Letter to the Field with reference to its letter of May 25, 1953, and enclosing a "Guaranty" for signature and six copies of Annex I to be attached to each copy of the contract. The Field was asked to make certain corrections in the contract prior to execution. No. 222

GUARANTY

In consideration of the waiver by the United States of America of the requirement of the Owner's Consent to Lien, as set forth in paragraph 2 (b) of the attached Exploration Project Contract, the undersigned jointly and severally hereby guarantee payment to the United States of America of any royalties, as specified in said Contract and any future amendment thereof, upon any and all ore which is mined within ten years of the date of said Contract from the land described in Article 2 thereof, regardless of whether the undersigned have any interest in the property covered by the said Contract, or any part in the mining operations at the time said ore is mined. If for any reason the net smelter returns or other net amounts, from operations that would be subject, under the said Contract and any amendment thereof, to such payments to the United States of America, are not available as a means of measuring the amount of such payment, then the undersigned agree and undertake jointly and severally to make such payment according to the best estimates of the amount that can reasonably be made, and in the event of dispute as to such estimate, the undersigned agree jointly and severally that the determination thereof by either the Administrator of Defense Minerals Exploration Administration, or his designee, shall be final and binding upon the undersigned.

Dated May 21, , 1953.

EXPLORATION PROJECT CONTRACT
BALSAM MICA MINERS
DOCKET NO. DMEA-2733

AMENDMENT NO. 1

It is agreed this 16th day of October, 1953, between the United States of America, acting through the Department of the Interior, Defense Minerals Exploration Administration, and Lewie Aldridge, C. W. Greene, J. R. Beam, John L. Phillips, Sam L. Phillips, and Phillip Ray, partners, doing business as Balsam Mica Miners, each acting in consideration of the other to the terms hereinafter set forth, that Exploration Project Contract Idm-E526, Docket No. DMEA-2733, dated May 21, 1953, be modified and amended as of July 3, 1953, as follows:

1. In Exhibit "A" under "Description of the Work," the third paragraph is changed to read as follows:

> To supplement the above trenching, excavate not more than 1200 cubic feet of test pits and/or benches.

2. Under "Estimated Costs of the Project," under the heading "Agreed Unit Costs," on page 3, the first line is changed to read:

> 1200 cubic feet of test pits and/or benches @ $0.83-1/3/cu. ft. $1,000.00

This amendment shall not be construed to increase the estimated total cost of the project, the aggregate total amount which the Government may be required to contribute, nor the amount of any item designated as "allowable maximum."

Executed in sextuplicate the day and year first above written.

EXPLORATION PROJECT CONTRACT[1]

IT IS AGREED this 21st day of May, 1953, between the United States of America, acting through the Department of the Interior, Defense Minerals Exploration Administration, hereinafter called the "Government," and[2] Balsam Mica Mines, a partnership composed of Lewis Aldridge, C. W. Greene, J. R. Bean, John L. Phillips, Sam L. Phillips, and Phillip Ray, Spruce Pine, North Carolina.

hereinafter called the "Operator," as follows: and as set forth in Annex I attached hereto and made a part hereof

ARTICLE 1. *Authority for contract.*—This agreement is entered into under the authority of the Defense Production Act of 1950, as amended, pursuant to DMEA Order 1 entitled "Government Aid in Defense Exploration Projects."

ARTICLE 2. *Operator's property rights.*—With respect to that certain land situated in the State of North Carolina, County of Yancey, described as follows:[3] A part of the tract of land known as the Ray Boundary on Bolens Creek consisting of an area 800 feet in radius from the center of the Balsam Mine marked "S.P." on the map attached hereto and made a part hereof and entitled "Balsam Mica Mine, Yancey County, North Carolina, DMEA-2733."

the Operator represents and undertakes:

(*a*) ~~That the Operator is the owner in possession and entitled to possession and that the property is subject only to the following claims, liens or encumbrances, to each of which the subordination agreement of the holder is attached:~~

Guaranty of 6 partners is attached

(*b*) That the Operator is a lessee, in possession and entitled to possession, and the ~~Owner's Consent to Lien~~ is attached.

The Operator shall devote the land and all existing improvements, facilities, buildings, installations, and appurtenances to the purposes of the exploration project without any allowance for the use, rental value, depreciation, depletion, or other cost of acquiring, owning, or holding possession thereof.

ARTICLE 3. *Exploration project.*—The Operator, within 60 days from the date of this contract shall commence work on a project of exploration for[5] Mica

in or upon the described land; and shall bring the project to completion within a period of six (6) months from the date of this contract. The work to be performed is more fully described in Exhibit "A" attached hereto, which, with any maps or drawings thereto attached, are made a part of this contract. The Government will contribute to the cost of this work as hereafter provided.

ARTICLE 4. *Performance of the work.*—(*a*) *Operator's responsibility.* The work shall be performed efficiently, expertly, in a workmanlike manner, in accordance with good mining standards and State regulations for health and safety and for workmens' compensation and employers' liability insurance, with suitable and adequate equipment, materials, and labor, to bring the project to completion within the time fixed. To the extent specified in Exhibit "A," attached hereto, the work may be performed by independent contractor or contractors; and work not specified in Exhibit "A" for performance by independent contractor may nevertheless be so performed upon amendment of Exhibit "A," as agreed to by the parties, to state the work to be so performed and the estimated unit costs thereof, as provided hereafter.

(*b*) *Independent contracts.*—Any independent contract for the performance of work shall be on a unit-price basis (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, per cubic yard of material moved), or on some basis that will indicate the amount due for work performed at any stage of the work to be performed under such independent contract. The Government shall not be nor be considered to be a party to any such independent contract, and the Government's right to terminate the exploration project contract under any of its provisions shall not in any manner be affected by reason of any such independent contract. If the reference in Exhibit "A" to any such independent contract states that the Government's approval thereof is required, the Government may refuse to participate in the cost thereof unless and until it has given its written approval of the independent contract.

(*c*) *Government may inspect.*—The Government shall have the right to enter and observe and inspect the work at all reasonable times, and the Operator shall provide the Government with all available means for doing so. The Government may consult with and advise the Operator on all phases of the work.

ARTICLE 5. *Estimated costs of the project.*—A statement of the estimated cost of the project is set forth in Exhibit "A," attached hereto. Except insofar as any item of requirement or the estimated cost thereof set forth in Exhibit "A" is there or elsewhere designated as an "allowable maximum," such items of requirement and of related cost are estimates only, and may be exceeded to the extent that the Government may from time to time approve for the most economic and beneficial performance of the work within the limitation of the total aggregate estimate of costs. The Government's approval of any such excess over the estimate for an item of requirement or related cost will be signified by its approval and payment of any invoice or voucher for payment which expressly calls attention to such excess. Items expressly designated in Exhibit "A" or elsewhere as "allowable maximum," and the total aggregate estimated cost are limitations, and any excess therein will be for the sole account of the Operator in which the Government will not participate.

ARTICLE 6. *Allowable costs of the project.*—(*a*) The costs of the project in which the Government will participate are limited to the following: and as set forth in Article 14.

(1) *Independent contracts.*—Payments to independent contractors under independent contracts listed in Exhibit "A." The estimated cost of any work to be performed under an independent contract is or shall be included in the estimate of costs in Exhibit "A" in terms of the estimated numbers of units of work to be performed, the estimated amount to be paid per unit, and the estimated total amount to be paid to the independent contractor, and such estimates shall be allowable maximums above which the Government will not contribute. Regardless of the provisions of any such independent contract, the Government will participate in the payments to the independent contractor only on account of work actually performed and that conforms with the provisions of the exploration project contract, and only to the extent that the Government deems the unit prices for the work under the independent contract to be reasonable and necessary. No such independent contract shall have the effect of increasing the estimated total cost of the exploration project contract nor the maximum amount which the Government will pay as provided in the exploration project contract.

(2) *Labor, supervision, consultants.*—Labor, supervision and technical services (including engineering and geological consultants), a schedule of which is included in the estimate of costs set forth in Exhibit "A." The requirements and related estimated costs for supervision and technical services are allowable maximums.

(3) *Operating materials and supplies.*—Necessary materials and supplies including items of equipment costing less than $50.00 each, and power, water, and fuel, a schedule of which is included in the estimate of costs in Exhibit "A."

(4) *Operating equipment.*—Any operating equipment to be rented or purchased, or which is owned and will be furnished by the Operator, with the estimated rental, purchase price, or the allowable depreciation, as the case may be, a schedule of which is included in Exhibit "A." Any items listed as owned and to be furnished by the Operator, and related ~~initial~~ allowable depreciation, are allowable maximums.

(5) *Rehabilitation and repairs.*—Any necessary initial rehabilitation or repairs of existing buildings, installations, fixtures, and movable operating equipment, now owned by the Operator and to be devoted to the purposes of the exploration contract, a schedule of which is included in the estimate of costs set forth in Exhibit "A." These items are allowable maximums.

(6) *New buildings, improvements, installations.*—Any necessary buildings, fixed improvements, or installations to be purchased, installed, or constructed for the purposes of the exploration work, with the estimated cost of each, a schedule of which is included in the estimate of costs in Exhibit "A." All of these items are allowable maximums.

(7) *Miscellaneous.*—Repairs to and maintenance of operating equipment (not including initial rehabilitation or repairs of the Operator's equipment), analytical work, accounting, workmen's compensation and employers' liability insurance and payroll taxes.

(8) *Contingencies.*—Such other necessary, reasonable direct costs of performing the exploration work, within the limit of the total aggregate estimate of costs, whether or not included in any schedule of costs in Exhibit "A," as may be approved by the Government in the course of the work, as indicated by its approval and payment of invoices and vouchers.

[1] If sufficient space is not provided in any blank, use an extra sheet of paper and refer to it in the blank.
[2] State name, address, and nature of organization if any.
[3] Give legal description or enough to identify the property, particularly excluding any land or interest therein to which the Government's lien is not to attach or the production from which is not to be subject to the Government's percentage royalty.
[4] Strike out the provision not applicable.
[5] Name of mineral or minerals.

(*b*) The Government's payments in all cases will be based on actual, necessary costs (including contract unit prices) incurred not in excess of any "allowable maximum," and not in excess of the fixed percentage of the total aggregate estimated cost. Costs will be considered to be incurred only as they are or become due and payable.

(*c*) No items of general overhead, corporate management, interest, taxes (other than payroll and sales taxes) or any other indirect costs, or work performed or costs incurred before the date of this contract, shall be allowed as costs of the project in which the Government will participate.

ARTICLE 7. *Reports, accounts, audits.*—(*a*) *Progress reports.* The Operators shall provide the Government with monthly reports of work performed and costs (including contract unit prices) incurred under the contract, in quintuplicate (five copies), upon forms provided by the Government. These progress reports shall be certified by the Operator, and shall constitute both the Operator's invoice of costs incurred on the project during the period covered by the report and his voucher for repayment by the Government, unless the Government requires the use of a standard voucher form with invoice attached. Progress reports shall include surface and/or underground engineering-geological maps or sketches showing the progress of the exploration, with assay-reports on samples taken concurrently with the advance in mineralized ground.

(*b*) *Final report.*—Upon completion of the exploration work or termination of the contract the Operator shall provide the Government with an adequate geological and engineering report, in quintuplicate (five copies), including an estimate of ore reserves resulting from the exploration work.

(*c*) Compliance with requirements.—If, in the opinion of the Government, any of the Operator's reports are insufficient or incomplete, the Government may procure the making or completion of such reports and attachments as an expense of the exploration work; and the Government may withhold approval and payment of any vouchers depending upon insufficient or incomplete reports.

(*d*) *Accounts and audits.*—The Operator shall keep suitable records and accounts of operations, which the Government may inspect and audit at any time. The Government may at any time require an audit of the Operator's records and accounts by a certified public accountant, the cost thereof to be treated as a cost of the project. The Operator shall keep and preserve said records and accounts for at least 3 years after the completion of the project or the termination of this contract. Upon the completion of the project or termination of the contract the Operator shall render a final account as provided in Article 12.

ARTICLE 8. *Payments by the Government.*—(*a*) The Government will pay 90 percent of the allowable costs incurred, as they accrue, in an aggregate total amount not in excess of $2,466.00, which is 90 percent of $2,740.00, the agreed, estimated total cost of the project in which the Government will participate; *Provided,* that until the Operator's final report and final accounting have been rendered to the Government, and any final auditing required by the Government has been made, and a final settlement of the contract has been made, the Government may withhold from the last voucher or vouchers such sums as it sees fit not in excess of ten (10) percent of the maximum total which the Government might have been called upon to pay under the terms of the contract.

(*b*) The Government may make any payment or payments direct to independent contractors and to suppliers, for the account of the Operator, rather than to the Operator.

ARTICLE 9. *Repayment by Operator.*—(*a*) If, at any time, the Government considers that a discovery or a development from which production may be made has resulted from the exploration work, the Government, at any time not later than 6 months after the Operator has rendered the required final report and final account, may so certify in writing to the Operator. The certification shall describe broadly or indicate the nature of the discovery or development. In the event of such certification, any minerals mined or produced from the land described in Article 2 within 10 years from the date of this contract, including any mined or produced before the certification, shall be subject to a percentage royalty which the Operator or his successor in interest shall pay to the Government, upon the net smelter returns, the net concentrator returns, or other net amounts realized from the sale or other disposition of any such production, in whatever form disposed of, including ore, concentrates, or metal, until the total amount contributed by the Government, without interest, is fully repaid, or said 10 years have elapsed, whichever occurs first, as follows:

(1) One and one-half (1½) percent of any such net amounts not in excess of eight dollars ($8.00) per ton.

(2) One and one-half (1½) percent of any such net amounts, plus one-half (½) percent of such net amounts for each additional full fifty cents ($0.50) by which such net amounts exceed eight dollars ($8.00) per ton, but not in excess of five (5) percent of such net amounts.

(For instance: The percentage royalty on a net amount of five dollars ($5.00) per ton would be one and one-half (1½) percent; on a net amount of ten dollars ($10.00) per ton, three and one-half (3½) percent.)

(*b*) As here used, "net smelter returns," "net concentrator returns," and "other net amounts realized from the sale or other disposition," mean gross revenue from sales; or if not sold, the market value of the material after it is mined in the form in which and the place where it is held. In the case of integrated operations in which the material is not disposed of as such, these terms mean what is or would be gross income from mining operations for percentage depletion purposes in income-tax determination.

(*c*) To secure the payment of its percentage royalty, the Government shall have and is hereby granted a lien upon the land described in Article 2 and upon any production of minerals therefrom, until the royalty claim is extinguished by lapse of time or is fully paid.

(*d*) This article is not to be construed as imposing any obligation on the Operator or the Operator's successor in interest to engage in any mining or production operations.

ARTICLE 10. *Assignment, transfer, or loss of Operator's interest.*—Without the written consent of the Government, the Operator shall not assign or otherwise transfer or hypothecate this contract or any rights thereunder. The Operator shall not make any voluntary nor permit any involuntary transfer or conveyance of the Operator's rights in the land described in Article 2, without making suitable provision for the preservation of the Government's right to a percentage royalty on production and lien for the payment thereof; *Provided,* that mere failure by the Operator to maintain the Operator's rights in the land, without any consideration running to the Operator other than relief from the cost of maintaining such rights (as by surrender of a leasehold, failure to perform assessment work, or failure to exercise an option), coupled with complete abandonment by the Operator of all interest in or operations on the land for a period of 10 years from the date of this contract, shall not constitute such a transfer or conveyance. Should the Operator make or permit any transfer or conveyance in violation of this provision, the Operator shall be and remain liable for payment to the Government of the same amounts, at the same times, as would have been paid under the terms of the percentage royalty on production. If for any reason the net smelter returns, net concentrator returns, or other net amounts realized from the sale or other disposition of such production are not available as a means of measuring the amount of the Operator's liability, the amount thereof shall be estimated as well as may be, and in the event of dispute as to such estimates, the determination thereof by the Administrator of Defense Minerals Exploration Administration or by his successor shall be final and binding upon the Operator.

ARTICLE 11. *Title to and disposition of property.*—All facilities, buildings, fixtures, equipment, or other items costing more than $50.00 each, paid for or purchased with funds contributed jointly by the Operator and the Government, although title may be taken in the name of the Operator, shall belong to the Operator and the Government jointly, in proportion to their respective contributions, and upon the completion of the work or the termination of the contract shall be disposed of promptly by the Operator for the joint account of the Government and the Operator, either by return to the vendor, by sale to others, or purchase by the Operator at a price at least as high as could otherwise be obtained, as may appear to be for the best interest of the Government, unless the Government, in writing, waives its interest in any such item. If necessary to accomplish such disposition, the Operator shall dismantle, sever from the land, and remove any such item, the cost thereof to be for the joint account of the parties in proportion to their respective interests. If the Operator, within 90 days after the receipt of written notice from the Government, fails, neglects, or refuses to dispose of such property, the Government may itself enter upon the land, take possession of, and remove and dispose of any such property as above provided.

ARTICLE 12. *Termination and completion.*—The Government may, at any time, by written notice to the Operator, terminate this contract: (*a*) If the Operator fails to provide his share of the money necessary to prosecute operations pursuant to the terms of the contract; (*b*) if the Operator, in the opinion of the Government, fails to prosecute operations pursuant to the terms of the contract; or (*c*) if in the opinion of the Government, operations up to the time of the notice have not indicated the probability of making any worth while discovery and in the opinion of the Government further operations are not justified. Upon the completion of the project or any termination of the contract the Operator shall dispose of any remaining materials, supplies, facilities, buildings, fixtures, and equipment in which the Government has an interest, for the joint account of the Operator and the Government in the proportion of their respective interests; shall render to the Government a full and final accounting of his operations under the contract and his expenditures of money; and shall pay to the Government its pro rata share of any money remaining.

ARTICLE 13. *Changes and added provisions.* ~~The Operator's obligation to bring the project to completion continues only as long as the accumulated allowable costs of the project in which the Government will participate do not exceed the agreed, total estimated cost of the project set forth in Article 8.~~

Executed in sextuplicate the day and year first above written.

BALSAM MICA MINERS
(Operator)

By John Phillips
By Leo Green
By Leonard Phillips
By Frank Phillips
By [illegible] Beane
By Philip Ray

I, [illegible], certify that I am the secretary of the corporation named as Operator herein; that , who signed this contract on behalf of the Operator, was then of said corporation; that said contract was duly signed for and in behalf of said corporation by authority of its governing body, and is within the scope of its corporate powers.

**ARTICLE 14. To the extent that costs are set forth in Exhibit "A" as "agreed unit costs," they are in lieu of the actual costs that would otherwise be allowable costs of the project as provided in Article 6(a) of the contract form.

[CORPORATE SEAL]

EXPLORATION PROJECT CONTRACT
BALSAM MICA MINERS
DOCKET NO. DMEA-2733

EXHIBIT "A"

Description of the Work

The exploration of the Balsam Mine will begin with surface excavation as shown on the map attached hereto. Four crosscutting trenches, deep enough to remove the overburden and expose pegmatite in place, will be excavated, as set forth below, to disclose mica shoots laterally along the strike of the ore body previously mined, or pegmatite dikes in the foot or hanging walls.

Trench No.	Approximate dimensions - Feet		
	Length	Width at Bottom	Nominal Depth
1	180	12	10
2	80	12	10
3	180	12	10
4	60	12	6

A shallow, water-diversion ditch on proper grade is also to be excavated approximately as indicated on the aforesaid map.

To supplement the above trenching, excavate not more than fifty (50) feet of test pits 4' x 6' in cross section. 1/

The location, direction and extent of all work shall have prior approval of the Government. 2/

1/ If in the opinion of the Government, additional trenching should be performed in lieu of any or all of the test pits, this may be done on the basis indicated in footnote 2.

2/ If more than the above specified four (4) trenches and diversionary ditch are approved by the Government, additional such work at the same rate per hour may be allowed provided the total estimated cost of the project is not exceeded.

If the results of the above work are satisfactory to it, the Government, in its discretion, may by amendment of this contract consent to further additional exploration work at an additional cost.

Estimated Costs of the Project
(*Indicates allowable maximum)

(1) Independent Contracts

Operation of 1 bulldozer, including operator, transportation to and from site, repairs, gasoline and all other costs -
150 hrs. @ $10.00/hr. 3/ $1,500.00*

(2) Labor, Supervision, Consultants

1 working supervisor - 150 hrs. @ $1.60/hr.* for time actually spent at work 240.00*

(3) Operating Materials and Supplies

None

(4) Operating Equipment

None

(5) Rehabilitation and Repairs

None

(6) New Buildings, Improvements, Installations

None

(7) Miscellaneous

None

(8) Contingencies

None

Total Estimated Actual Costs $1,740.00*

3/ See footnote 2.

Agreed Unit Costs

50' Test pits @ $20.00/ft.	$1,000.00

The Government will contribute to the cost of excavating the needed test pits on the basis of the above agreed unit costs as they accrue for units of work in lieu of actual costs. This unit cost includes all costs of this work, which may be performed by independent contractor without reference to the provisions relating to independent contracts and contractors in Articles 4(a) and (b) and 6(a) of the contract form.

S U M M A R Y

Total Estimated Actual Costs	$1,740.00 *	
Total Agreed Unit Costs	1,000.00	
Total Estimated Cost of Project		$2,740.00*
Government Participation @ 90%		$2,466.00*

Mr. Lewis Aldridge, Manager
Balsam Mica Miners
Spruce Pine, North Carolina

Re: Docket No. DMEA-2733 - Mica
Balsam Mine
Yancey County, North Carolina
Contract No. Idm-2526

Dear Mr. Aldridge:

We are pleased to advise you that your performance of exploration work under the subject contract has been satisfactory to the Government, and the account relating thereto has been closed. The final audited and settled account shows:

Total allowable costs incurred	$2,033.33
Total Government contribution at 90 percent	$1,830.00

Your attention is called to the provision of the contract which requires you to keep and preserve your records and accounts of this transaction for a period of three years for possible future reference.

We sincerely regret that the work performed did not result in a certification of discovery or development under the provisions of the exploration contract. In the absence of such certification, the Government retains no claim or lien against the property or any production therefrom.

The Government is grateful for your participation in the exploration program of the Defense Minerals Exploration Administration.

Sincerely yours,

C. O. Mittendorf (for)

Project Summary Report

By: Walter C. Anderson

1. DMEA Docket No. 2733 - Mica
Contract No. Idm-E526
Balsam Mine, Yancey County, North Carolina

Operators: Lewis Aldridge, C. W. Greene, J. R. Bean
John L. Phillips, Sam L. Phillips and Phillip Ray
d/b/a Balsam Mica Miners
Spruce Pine, North Carolina

Operator's Property Rights -
Lease and Option - dated August 16, 1952.
Guarantee of payments - dated May 21, 1953.

2. Contract - dated May 21, 1953.
Work authorized:

Rental - one bulldozer for excavating 4 trenches 150 hours @ $10.00/hr.	$1,500.00
1 working supervisor - 150 hrs @ $1.60/hr.	240.00
50 feet of test pits @ $20.00/ft.	1,000.00
Total estimated cost	$2,740.00
Government participation @ 90%	$2,466.00

Amendments: No. 1 - 10/16/53 - changes "50 feet test pits @ $20.00/ft." to "1200 cubic feet of test pits and/or benches at $0.83 1/3/cu.ft."

Work completed:

Rental bulldozer - 120 hrs. @ $10.00/hr.	$1,200.00
1000 cubic feet of test pits and/or benches @ $0.83 1/3 cu.ft.	833.33
Total accepted cost	$2,033.33
Government participation @ 90%	$1,830.00

Work began the latter part of June, 1953 and was completed on August 28, 1953, per final field team report dated 2/2/54.

R.C.J.
3-10-54

3. Audit: Certificate issued on January 20, 1954 (no exceptions).

4. Certification of Discovery - none issued.

5. Comments:

How conducted - Operators satisfactorily accomplished work on schedule, as set forth in contract.

Operation - Good cooperation with the Government in planning and carrying out necessary work.

Engineering - Operators submitted acceptable monthly reports, but failed to submit a final engineering and geological report. Field Team accept last 104.

Geological premises - The premise that a favorable structure for localization of a mica shoot existed along the strike of the pegmatite on either side of the Balsam Mine proved incorrect. Trenching exposed a thin pegmatite containing no strategic mica.

Geological criteria upon which work was based -

1. The Balsam Mine was a pipe like body 40' by 20' in horizontal plane and persistent for about 400 feet down the dip.
2. Mica content was up to 50% of the stoped area.
3. Past production - World War II - Colonial Mica Reports $57,359.27. Owner's report same period $129,000.

Geological criteria developed during exploration project -

1. No abrupt changes and irregular bends in dip and strike were observed near pegmatites.
2. Pegmatite too thin to contain a workable mica deposit.

Future possibilities - No additional work warranted.

Recommendation - Concur with field team that no certification be made.

Project Summary Report

By: Walter C. Anderson

1. DMEA Docket No. 2733 - Mica
Contract No. Idm-E526
Balsam Mine, Yancey County, North Carolina

Operators: Lewis Aldridge, C. W. Greene, J. R. Beam
John L. Phillips, Sam L. Phillips and Phillip Ray
d/b/a Balsam Mica Miners
Spruce Pine, North Carolina

Operator's Property Rights -
Lease and Option - dated August 16, 1952.
Guarantee of payments - dated May 21, 1953.

2. Contract - dated May 21, 1953.
Work authorized:

Rental - one bulldozer for excavating 4 trenches 150 hours @ $10.00/hr.	$1,500.00
1 working supervisor - 150 hrs @ $1.60/hr.	240.00
50 feet of test pits @ $20.00/ft.	1,000.00
Total estimated cost	$2,740.00
Government participation @ 90%	$2,466.00

Amendments: No. 1 - 10/16/53 - changes "50 feet test pits @ $20.00/ft." to "1200 cubic feet of test pits and/or benches at $0.83 1/3/cu.ft."

Work completed:

Rental bulldozer - 120 hrs. @ $10.00/hr.	$1,200.00
1000 cubic feet of test pits and/or benches @ $0.83 1/3 cu.ft.	833.33
Total accepted cost	$2,033.33
Government participation @ 90%	$1,830.00

Work began the latter part of June, 1953 and was completed on August 28, 1953, per final field team report dated 2/2/54.

3. Audit: Certificate issued on January 20, 1954 (no exceptions).

4. Certification of Discovery - none issued.

5. Comments:

How conducted - Operators satisfactorily accomplished work on schedule, as set forth in contract.

Operation - Good cooperation with the Government in planning and carrying out necessary work.

Engineering - Operators submitted acceptable monthly reports, but failed to submit a final engineering and geological report. Field Team accept last 104.

Geological premises - The premise that a favorable structure for localization of a mica shoot existed along the strike of the pegmatite on either side of the Balsam Mine proved incorrect. Trenching exposed a thin pegmatite containing no strategic mica.

Geological criteria upon which work was based -

1. The Balsam Mine was a pipe like body 40' by 20' in horizontal plane and persistent for about 400 feet down the dip.
2. Mica content was up to 50% of the stoped area.
3. Past production - World War II - Colonial Mica Reports $57,359.27. Owner's report same period $129,000.

Geological criteria developed during exploration project -

1. No abrupt changes and irregular bends in dip and strike were observed near pegmatites.
2. Pegmatite too thin to contain a workable mica deposit.

Future possibilities - No additional work warranted.

Recommendation - Concur with field team that no certification be made.

From: Field Team, D M E A - Region VII

Subject: Final Report on DMEA-2733, Idm-E 526, (mica) Balsam Mica Miners, Yancey County, North Carolina

Enclosed are 4 copies of the Field Team final report on the subject exploration contract.

Work was completed on August 31, 1953, but the Operator did not submit final voucher and monthly report until January 15, 1954. Operator has not submitted a final engineering and geologic report, but we consider the two monthly narrative reports to adequately fill the requirement.

We agree with the field examiner's conclusion that certification of discovery should not be issued.

FINAL REPORT
ON
DMEA-2733, Idm-E 526, BALSAM MINE
(mica)

Operator: Balsam Mica Miners, c/o Lewis Aldridge, Spruce Pine, N. C.

The Balsam mica mine is 4.1 airline miles S. 23° E. of Burnsville, North Carolina in Yancey County. The mine is on the crest of a west spur of Celo mountain.

Mica bearing pegmatite was uncovered in two of the trenches. Trench No. 2 uncovered the extension of a pegmatite previously mined in the "Duck's Nest" and Trench No. 1-4, which is one continuous trench, exposed pegmatized gneiss that contains some small mica. At neither place was worthwhile mica-bearing pegmatite exposed, nor is additional work warranted. No discovery was made, thus no certification of discovery should be issued.

Work began on this project during the latter part of June 1953 (Operator's narrative report gives July 6, but this is in error), and was completed on August 28, 1953. Work accomplished under the project consisted of cutting three bulldozer trenches as shown on the attached map to 12 feet. In addition to the trenching, two cuts, one in Trench No.2, 12 feet long, 4 feet wide, and 4 feet deep, and one bench cut in Trench 1-4, 25 feet long, 6 feet wide, and an average face height of 7 feet were made.

The cut in Trench No. 2 explored the northeast extension of the pegmatite previously mined in the "Duck's Nest," This pegmatite is on the footwall side of the main Balsam pegmatite and has been worked previously to an unknown depth. In Trench No. 2 this pegmatite was uncovered along its strike for about 35 feet. The cut is located in the thickest part of the pegmatite. It ranges in thickness from 6 to 15 inches. Many books of mica up to 8 inches in diameter were recovered from this cut, but all of the mica is badly stained by fine to medium black spots. No strategic mica could be recovered. Furthermore the pegmatite is too thin to contain a workable mica deposit.

In Trench No. 1-4 a bench cut was made on a pegmatite which thoroughly saturates a buitite gneiss. Mica books up to two inches in diameter occur, but no true pegmatite was found.

From the above it is apparent that no worthwhile deposit of mica was discovered, thus no certification of discovery should be issued.

RECEIVED
OCT - 2 1953

October 2, 1953

Memorandum

To: Operating Committee, DMEA - Washington

From: Field Team, Region VII

Subject: Amendment to Docket No. DMEA-2733-mica, Contract Idm-E 526
Balsam Mica Miners, Yancey County, North Carolina

The subject contract was set up to do surface excavation in 4 trenches which were to be supplemented by test pits not in excess of 50 linear feet.

After completion of the trenching in the four designated locations, a test pit 4' x 4' in cross section was dug to a depth of 12 feet in trench No. 1 without showing a worthwhile pegmatite. In trench No. 2 the pegmatite and country rock were very hard and required drilling and blasting. As the trench was sloping steeply down the hill the field examiners suggested that instead of sinking test pits a better view of the deposit could be obtained by benching in the trench. This was done with the approval of the Field Team.

As no allowance was made in the contract for benching the field team requests that an amendment be prepared allowing the Operator to either test pit or bench in the trenches. It is suggested that both the test pitting and benching be set up on a cubic foot basis and that no more than 1200 cu. ft. @ $0.83 1/3 per cubic foot be excavated. This amounts to $1,000.00 which is the sum set up in the contract for test pitting.

As we have received only the July Operator's monthly report and voucher, which was for bulldozing only, we would suggest that the effective date of the Amendment Be July 3, 1953.

Contract No. Im-3526

Dear Mr. Laurence:

Reference is made to your memorandum of September 15, 1953, to the Operating Committee, stating the contract work is completed and that no discovery has been made and expressing the desire of the Operators to dewater, recondition, and explore from the old shaft as proposed by them in their original application.

The original work proposal dated November 20, 1952, and the less elaborate program of exploration dated February, 1953, were principally rehabilitation and preparation for mining of a known mica shoot, and as such are not eligible for exploration assistance.

Sincerely yours,

George C. Selfridge

SEP 1 1953

September 15, 1953

Memorandum

To: Operating Committee - DMEA- Washington

From: Field Team, D M EA - Region 7

Subject: Balsam Mine, DMEA-2733, Contract No. Idm-E526. (mica)

Work as provided in subject contract has been completed. Mica bearing pegmatite was encountered in trenches No. 1 and 2. In trench No. 1 intermixed pegmatite and biotite gneiss were found west of the old dump. A bench which was opened in this material exposed small stringers of pegmatite containing mica of scrap size and quality only. In Trench No. 2 a pegmatite from 6" to 15 " thick was exposed for 20 feet along the strike. Mica up to 12 inches in diameter was obtained from this pegmatite, but it was all mineral stained and of electric grade only, thus the work was abandoned.

During the field inspectors last visit to the project (Sept. 11, 1953) the operators expressed a desire to secure aid in dewatering, reconditioning, and exploring from the old workings. Certainly the results to date have been negative and as the project now stands no discovery has been made.

The purpose of this inquiry is to ascertain the current opinion on conducting exploration from the old incline. The original program as recommended in the examination report dated November 28, 1952, was, as we agree, elaborate and in part, development. During February 1953 a less elaborate program of exploration was discussed with the Non-metallic Minerals Division. The program as discussed in February consisted of rehibilitation of about 150 feet of incline, 200 - 300 feet of drift and crosscut, and long jackhammer holes.

The Field team is of the opinion that if the Operators could be aided in rehabilitating part of old opening, they would continue at their own expense. We believe that rehabilitation of 150 feet of incline at

$20.00 per foot; 150 feet of drift or crosscut @ $35/foot; and 300 feet of jackhammer holes @ $1.00/ foot will be sufficient to bring this mine into operation.

The above is not a recommendation, but a statement of the conditions as they exist.

INTERIM REPORT

DMEA-2733 Idm-E526 (mica) BALSAM MINE

OPERATOR: Balsam Mica Miners, c/o Lewie Aldridge, Mgr., Spruce Pine, N. C.

LOCATION: 4.1 miles S 28° E of Burnsville, Yancey County, N. C., near the crest of a narrow ridge on the northwest slope of Celo Mountain.

This mine was visited while in the vicinity of DMEA-2790, S. W. Presnell Mine. Exploration by trenching has been completed, but activities around the old deep shaft is in progress. The water level in the "Ducks Nest" area has been lowered about 10 feet by a gasoline pump, but it is not known whether other work will be attempted.

INTERIM REPORT

IMEA-2733 Idm*E526 (mica) BALSAM MINE

OPERATOR: Balsam Mica Miners, c/o Lewie Aldridge, Mgr., Spruce Pine, N. C.

LOCATION: 4.1 miles S 28° E of Burnsville, Yancey County, N. C., near the crest of a narrow ridge on the northwest slope of Celo Mountain.

Test pitting and benching of pegmatite exposed in Trench #2 has been completed and required approximately 14 feet of work vertically. The cut is 25 feet long and was made to the southwest, in the bulldozer trench. Material removed consists of biotite schist and pegmatite, which is composed of quartz with little feldspar and small mica and interlayered biotite schist. It was suggested that no additional work be accomplished in either trench where pegmatite material has been explored.

The operators, at their own expense, have begun pumping water from the old shaft and water in the vicinity of the Ducks Nest. Unless some form of exploration can be justified here, it is suggested that this contract be terminated.

OPERATOR: Balsam Mica Miners, c/o Lewie Aldridge, Mgr., Spruce Pine, N. C.

LOCATION: 4.1 Miles S 28° E of Burnsville, Yancey County, N. C., near the crest of a narrow ridge on the northwest slope of Celo Mountain.

A test pit within Trench No. 1 has been completed and benching will begin in the near future on pegmatite material exposed in Trench No. 2. Test pitting at the No. 1 location removed pegmatite material from an area 12' x 4' x 4' and the bottom was reported as containing a pegmatite stringer about 6" in thickness flanked by mica schist. Material examined consisted of quartz, feldspar and several pieces of badly stained and bent muscovite mica.

DMEA-2733 Idm-E526 (mica) BALSAM MINE

OPERATOR: Balsam Mica Miners, c/o Lewie Aldridge, Mgr., Spruce Pine, N.C.

LOCATION: 4.1 miles S 28° E of Burnsville, Yancey County, N. C., near the crest of a narrow ridge on the northwest slope of Celo Mountain.

The trenching of 4 areas, as outlined in the contract, has been completed. No estimate of the number of hours required for this work was given. Trench No. 1 and 2 showed pegmatite material as described in the June 29, 1953 interim report. Additional bulldozing on Trench No. 1 exposed the body for an additional 10-15 feet. Some large weathered blocks of mica were observed in this new section, but it is difficult to evaluate this material without additional work. It was suggested that trenching and/or benching be done at both pegmatite locations.

Trenches 3 and 4 did not cut pegmatite material. Work on trenches No. 1 and 2 will begin as soon as necessary equipment is obtained.

DMEA-2733 Idm-E526 (mica) BALSAM MINE

OPERATOR: Balsam Mica Miners, c/o Lewie Aldridge, Mgr., Spruce Pine, N. C.

LOCATION: 4.1 miles S 28° E of Burnsville, Yancey County, N. C., near the crest of a narrow ridge on the northwest slope of Celo Mountain.

Trenching by bulldozer of four open cuts has begun. Trenches No. 1 and No. 2 have been completed and both exposed some pegmatite material, but to properly evaluate this material, additional work by test pitting or benching will be necessary. Trench No. 1 cut pegmatite composed of quartz boulders, feldspar and small blocks of ruby mica. It was suggested that additional bulldozer work be accomplished along the strike to better define the body. In the lower end of this cut nothing but surface and dump material shows. Trench No. 2 exposed granitic material at the center of the cut for a distance of about 20 feet, composed principally of feldspar and biotite. The lower section exposed a pegmatite body for 10-15 feet in length and a vertical section of 4-6 feet. This material is very hard and is composed of quartz, feldspar with some scattered blocks of ruby mica. It was suggested that some benching and shooting, as an open cut, be accomplished here to determine mica content. Trenches No. 3 and 4 will probably be completed by July 15, 1953.

Mr. Robert A. Laurence
Executive Officer, DMEA
Field Team, Region VII
Room 13, Post Office Bldg.
Knoxville 2, Tennessee

Subject: Docket No. DMEA-2733 - Mica
Balsam Mica Miners
Balsam Mine
Yancey County, North Carolina
Contract No. Idm-3526

Dear Mr. Laurence:

Reference is made to your memorandum to the Operating Committee, dated May 25, 1953, on the subject contract.

The personal "Guaranty" forms are enclosed herewith and should be signed by all six partners. The financial statements of each of the applicants should be returned to this office. Also enclosed are six copies of Annex 1 which should be attached to each copy of the contract and made a part thereof.

Kindly make the following corrections in the contract forms in your possession before execution:

In line eight of the first page of the subject contract after "as follows", kindly type in: "and as set forth in Annex 1 attached hereto and made a part hereof".

Under Article 2 (b) strike out the "Owner's Consent to Lien is attached, and type in: "the Guaranty of 6 partners is attached."

A blank contract with the proper corrections made is enclosed for your convenience.

S.H.

Memorandum

To: Operating Committee, DMEA, Washington, D. C.

From: Acting Executive Officer, DMEA, Region VII

Subject: Contract on DMEA-2733 (mica), Balsam Mica Miners (Balsam Mine) Yancey County, North Carolina

Today we received original and five copies of the subject contract for presentation to the applicants for signatures. In your transmittal letter mention was made that "The attached personal guarantee, as well as the contract itself should be signed by all three of the partners." We failed to find the personal guarantee and there are six parties in the organization.

We are holding these contracts in this office until receipt of the personal guarantee forms.

Transmitted with the contracts were the financial statements of each of the applicants. No mention of these was made in the transmittal letter and we are wondering whether you meant us to have them for our files.

Subject: Docket No. DMEA - 2733, Mica
Balsam Mica Miners
Balsam Mine
Yancey County, North Carolina

Dear Mr. Laurence:

Please find herewith the original and five copies of a contract covering the subject exploration project which have been signed by the Government with register number and effective date as shown.

If the contract meets with your approval, insert the time for starting and completing the work in Article 3 of the contract and present it to the Operators for approval and signature. The attached personal guarantee, as well as the contract itself, should be signed by all three of the partners. Please explain to the Operators that the contract, when executed, is a firm commitment under the terms of which they are obligated to complete the work outlined at the agreed unit cost. If any part of this contract does not have either your approval or that of the Operators and cannot be amended within your delegated authority, then the original and all copies of the contract are to be returned to this office, together with the proposed changes for consideration.

After execution of the contract, the copies are to be distributed in the usual manner.

May 19, 1953

Memorandum

To: Administrator

From: Nonmetallic Minerals Division

Subject: Waiver of MF-203 - Docket No. DMEA-2733 - Mica
Balsam Mica Miners
Balsam Mine
Yancey County, North Carolina

Recommendation: It is recommended that the Administrator accept the Applicants' personal guarantees of royalty payments in lieu of an Owner's Consent to Lien as the data presented below indicates that the resources and reputations of the individuals are adequate.

Data and conclusions:

The applicant is a partnership composed of Lewie Aldridge, C. W. Greene, J. R. Beam, John L. Phillips, Sam L. Phillips, and Phillip Ray and has requested that the partner's personal guaranty be accepted in lieu of an Owner's Consent to Lien.

Financial statements submitted by the partners indicate net worths as follows:

5/1/53	Lewie Aldridge	$ 59,250.00
5/1/53	Claude W. Green	34,048.15
5/1/53	J. R. Beam	48,500.00
4/15/53	John L. Phillips	81,033.81
4/15/53	Sam L. Phillips	36,000.00
5/1/53	Phillip Ray	29,800.00
	Total	$288,631.96

The estimated cost of the project is $2,740.00 and Government participation, at 90%, is $2,466.00. On the basis of their aggregate net worth, the Nonmatallic Minerals Division recommends ~~in~~ accepting financial statements and personal guarantees in lieu of Owner's Consent to Lien.

Field Team, Region VII
Room 13, Post Office Building
Knoxville 2, Tennessee

Subject: Docket No. DMEA-2733 - Mica
Balsam Mica Miners
C/o Lewis Aldridge
Spruce Pine, North Carolina

Dear Mr. Laurence:

JAN 28 1953

Reference is made to the subject application for exploration assistance at the Balsam Mine, and the exploration program proposed in the Field Team report dated November 23, 1952.

The purpose of this letter is to brief you on the points the Nonmetallic Minerals Division plans to discuss with you, Mr. Beck and Mr. Teague by telephone on the afternoon of February 2, 1953.

The program seems to be elaborate and, in part, development.

Are the surface conditions favorable for trenching across the strike of the pegmatite north and south of the present workings to uncover footwall and hangingwall pegmatites as well as possible extensions of the main pegmatite? J.C. 1/28/53

To explore any surface discoveries and the hanging and footwalls at depth, the shaft might be unwatered and rehabilitated for 150 feet.

Will 20-foot jackhammer holes allow enough penetration to explore the walls adequately? The map indicates pegmatite outcrop as much as 100 feet west of the main workings. Should some sort of exploration extend that far into the hangingwall underground or on the surface?

Will 200 - 300 feet of drifting from the shaft be adequate to explore along the strike and into both walls? From the information at hand the commodity division of DMEA and the Geological Survey

believe that the following would provide an adequate exploration program for this mine:

Trenching (100 hrs.?)
Rehabilitation of shaft 150 feet
Drifting and crosscutting 200 - 300 feet
Long jackhammer holes (?)

Sincerely yours,

George C. Selfridge (JHB)

REVIEW OF FIELD TEAM REPORT ON APPLICATION DMEA-2733 (mica)

To: L. G. Houk, Defense Minerals Exploration Administration
From: J. J. Norton, U. S. Geological Survey
Applicant: Balsam Mica Miners (Lewis Aldridge, Manager)
Name of property: Balsam
Location of property: 4.1 miles S. 28 E. of Burnsville, Yancey County, N.C.
Date of field team report: November 28, 1952
Authorship of field team report: Teague and Shirley
Field team's recommendations:

The field team's recommendations appear to be designed for three purposes: (1) unwater the shaft to expose any unmined part of the known mica shoot; (2) find similar mica shoots along the strike; (3) find any mica deposits in parallel pegmatites above or below the known deposit.

The specific proposals are:

1. Unwater 450-foot shaft - $9,000.
2. 300 feet of drifts up to 60 feet long at not more than 5 levels - $10,500.
3. 600 feet of jsckhammer holes in foot- and hanging-wall - $600.
4. 120 feet of crosscuts and drifts to explore any deposits found by the jackhammer work - $4,200.

Criticisms of the field team recommendation:

1. The field team proposal seems to be more elaborate than justified, although the data presented indicates that a modest exploration program is warranted.

2. The estimated costs seem exorbitant. Certainly most mica mines do work of this sort at much less expense. ?

3. Unwatering and rehabilitating the entire shaft seem unnecessary for exploration, though possibly desirable for development.

Proposal to change field team recommendation:

Exploration for new mica shoots is ~~un~~warranted. An adequate program costing between $5000 and $10,000 probably can be set up as follows:

1. Bulldoze surface to find evidence for additional mica shoots.

2. Unwater shaft to depth of 150 feet.

3. If bulldozer work ~~were~~ is successful, a drift on the 50-foot level should show whether anything found at the surface is large enough and persistent enough to be significant.

4. Drifts on the 150-foot level might result in the discovery of a shoot that does not extend to the surface.

5. Jackhammer long holes followed by crosscutting may be warranted, but probably should be reduced to less than half what the field team proposes.

A total of 200 feet of drifts and crosscuts would probably exhaust the best possibilities.

Memorandum

To: Operating Committee, D M E A - Washington

From: Field Team, D M E.A - Region 7 - Knoxville, Tennessee

Subject: DMEA-2733, Balsam Mica Miners (mica) Field Examination Report.

Enclosed herewith are 4 copies of the Field Examination Report by K. H. Teague and L. E. Shirley, on the subject application, and 6 extra copies of the map.

It should be noted that about $9,000.00 of the estimated cost is for preparation for the exploratory work. However, it appears that this provides the best means of exploring the unworked portions of this pegmatite body, and the Field Team is in agreement with the findings of the field examiners. Attention is directed to page 4 of the 1944 report by John M. Parker, III, of the Geological Survey.

Field Examination Report on

THE BALSAM MINE

DMEA DOCKET No.-2733, (mica)

Applicant: Balsam Mica Miners, c/o Lewie Aldridge, Manager, Spruce Pine, North Carolina

Exploration appears to be justified on the subject property. It should consist of dewatering, reconditioning, and laying track in the deep incline; driving drifts on the pegmatite at several levels to explore the possible lateral extension of the deposit; and exploring both the hanging- and foot-walls for possible nearby parallel pegmatites. Should parallel pegmatites be found, then crosscuts and drifts should be driven to explore them.

This deposit was examined on November 22, 1952. The Field Team was accompanied by Lewie Aldridge, Ramey Beam and Phillip Ray, three of the applicants. The examination required six hours.

The location, geology, and extent of the workings as of August 1944 is given on the attached report and map by the U. S. Geological Survey of the Balsam Mine. Operation of the mine continued for about one year after the map was prepared, and the applicants report that it is now in excess of 400 feet deep, on the incline (probably between 425 and 450 feet).

Reports indicate that the mine was left in good condition when it was closed in 1945, with little muck in the bottom; however, there is a good possibility that a few of the lofts which are loaded with muck will have to be replaced or removed. Water fills the mine to the shaft collar.

Access to the mine is difficult. The applicants plan to build about one mile of new access road (at their own expense) which will provide much easier access and permit 4-wheel drive trucks to be driven to the mine.

Total production from this deposit is unknown, but large, as compared with most mica mines. Colonial Mica Corporation production figures for production during World War II indicate a production of mica valued at $57,359.27. Mr. Phillip Ray, one of the owners and holder of the lease on the deposit, informed the Field Team that the various operators during World War II paid the Ray estate royalities for $129,000.00 for mica produced. This figure is more than twice that indicated by Colonial's records.

There are no facilities, buildings, or power on the property at the present time. The applicants plan to either buy a generator or have an electric line installed. Either a single- or 3-phase power line can be obtained.

The applicants' lease on the deposit appears to be in good standing. The legal description of the area to be covered by the proposed project should read as follows:

> "The Balsam Mine herein described is meant to include the distance of 800 feet in every direction from the center of said mine. The center of the circular area with an 800-foot radius for this project is shown on the attached map entitled 'Balsam Mica Mine, Yancey County, North Carolina, DMEA-2733'. The center is marked and designated 'S. P.'"

The Field Team believed that the Balsam Mine offers a good possibility for the discovery of a significant deposit of strategic mica. Mica from this deposit has been appraised by the Spruce Pine Mica Depot as being suitable for the National Stockpile.

The Field Team recommends that this deposit be explored in several stages, each succeeding stage dependent upon results obtained from the previous stage.

Stage 1:

To consist of dewatering mine; reconditioning incline (this will consist of replacing or removing those lofts of muck which are unsafe and where necessary removing the roof or sides of the incline in order to provide a straight course at a constant grade for the inclined track); and installing steel track in the incline.

Estimated cost:

450 feet @ $20/ft.	$9,000.00

Stage II:

To consist of driving drifts along the strike of the pegmatite in one or both directions from not more than 5 levels. At no level should the drifts exceed 60 feet in length. The location and extent of all drifts should be mutually agreeable to the operator and Field Team.

Estimated cost:

300 feet of drifts @ $35/ft.	$10,500.00

Stage III:

To consist of drilling long jackhammer drill holes in both the hanging-and foot-wall from five levels. Each hole should be about 20 feet deep and six holes should be drilled at each level.

Estimated cost:

600' jackhammer holes @ $1/ft. $600.00

Stage IV:

To consist of exploring by crosscuts and drifts any pegmatites which may have been discovered by the drilling in Stage III.

Estimated cost:

120 feet of crosscuts and drifts @ $35/ft. $4,200.00

Estimated total cost - Stage I through IV $24,300.00

Estimated time required - 14 months

BALSAM MICA MINE
YANCEY COUNTY, NORTH CAROLINA

August 16, 1944

John N. Parker III

GLF 1/27/53

Introduction

The Balsam mica mine (No. 356 in U. S. G. S. Bulletin 936-A) in Yancey County, North Carolina, is 4.1 miles S. 28° E. of Burnsville, at an elevation of about 4500 feet near the crest of a narrow ridge on the northwest flank of Celo Mountain. One can reach the mine as follows:

Turn south from U. S. Highway No. 19-E near the eastern edge of Burnsville onto N. C. Highway No. 197 (paved);

At 0.85 mile turn left (southeast) onto the Bowlen's Creek road (dirt);

At 2.45 miles farther (about 250 feet short of the switchback turn up over Low Gap) leave car in yard of house beside creek;

Proceed on foot up steep sled road to east and southeast about 2.5 miles to mine.

The mine was mapped on August 4 and 10, 1944 by E. Billingwood III, L. Goldthwait, J. N. Parker III, and J. R. Wolfe, Jr., as part of the Strategic Minerals Investigations of the U. S. Geological Survey, in cooperation with the North Carolina Department of Conservation and Development. The surface was mapped by plane table methods (Goldthwait and Wolfe) and the underground workings by Gurley and Brunton compass and tape methods (Billingwood, Goldthwait and Parker), on a scale of 1 inch equals 20 feet.

Notes made by J. C. Olson on a visit February 17, 1940, when the mine was idle, have been freely used in this report. Information was supplied by the operators and miners.

History and workings

The deposit is reported to have been discovered sometime between 1875 and 1900 by Ned Boone or George Silvers. The first work was done by John Young, who was followed by Col. Sam Blalock, Jess Penland and F. Harris. The mine was worked by Bart Penland from about 1914 to 1919. After being idle some years the mine was reopened in 1928 by H. A. Monnack. In 1936 the mine was worked for about six months by Sam Blalock and Bob Harris. The present operation was started in January, 1943 by Lee Milliard, P. C. Coletta, and Tom Edge, partners. The mineral rights are owned by the G. D. Ray heirs.

The mine consists of a curved open cut from which a deep, inclined shaft extends steeply downward toward the west. The cut trends northeast and is about 60 feet long, 10 to 20 feet wide, and 15 to 30 feet deep. At the southwest end a small winze (Tuck's Nest) about 35 feet deep plunges at 50 degrees S. 60° W. The main shaft extends from near the middle of the open cut downward at an average angle of 62½ degrees for 280 feet (slope length) about S. 85° W. The shaft is variable in outline at different levels, but the plan in general is irregularly elliptical, averaging 20 feet parallel to the strike of the pegmatite (northeast) and 10 feet at right angles to it. The bottom is about 277 feet lower than the rim of the open cut and nearly 140 feet horizontally westward; it is about 325 feet below the surface of the ground directly above. Another old slumped and overgrown open cut about 70 feet long lies just southeast of the principal cut.

Country rock

The country rock at the Balsam mine is muscovite-biotite gneiss, locally containing many small pink garnets. Kyanite gneiss occurs in the vicinity but was not observed at the mine. The strike ranges from north to northeast and the dip from 45 to 80 degrees northwest; the average strike is N. 35° E. and the average dip about 67 degrees. In general the attitude of the country rock is irregular, and changes in strike or dip are gradual. More abrupt, irregular bends were observed, however, near the pegmatites. In places near the contacts the gneiss has been closely crumpled into chevron-shaped folds. No faults or joint sets were noted.

Pegmatite

In general the Balsam mine has exploited two thin, closely-spaced, conformable pegmaties along a swelling which plunges steeply westward. In most places along the side of the shafts

two pegmatites, each 1 to 3 feet thick, can be seen lying parallel to the gneissic foliation. These seem to have been as much as 6 to 7 feet thick in the center of the shaft, and probably to have coalesced in places. At some levels one or both pegmatites have lensed out along their strike within the mine opening; in the open cut, however, they appear to have persisted as thin sills for over 80 feet along their strike (see plan of 4458-foot level). The local swelling along which the shaft was sunk does not plunge directly down dip, i.e., toward N. 55° W., but instead rakes obliquely across the dip S. 85° W.

The pegmatite contacts are sharp and in most places conform to the gneissic foliation. The only effect of metamorphism seems to be a concentration of garnet near the contacts in both gneiss and pegmatite. At the bottom of the mine projections of gneiss and perhaps inclusions interrupt the pegmatite. A septum of gneiss 2 to 3 feet in thickness seems to have divided the pegmatites at most levels.

The pegmatite is medium to fine grained and consists mainly of plagioclase feldspar and quartz, with muscovite and garnet. The feldspar is in masses usually less than 4 to 5 inches across; it is both white and gray and a little is fairly clear. No microcline was found. The quartz is gray and is scattered through the feldspar in small masses. Small violet to pink garnets are common, especially in the feldspar and mica. No zoning of the pegmatite is apparent.

Mica

The Balsam micais rum color, in part whitish and in part reddish. A good deal is stained, less than five percent of that sold being of No. 1 quality. The proportion of No. 2 inferior mica to No. 2 mica has increased steadily in the last seven months, though on the average the No. 2 quality predominates in a 5 to 4 ratio. Much of the stain is due to intergrowth of tiny biotite flakes. Iron hydroxide stain also occurs and inclusions of garnet are plentiful. Ruling is fairly common but not excessive.

Mica books are abundant in the pegmatite, in places constituting about half of the rock. They range in size from about an inch to more than a foot across. They appear to be somewhat more common near the pegmatite borders than in the middle, but are distributed throughout with random orientations.

Outlook and recommendations

The outlook for continued mica production at the Balsam mine is good. The pegmatites have been mined downward some 300 feet without giving any indication of lensing out. Conditions at the bottom seem to be essentially the same as those encountered at higher levels.

In addition, at most levels the pegmatite could be mined in both directions along its strike, since mica shows in the remaining thinner pegmatites along the shaft sides. Conditions are favorable for doing this by overhand stoping when deeper mining is no longer profitable. Costs should be lower as waste rock could then be left in the mine.

Both hanging wall and footwall should be thoroughly tested by long boreholes at all levels. The possibility of finding other mica-bearing pegmatites lying near those mined is good. One such pegmatite, recently discovered while putting in a stull, seems to provide considerable reserves.

Mining conditions

The mining conditions at the Balsam mine are fair. The equipment seems to work well and to be adequate. Hoisting is slow and inefficient because of the depth and nature of the shaft. The muck bucket is dragged up along the sloping northeast corner of the shaft. It occasionally catches and loses part of its load; when lowered it slides and tumbles down the shaft. The rate of wear is high. It is doubtful if this situation could be improved economically.

The walls are well scaled down and seem perfectly safe. Most of the ladders are strong and secure.

Labor turn-over is a serious problem. Because of the remote situation of the mine, the men live at the mine in a cabin five days of the week. Lack of comfort and recreational opportunities makes this unpleasant. Furthermore, the mine is unusually cold, as well as damp, so that the men frequently catch cold. The consequent difficulty in keeping a crew makes for sporadic and inefficient operation. An effort by the operators to make the conditions attractive would doubtless more than pay for itself.

Memorandum

To: Nonmetallic Minerals Division
Defense Minerals Exploration Administration

From: Chief, Ceramic and Fertilizer Materials Branch

Subject: DMEA-2733, Mica, Balsam Mine, Yancey County, North Carolina

The Geological Survey (Professional Paper 225, p. 50) tested 717 pieces of mica to be 100 percent of E-1 capacitor quality and color was classified as cinnamon brown, generally acceptable as ruby mica. Bureau of Mines records show $3,371 worth of mica purchased by Colonial Mica from May to September, 1944, and 553.5 pounds of full trimmed mica valued at $4,010 in 1945. On the basis of past operations and the applicant's description of present exposures, a field team investigation is recommended.

NORTH CAROLINA

YANCEY COUNTY

AGREEMENT

We, the undersigned, who have this date been assigned a two thirds interest in that certain mining lease made by Alice S. Byrd, Mrs. Pansy Ray, J. Frank Ray and wife Ruby Ray, Mrs. J. A. Higgins and Nu-Ray, Inc. to Phillip Ray, which lease is dated August 16th 1952, and which lease relates to the Balsam & Silvers Mines in Yancey County, North Carolina, do hereby agree as follows with said Phillip Ray, it being understood that this agreement is a part of the consideration of said assignment:

We agree that as soon as said mine or mines begin to pay and said products mined therein are sold that we will engage said Phillip Ray as a foreman of said mine at a salary of $250.00 per month as long as we operate said mine and his work remains satisfactory.

Witness our hands and seals this the 25th day of September 1952.

Re: Exploration Assistance
Balsam Mica Mine

My dear Mr. Aldridge:

The receipt of your application dated October 6, 1952 for exploration assistance under the Defense Production Act of 1950, as amended, is hereby acknowledged.

Your application has been assigned Docket Number DMEA-2733 and referred to the Nonmetallic Minerals Division.

Kindly refer to DMEA-2733 in any future correspondence relating to your application.

Sincerely yours,

re: Balsam Mica Miners

Dear Mr. Houk:

Enclosed are four (4) copies of the Balsam Mica Miners' application for exploration contract assistance.

The lease covering the area to be explored is in the name of one of the partners. An assignment of his lease, in four (4) copies, will be sent to you as soon as it is received by this office.

I have been advised by telephone that all parties concerning this are consenting to this assignment; consequently, this application is being filed with the assurance that the assignment will be received within the next few days.

Sincerely yours,

C B Collins

Spruce Pine, North Carolina

Date October 6, 1952

If you have already filed MF-100, give date filed ~~herewith~~, type of assistance requested exploration,

DMA Docket Number (if available)

INSTRUCTIONS

Read Mineral Order 5, Regulations Governing Government Aid in Defense Projects, before completing this application. Submit four copies each, of the signed application form, General Technical Data Form MF-100, and answers to questions as specified, to Defense Minerals Administration, Department of the Interior, Washington 25, D. C., or to the nearest field executive office thereof, with your name and address on each sheet of the application and all accompanying papers. If you have previously filed MF-100, it is not necessary to file it again. However, you should indicate in space provided above the type of assistance previously applied for (loans, procurement contracts, etc.) and DMA Docket Number, if available. *When a question is inapplicable it should be so stated in the form.* Additional sheets should be attached in answering any questions or in supplying additional information. IF YOU CANNOT ANSWER A QUESTION, SO STATE.

1. (*a*) Give a description of the real property that will be in any way involved in the exploration project, including any existing mine or operating property.

   (*b*) If you are not the owner of the property, submit a copy of the lease, purchase option, or other agreements under which you are authorized to operate the property with each copy of your application.

   (*c*) Give the legal description of the exact parcel, plot, or area upon which the exploration is to be conducted.

   NOTE: (1) If both areas are the same, so state. The only obligation to repay the Government is from the net earnings from any commercial discovery made in the area specified in (*c*) above in which the exploration is to be conducted, and the expenditure of funds which may be charged as costs of the project must be limited to that area or to work necessary to perform the exploration in that area.

   (2) If applicant is not the owner of the property or if there are any liens or encumbrances against the property, copy of agreements of claimants, lienors, encumbrances, and lessors subordinating their interests in the property to the interest of the Government under the Exploration Project Contract will be required for attachment to the Contract.

2. (*a*) What metals or minerals do you expect to find?

   (*b*) Furnish statement of the geologic features of your property, giving type of ore deposit and reasons for expecting to find commercial ore bodies. Illustrate with maps or sketches. If you have a geologic or engineering report, or assay maps showing width and grade, please send them with application, stating whether or not you wish to have them returned.

The information requested in questions 3, 4, 5, 6, 7, 8, and 9 below should be answered specifically and in detail, as this information will be attached to and incorporated as part of the Exploration Project Contract, if such contract is entered into with you by the Government.

ANSWER EACH QUESTION ON SEPARATE SHEETS OF PAPER AND SUBMIT A COPY OF EACH ANSWER FOR EACH COPY OF YOUR APPLICATION.

3. (*a*) Describe fully the proposed work and give the total cost of the project.

   (*b*) State the time required to start the project and to complete it.

4. Submit a map or sketch of the property involved showing a plan (and cross section, if needed) of the present mine workings and the *location of the proposed exploration work* as related to geologic features, such as contacts, veins, ore-bearing beds, etc.

5. Furnish an itemized list of existing facilities, buildings, installations, and fixtures with a statement of the cost of any necessary rehabilitation or repairs to put into useful and operable condition.

6. Furnish a detailed list of additional facilities, buildings, and fixtures to be purchased, installed, or erected by you, with the estimated cost of each item.

7. Furnish a detailed list of operating equipment, separated into items to be—

   (*a*) Rented

   (*b*) Purchased

   (*c*) Furnished by you

   with the rental, purchase price, or depreciation of each item, as the case may be, to be charged as a cost of the project.

8. Furnish an itemized schedule of labor, by numbers and classes (miners, muckers, etc.) and of supervisors by numbers and positions, with the maximum wages or salaries to be paid to each.

9. Furnish a detailed list with estimated cost of each item for materials, supplies, engineering, assaying, accounting, power, water, utilities, and any other items not provided for above.

10. (*a*) How much are you prepared to invest in the proposed project?

    (*b*) Is this amount sufficient to pay your part of the cost of the project, in accordance with the regulations on Government participation (Sec. 9 of MO–5)?

11. State any conditions or circumstances regarding the property not sufficiently brought out by the foregoing questions.

CERTIFICATION

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this form and accompanying papers is correct and complete to the best of their knowledge and belief.

U. S. GOVERNMENT PRINTING OFFICE 16—64067-2

MF 103 Defense Minerals Exploration Administration

Balsam Mica Miners, a partnership
c/o Lewis Aldridge, Manager
Spruce Pine, North Carolina

1. (a). Legal description is set forth in the lease attached as Exhibit A.

(b). Copy of lease is attached as Exhibit A.

(c). (1) The area that is the subject of this exploration project is limited to that area which is inscribed by a circle 500 feet in radius commencing at the center of the abandoned shaft of the Balsam Mine.

(2) The landlords will not give an Owner's Consent to Lien; however, the applicant will give such security as may otherwise be necessary to obtain governmental exploration assistance.

2. (a). This exploration is expected to reveal the presence of strategic grade mica. During World War II, this mine produced a large quantity of strategic grade mica. The sales to Colonial Mica Corporation exceeded $65,000. It was in production at the cessation of the Colonial purchase program, and at that time the quality of the mica extracted from this mine was of very high quality.

(b). A copy of a map prepared by the U. S. Geological Survey is attached to the original copy of this application, which shows that this pegmatite contained mica rich pockets at several levels and that an inference is indicated that this grouping of mica rich concentrations extend deeper into the pegmatite.

This abandoned mine was previously worked by the lowering of a slanting shaft (approximately 30 degree angle) through the mica rich concentrate down the dike. Pockets or "rolls" of exceptionally rich concentrations were found at several levels as the shaft was lowered. And since the dike is generally not wider than 20 feet in the prior workings, the richness and quality of the mica which has been extracted can readily be appreciated, in that the sales to Colonial Mica Corporation usually exceeded Three Thousand ($3,000) Dollars per month.

The applicant expects this exploration project to reveal the presence of strategic mica at two locations. One by the extension of the present abandoned 300 ft. shaft, with the good geological probability of contacting a mica "pocket" or "roll" within a distance of fifty feet. And the second is by driving two drifts of 30 feet each in opposite directions at the lowest level reached by the shaft continuation. It is common for several pegmatites to be grouped in this area. If another mica rich vein can be contacted at this 350 foot level, it would be possible to mine that second vein very economically in that it could be mined by undercutting.

3. (a). It is proposed to dewater the abandoned 300 feet shaft, then lower a 5x7 shaft on the same dip for a distance of 50 feet. When that depth is attained, it is proposed to drive two drifts in opposite directions for a distance of 30 feet each.

Balsam Mica Miners, a partnership
c/o Lewis Aldridge, Manager
Spruce Pine, North Carolina

(b). It is anticipated that it will take five weeks to lower the shaft, and four weeks to drive the drifts, or a total of nine weeks.

The costs for the proposed project are:

11. (a) The persons comprising the partnership, Balsam Mica Miners, are:

Lewis Aldridge, Spruce Pine, North Carolina
John Phillips, Spruce Pine, North Carolina
Sam L. Phillips, Spruce Pine, North Carolina
Phillip Ray, Bakersville, North Carolina

all of whom are well known to the DMEA from recent exploration history.

(b) The Balsam Mine is located approximately 5 miles southeast of Burnsville, and approximately 4½ miles southwest of Micaville, N. C., in Yancey County. The area is the very heart of the better color strategic mica mines of the Spruce Pine Mica District. The area immediately surrounding this mine, as well as this mine, is well known for its past high production of good quality strategic grade muscovite.

Since the area abounds in pegmatites, if the mining engineers processing this application, or the field team appraising its worthiness and super-

Balsam Mica Miners, a partnership
c/o Lewis Aldridge, Manager
Spruce Pine, North Carolina

sing the progress of the project, either were to suggest that horizontal small cores be extracted at high levels in the shaft, the applicant would gladly cooperate. At the small additional cost for obtaining small core borings, at the below surface depth of this shaft, it would appear to be an economical exploration.

STATE OF NORTH CAROLINA

COUNTY OF YANCEY

THIS LEASE made this the 16th day of August, 1952, by Alice S. Byrd; Mrs. Fanny Ray; J. Frank Ray and wife, Ruby Ray; Mrs. J. A. Higgins; and Nu-Way, Inc., parties of the first part, to Phillip Ray of Yancey County, North Carolina, hereinafter called party of the second part.

W I T N E S S E T H:

THAT FOR AND IN CONSIDERATION of the sum of $1.00 in hand paid by the party of the second part to the parties of the first part, receipt of which is hereby acknowledged, and the further consideration of the agreements to be paid as hereinafter set out, the parties of the first part have bargained and leased, and by these presents do bargain and lease unto the party of the second part, his successors or assigns, the exclusive rights and privileges of mining and removing minerals from and upon those tracts of land on the Ray Boundary on Bolens Creek and known as Balsam and Silvers Mines and described as follows:

> The Balsam Mine herein described is meant to include the distance of 800 feet in every direction from the center of said mine.
>
> The Silvers Mine is meant to include 100 feet extending in the direction of the S. W. Fresnell Mine and 800 feet extending in all other directions from the center of the mine.

And there is hereby granted the rights of ingress, egress and regress to, from and over said property, together with the right to construct and maintain roads, tramways, chutes, and such other methods and means of transportation as may be necessary; and to construct and maintain thereon such machinery and equipment as may be necessary for the mining and removing of said minerals during the life of this lease or any renewal thereof.

It is understood and agreed that the life of this lease shall be for a period of five (5) years from this date with the privilege of renewal for an additional five (5) years, providing that the terms and conditions of said Lease are fully complied with.

In granting rights of way over said property it is understood that the rights herein granted are not exclusive and that such roads as may be

upon said property, or hereafter constructed, may be used in carrying on operations on other parts of said property but the use of the same is not to interfere with the rights of the parties to this instrument.

The party of the second part shall pay to the parties of the first part as royalty fifty cents per ton for all Feldspar and 1/8 of the sales price of all Mica mined and sold from said property; for all other minerals mined and sold from said property there shall be paid the usual and customary royalty prevailing in Yancey County, North Carolina. Duplicate deposit slips, sales tickets, and weight tickets shall be furnished to the parties of the first part showing each and every sale, the quantity and grades of all minerals, weights, and the price received therefor. All royalties are due and payable on the 1st and the 15th of each month for the minerals mined and sold during the two weeks period immediately preceding said dates, and the failure to pay royalties within ten days from the time same is due shall cause this Lease to be null and void at the option of the parties of the first part.

It is understood and agreed that said mines shall be operated in good faith, keeping the same in reasonably good working condition and that upon the surrender of this Lease said mines shall be left in reasonably clean condition. The mines shall be worked with reasonable regularity and pperations shall not cease for a period of more than thirty days unless the party of the second part is prevented from operating the same by conditions ordinarily termed Acts of God, or by strikes or other conditions beyond the control of the part of the second part. The party of the second part shall have the use of the timber, not of commercial value, which may be necessary in carrying on mining operations. Any violation of the terms of this Lease by the party of the second part shall render the same null and void.

It is understood and agreed that the Lessee, his successor or assign, shall have ninety (90) days from the time of the delivery of this Lease within which to ~~operate~~operations.

IN TESTIMONY WHEREOF, the parties of the first part and the party of the second part have hereunto set their hands and seals in duplicate the day and year first above written.

Subject: Docket No. DMEA-2733 - Mica
Balsam Mine, Balsam Mica Miners
Yancey County, North Carolina

Dear Mr. Aldridge:

Reference is made to the subject application for exploration assistance at the Balsam Mine in Yancey County, North Carolina.

Your application is being referred to Mr. Robert A. Laurence, Executive Officer, DMEA Field Team, Region VII, Room 13, Post Office Building, Knoxville 2, Tennessee, for further information.

Sincerely yours,

C. O. Mittendorf (for)

Administrator

Mr. Robert A. Laurence
Executive Officer, DMEA
Field Team, Region VII
Room 13, Post Office Building
Knoxville 2, Tennessee

Subject: Docket No. DMEA-2733 - Mica
Balsam Mica Miners
Spruce Pine, North Carolina

Dear Mr. Laurence:

Reference is made to the subject application for exploration assistance at the Balsam Mine, Yancey County, North Carolina.

This mine has a good production record and according to a report by J. M. Parker III, 1944, exploration may result in the discovery of additional mica. Parker also considers exploration for additional pegmatite bodies worthwhile. Memoranda from the Geological Survey and the Bureau of Mines are enclosed.

Please submit a review and recommendation for the subject application. An on site examination should be made if you consider it worthwhile. The applicant has suggested a modest exploration program but is apparently willing to do as much work as the Government may recommend.

If exploration is justified, the usual information should be included in the report. The property description for the Balsam Mine as stated in the lease is inadequate.

F.H. 11-13-52

Sincerely yours,

Frank E. Johnson

Memorandum

REVIEW OF APPLICATION DMEA-2733 (mica)

To: L. G. Houk, Defense Minerals Exploration Administration
From: R. E. Van Alstine, U. S. Geological Survey
Applicant: Balsam Mica Miners, Spruce Pine, North Carolina.
Name of property: Balsam Mine.
Location of property:
Approximately 5 miles southeast of Burnsville, and approximately 4½ miles southwest of Micaville, North Carolina, Yancey County.
Estimated cost of project: $5,675.
Summary of applicant's proposal:
Extend the present 300-foot shaft about 50 feet and drive two drifts in opposite directions for a distance of 30 feet each.
Sources of information on applicant's property:
1) Unpublished report and map of the Balsam Mica Mine, Yancey County, North Carolina, by John M. Parker, III, Aug. 16, 1944.
2) Colonial Mica Corporation card files on the Balsam Mine.
3) Physical characteristics of commercial sheet muscovite in the Southeastern United States by R. H. Jahns and F. W. Lancaster, U. S. G. S. Prof. Paper 225, pp. 50, 87, 1950.
Comments:
1) Colonial Mica Corporation purchased $57,359.27 worth of strategic mica from the Balsam mine.
2) According to Parker's map and report, the two pegmatites at the Balsam mine have been mined downward some 300 feet without giving any indication of lensing out. According to Parker the possibility of finding other mica-bearing pegmatites near those mined was considered good; the pegmatite exposed in 1944 at most levels could be mined in both directions along its strike, since mica showed in the remaining thinner pegmatites along the sides of the shaft.
RECOMMENDATION:
Refer to field team.

R. E. Van Alstine
