require the same proportionate amount of sampling and assaying as would the 2000 feet of combined drifting and crosscutting and the 2000 feet of core drilling allotted to the second stage. This inequity has been called to the attention of the Field Team who has agreed to allocate a proportionate number of the authorized assays to the Stage I work. The 15 assays reported for reimbursement this period are accepted contingent to such allocation by the Field Team.

In the first few rounds of the project heading, the Keystone vein continued on a northwesterly course toward its projected intersection with the Union vein. Beyond this point, however, it turned and followed a more northerly course. The final 100 feet of the vein exposed on the date of inspection strikes N. 40° W., a course essentially parallel to the 2000 level drifts on both the Keystone and Union veins directly above this location. It is unlikely that the two veins ever would junction on such a course and, in no event, within the 350-foot estimate stipulated in the contract. Recent reports indicate that the Keystone vein exposed in the project heading subsequent to the date of inspection has started to weaken as it did directly above this location on the 2000 level. The operator requested and was granted permission to start the authorized alternate crosscut to the Union vein from the present advance of about 140 feet in the project drift instead of from the 350-foot distance stipulated in the contract.

A total of 322 tons of rock were broken in the first 78 feet of the project heading; 256 tons of this material was milled as development "ore" and 66 tons was discarded as waste. A sample is taken of each car of rock removed from the heading. The total metal content in the heading

material is computed monthly on the basis of these car samples and an established car factor. This metal content is adjusted monthly so as to conform with the total input to the mill for the month from all sources in the mine as determined by mechanical sampling and weighing of the mill feed. The average mill recovery for the various metals also is computed each month. The Government's royalty will be based on the adjusted metal content in the material milled from the project heading, the average mill recoveries, and the average prices received for the various metals from the smelter. Generally there is considerable delay in the receipt of the smelter settlements. The royalty due on the concentrates recovered from the project heading will be computed and paid when all of the necessary data are available.

The $2,775.00 total costs reported for the period on the operator's MF-104 forms - equivalent to the completed 78 feet of drifting at the agreed unit price of $35.00 per foot plus 15 assays at $3.00 each - are approved. Reimbursement to the operator of 50 percent of the approved reported costs, or $1,387.50, is recommended.

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. Idm-E903 in accordance with the terms of the contract.

Signature K. L. Bolmer, $1,387.50 Title Mining Engineer Date MAR 20 1956

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W. M. Lamey Title Executive Officer Date APR 5 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

PROJECT NO. [illegible] 3866
CONTRACT NO. [illegible]-2903

Dear Sir:

Attached you will find 5 copies of the Operators Unit Cost and Progress Report and 5 copies of the Operator's Monthly Report and Voucher. Under separate cover from our Salt Lake Office, you will receive in a few days, 5 copies of the progress map with assays.

General Remarks:

Advance of the 2160 level drift face on the Keystone Vein commenced February 6, 1956, at which date preliminary preparations were completed. Eighteen (18) feet of advance was made up to and inclusive of February 15, on which date a regular crew was assigned to the drift and a total of 76 ft. of advance was made for the month. A total of 322 tons of rock was handled from this heading of which 256 tons was sent to the mill as development ore and 66 tons discarded as waste.

Sampling Procedure and Weighing Procedure:

The face is cut sampled each round with separate cuts being made of the vein material and waste across the drift width. A composite grab sample is taken of each drift round by grab sampling each car. These samples are brought to the surface and assayed daily. A daily record is made of the car count from the face.

In keeping with general practice throughout the mine estimated car weights are adjusted to actual mill weightometer weights at the end of each month. All weights reported will be corrected weights. Likewise, the metal content of all mine grab samples are adjusted to actual metal content indicated by sample of mill heads by assigning factors each month to grab sample assays of each metal. All grab sample assays reported will therefore be corrected assays.

General Geology - Keystone Vein 2160 Level

At the outset of drifting it appeared the Keystone Vein was trending towards the Union Vein, however, after two rounds of advance, it assumed its regular attitude. Mineralization has been sparse and composed almost entirely

Mr. John F. Shaw March 14, 1956

of small veinlets of pyrite with scattered sulfides of Zn, Pb and Cu. The vein has been essentially tight with the wall rock firm and little gouge showing. Sympathetic veinlets of quartz and sulfides enter and leave the drift in several instances with definite pattern. Wall rock is predominately sandstone with minor interpolations of shale.

Very truly yours,
