Memorandum

To: Regional Director, Audit Operations, Region I
Office of Survey and Review, Audit Operations

From: Chief, Office of Minerals Exploration

Subject: Report of Review--Contract 2297
Docket No. OME-6840 (Silver)
Blue Sky Mining Corporation
Beaverhead County, Montana

The subject Report of Review questions the absence in the file of acceptable evidence to support payment by the Government to the Operator of $3,750.00 for services of the Supervisor-engineer-geologist employed by the Operator. Such evidence was described as checks or copies of the Operator's payroll to support actual salary payments to the employee.

The Operator has provided us with certified true copies of four checks listed below drawn on the First National Bank, Dillon, Montana, by Blue Sky Mining Corporation and written to Bill Hand, Supervisor-engineer-geologist, for professional services totalling $3,750.00, and bus, freight, and miscellaneous expenses totalling $148.35.

Check No.	Date	Payee	Amount
682	July 12, 1971	Bill Hand	$ 300.00
690	Aug. 26, 1971	Bill Hand	200.00
694	Sept. 15, 1971	Bill Hand	1,468.00
702	Oct. 22, 1971	Bill Hand	1,930.35
		Total	$3,898.35

This evidence adds further support to the Field Officer's approval of the vouchers and his knowledge that the claim for services of the employee were incurred in accordance with the contract terms. We are filing this material in the docket for this project and it is available for inspection at any time.

The Report of Review together with a copy of this memorandum will be sent to the Field Officer who, after review, will forward the Operator's copy of the same material to the Operator.

Memorandum

To: Director, Geological Survey

From: Regional Director, Region I
Audit Operations, Office of Survey and Review

Subject: Review of Contract No. 2297
Docket No. OME-6840 (Silver)
Blue Sky Mining Corporation
Beaverhead County, Montana

As requested by the Chief, Office of Minerals Exploration, we made a cost review of contract No. 2297. The results of our review are shown in the attached report.

C. D. Bare

Attachment

We reviewed the contract files of the Office of Minerals Exploration (OME) pertaining to the Minerals Exploration Contract No. 2297 with Blue Sky Mining Corporation (Operator) made under Public Law 85-701. We also examined the related disbursement records in the Branch of Budget and Finance, Administrative Division, Geological Survey. The review was made during November 1971 at Washington, D.C.

The contract was awarded on May 28, 1971, with work to begin on or before July 1, 1971, and to be completed within six (6) months from the date of the contract. The total allowable cost is $32,640, with OME participation on a 75-percent basis or for a sum not in excess of $24,480.

The purpose of the project was to explore by diamond core drilling from a single surface site for silver-bearing ore bodies in and along a quartz-filled shear zone cutting granite.

Repayment of disbursed Federal funds plus interest at 7-3/4 percent is to be paid on the basis of established royalties of all minerals and metals produced from the land during the exploratory operations and for a period of 10 years from the date of the contract should a certification of possible production be made by OME.

The work under this contract was performed on property explored under OME contract No. 2181, Wayne Erickson, awarded January 30,

1964. This contract was mutually terminated on December 11, 1964. Amendment No. 1 to Contract 2181 states that if the contract were terminated, royalties would be paid to the Government on all production, even though a certification was waived, from January 30, 1964, to January 30, 1974, or until the contract was repaid with simple interest at a rate of 6¼ percent per annum. At the time Contract 2297 was awarded, royalties in the amount of $101.81 had been applied against costs of $9,568. Therefore, any royalties accruing shall be applied first to the payment of Contract 2181.

During operations on Contract 2297, field inspections were made, and three vouchers submitted by the Operator were approved by the OME Region I Office.

For each voucher submitted under this contract, a pro-rata share of the monthly salary as stated in the contract estimate was claimed and paid for supervision. Article 6 of the contract states that the Government contribution is limited to actual costs and that the costs shown in the contract estimates are maximums.

Although the docket file indicates that the Supervisor-Engineer-geologist spent at least one day each month when contract progress was inspected by an OME Region I Field Office staff member, there is no other acceptable audit evidence in the file to support actual time worked on the contract. Likewise, there is no other acceptable

audit evidence, checks or copies of the Operator's payrolls, to support actual salary payments to this employee of the Operator. Therefore, we are questioning $3,750 for Supervisor-Engineer-geologist.

The units of work authorized, paid, and questioned under contract No. 2297 are summarized on Exhibit I.

Subject to the foregoing comments, the costs identified as approved by audit on Exhibit I are eligible for OME participation at 75 percent in conformity with the Act and the contract.

On October 7, 1971, the OME Field Officer suggested to the Chief, Office of Minerals Exploration that the project not be certified.

C. D. Bare

Regional Director

SUMMARY OF CONTRACT TERMS, CLAIMED COSTS, AND UNEXPENDED BALANCE

	Authorized Amount	Costs Paid	Unexpended Balance	Questioned Cost	Approved By Audit
Fixed Unit Costs					
Drill site preparation	$ 250	$ 250	$		$ 250
Road maintenance during project	250	250	-0-		250

EXPLORATION CONTRACT
(Long Form)

Docket No.	Commodity	Contract No.	County	State
OME-6840	Silver	2297	Beaverhead	Montana

It is agreed MAY 28 1971 (Date), between the United States of America, acting through the Department of the Interior, U. S. Geological Survey, hereinafter called the "Government," and

Blue Sky Mining Corporation

whose mailing address is 521 S. Washington, Dillon, Montana 59725, hereinafter called the "Operator," as follows:

ARTICLE 1. Authority and scope.--(a) This contract entered into under the authority of Public Law 701, 85th Cong., 2d sess. (72 Stat. 700; 30 U.S.C. § 641 - 646), consists of this form, the attached Annex I (land description), Exhibit A (work and costs), and the maps and documents listed. The work is a search for new or unexplored deposits of the commodity designated above. The Operator shall begin the work on or before July 1, 1971 (Date), and, subject to the provisions of Article 9 and Exhibit A, shall either have completed the work within 6 months from the date of the contract or shall have incurred allowable costs (see Article 6) in a sum not less than the total cost set forth in Exhibit A.

(b) The total allowable cost of the work set forth in Exhibit A is $32,640.00. The Government will contribute 75 percent of the allowable costs as they are incurred, in a total sum not in excess of $24,480.00 in accordance with the provisions of Articles 3, 4, 5, and 6. "Costs incurred" means costs that have been paid or have become due and payable, or that the Government determines have become obligations.

(c) Interest computation.--Simple interest at the rate of 7¾ percent shall accrue from the dates Federal funds are made available until the period specified for payment of royalty expires, or until the amount of Federal funds contributed is fully repaid with interest.

(d) The Operator shall not transfer or assign this contract or any right or obligation thereunder without the written consent of the Government.

ARTICLE 2. Operator's right in land.--(a) The Operator represents and undertakes that Annex I correctly describes the land which is the subject of this contract and the nature of the Operator's right of property and possession therein (whether as owner, lessee, or otherwise), and that such right, title, or interest is subject only to the following claims, liens, or encumbrances:

SEE ANNEX I AND II

(b) The Subordination Agreement of the holder of any claim, lien, or encumbrance listed above and (if the Operator does not hold the legal title) the lien agreement of any holder of the legal title of the land (lessor, seller, optionor, etc.) are attached as follows:

SEE ANNEX I AND II

(c) The Operator shall preserve and maintain his right, title, or interest in the land and his right to the possession thereof for the purposes of this contract, and shall devote the land and all existing improvements, facilities, buildings, installations, and appurtenances to the purposes of this contract. The Operator shall neither transfer, convey, nor surrender the land nor any right, title, or interest therein, nor permit nor suffer any claim, lien, or encumbrance thereon, without expressly referring to and providing in the instrument of conveyance, lien, or encumbrance for the preservation of the Government's right to a royalty on production and liens for the payment thereof. Two true copies of such instrument shall be furnished to the Government. If the Government's rights to royalty as provided in Article 7 have been terminated, the provisions of this paragraph (c) shall become inapplicable.

ARTICLE 3. Performance of the work.--(a) Operator's responsibility.--The work shall be performed diligently, efficiently, in a workmanlike manner in accordance with good mining standards, and in compliance with State laws governing health, safety, and liability insurance covering employment. The Operator shall provide suitable and adequate equipment, facilities, materials, supplies, and labor to complete the work as specified in Article 1(a).

(b) Independent contracts.--To the extent that the allowable costs are estimated in Exhibit A with express reference to performance by independent contractors on a unit-price basis (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations), the work may be so performed (see Article 6(a), Category (1)). Any such independent contract shall refer to some specific and identifiable part of the work, and shall be subject to all of the pertinent terms and conditions of this exploration contract; but the Government shall not be considered a party thereto, and its rights under this contract, including the right to terminate its contributions, shall not be affected thereby. Regardless of the provisions of any such independent contract, the Government will participate in payments to the independent contractor only as to work performed in accordance with the provisions of this exploration contract, and only to the extent that the Government deems the unit prices for the work under the independent contract to be reasonable.

(c) Government may inspect.--The Operator shall consult with and inform the Government on all phases of the work as it progresses. The Government may enter at all reasonable times to inspect the work under the contract and production operations during the period that royalty is payable to the Government. The Operator shall provide the Government with all reasonable means of access for such inspections.

ARTICLE 4. Contribution by the Government.-- The Government will make its contribution on the basis of the monthly vouchers referred to in Article 5(b), but all payments by the Government are provisional only, subject to audit. Until the account between the Operator and the Government is finally audited and settled and the Operator's final report has been received, the Government may withhold such sums as are necessary to protect its interests. The Government may make payments for the account of the Operator directly to independent contractors and suppliers rather than to the Operator.

ARTICLE 5. Reports, accounts, audits.--(a) Operator's records.--The Operator shall keep suitable records and accounts of the work performed and of any production in which the Government may have an interest; and shall preserve those with respect to work performed for at least three years after final payment by the Government, and those with respect to production for at least three years after any obligation to pay royalties to the Government has terminated. The Government may inspect and audit said records and accounts at any time, either by itself or by a certified public accountant. The Comptroller General of the United States or his representative, until the expiration of said three-year periods, shall have access to and the right to examine all pertinent books, documents, papers, and records of the Operator. If work under this contract is carried on in conjunction with any other operations, or if labor, supervision, services, materials, supplies, equipment, facilities, or other requirements for carrying on the work are also used in connection with other operations, the costs shall be segregated and accounted for on a basis and by methods and accounts that are satisfactory to and approved by the Government.

(b) Monthly reports.--The Operator shall provide the Government with four copies of monthly reports in three sections as follows:

(1) Operator's Monthly Voucher claiming costs for work performed;

(2) Operator's Progress Report showing the number of units of the various types of work performed; and

(3) a narrative report of the work performed during the reporting period, including adequate engineering-geological maps or sketches, drill hole logs and locations, and assay reports on samples taken concurrently with advance in mineralized ground.

(Forms for reporting under (1) and (2) above will be provided by the Government; however, the original of the Operator's Monthly Voucher shall be supported by documentary evidence, such as certified copies or transcripts of payrolls and invoices, for all costs claimed under Article 6 (a) (1).)

(c) Final report.--Upon completion of the work or termination of the Government's obligation to contribute to costs, the Operator shall furnish the Government with three copies of a final report (in addition to the final monthly report). This final report shall include a geological and engineering evaluation of the results of the work performed under the contract with an estimate of the ore reserves resulting from such work, complete assay data, adequate geological and engineering maps or sketches, and a summary of the work performed and the related costs.

(d) Report of sales.--The Operator shall provide the Government with suitable accounting and documentary evidence covering all production to which the Government's royalty relates, such as two copies of smelter or concentrator settlement sheets and certified accounts of production and sale or other disposition of production.

(e) Compliance with requirements.--If the Government determines that any of the Operator's reports, records, or accounts are insufficient or incomplete, or if the Operator fails to make them, the Government may procure the preparation or completion of the same with suitable attachments as an expense of the work to which the Operator shall contribute. The Government may withhold approval and payment of any vouchers relating to insufficient or incomplete reports, records, or accounts.

ARTICLE 6. Costs.--(a) Allowable costs.--The allowable costs of the work to which the Government will contribute are limited to:

(1) the necessary, reasonable, and direct actual costs that are estimated in Exhibit A by categories as specified in this article; and

(2) fixed costs for units of work to be performed (per foot, per hour, etc.) agreed upon in lieu of actual costs and set forth in Exhibit A.

The Government will not contribute to costs under any category or subcategory omitted from the estimate of costs in Exhibit A. Any excess over any estimate which is indicated as the maximum of any category, subcategory, or item, either as to requirement or related cost; any excess over a fixed unit cost; and any excess over the total allowable cost of the work are not allowable. The Operator shall incur such excesses for his own account without contribution by the Government, but the Operator is not obligated to incur more than his agreed percentage of the total allowable cost of the work.

Any category or subcategory or element thereof not designated as a maximum in this article, or in Exhibit A may be exceeded, provided that the total allowable cost of the work, which is a maximum, is not exceeded.

CATEGORY (1)--INDEPENDENT CONTRACTS.--(See Article 3(b)). The total of this category and the average unit cost estimated for each type of work to be performed under an independent contract are maximums.

CATEGORY (2)--PERSONAL SERVICES.

Subcategory (a)--Supervision and Technical Services--All elements of this subcategory (number of supervisors, technicians, outside consultants, periods of employment, rates of pay, and total) are maximums.

Subcategory (b)--Labor.

CATEGORY (3)--OPERATING MATERIALS AND SUPPLIES.--Includes such items as drill bits and steel, explosives, fuel, pipe, power, timber, rail, and small tools costing less than $50 each.

CATEGORY (4)--OPERATING EQUIPMENT.

Subcategory (a)--Rental.--The number of each rented item [6 mine cars, 1 truck], the rate of rental [$100 per month, $5 per hour], and the total of this subcategory are maximums.

Subcategory (b)--Purchases.--The total of this subcategory is a maximum.

Subcategory (c)--Depreciation.--All elements of this subcategory (time periods, rate of depreciation, and subcategory total) are maximums.

CATEGORY (5)--INITIAL REHABILITATION AND REPAIRS.--Costs of items listed under this category include all requirements, such as labor, materials and supplies, and supervision at a rate not higher than provided for in Category (2), and shall not be duplicated under any other category. The total of this category is a maximum.

Subcategory (a)--Initial rehabilitation and repairs of existing buildings, fixtures, and installations (exclusive of mine workings).--The total of this subcategory is a maximum.

Subcategory (b)--Initial rehabilitation and repairs of operating equipment.--The total of this subcategory is a maximum.

CATEGORY (6)--NEW BUILDINGS, FIXTURES, AND INSTALLATIONS (EXCLUSIVE OF MINE WORKINGS).--Costs of items listed under this category include all requirements, such as labor, materials and supplies, and supervision at a rate not higher than provided for in Category (2), and shall not be duplicated under any other category. The total of this category is a maximum.

CATEGORY (7)--MISCELLANEOUS.--Includes requirements and costs that do not fall within any of the first six categories, such as repairs other than initial and maintenance of operating equipment, analytical work, prints and other reproductions, accounting, Operator's share of payroll taxes, liability insurance covering employment, travel, and communications.

(b) Nonallowable costs.--In addition to the limitations imposed by paragraph (a) of this Article 6 the Government will not contribute to the following costs:

(1) Costs of the land, such as rental, depreciation, depletion, or other costs of acquiring, owning, or holding possession;

(2) Indirect costs, such as general overhead, corporate management, interest, taxes (other than payroll and sales taxes), insurance (other than liability insurance covering employment), damages to persons, damages to property (other than necessary repairs or replacements of equipment or other property used in the work);

(3) Previous work performed or costs incurred before the date of this contract; and

(4) Deferred payments.--Any costs incurred by the Operator under any rental-purchase agreement, installment-purchase agreement, or any agreement for the purchase of goods under the provisions of which payment of the full purchase price is deferred more than 90 days from the delivery of the goods, unless the purchase agreement is approved by the Government in writing.

(c) Reductions in costs.--The Operator shall account for and give the Government credit for any incidental benefits, credits, or money received in the ordinary course of business in prosecuting the work (as by salvage or sale of materials or equipment, furnishing of room or board, furnishing of power or services to third persons, rebates or discounts on purchases, etc.), in the same ratio in which the Government contributes to costs; and such amounts shall be treated as a reduction in costs incurred so that they are available for use within the limit of the original total cost. The provision does not apply to receipts from production which are subject to the Government's royalty under the provisions of Article 7.

ARTICLE 7. Repayment by Operator.--(a) Certification.--If the Government considers that mineral or metal production from the land covered by the contract may be possible as a result of the exploration work, it shall so certify in writing to the Operator at any time not later than six months after a sufficient final report and final accounting (see Article 5) have been furnished.

(b) Royalty on production.--The Operator, whether or not the producer (for example, if the Operator either transfers or does not retains his interest in the land), shall pay to the Government a royalty on all minerals and metals mined or produced from the land as follows:

(1) irrespective of any certification of possible production--from the date of the contract until the lapse of the time within which the government may issue such certification or until the total net amount contributed by the Government is fully repaid with interest, whichever occurs first; or

(2) if the Government issues a certification of possible production--for a period of ten years from the date of the contract, or until the total net amount contributed by the Government is fully repaid with interest, whichever occurs first.

(c) Payment of royalty.--(1) The Government's royalty shall be five percent of the gross proceeds (including any bonuses, premiums, allowances, or other benefits) from the production sold, in the form sold (ore, concentrate, metal or equivalent), at the point of delivery (the f.o.b. point); except, that charges of the buyer arising in the regular course of business and shown as deductions on the buyer's settlement sheets (such as treatment processes performed by the buyer, sampling and assaying to determine the value of the production sold, and freight payable by the buyer to a carrier (not the Operator or producer)), shall be allowed as deductions in arriving at the "gross proceeds" as that term is used herein. No costs of the Operator or Producer are deductible in arriving at the "gross proceeds" as that term is here used.

The term "treatment processes" means those processes (such as milling, concentrating, smelting, refining, or equivalent, but excluding fabricating or manufacturing) applied to the crude ore or other production after it is extracted from the ground to put it into a commercially marketable form.

(2) The Government's royalty shall be computed and paid currently upon each lot sold, held, or used in integrated operations, as the case may be.

(d) Unsold production.--If any production (ore, concentrate, metal, or equivalent), after the lapse of six months from the date the ore was extracted from the ground, remains neither sold nor used in integrated manufacturing or fabricating operations (for instance, if it is stockpiled), the Government, at its option, as long as it so remains, may require the computation and payment of its royalty on the value of such production in the form (ore, concentrate, metal, or equivalent) it is in when the Government elects to require computation and payment. If any production is used in integrated manufacturing or fabricating operations before the Government makes its election, the Government's royalty on such production shall be computed on the value thereof in the form in which and at the time it is so used. "Value" as here used means what is or would be gross income from mining operations for percentage depletion purposes in Federal income tax determination or the market value, whichever is greater.

(e) Lien for payment.--To secure the payment of royalty (see Article 7(b)), the Operator hereby grants to the Government a lien upon his interest in the land and upon any production of minerals and metals therefrom until the royalty claim is extinguished by lapse of time or is fully paid.

(f) Notice to purchasers.--The Operator or producer shall give notice of the Government's claim for royalty to any purchaser of the production, and shall authorize and direct such purchaser to pay the royalty directly to the Government and to furnish the Government with copies of the settlement sheets. If the records of any production and sales or other disposition of production, whether the production is by the Operator or by others, are not made available to the Government, the amount of the royalty may be estimated by the Government, and this estimate shall be final and binding upon the Operator or producer.

(g) No obligation to produce.--Nothing in this contract shall be construed as imposing any obligation on the Operator or the Operator's successor in interest to engage in any production operations.

(h) Government not obligated to buy.--Nothing in this contract shall be construed as imposing any obligation on the Government to purchase any minerals and metals mined or produced from the land.

ARTICLE 8. Interests in purchased property.--(a) Title and ownership.--All costs under this contract shall be incurred by the Operator in the Operator's own name and for the Operator's own account; but any property acquired to the cost of which the Government contributes shall belong to the Operator and the Government jointly in proportion to their respective contributions although title thereto shall be taken in the name of the Operator.

(b) Preservation of property.--Until the final disposal of any property in which the Government has an interest, the Operator shall preserve and protect same for the best interest of the Government, and any reasonable and necessary cost thereof will be treated as an allowable cost of the exploration. After the completion of the work, termination of the Government's obligation to contribute, or when such property is not being used for the work, the Operator shall not use it elsewhere without the written consent of the Government and without paying a reasonable rental to be fixed by the Government for its proportionate interest.

(c) Disposal of property.--Upon the completion of the work, termination of the Government's obligation to contribute to costs, or when the property is no longer needed for the work, the Operator shall promptly dispose of salable or salvageable property in which the Government has an interest for the joint account of the Government and the Operator, either by return to the vendor, sale to others, purchase by the Operator, or sale or transfer to the Government at a price at least as high as could be obtained from others, unless the Government in writing waives its interest in any such property. Without advance approval of the sales price by the Government, the Operator shall not sell at any price any item of property that cost more than $500, and shall not sell at less than 25 percent of the purchase price any item of property that cost $500 or less. The Government, in lieu of approving the sales price for any such item, may itself purchase the item at the best price which the Operator is able to obtain or offers. Property remaining upon any termination of the work shall be considered in groups or categories (such as drill steel, explosives, pipe, or rail), and if the original cost of the remaining unexpended portion of any such group or category is less than $50, the Government waives its interest therein. If necessary to accomplish the disposal of any item, the Operator shall dismantle and sever it from the land, the cost thereof to be treated as a cost of the exploration.

(d) Default of the Operator re disposal.--If within 90 days after the completion of the work, termination of the Government's obligation to contribute to costs, or after the property is no longer needed for the work, the Operator has failed to sell or otherwise liquidate or dispose of any property in which the Government has an interest, the Government, at any time prior to final settlement under the contract, may:

(1) in writing extend the time within which the Operator must dispose of or liquidate the property;

(2) by written notice to the Operator, place upon such property what it determines to be a fair valuation thereof, not in excess of the cost less 1.66 percent per month from the date such property was purchased under this contract to the termination of said 90-day period; and such property shall thereupon be considered and accounted for as having been purchased by the Operator at the valuation so fixed by the Government; and

(3) enter and take possession of such property wherever it may be found, and remove and dispose of it for the joint account of the parties.

ARTICLE 9. Termination of the Government's obligations.--(a) If the Government determines that operations at any time have failed to achieve anticipated results and further work is not justified, the Government may give the Operator written notice thereof, and thereupon:

(1) the Government shall be free of all obligation to contribute to costs not then incurred other than such as may be allowable under the provisions of the contract as necessary and incidental to final accounting and reporting; and

(2) the Operator shall be free of all obligation to prosecute the work other than such as may be necessary and incidental to final accounting and reporting.

(b) If the Government determines that the Operator is in default under the terms of the contract, the Government may give the Operator written notice of such default with a specification of reasonable time within which the default must be cured; and if the Operator fails to cure such default as required, thereupon:

(1) the Government shall be relieved of all obligation to contribute to costs not incurred when the notice was given, other than such as may be allowable by the provisions of the contract as necessary and incidental to final accounting and reporting; and

(2) the Operator shall be free of all obligation to prosecute the work other than such as may be necessary and incidental to final accounting and reporting.

The Government may also avail itself of any other remedy the law may provide for breach of contract, including the right to rescind the contract and to demand repayment of all moneys contributed by the Government under the contract.

(c) The giving of any notice by the Government under the provisions of this Article 9 shall not affect the Government's rights as provided for in the contract with respect to royalty and liens to secure the payment thereof, and such rights shall be fully preserved.

(d) The determinations of the Government are subject to appeal under Article 13.

ARTICLE 10. Notices to be given by the Government may be delivered to the Operator, or may be sent by certified mail addressed to the Operator at his mailing address stated in this contract. If mailed, notices are deemed to have been delivered five days after the date of mailing.

ARTICLE 11. Officials not to benefit.--No member of or delegate to Congress or resident commissioner shall be admitted to any share or part of this contract or to any benefit that may arise therefrom; but this provision shall not be construed to extend to this contract if made with a corporation for its general benefit.

ARTICLE 12. Nondiscrimination in Employment. The provisions respecting nondiscrimination in employment which are required by section 301 of Executive Order 10925, dated March 6, 1961 as amended and supplemented are attached hereto as Exhibit B and are hereby incorporated in and made a part of this contract.

ARTICLE 13. Disputes.--Any dispute arising under this contract which is not disposed of by agreement shall be decided by the Director, U. S. Geological Survey, who shall reduce his decision to writing and mail or otherwise furnish a copy thereof to the Operator. The decision of the Director, U. S. Geological Survey, shall be final and conclusive unless, within 30 days from the date of receipt of such copy, the Operator mails or otherwise furnishes to the Director, U. S. Geological Survey, a written appeal addressed to the Secretary of the Interior. The decision of the Secretary or his duly authorized representative for the determination of such appeals shall be final and conclusive unless determined by a court of competent jurisdiction to have been fraudulent, or capricious, or arbitrary, or so grossly erroneous as necessarily to imply bad faith, or not supported by substantial evidence.

The term "Director, U. S. Geological Survey," as used herein includes his duly authorized representative.

ARTICLE 14. Work Hours Act of 1962 - Overtime Compensation.--This contract, to the extent that it is of a character specified in the Work Hours Act of 1962 (Public Law 87-581, 76 Stat. 357-360) and is not covered by the Walsh-Healey Public Contracts Act (41 U.S.C. 35-45), is subject to the following provisions and to all other provisions and exceptions of said Work Hours Act of 1962.

(a) Overtime requirements.--No Operator or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any laborer or mechanic to be employed on such work in excess of eight hours in any calendar day or in excess of forty hours in any workweek unless such laborer or mechanic receives compensation at a rate of not less than one and one-half times his basic rate of pay for all hours worked in excess of eight hours in any such calendar day or in excess of forty hours in any such workweek, as the case may be.

(b) Violations; liability for unpaid wages; liquidated damages.--In the event of any violation of the clause set forth in subparagraph (a) of this paragraph, the Operator and any subcontractor responsible therefor shall be liable to any affected employee for his unpaid wages. In addition, such Operator and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for

liquidated damages. Such liquidated damages shall be computed, with respect to each individual laborer or mechanic employed in violation of the clause set forth in subparagraph (a) of this paragraph, in the sum of $10 for each calendar day on which such employee was required or permitted to work in excess of eight hours or in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in subparagraph (a) of this paragraph.

(c) Withholding for unpaid wages and liquidated damages.--The U. S. Geological Survey may withhold or cause to be withheld, from any moneys payable on account of work performed by the Operator or subcontractor, such sums as may administratively be determined to be necessary to satisfy any liabilities of such Operator or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in subparagraph (b) of this paragraph.

ARTICLE 15. Copeland (Anti-Kickback) Act--Nonrebate of wages.--The regulations of the Secretary of Labor applicable to contractors and subcontractors (29 CFR, Part 3), made pursuant to the Copeland Act, as amended (40 U. S. C. 276c) and to aid in the enforcement of the Anti-Kickback Act (18 U. S. C. 874) are made a part of this contract by reference. The Operator will comply with these regulations and any amendments or modifications thereof and will be responsible for the submission of affidavits required of independent contractors thereunder. The foregoing shall apply except as the Secretary of Labor may specifically provide for reasonable limitations, variations, tolerances, and exemptions.

ARTICLE 16. Changes and added provision.--

EXPLORATION CONTRACT
BLUE SKY MINING CORPORATION
OME-6840

ANNEX I

The land, including all rights pertaining thereto, referred to in Article 2 of the contract consists of six (6) unpatented lode mining claims in Secs. 26 and 27, T. 4 S., R. 12 W., Elkhorn Mining District, Beaverhead County, Montana. These claims are shown on Figure 1, entitled "Property map, Blue Sky Mining Corporation, Beaverhead County, Montana," which is attached and made part hereof.

The following six (6) unpatented lode mining claims are recorded in the official records of Beaverhead County, Montana, as follows:

Claim Name	Book	Page
Dox No. 1	164	27 and 28
Dox No. 2	164	29 and 30
Comet No. 1	155	463 and 464
Comet No. 2	155	465 and 466
Comet No. 3	164	25 and 26
Comet Fraction	155	461 and 462

The Operator is in possession of a one-half interest in the six (6) unpatented lode mining claims under the terms of a quit-claim mining deed executed December 13, 1968, by the owners, Roger C. Pierce and Hazel Pierce.

The Operator is in possession of the remaining one-half interest in the six claims under the terms of a lease dated January 23, 1969 between H. L. Patterson, owner, and the Operator.

A Lien and Subordination Agreements dated February 27, 1971, and executed by H. L. Patterson is attached and made part hereof.

MME Form 52

UNITED STATES
DEPARTMENT OF THE INTERIOR
OFFICE OF MINERALS EXPLORATION

FOR GOVERNMENT USE ONLY	
Operator	
Docket No. OME –	
Contract No. 14-23-090–	2297
Contract Date	MAY 23 1971

LIEN AND SUBORDINATION AGREEMENTS[1]

To the United States of America:

That certain land in the County of Beaverhead, State of Montana, described as follows:[2] The unpatented lode mining claims known as Dox no.1, Dox no.2, Comet no.1, Comet no.2, Comet no.3, and Comet Fraction located in Sections 26 & 27, T.4 S., R.12 W., M.P.M., Elkhorn Mining District,

hereinafter called the "land", is the subject of a proposed exploration contract, hereinafter called the "Contract", between the United States of America, hereinafter called the "Government" and

Blue Sky Mining Corporation [3],

hereinafter called the "Operator". In consideration for and as an inducement to the Government executing the Contract, the undersigned:

1. (a) Being the owner of an interest in the land, hereby grants to the Government a lien upon all of his right, title, and interest in the land and upon any production of minerals therefrom to secure the payment to the Government of the royalty on production provided for by the Contract, and agrees if the Operator's interest should be surrendered or terminated at any time prior to the expiration of the rights of the United States under said Contract to pay royalty to the Government according to the terms of said Contract; or

(b) Being the holder of a claim, lien, or encumbrance against the land, hereby subordinates his claim, lien, or encumbrance in or against the land and in any production therefrom to the rights of the Government under the Contract with respect to royalty on production and liens to secure same.[4]

2. Undertakes and agrees that property in which the Government may acquire an interest or equity under the Contract may be dismantled, severed from the land, and removed as may be provided in the Contract; and the Government's interest and equity in such property shall be prior and superior to any adverse right or claim of the undersigned.

3. Represents and undertakes that there is no claim, lien, or encumbrance upon the undersigned's right, title, claim, or interest in or against the land other than the following: (If "none" insert the word "none". Do not leave blank.)

United States Government O.M.E. loan no.6326, Contract no.2181 incurred by Wayne Erickson Comet et al Claims.

1/ Production from the land is not required, and in the absence of production there is no obligation to pay royalty to the Government.

2/ Either (a) insert the legal description of the land, or (b) strike out the words "as follows" and insert "in a lease /or contract, deed, or other document/ dated _____, and recorded in Book_____, Page____, official records of said county". If (b) is used, the book and page of recordation must be inserted above. If the space provided is insufficient, use an Annex and refer to the Annex in the space.

3/ Insert name exactly as it appears in the Application MME Form 40.

4/ Subparagraph 1(a) does not apply to the holder of a claim, lien, or encumbrance.

4. Undertakes and agrees (a) neither to commit any act nor assert any claim in conflict with the provisions of this Agreement; and (b) to give advance notice of the Government's rights under this agreement to any subsequent transferee, mortgagee, encumbrancer, or lessee of any of the undersigned's right, title, claim, or interest in or against the land or any production therefrom, furnishing the Government with two true copies of such notice; and

5. Consents to all amendments (including an agreement of termination) and assignments of the Contract without notice thereof, and undertakes and agrees that this agreement shall extend and apply thereto.

6. Added provisions None (State "None" or "See Annex No. ____".)

Dated this 27 day of February, 19 71.

EXPLORATION CONTRACT
BLUE SKY MINING CORPORATION
OME-6840

ANNEX II

WHEREAS, the land referred to in Article 2 of the contract was the subject of a prior contract dated January 30, 1964, between the United States of America, acting through the Department of the Interior, Office of Minerals Exploration, hereinafter called the "Government," and Wayne Erickson (Contract 2181, as amended, OME-6326, hereinafter called the "Prior Contract"); and

WHEREAS, the Prior Contract was performed in part and the balance as of March 31, 1971 of the Government's contribution thereunder is $9,558.09, and

WHEREAS, the Prior Contract was terminated pursuant to Articles 6 and 7 of the contract and Article 3(d) of Amendment No. 1 thereto, which provided for repayment of said contribution with interest in the same manner and amount as if certification of possible production had been made, and

WHEREAS, the work now provided for in this contract is to further explore a portion of the lands included in the Prior Contract;

NOW THEREFORE, it is agreed that:

1. The balance of the contribution of the Government under the Prior Contract in the sum of $9,558.09, plus accrued interest at the rate of 6-1/2% per annum, shall be and is hereby added to the estimated contribution of the Government under this contract as indicated in Exhibit A, for repayment to the Government under the provisions of this contract. Any royalty accruing under this contract shall be applied first to the payment of said $9,558.09 plus accrued interest, but in no event shall more than one royalty be due or paid on the same production.

$466.19
6 1/4%

$ 9466.19

EXPLORATION CONTRACT
BLUE SKY MINING CORPORATION
OME-6840

EXHIBIT A

The purpose of the project is to explore by diamond core drilling from a single surface site for silver-bearing ore bodies in and along a quartz-filled shear zone cutting granite.

GENERAL PROVISIONS

Drill holes shall be drilled no less than 100 feet from the outer boundaries of the claim group shown on Figure 1.

All drill holes shall be cased through the overburden and completed not less than standard AX core size or equivalent wire line size.

Diamond drill core shall be stored in boxes identified as to hole number with markers in the core sections indicating the depths represented.

Facilities shall be provided for recovering diamond drill sludge, and such sludge shall be retained when drilling in significantly mineralized ground.

Significantly mineralized core recovered from hole intervals not exceeding 5 feet each shall be split and one split assayed for gold and silver. Wherever core recovery is less than 60 percent, a split of the corresponding retained sludge and a split of the recovered core shall be assayed separately and the assay results combined according to standard practice to represent a single sample. The remaining core shall be stored in proper sequence with the unsampled core, and the remaining sludge shall be stored in suitable containers properly identified as to source and location. The stored core and sludge samples shall be made available for Government inspection and possible use. With prior Government approval, the Operator may dispose of the stored core and sludge.

All drill holes shall be logged and true copies of assay certificates, copies of drill logs, and maps or sketches showing the work completed during the reporting period, the location, width and assay value of all samples taken and the geological formations and structures traversed by the drill holes shall be furnished monthly to the Government.

The Operator shall provide such supervision, labor, and technical services as may be required to perform the work in a satisfactory manner.

The location, direction, and extent of each work item shall be subject to Government approval.

The Government will not contribute toward the costs of incomplete drill holes or to the cost of casing left in place at the request of the Operator.

DESCRIPTION OF THE WORK

The work shall consist of preparing one surface drill site and drilling not more than 6 holes totalling not more than 2,110 feet, including overburden drilling, from the site. The approximate locations of the drill holes are shown on Figure 2 entitled "Proposed Exploration, Blue Sky Mining Corporation, Beaverhead County, Montana," which is attached and made part hereof. The number, approximate bearing, inclination, and approximate length of each hole are as follows:

Hole No.	Bearing	Inclination	Approximate length 1/ Feet
3	S.38°E.	-48°	330
4	S.38°E.	-70°	370
5	S.9°E.	-45°	270
6	S.9°E.	-67°	390
7	S.65°E.	-45°	310
8	S.65°E. 2/	-67°	440

1/ No hole shall be drilled for more than 20 feet beyond a vein zone correlative with that exposed on the 400 level.

2/ If previously drilled holes indicate a SW rake to ore shoot, Hole No. 8 with prior Government approval, may be drilled on a more southwesterly bearing.

ESTIMATED COSTS OF THE PROJECT

Fixed Unit Costs 3/

Drill site preparation	$ 250.00

Road maintenance during project	$ 250.00	$ 500.00

Actual Costs

Category (1) Independent Contracts

Mobilization and demobilization, 1 drill unit	$ 1,200.00	
Diamond core and overburden drilling, 2,110 feet	19,517.50	

Price Per Foot

BXWL	AXWL
$9.50	$9.00

Reaming and casing, 200 feet at $4.00/foot	800.00	
Lost casing in completed holes, 200 feet at $2.00/foot	400.00	
Cementing and redrilling, 50 hours at $14.00/hour	700.00	
Water supply for 2,110 feet of drilling, at $1.75/foot	3,692.50	
		$26,310.00

Category (2) Personal Services

None except:

1-Supervisor-engineer-geologist 4 months at $1,200.00/month	4,800.00	
		$ 4,800.00

Category (3) Operating Materials and Supplies

None except:

Cement, drill muds, additives 40 sacks materials listed or equivalents	$ 200.00	

Cement at $8.00/100-lb. sack
Drill mud at $2.50/50-lb.sack
Additives
Caustic soda $20.00/50-lb. sack
Cellex at $65.00/50-lb. sack

Cardboard core boxes, 210 at $1.00/box	$ 210.00	
Sample sacks, 50 sacks at $0.60/sack	30.00	
Sludge collecting and sampling supplies	40.00	
		$ 480.00

Category (7) Miscellaneous

Office and accounting expense, 4 months at $75.00/month	300.00	
Assaying for gold and silver, 50 samples at $5.00/sample	250.00	
		550.00

Total Estimated Cost of the Project $32,640.00

Government participation at 75% $24,480.00

3/ The completed job is the unit of work, and costs include labor, supplies, and equipment used.

EXHIBIT B

NONDISCRIMINATION IN EMPLOYMENT

(Section 202, Executive Order 11246, September 24, 1965)

"During the performance of this contract, the contractor agrees as follows:

'(1) The contractor will not discriminate against any employee or applicant for employment because of race, creed, color, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, creed, color, or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.
'(2) The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, creed, color, or national origin.
'(3) The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or workers' representative of the contractor's commitments under Section 202 of Executive Order No. 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.
'(4) The contractor will comply with all provisions of Executive Order No. 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.
'(5) The contractor will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contractingagency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.
'(6) In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No. 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No. 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.
'(7) The contractor will include the provisions of Paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order No. 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the contracting agency may direct as a means of enforcing such provisions including sanctions for noncompliance: Provided, however, That in the event the contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the contracting agency, the contractor may request the United States to enter into such litigation to protect the interests of the United States.'"

GENERAL INSTRUCTIONS

Before filling out this application, please read the *OME Regulations for Obtaining Federal Assistance in Financing Explorations for Mineral Reserves* (30 CFR Chap. II). To assure prompt action, your application must provide all applicable material and information specified on the back of this application form. Avoid unnecessary correspondence and delays by submitting complete and accurate information. *Please submit two copies of this application and all accompanying papers* except as otherwise noted. Place your name and address on each sheet. Each item of information, maps, and reports required as a part of this application is described on the back of this form. Identify each attached statement by the item number to which it applies. If an item does not apply to your application, show the item number on your statement and after it write "not applicable." Maps or sketches should be used to supplement narrative descriptions of the property location and boundaries in item 2, existing mine workings and geology in item 3, and the proposed exploration work in item 5. When this information is not too complex, all of it may be shown on one map or sketch. All documents and other attachments submitted as a part of this application, except those in item 3(g) which you mark to be returned, become the property of the Government and will not be returned to the applicant. Send true copies, *not originals*, of leases, contracts, and other documents which are an essential part of your business records. *File this application with the Department of the Interior, U.S. Geological Survey, Office of Minerals Exploration, Washington, D. C., 20242, or with the nearest OME Field Office.*

CERTIFICATION

The undersigned, whether as an individual, corporate officer, partner, or otherwise, both in his own behalf and acting for the applicant, certifies that the information set forth in this form and accompanying papers is correct and complete, to the best of his knowledge and belief, and that he would not ordinarily undertake the proposed exploration under current conditions and circumstances at his sole expense.

December 22, 1970
DATED

Roger C. Pierce
BY *(Signature)*

President
TITLE

A wilfully false statement or certification to any Department or Agency of the United States Government is a criminal offense.
U. S. Code, Title 18, Sec. 1001.

INFORMATION REQUIRED WITH THIS APPLICATION

1. Financial Eligibility:

(a) Submit evidence of efforts made within 90 days preceding the filing of this application to obtain credit from your bank of account and at least one other banking institution or other private source of credit. Such evidence shall include (1) true copies of your letters to credit sources which show date of loan request, amount and terms requested, and proposed use of loan funds and (2) true copies of replies from credit sources. If the loan was offered under terms which you consider unreasonable, state why you consider them so.

(b) List names and addresses of affiliated, parent, or controlling companies or organizations and state extent and nature of their interest.

(c) State how you propose to furnish your share of the cost of the exploration work.

2. Applicant's Rights in Land:

(a) State your interest in the land and mineral rights, whether owner, lessee, purchaser under contract, or other. If you are not the owner, submit one true copy of the lease, contract, or other document (with address of owner) under which you control the property. Describe all liens, mortgages, or other encumbrances on the land and state book and page number and official place where recorded.

(b) State the legal description (section, township, and range; metes and bounds; patent number of claims) of the land upon which you wish to explore and all adjacent land which you own or control. Describe any part of the land or workings which should not be subject to Government royalty and liens. If the land consists of unpatented claims, state book and page number for each recorded location notice, including amended locations, and official place where recorded. State all the names by which you know the property.

(c) For all land or mineral rights encumbered or not owned, submit five copies of Lien and Subordination Agreements signed by owner on MME Form 52. If the agreements cannot be obtained, state reasons and whether you can furnish a performance bond.

3. Physical Description:

(a) Describe in detail and illustrate with maps or sketches all mining or exploration operations which you know have been or are being conducted upon the land. Include existing mine workings and all production facilities.

(b) State your interest, if any, in operations described in (a)

(c) State, if you know, the past and current production, supporting your statement with copies of settlement sheets, mine records, or published data if available.

(d) Describe known ore reserves, giving quantities and grades.

(e) Describe by narrative and maps or sketches the geologic features of the property, including ore minerals, geologic formations if known, and type of deposit (vein, bedded, etc.).

(f) If you have sampled the area you propose to explore, show where the samples were taken, describe sampling methods used, and provide copies of assay certificates. State your reasons for expecting to find ore.

(g) Send with your application at least *two* copies of all geologic or engineering reports, assay maps, or technologic information which you have, indicating whether you require their return.

4. Accessibility of Property:

(a) To aid the OME representative who may examine the property state name, address, and telephone number of person who will meet him; give directions for reaching the property; and describe accessibility of property and of any mine workings.

(b) Name the shipping and supply points and state the distances to the property.

5. Exploration Work:

(a) Describe fully the proposed exploration work giving individual footages and sizes of openings *for each item of work.* Use narrative, maps, plans, and sections as necessary. Show location of the proposed work as related to geologic features such as veins, ore-bearing beds, contacts of rock formations, etc. Show also the relation of the proposed work to any existing mine workings and to *land boundaries* or to the closest identifiable corner.

(b) If an access road must be built, show the proposed location on the property map and state the length, type and construction methods proposed.

(c) If an OME contract is executed, state how soon thereafter work would be started and finished. State your anticipated average daily or monthly rate of progress for each type of work.

6. Experience:

State your operating experience and background to conduct this exploration work and also that of the person who will supervise the work.

7. Estimate of Costs:

Furnish detailed estimates of the necessary costs for time and materials *for each item of the work proposed in 5(a)* under the headings listed below with a total for each heading and the estimated total cost of the work. Costs for any work to be performed by an independent contractor should be listed separately under category (a) below. Costs for any work that is not to be performed by an independent contractor should be listed under categories (b) through (g).

(a) Independent contracts. State the total cost of any proposed independent contract for all or any part of the work, and the number of units and the unit cost for each type of work, such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, or per cubic yard of material moved. Cost estimates should be supported by bids from three contractors if possible. (*Note*—If none of the work is to be contracted, write "none" after this item.)

(b) Personal services. The cost of supervision, engineering and geological services, outside consultants, and labor should be itemized by numbers and classes of employees; rates of wages, salaries or fees; and periods of employment. State whether these services are available.

(c) Operating materials and supplies. List items of material and supplies giving quantity and price of each. Include under this heading power, water, and fuel, and units of equipment and tools costing less than $50 each.

(d) Operating equipment. List items of equipment and tools costing $50 or more per unit. Give specifications and indicate how each item is to be acquired—i. e., rented, purchased or provided by the applicant. If rented or purchased, state the estimated rental or purchase price. If furnished by the applicant, state condition and present fair market value.

(e) Initial rehabilitation and repairs. Describe the type and the cost of *initial* rehabilitation or repair of existing buildings, fixtures, installations (exclusive of mine workings), and movable operating equipment now owned by the applicant which will be used in the exploration work.

(f) New buildings, fixtures, installations. Describe each building, fixed improvement, and installation to be purchased, constructed, or installed for the exploration work, stating specifications and cost including labor, materials, and supervision.

(g) Miscellaneous. Describe the type and estimate the cost of repairs and maintenance of the operating equipment listed in 7(d). Do not repeat initial repairs listed in 7(e). Show also the costs of analytical work, accounting, workmen's compensation and employees' liability insurance, payroll taxes, and other required costs that do not fall within the previous categories. [*Note*—The Government will not contribute to costs incurred before the date of the contract, or to costs of or incident to: (1) acquiring, using, or possessing land and any existing improvements, facilities, buildings, installations, and appurtenances, or the depreciation and depletion thereof; (2) general overhead, corporate management, interest and taxes (other than payroll and sales taxes); (3) insurance (other than employees' liability insurance); and (4) damages to persons or property (other than authorized repair to or replacement of equipment or other property used in the work).]

Application for Financial Assistance in Minerals Exploration

COMET GROUP
(Silver)

Elkhorn District
Beaverhead County, Montana

by

Blue Sky Mining Corporation
December 22, 1970

GENERAL INFORMATION

An application for financial assistance on this property was made by Wayne Erickson in September 1963 with the office of Mineral Exploration.

Information such as geology, maps, accessibility of project area, existing workings, etc have not been duplicated in the present application since they are available in the prior one.

RECEIVED

SUMMARY

Recent exploration and study of this property indicates a substantial ore potential.

The applicant proposes to diamond drill at depth specific areas so that indicated mineralization can be proven.

The total estimated cost of all proposed work is $57,040.00

Blue Sky Mining Corporation
521 S Washington,
Dillon, Montana
December 21,1970

The First National Bank,
Dillon, Montana

Gentlemen:

The Blue Sky Mining Corporation owns controlling interest in a number of silver mining claims located on Comet Mountain in the Elkhorn Mining District, Beaverhead County, Montana.

Recent engineering studies indicate that these claims merit further exploration by diamond drilling. Preliminary estimates show that this work will cost approximately $55,000.

Under what conditions and terms would you lend the Blue Sky Mining Corporation 75% of the specified amount to finance indicated exploration?

Respectfully yours,

Blue Sky Mining Corporation.

PROPOSED DIAMOND DRILLING

Diamond Drill station no.1

Hole #1	N43° W – 45°	370 ft
Hole #2	N28° W – 45°	370 ft
		740 ft

These holes are to prospect for possible intersection of the no.6 and the no. 7 veins. They will intercept the veins at about 200 ft from the surface.

Diamond Drill station no.2

Hole #3	S38° E – 48°	330 ft
Hole #4.	S38° E – 70°	370 ft
Hole #5	S9° E – 45°	270 ft
Hole #6	S9° E – 67°	390 ft
Hole #7	S65° E – 45°	310 ft
Hole #8	S65° E – 67°	440 ft
		2110 ft

The holes from station #2 explore the downward extrusion of a mineralized area that has been mined above the 400 ft level on the no.4 vein. Holes #3,5,and7 cut the vein about 100 ft below the 400 level and holes #4,6 and 8 about 250 ft below this level. Hole #3 has also been extended so that it may intercept #3 vein. Station #2 is located 80 ft SW of the center of the 400 level ore shoot because it is believed that the ore rakes in this direction. An alternative to station "2 is to drill 2 or 4 holes from the road above it.

Diamond Drill station #3

Hole #9	S30° E – 35°	400 ft
Hole #10	S50° E-35°	430 ft
		830 ft

These holes will explore at depth the mineralized ore zone that the old timers mined above the Telstar tunnel level. The intercepts are about 200ft below tje tunnel.

The total diamond drill footage in thie application is 3,680 feet.

COMET MINE
Beaverhead County, Mt.
Scale 1" = 200'
Oct. 1970

COST ESTIMATE OF PROPOSED EXPLORATION

Coring (A X section minimum 3 veins)	$ 9.25 per ft
Casing or cementing	1.75 "
Water supply	1.50 "
Move in and set up--tear down and move out	0.35 "
Access roads and diamond drill stations	0.50 "
Core boxes	0.15 "
Survey inclination of holes (instrument and drill down time)	0.35 "
Supervision and engineering	1.65 "
	$15.50 per ft

With proper management there is enough water in the winze on the 400 tunnel level to supplu the drill, especially on a one shift basis. The water will flow by gravity to #1 drill station. It will have to be pumped to #2 station and hauled to #3.

The cost of drilling is comparatively high due to the property's inaccessability and remoteness from hotel and reataurant accommodations. It is about 45 miles from Dillon. The workers will probably live in cabins and batch in the Elkhorn Hot Springs area which is about 4 miles from the mine.

The total cost of the proposed exploration is (3680 ft X$15.50) or a total of $57,040.00.

Dillon, Montana 59725

Telstar #2 claim is included in the Blue Sky Mining Corp ownership.

The San Francisco claim is still owned by Margaret G. (Mrs. Harry G.) Relling of Spokane, Washington.

Very truly yours,

Roger C. Pierce Pres.

Blue Sky Mining Corp.

Received in Spokane office Jan. 11, 1971

THIS LEASE, made and entered into this 23rd day of January, 1969, by and between H. L. PATTERSON, party of the first part, hereinafter referred to as Lessor, and BLUE SKY MINING COMPANY, a Montana corporation, the party of the second part, hereinafter referred to as Lessee;

W I T N E S S E T H:

That for and in consideration of the rents and covenants herein contained and by Lessee to be paid and performed, the Lessor has leased, demised and let and by these presents does lease, demise and let unto the Lessee an undivided one-half interest in and to the following described mining claims, to-wit:

DOX NO. 1 Mining Claim, as located October 8, 1960, the Certificate of Location whereof is recorded in Book 164 of Lode Locations at Pages 27 and 28, Official Records of Beaverhead County, Montana.

DOX NO. 2 Mining Claim, as located October 8, 1960, the Certificate of Location whereof is recorded in Book 164 of Lode Locations, at pages 29 and 30 thereof, Official Records of Beaverhead County, Montana.

COMET NO. 1 Mining Claim, as located June 8, 1960, the Certificate of Location whereof is recorded in Book 155 of Lode Locations at pages 463 and 464, Official Records of Beaverhead County, Montana.

COMET NO. 2 Mining Claim, as located June 8, 1960, the Certificate of Location whereof is recorded in Book 155 of Lode Locations at pages 465 and 466, Official Records of Beaverhead County, Montana.

COMET NO. 3 Mining Claim, as located October 8, 1960, the Certificate of Location whereof is recorded in Book 164 of Lode Locations at pages 25 and 26, Official Records of Beaverhead County, Montana.

COMET FRACTION Mining Claim, as located June 8, 1960, the Certificate of Location whereof is recorded in Book 155 of Lode Locations at pages 461 and 462, Official Records of Beaverhead County, Montana.

Said claims are situated in the Elkhorn Mining District, Beaverhead County, Montana.

TO HAVE AND TO HOLD all and singular, the above-described mining claims unto the Lessee for a term of three (3) years from the date hereof.

IT IS FURTHER AGREED:

1. PURPOSE OF LEASE - Said claims are leased to Lessee for the purpose of mining and removing the minerals found in said lands, together with the right to make such buildings, ditches, draws, roads, excavations or other improvements upon such premises as may be necessary.

2. ASSESSMENT WORK - Lessee shall perform by August 1st of each year, all assessment work required under the applicable mining laws to keep the said mining claims herein described or subsequently located hereunder in good standing and shall make due and timely proof thereof on or before said date of the performance of such work.

3. TAXES - Lessee shall pay all taxes which may be assessed against said land and the improvements thereon, used or controlled by Lessee, and the personal property thereat, used or controlled by Lessee.

4. REPORTS - Lessee shall furnish to Lessor, upon request, in writing, from time to time, and as compiled and prepared, but not oftener than quarterly, duplicate copies of all exploration reports, concentrating plant reports, mine maps, analysis maps and plans of development made and used in the operations on said premises. It shall furnish to Lessor a monthly report showing the estimated weights and analysis of all ore material stockpiled according to each classification, whether merchantable, concentratable, or nonmerchantable. It shall furnish to Lessor a monthly report of all ores mined and shipped or beneficiated from said premises, showing the values, tonnage and analysis thereof, together with a record and analysis of

any tailings and rejects, and specifying the claims from which said ores were mined.

5. OPERATIONS TO BE CONDUCTED IN ACCORDANCE WITH GOOD MINING; WORKMEN'S COMPENSATION; INDEMNIFICATION.- Lessee shall have the sole and absolute supervision of mining and milling operations hereunder. Lessee will open, use and work the mine or mines on said lands in such manner only as is usual and customary in skillful and proper mining operations of similar character and in accordance with the requirements, methods and practices of good mining engineering.

Lessee will timber tunnels, shafts, drifts or other working points as required in accordance with good mining practices, and repair all old timberings that may be necessary with 8-inch by 8-inch timbers or larger. Lessee will keep all drifts, shafts, tunnels and other passageways and workings thoroughly drained and cleaned of loose rock and rubbish of any kind whatsoever insofar as practicable.

In its occupancy of the demised premises and in carrying on the operations to be carried on hereunder, Lessee shall comply with all requirements of State and Federal statutes to the extent applicable to such operations, and shall maintain in full force and effect Workmen's Compensation insurance.

Lessor shall not be liable to Lessee for any damage occurring by reason of any defect in, upon or about the demised premises nor be liable for any damage occasioned by said premises being out of repair or for any damage arising from any act or neglect of any person on any adjoining or contiguous property. Lessee agrees to indemnify and hold harmless Lessor from and against any and all loss, liability or claims for the death and/or injury to any person and/or for the loss or damage to property in or about the demised premises or to property of other persons occurring during the term hereof and resulting directly or indirectly out of any of Lessee's operations hereunder. It is

understood and agreed that Lessee shall carry on all mining and milling operations hereunder as an independent contractor. Lessee agrees to hold Lessor harmless from and against any and all liens that may be placed upon the demised premises resulting from any operations or activities of Lessee hereunder.

6. MINIMUM WORK REQUIREMENTS - Lessee agrees to work and mine said premises working not less than sixty (60) shifts of eight (8) hours each during each and every year of the term of this lease.

7. ROYALTIES ON ORES - On all ores mined or removed from said premises, Lessee shall pay to Lessor a royalty of five per cent (5%) of the net mill or smelter returns. By "net mill or smelter returns" is meant the amount received for such ores after deducting therefrom the cost of milling, smelting, and freighting or haulage from the mine to the mill or smelter.

8. RIGHT OF INSPECTION - The Lessor, his agents, engineers, or other persons in his behalf, with his assistance, shall have the right to enter at all times the mines and other workings connected therewith and other operations of Lessee under this lease, in order to examine, sample, assay, inspect, survey, or measure them or any part thereof. Lessee agrees to render to Lessor, his agents or engineers, proper assistance in making such inspection, surveys or examination.

9. FORCE MAJEURE - It is understood and agreed any period or delay in the performance of any obligation hereunder occasioned by strikes, acts of God, war, rebellion, or other causes (except financial) reasonably beyond the control of the defaulting party, shall be excused during the continuances of such cause or causes and such delay shall not be considered a default hereunder by such party, but such party shall exert every reasonable effort to overcome any such cause of delay, and shall give otherparty prompt written notice of all such delays and their expected duration.

10. NOTICE OF DEFAULT AND TERMINATION - In the event of failure of Lessee to perform any obligation assumed by it hereunder and the failure of Lessee to correct such default within sixty (60) days (or in the event such default is of such a nature that it cannot reasonably be corrected within sixty (60) days, in the event of failure of Lessee to commence within such sixty-day period to correct such default and to diligently prosecute to completion the work of correcting such default) after written notice from Lessor so to do, Lessor may, at his option, terminate this agreement.

11. OPTION TO PURCHASE - Lessee shall have the right and option at any time during the term hereof, or during the time of any extension of such term, to purchase said mining claims by paying to Lessor the sum of THIRTY-FIVE THOUSAND DOLLARS ($35,000.00). In the event of the exercise of such option, all rents and royalties theretofore paid by Lessee hereunder shall be credited against such purchase price.

It is expressly understood by and between the parties hereto that said premises are subject to a lien for a Government OME Loan No. 6326, Contract No. 2181. Lessee will comply with all provisions of said loan and agreement and in the event the Lessee exercises its option to purchase said claims, Lessor agrees to pay one-half of the balance then owing on said loan, which said sum shall be deducted from the $35,000.00 purchase price, in addition to royalty payment deductions.

12. BENEFIT - This agreement shall inure to the benefit of and be binding upon the successors and assigns of the parties hereto.

13. NOTICES - Any notice to be given hereunder shall be properly given if mailed by registered mail to:

To Lessor: H. L. Patterson
509 Kentucky Avenue
Dillon, Montana 59725

To Lessee: Blue Sky Mining Company
521 S. Washington
Dillon, Montana 59725.

IN WITNESS WHEREOF, the parties have executed this agreement the day and year first above written.

BLUE SKY MINING COMPANY

ATTEST:

Hazel Pierce
Secretary

By Roger C. Pierce
Its President

LESSEE

STATE OF MONTANA)
ss
County of Beaverhead)

On this 23rd day of January, 1969, before me, the undersigned, a Notary Public for the State of Montana, personally appeared H. L. PATTERSON, known to me to be the person whose name is subscribed to the within instrument and acknowledged to me that he executed the same.

Also, on the 23rd day of January, 1969, before me, the undersigned, personally appeared ROGER PIERCE and HAZEL PIERCE, known to me to be the President and Secretary respectively of the corporation that executed the within instrument and acknowledged to me that such corporation executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed my Official Seal the day and year in this certificate above written.

Leal McDavis
Notary Public for the State of Montana
Residing at Dillon, Montana
My Commission expires June 24, 1970.

RESOLUTION

WHEREAS, Blue Sky Mining Corporation was organized for the purpose of mining what is known as the Comet claims situated in Beaverhead County, Montana; and

WHEREAS, the corporation does not have sufficient funds on hand to continue the operation of said Comet Mine; and

WHEREAS, it now appears that this corporation can (possibly) obtain a loan from the Office of Mineral Exploration, a governmental lending agency, and thereby obtain funds for extensive mineral exploration and discovery operations in the mining properties owned and controlled by this company; and

WHEREAS, the directors of this corporation held a telephone conference among themselves on the _____ day of December, 1970, during the course of which it was unanimously agreed by all of the directors of this company that Roger Pierce, president of the company, should be authorized to apply for a loan from said Office of Mineral Exploration in order to obtain funds for mineral exploration and discovery operations of this company;

NOW, THEREFORE, BE IT RESOLVED by the Board of Directors of Blue Sky Mining Corporation that Roger Pierce, president of Blue Sky Mining Corporation, is hereby directed and authorized to take all actions necessary on behalf of said company in order to apply for a loan from the Office of Mineral Exploration;

BE IT FURTHER RESOLVED, that the said Roger Pierce, president, and the secretary of this corporation, are hereby authorized to execute all documents necessary or required in order to apply for and to obtain a loan of moneys from the Office of Mineral Exploration, a governmental lending agency, and to execute any and all documents necessary or required in order to mortgage any and all properties of Blue Sky Mining Corporation to said Office of Mineral Exploration, or to any other lending agent or agency, in order to obtain said loan of moneys to Blue Sky Mining Corporation.

CONSENT AND WAIVER

We, the undersigned, being all of the directors of Blue Sky Mining Corporation, do hereby waive the holding of any formal meeting of the directors of said corporation for the purpose of considering the adoption of the above and foregoing resolution and we, and each of us, do hereby consent (pursuant to the provisions of Section 15-22-134, R.C.M., as amended) to the adoption of the foregoing resolution by the directors of this company without a formal directors meeting being held.

Re: letter January 12, 1971 Comet Mine, Beaverhead County, Montana. Former OME 6326 Silver Contract 2181

Attention: Willard P. Puffett.

Dear sir:

San Francisco lode survey no.3353 is not available by reason of too high a price by owners.

The claims specifically included in the project are Dox #1, Diamond Drill Station no 1, Comet Fraction, Diamond Drill Station no2, and Telstar no2, Diamond Drill Station no3.

See enclosed bids from three contractors.

See revised drilling estimates for engineer's salary.

See category 3, excavating and road building, Diamond Drill Station no1. This area will be soil sampled before drilling.

Please find enclosed cross section map of all work completed on the 400 level including mill returns and assays.

Very truly yours,

Blue Sky Mining Corporation

Roger C. Pierce.

PROPOSED DIAMOND DRILLING

Diamond Drill Station no.1

	Bearing	Inclination		
Hole #1	N43W	45	----------	370 ft
Hole #2	N28 W	45	----------	370 ft
				740 ft

These holes are to prospect for a possible intersection of the no.6 and the no.7 veins. There are large outcrops of quartz in this area but some soil sampling is needed in order to find the highest intensity of mineralization before drilling is started.

Diamond Drill Station no.2

Hole #3	S38 E	48	----------	330 ft
Hole #4	S38 E	70	----------	370 ft
Hole #5	S 9 E	45	----------	270 ft
Hole #6	S 9 E	67	----------	390 ft
Hole #7	S65 E	45	----------	310 ft
Hole #8	S65 E	67	----------	440 ft
				2110 ft

The holes from station #2 explore the downward extrusion of a mineralized area that has been mined above the 400 ft level on the no.4 vein. Holes #3,5 and 7 cut the vein at about 100 ft below the 400 level and holes #4,6, and 8 about 250 ft below this level. Hole #3 has also been extended so that it may intercept #3 vein. Station #2 is located 80 ft SW of the center of the 400 level ore shoot because it is believed that the ore rakes in this direction. An alternative to station #2 is to drill 2 or 4 holes from the road above it.

Diamond Drill Station no.3

Hole #9	S30 E	35	----------	400 ft
Hole #10	S50 E	35	----------	430 ft
				830 ft

The minimum drilling required at all stations would be as follows:

Hole #1	----------	370 ft
Hole #3	----------	330 ft
Hole #5	----------	270 ft
Hole #9	----------	400 ft
		1370 ft

The balance of the holes would be drilled as needed.

ESTIMATED COST OF PROJECT

Category (1) Independent Contracting.

a. Mobilization and demobilization of personnel and equipment 1 drill unit	$1200.00
b. Diamond core and overburden drilling @$9.25 per ft. (minimum of AQWL thru veins, BQ @$9.50 per ft AQ @$9.00 per ft.)	$34,040.00
c. Reaming for and supply of casing.1000 ft @$4.00 per ft. *	4000.00
d. Cementing, redrilling and other drill hole stabilizing operations, and moving and setting up.100 hrs @$14.00 per hour	1400.00
e. Casing lost in completed holes, 300 ft @$2.00 per ft.	600.00
f. Water supply (25% probably truck hauled)	5520.00
	$46760.00

Category (2) Supervision and Technical Services.

None except 1 Supervisor-Engineer. 5 months @ $1200.00 per month	6000.00

Category (3) Private Excavating

None except Access roads, drill stations, road maintenance, standby power etc. 1 track type loader, 130 hrs @ $14.00 per hour.	1820.00

Category (4) Operating materials and supplies.

None, except	
368 cardboard core boxes @ $1.00 each	368.00
Cement, cement substitutes, drilling mud and additives	525.00
150 sample sacks @$.60 each	90.00
Sludge catching and sampling supplies	90.00
	1073.00

Category (5) Miscellaneous.

None, except,	
Office and accounting expenses. 5 months @ $75.00 per month	375.00
Assaying 100 samples. Gold and Silver @$5.00 per sample	500.00
Chemical Trace analysis.100 determinations, molybdenum and silver @$2.00 per determination.	200.00
Engineering supplies (for soil sampling, hole surveying etc.)	312.00
	1387.00

Total Estimated Cost of Project	$57,040.00
Government Participation @ 75%	$42,780.00

With proper management there is enough water in the winze on the 400 tunnel level to supply the drill, especially on a one shift basis. The water will flow by gravity to #1 drill station. It will have to be pumped to #2 station and hauled to #3.

The cost of drilling is comparatively high due to the property's inaccessability and remoteness to hotel and restaurant accommodation. It is about 45 miles to Dillon. The workers will probably batch and live in cabins in the Elkhorn Hot Springs area which is about 4 miles from the mine.

Gentlemen:

Thank you for the opportunity to bid your proposed drilling program. The following proposal is based on a minimum of 1,370 feet and maximum of 3,680 feet (4 to 10 test holes) located about 50 miles West of Dillon, Montana.

Coring BX Size	$12.00 per foot
Coring AX Size	$10.00 per foot
Water Supply	$ 2.25 per foot
Mobilization & Demobilization	$1,200.00 Lump Sum
Reaming Casing	$ 4.00 per foot

Access to the drill sites to include Bulldozer preparation is not included in this bid.

Thank you.

Dear Sir:

Estimates on your proposed diamond drilling at your Comet Mine is as follows:

Mobilization and demobilization----------	$1,200.00
Coring AQ thru vein----------	$9.25/ft.
Reaming for casing ----------	$4.00/ft.
Drill hole stabilization (supplies not incl.), moving and setting up and standby ----------	14.00/hour
Water supply ----------	1.75/ft.
Casing lost ----------	2.00/ft.

Access roads and drill sites are not included in any of these estimates.

Sincerely,

Gunnar S. Johnson

Dear Sir;

We are pleased to quote on your proposed Diamond Drilling Program at the Comet Mine, near Dillon, Montana, as follows;

Mobilization and Demobilization,	$1,300.00	
Coring, BX	9.75	per foot
Coring, AX	9.25	per foot
Reaming for Casing	4.00	per foot
Hole Stabilization	16.00	per Hour
plus cost of supplies		
Moving to New Drill Sites	16.00	per Hour
Casing lost	2.50	per foot

We trust that this Quotation is satisfactory to your requirements and we would be happy to discuss this program with you at your convenience.

Yours very truly,
Ace Trading Company,

H. G. Young

MEMORANDUM

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: Summary final report
OME-6840 (silver)
Blue Sky Mining Company
Comet mine
Beaverhead County, Montana
Contract 2297

INTRODUCTION

The report summarizes a diamond-drill exploration project for downward projections of a vein in granite that formerly had been explored under OME contract 2181 at the Comet mine, high on the west slope of Pioneer Mountains, and about 45 miles southwest of Butte, Montana. The contract, dated May 28, 1971, was for a total estimated cost of $32,640.00 of which the Government would contribute 75 percent or $24,480.00. Work, started in the latter part of June 1971, and completed Sept. 4, 1971, consisted of diamond drilling 6 holes with an aggregate length of 2,387.5 feet. Vein material and altered granite were intersected by each of the holes but assay data from 56 samples failed to indicate that ore grade material was present. Total allowable cost of the work was $26,643.50 of which the Government contributed $19,982.62. The Operator was notified on Feb. 10, 1972, that the Government does not contemplate issuing a certification of possible production as a result of the work performed. However, the balance of the Government's contribution under the prior contract in the sum of $9,466.19 shall be paid to the Government through royalties on production with interest at the rate of 6¼ percent per annum or until the period of royalty obligation ends on Jan. 30, 1974, whichever occurs first. The property was idle in Feb. 1972.

FINAL FIELD REPORT

OPERATOR

Blue Sky Mining Corporation
521 S. Washington
Dillon, Mont., 59725

Officers of the corporation include:

President: Roger C. Pierce, 521 S. Washington, Dillon, Mont.
Vice-President: Hazel Pierce, 521 S. Washington, Dillon, Mont., and Secretary
Chairman of Board: William A. Cook, 925 Curry Pike, Bloomington, Ind., 47401

PROPERTY

The land subject to the contract consists of six unpatented lode mining claims in secs. 26 and 27, T. 4 S., R. 12 W., Elkhorn Mining District, Beaverhead County, Mont. (Fig. 1 - Plan and section maps of diamond drill holes, Blue Sky Mining Company's Comet mine, sec. 26, T. 4 S., R. 12 W., Beaverhead County, Mont.). The claims are recorded in the official records of Beaverhead County, Mont., as follows:

Claim	Bk.	Pg.
Dox No. 1	164	27-28
Dox No. 2	164	29-30
Comet No. 1	155	463-464
Comet No. 2	155	465-466
Comet No. 3	164	25-26
Comet Fraction	155	461-462

The Operator possessed a one-half interest in the claims under the terms of a quit-claim mining deed executed Dec. 13, 1968, by the owners, Roger C. and Hazel Pierce. The Operator was in possession of the remaining one-half interest in the six claims under the terms of a lease dated Jan. 23, 1969, between H. L. Patterson, owner, and the Operator.

Except for the patented San Francisco Lode, this property is essentially the same as that which was the subject of OME contract 2181, on which there remains a lien on production until Jan. 30, 1974, or until the sum of $9,466.19 is fully repaid with interest at the rate of 6½ percent per annum, whichever occurs first.

LOCATION AND ACCESSIBILITY

The claims are on the steep southwest slope of Comet Mountain between altitudes of 8,500 and 9,250 feet and extend across the common boundaries of secs. 26 and 27. An unsurfaced access road leads 4.5 miles to the

property from the county road near Grasshopper Creek at an altitude of about 6,650 feet. This junction with the county road is 10.85 miles north of the junction with surfaced county road 278, which leads easterly 25.5 miles to U. S. Highway 91, about 3.5 miles south of the City limits of Dillon, Mont.

MINE WORKINGS

Three adits are on the property (Fig. 1). Adit level, 300, at altitude of 9,081 feet, is 130 feet long. Adit level 400, at altitude of 8,986 feet, contains 680 feet of drifts and crosscuts. Adit level 600, at altitude of 8,575 feet, contains 1,620 feet of drift and crosscuts. An old, now caved, shaft extended upward to the surface from the 300 level. A raise connects between the 400 and 300 level and there are two stopes, one overhead, and one underhand, off the 400 level. All the adit levels are open and contain only small amounts of timber.

The main working adit level is the 400 level. Near its portal are tool sheds and an ore bin.

GEOLOGY

The known ore minerals at the Comet mine are in silicified shear zones that cut coarse-grained biotite granite. Oxidation extends to the lowest depths explored and has resulted in broad, brown, iron-stained zones adjacent to and including the veins. Ore minerals include argentiferous tennantite, galena, chalcopyrite, and their oxidation products; the main commodity is silver. Concentrations of economic minerals form ore shoots somewhat limited in strike length, and which apparently do not persist in depth far below the 400 adit level. An ore shoot on the 400 level is about 25 feet long and 5.5 feet thick and has an average assay value of 11.2 ounces silver per ton (see final report, Docket OME-6326). The higher grade portions of this ore shoot are along the hangingwall and footwall of the shear zone. Presumably other ore shoots in the mine have similar characteristics. The proposed exploration was to test for downward extension of the ore shoot exposed on the 400 level.

PURPOSE OF PROJECT

The purpose of the project was to explore by diamond core drilling from a single surface site for silver-bearing ore bodies in and along a quartz-filled shear zone cutting granite.

CONTRACT

The contract, No. 2297, dated May 28, 1971, required that work start on or before July 1, 1971, and be completed within 6 months from the date of the contract.

Work was to consist of preparing one surface drill site and drilling not more than 6 holes totalling not more than 2,110 feet, including overburden drilling. The number, approximate bearing, inclination, and approximate bearing of each hole were as follows:

Hole No.	Bearing	Inclination	Approx. length feet
3	S. 38° E.	-48°	330
4	S. 38° E.	-70°	370
5	S. 9° E.	- 45°	270
6	S. 9° E.	- 67°	390
7	S. 65° E.	- 45°	310
8	S. 65° E. 1/	- 67°	440

1/ If previously drilled holes indicate a SW rake to ore shoot, Hole No. 8, with prior Government approval, may be drilled on a more southwesterly bearing.

ESTIMATED COST OF THE PROJECT

Fixed Unit Costs

Drill site preparation	$250.00	
Road maintenance during project	250.00	$500.00

Actual Costs

Category (1) Independent Contracts

Mobilization and demobilization, 1 drill unit $1,200.00

Diamond core and overburden drilling, 2,110 feet $19,517.50

Price per foot

$9.50	$9.00

Reaming and casing 200 feet at $4.00/ft	800.00
Lost casing in completed holes 200 feet at $2.00/ft	400.00
Cementing and redrilling 50 hours at $14.00/hr	700.00
Water supply for 2,110 feet of drilling at $1.75/ft	3,692.50
	$26,310.00

Category (2) Personal Services

None except:

1 Supervisor-engineer-geologist 4 months at $1,200/month		$ 4,800.00

Category (3) Operating Materials and Supplies

None except:

Cement, drill muds, additives - 40 sacks materials listed or equivalents	$200.00	
Cement at $8.00/100-lb sack Drill mud at $$2.50/50-lb sack Additives Caustic soda $20.00/50-lb sack Cellex at $65.00/50-lb sack		
Cardboard core boxes - 210 at $1.00/box	210.00	
Sample sacks - 50 sacks at $0.60/sack	30.00	
Sludge collecting and sampling supplies	40.00	480.00

Category (7) Miscellaneous

Office and accounting expense - 4 months at $75.00/month	300.00	
Assaying for gold and silver - 50 samples at $5.00/sample	250.00	550.00

Total estimated cost of the project:	$32,640.00
Government participation at 75%	24,480.00

PROJECT WORK

Project work started on June 21, 1971, when a preliminary survey was completed to locate the drill site. The originally proposed location was unsatisfactory for there would be insufficient footage in the contract for all the holes to intersect the vein. A new site was chosen some 270 feet north of the vein outcrop. The drill site was prepared on June 25 and 26, with the use of a D8 Caterpillar, and on July 1, 1971, the Joy drill rig was positioned to drill the first hole, Hole No. 3.

The sequence, bearing, inclination, and length of the holes drilled are as follows:

Hole No.	Date Started	Date Finished	Bearing	Inclination	Length Feet	Bit Size
3	7-5-71	7-17-71	S.47°45'E.	-44°30'	330	NQ to 102 BX to 330
4	7-18-71	7-25-71	S.47°45'E.	-67°30'	457	BQWL
8	7-26-71	7-31-71	S.81°E.	-59°30'	505	BQWL
7	8-1-71	8-6-71	S.73°E.	-37°	337.4	BQWL
6	8-6-71	8-20-71	S.90°E.	-64°	424	BQWL
5	8-21-71	9-3-71	S.16°15'E.	-41°	344	BQWL

The bearings and inclination were determined by the Operator.

Approved costs of the completed work are as follows:

Fixed Unit Costs

Drill site preparation	$ 250.00	
Road maintenance during project	250.00	$ 500.00

Actual Costs

Category (1) Independent Contracts

Mobilization and demobilization 1 drill unit	1,200.00
Diamond core and overburden drilling - 2,387.5 ft. at $8.00/ft	19,100.00
Reaming and casing - 47 feet at $4.00/ft	188.00
Lost casing in completed holes - 73 ft at $2.00/ft	146.00

Cementing and redrilling - 58 hours at $14.00/hr	812.00	$21,446.00
Category (2) Personal Services		
1 Supervisor-Engineer-Geologist - 3-1/8 months at $1,200/month		3,750.00
Category (3) Operating materials and supplies		
Cement, 23 sacks at $8.00/sack	184.00	
Drill mud, 16 sacks at $2.50/sack	40.00	
Cardboard core boxes, 210 at $1.00/box	210.00	
Sludge collecting, sampling supplies, and sample sacks	46.00	480.00
Category (7) Miscellaneous		
Office and accounting expense - 2½ months at $75.00/month	187.50	
Assaying for gold and silver - 56 assays at $5.00/assay	280.00	467.50
TOTAL:		$26,643.50
Government contribution - 75%		19,982.62

The Government retains no equity in any materials and supplies at the property.

Work under the project proceeded with a minimum of delay and progress was very satisfactory. The Supervisor-engineer-geologist supervised the direction of the drill holes, logged the core, selected samples, and prepared the monthly and final report. Graphic logs submitted with the monthly vouchers were well prepared. The completed drilling quite adequately tested the area between the 400 and 600 level beneath the known ore shoot that had been mined along the 400 level.

The Operator was fortunate in contracting with a driller who was willing to do the drilling for $8.00 per foot, rather than for the $9.00 to $9.50 per foot allowed in the contract. There also was no need for water supply that was estimated to cost $1.75 per foot. The actual drilling necessary was 2,387.5 feet as compared to the original estimate of 2,110 feet. Sufficient funds were in the contract to pay for the increased drilling, mainly because of the lower contracted cost per foot and lack of need for water supply.

REPORTS

The Operator submitted a satisfactory final report on Oct. 6, 1971.

The Government's Report of Review was prepared in Nov. 1971. This report disallowed the $3,750.00 that had been approved for payment of Supervisor-Engineer-Geologist for 2½ months as there was no satisfactory evidence to support actual salary payments to this employee by the Operator. Later, the Operator provided certified true copies of four cancelled checks indicating payment had been made to Bill Hand, Supervisor-Engineer-Geologist, as indicated in the approved vouchers. The Chief, Office of Minerals Exploration transmitted this information with accompanying memorandum to the Regional Director, Audit Operations, Region I, Office of Survey and Review, on Jan. 13, 1972, stating that the evidence supported the Field Officer's approval of the vouchers.

PROJECT RESULTS

Altered, brown, iron-stained zones were found in all of the drill holes; sulfides were sparse and quartz was not abundant. Assay data of drill core samples are as follows (see also Fig. 1):

Hole No.	From (feet)	To (feet)	Au oz/ton	Ag oz/ton
3	164	165	Tr.	Tr.
	273.5	274.6	Tr.	0.6

	469.0	474.0	Tr.	Tr.
	482.0	482.5	Tr.	0.2
	483.0	487.0	Tr.	Tr.

The one sample, from between 274.6 and 274.9, in drill hole No. 3 is the only one that contained interesting amounts of silver. Samples of core from either side of the silver-rich one were essentially barren, and there is no reason to assign any ore reserves to the rock penetrated by drill hole No. 3.

Wide zones of iron-stained rock were sampled from all the holes, but there was no indication that extensions of the ore shoot exposed in the 400 level adit had been penetrated by the drilling. There is always the possibility that short or narrow ore shoots exist between the drill-hole vein intercepts, but it is doubtful that an important ore body has been missed.

CERTIFICATION

The Operator was notified in a letter dated Feb. 10, 1972, that the Government did not contemplate issuing a certification of possible production as a result of the work performed under the contract. However, the balance of the Government's contribution under the prior contract (OME-6326, contract 2181), in the sum of $9,466.19 shall be paid to the Government through royalties on production with interest at the rate of 6¼ percent per annum. The period of royalty obligation extends to Jan. 30, 1974.

PRODUCTION AND ROYALTIES

There was no production from the mine during the project and there are no unpaid royalties due to the Government.

The mine was idle in Feb. 1972.

SUMMARY

Six diamond drill holes directed downward at moderate angles from a single surface drill site explored an area about 350 feet long and to a depth of 250 feet below the 400 level. Objective was the extensions of a silver-bearing ore shoot exposed on the 400 level. Zones of altered and iron-stained granite were cut in the drill holes, and sparse sulfides were in some of the rock. Assay data indicate, however, that no minable width of mineralized rock was cut by any of the holes.

No further exploration below the 400 level on the Operator's property is warranted. Perhaps there are other promising exploration objectives elsewhere on the Operator's ground that warrant Government participation. These would require additional study.

Dear Mr. Patterson:

Enclosed is a copy of a self-explanatory letter to the Operator under the subject Contract 2297. This relates to the Lien and Subordination Agreements signed by you on February 27, 1971, under the Office of Minerals Exploration program.

The Government's prior lien on the land and upon any production therefrom will continue in existence for the length of time mentioned in the enclosed copy of the letter to the Operator. You are obligated during that period to commit no act and to assert no claim in conflict with the Government's rights under the agreement signed by you, to give advance notice of the Government's rights to any transferee or lessee of any part of your interest in the land or the production therefrom, and to furnish this office with two true copies of such notice.

Sincerely yours,

Harold Kirkemo

Beaverhead County, Montana
Contract 2181

Gentlemen:

The Government does not contemplate issuing a certification of possible production as a result of the work performed under the first cited contract. However, pursuant to Paragraph 1, Annex II, of Contract 2297, the balance of the Government's contribution under the Prior Contract in the sum of $9,466.19 shall be paid to the Government through royalties on production with interest at the rate of 6-1/4 percent per annum as stated in the Report of Review issued in November 1971. The period of royalty obligation extends from January 30, 1964 to January 30, 1974, or until the total sum is repaid with interest, whichever occurs first. The payment of royalties is secured by a lien upon the land and upon any production therefrom.

Royalty payments should be made in favor of the U. S. Geological Survey and mailed or delivered to the Field Officer, Office of Minerals Exploration, Region I, U. S. Geological Survey, U. S. Courthouse, Room 656, West 920 Riverside Avenue, Spokane, Washington 99201. Each payment should be accompanied by two copies of settlement sheets or other suitable sales evidence showing the date of sale, name of the purchaser, the quantity and grade of the production sold, the price per unit, and the gross proceeds and allowable deductions therefrom. The purchaser should be notified of the Government's royalty on production and directed to pay the royalty, computed as provided in the contract, directly to the Government.

The Field Officer should be promptly notified upon the commencement of any production and upon any extended cessation thereof. Production unsold or unused six months after extraction from the ground should be reported promptly to the Field Officer.

Attention is specifically invited to the provisions of Article 2(c) of the Prior Contract referring to the preservation of the Government's royalty rights. Two true copies of any instrument transferring, surrendering, or encumbering any of your company's rights in the lands embraced in the contract shall be furnished to this office.

Sincerely yours,

Harold Kirkemo

SUBJECT: Cancelled checks showing payment for personal services, etc.
OME 6840 (Silver)
Blue Sky Mining Company
Comet Mine
Beaverhead County, Montana
Contract 2297

Attached is certified true copy of four cancelled checks from Blue Sky Mining Company to Bill Hand. Total of the four checks is $3,898.35. The total for Supervisor-Engineer-Geologist claimed on the several vouchers from Blue Sky Mining Company is $3,750.00. To me the attached cancelled checks are adequate documentation that Mr. Hand was paid the $3,750 claimed--I hope that the auditors will agree.

It might be necessary for you to make additional copies of the attachment--I have retained one copy here.

MEMORANDUM

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: Operator's Final Report
OME-6840 (Silver)
Blue Sky Mining Company
Comet Mine
Beaverhead County, Montana
Contract 2297

Enclosed is an acceptable Operator's final report on the subject contract. This fulfills the Operator's obligation under the contract. I recommend that the $200.00 held in suspense from the Operator's August-September 1971, voucher, pending receipt of a final report, be released to him.

A Report of Review is now in order. The accepted units of work completed under the contract are as follows:

Fixed Unit Costs

Drill site preparation	$ 250.00	
Road maintenance during project	250.00	$ 500.00

Actual Costs

Category (1) Independent Contracts

Mobilization and demobilization - 1 drill unit	$1,200.00
Diamond core and overburden drilling - 2,387.5 ft. at $8/ft	19,100.00
Reaming and casing - 47 feet at $4/ft	188.00

Lost casing in completed holes - 73 ft. at $2/ft	146.00	
Cementing and redrilling - 58 hrs at $14/hr	812.00	$21,446.00
Category (a) Personal Services		
1 Supervisor-Engineer-Geologist 3-1/8 months at $1,200/month		3,750.00
Category (3) Operating materials and supplies		
Cement, 23 sacks at $8/sack	184.00	
Drill mud, 16 sacks at $2.50/sack	40.00	
Cardboard core boxes, 210 at $1/box	210.00	
Sludge collecting, sampling supplies, and sample sacks	46.00	480.00
Category (7) Miscellaneous		
Office and Accounting expense 2-1/2 months at $75/month	187.50	
Assaying for gold and silver 56 at $5/sample	280.00	467.50
Total accepted cost:		$26,643.50

The work failed to find downward extensions of ore that had been mined on the 400 level. I recommend that there be no Certification of Possible Production. Still outstanding, however, is the Government's lien under a prior contract in the sum of $9,558.09, plus accrued interest at the rate of 6-1/2 percent per annum.

OPERATOR'S FINAL REPORT

Blue Sky Mining Corporation, Operator
521 S. Washington St. Dillon, Mt. 59725

to

Office of Minerals Exploration
U. S. Courthouse Building Room 656
W. 920 Riverside Building
Spokane, Washington 99201

Docket - OME--~~5840~~ 6840 Silver
Contract 14-08-0001-2297
Contract Amount $32,640.00
Gov/t Participation 75%
Completed Sept. 17, 1971

Historically, from the comming of the white man the white quartz viens on Comet Mountain have challenged his wit. Some of them even "laid their money on the line" to drive a long exploration cross cut some 450 feet below the upper workings. Some of the viens, numbering perhaps seven, make bold impressive outcrops of white quartz showing galena and gree copper carbonate. Selective mining was attempted by taking only part of the viens.

The purpose of this exploration project was to probe the unexplored sections of the Comet Vien 150 feet above the lowest workings and again 150 feet below the upper workings and some 250 feet along the strike. More particularly for the extension of the ore mined on the 400 level and thereabouts. The project required drilling six "BQ" drill holes (yielding 1 7/16 inch core) to a depth of between 300 feet and 500 feet in a fan pattern. Intersection with the vien was from 40° to 60°.

Some 2,387 feet of coring was performed. Most of it in the hard unaltered granite wall rock. Core recovery was about 95% with no question of complete recovery at the vien.

Viens are usually sandwiched between 4 to 10 feet of altered granite in which the orthoclase has been altered to kaolin, the hornblende destroyed, and the biotite altered to muscovite.

Geochemically, from the soils, the viens make poor impressions. Some 18 samples were taken in the "B" soil zone immediately over holes three and four. The result are plotted on that section.

RECEIVED
OCT 6 1971
O. M. E.
SPOKANE, WASH.

OPERATOR'S FINAL REPORT

Reference is made to the accompanying cross sections displaying the drill holes, their intersections with various structures and assays thereof. In all probability the structural pattern is oversimplified. In any event no discovery of ore was evident. Where values exhibited themselves they were far too narrow for profitable extraction.

Also attached is a longitudinal section indicating the hole position as it intersected the vien and the appropriate assays.

Costwise, the entire program of drilling 2,387 feet cost $26,755.40 or about $11.20 per foot. Broken Down in the following items:

Drill site Preparation ----	10½¢ per foot	Mobilization --	50¢ per foot
Rd.Maint. During Proj.	10½¢	Reaming & Case	7½¢
Diamond Core Drilling	$8.00	Lost Casing	6¢
Cententing & Redrilling	34¢	Mud ----------	2¢
Supervisor-Engr.	1.56	Core Boxes	10¢
cement	10¢	Assaying	12½¢
Sludge Collecting & Sampling Supplies ----	2½¢	Office and Accounting	8¢

The total was nearly 20% less than estimated cost and the project was completed in some 40% of the time alloted.

The operator and his staff wish to acknowledge the fine layout and excellent cooperation making possible the smooth execution of the program.

Approved for: $ 6936.51
(SUBJECT TO AUDIT)

Signature MS

Date OCT 6 1971 Vou. No. 21638

(SEE OTHER SIDE)

FOR OPERATOR'S USE	FOR GOVERNMENT USE
REMARKS	REMARKS
	1] Disallowed 7 sacks cement at $8/sack, 26 core boxes at $1/box, and $9.90 of sludge collecting and sampling supplies because category (3) total should not exceed $480.00 2] Withhold $200.00 from payment until receipt of Operator's final report. 3] Disallowed costs of 4 assays because receipts show only 19 samples assayed.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of two parts.

FIRST, the Operator's Monthly Voucher on Form 9-1648 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and three copies of each of the two sections of this report to the OME regional Field Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, FORM 9-1648

In the left hand column list the items for which costs were incurred during the month, and also the items for which costs were previously reported. For items previously reported, show only UNITS TO DATE and COSTS TO DATE. Items listed should conform to Exhibit A of the contract (Estimated Costs of the Work). The total of COSTS THIS MONTH followed by the Operator's signature constitutes a claim for payment of the Government's share of the costs. The Operator or his agent must sign the certification in the lower left corner.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as unemployment taxes, employee's liability insurance, and depreciation of Operator-owned equipment. The certification may be stated thus, "Certified True Copy", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Field Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Branch of Budget and Finance

OPERATOR'S NARRATIVE REPORT
Blue Sky Mining Corporation
521 S. Washington St. Dillon, Mt. 59725
for
the Months of August and September 1971

to
Office of Minerals Exploration
U. S. Courthouse Building Room 656
W. 920 Riverside Avenue
Spokane, Washington 99201

Hole No. 6 was collared on August 6, 1971 and was satisfactorily completed on August 20, 1971 at a depth of 424 feet of BQ hole. Some mechanical difficulties were encountered (hydraulic) and temparary Summer help returned to school and other persuits. Vein #4 was crossed as white barren quartz from 397 to 405 feet. A three foot split assayed a trace in gold and 1.7 oz. silver per ton.

The machine was then positioned and inclined for Hole No.5 on August 21, 1971. The entire Udy crew took a few days off and moved a drill rig onto another job. Drilling was not resumed until August 28th. Work was again interupted by an indicated shortage of water on September 1 but the problem was resolved and ernest drilling was begun on September 2nd. With persistance and long hours the hole was drilled to a depth of 344 ft. of BQ and satisfactorily completed on September 4, 1971 at 11:45 P.M. Values were extremely low about 0.3 oz. silver per ton.

Core recovery again exceeded 95% on no sludge was recovered.

This marked the end of a program completed in about one third the time and substancially less than the anticipated cost. Surely this is a credit to both the Government and the operator.

Respectfully submitted,

BLUE SKY MINING CORPORATION

United States Department of the Interior

GEOLOGICAL SURVEY

OFFICE OF MINERALS EXPLORATION
656 U. S. Court House
Spokane, Wash., 99201

September 22, 1971

MEMORANDUM

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: Final inspection
OME-6840 (Silver)
Blue Sky Mining Company
Comet Mine
Beaverhead County, Montana
Contract 2297

I made a final inspection of the subject project on Thursday, Sept. 16, 1971, during which I conferred at his home with Mr. Bill Hand, Engineer, and then the two of us drove to Argenta, Mont., to inspect the core which is stored in a locked shed.

The core is stored in 246 core boxes. Aggregate hole length is 2,387.5 feet. Total cost of the project, as tentatively approved on the final voucher is $26,643.50, or $5,996.50 less than originally estimated. Cause of the decreased cost is lower unit cost for drilling and lack of need for water supply at an estimated $1.75 per foot.

The drilling successfully intersected altered but only sparsely mineralized vein zones. Fifty six samples were assayed with very discouraging results. The work did not indicate an extension of the known ore shoot below the 400 level.

The final voucher arrived at our office on Sept. 20, 1971, and has been transmitted to Washington, D. C. Mr. Hand had about completed the final report, which we should receive in a few days.

Willard P. Puffett

FOR OPERATOR'S USE	FOR GOVERNMENT USE
REMARKS	REMARKS 1 original & suspense statement for voucher 20614 submitted with original of this voucher.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of two parts.

FIRST, the Operator's Monthly Voucher on Form 9-1648 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and three copies of each of the two sections of this report to the OME regional Field Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, FORM 9-1648

In the left hand column list the items for which costs were incurred during the month, and also the items for which costs were previously reported. For items previously reported, show only UNITS TO DATE and COSTS TO DATE. Items listed should conform to Exhibit A of the contract (Estimated Costs of the Work). The total of COSTS THIS MONTH followed by the Operator's signature constitutes a claim for payment of the Government's share of the costs. The Operator or his agent must sign the certification in the lower left corner.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as unemployment taxes, employee's liability insurance, and depreciation of Operator-owned equipment. The certification may be stated thus, "Certified True Copy", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Field Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Operator's Narrative Report
Docket No. OME-6[illegible] Silver
Contract No. 14-08-0001-2297

Blue Sky Mining Corporation
Comet Mine, Beaverhead County, Montana
For Month of June 1971

Operations progressed favorably during the month. Hole No. 3 was collared on July 6 using NXWL rods and diamond bits which were carried to a depth of about 120 feet.

Udy Core Drilling, Mr. David Udy, Owner-mgr., Box 84, Leadore, Idaho 83464 was doing the drilling.

At about 120 feet the water was lost unbeknown to the driller. When the overshot was slid down the rods it had no water cushion and went through the bit. Several days were consumed in cementing and retrieving the apparatus.

New BQWL rods bits and core barrel were initiated on this hole which yielding 1/8 inch large diameter core. The hole was completed on July 17th. It encountered some four zones of alteration and quartz introduction, the last of which assayed 177 oz. per ton in silver and .33 oz. per ton in gold over a 0.3 foot width.

Core recovery was deemed satisfactory loosing only about one foot in some 300 feet of core considered. This being the case, it was not considered necessary to recover the sludge. The hole was drilled 320 feet deep some 10 short of the alloted footage.

Companion holes 8 and 7 were collared July 26 and August 1st and completed the 31st of July and the 6th of August. Both are considered satisfactory.

Results are not yet complete on No. 7 hole but those of No.8 showed no significant values. Because of the intermitent altered and unaltered zones, the footwall was difficult to identify; the search of which, took the hole to 505 feet. Some 65 feet beyond its projected 440 feet. However, another vein was encountered at about 490 feet (assigned No. 26 Vn). Value-wise little of importance can be placed on it.

As of this writting, hole No. 6 is being drilled.

Much more detail is available in the drill logs. The mechanics of drilling are explained somewhat in the Narrative supplement.

Respectfully submitted,
BLUE SKY MINING CORPORATION

Roger C. Pierce

JULY REPORT
Narrative Supplement OME 6840

This portion of the report is not meant to be read by anyone not interested in the details on how this program is carried out.

It is felt that the program is worthy exploration-wise and is being executed in an efficient manner along lines of established procedure.

Equipment Includes:

(1) Joy 22 Diamond Drilling Machine powered by an International Harvester UD 9A Diesel engine.

(2) Water under pressure is delivered to the water swivel via a piston-type mud pump powered by a 3-cylinder Sheppard Diesel engine. Water is pumped to the site by a comparable pump through a 3/4" plastic line but powered by a Wisconsin Air-Cooled gasoline engine.

(3) A 3-legged derrick to hoist the drill rods.

(4) Wire line overshot assembly (this is dropped down the hole on the end of a cable to "fish out" the core-bearing innertube).

(5) A wire line hoist with ¼" cable, power transmitted from Diesel Engine by an oil hydraulic motor. This pulls the overshot and corebearing inner tube to the surface to recover the core.

(6) 500 feet of BQ (Longyear) wire-line drill rods (new on this job).

(7) One 10 ft. core barrel with 2 inntertubes (One being "de-cored" while the other is being dropped into the hole and

drilling commenced again) (with Overshot attachment--O.A. length is 13 ft). To assure that the core is not lost due to inntertube blockage, the overshot receiving attachment of the core barrel is fitted with rubber washers. When undue pressure is exerted on the inner tube for any reason, the washers expand and close off the water which is immediately detected by the driller, signalling that he must unblock the inner tube.

(8) Water swivel, which allows drilling solutions to be introduced into the center of the rotating drill rods. Drilling Solutions (Media) are required to wash away the cut out rock and to keep the bit cool. Diamonds will burn very quickly without a means of cooling.

(9) Stock Watering Tanks--These are used to receive and store the water and act as a minute reservoir from which the pumps take their water.

(10) Drill Rod Dogs--These act as a check valve when drill rods are either being raised or lowered--grabbing the rods fast so that they do not run back down the hole.

(11) Dual tired flat bed 2-ton Chev. Truck on which the drill rig and supplies and accessories are transported to the drill site.

(12) 4-wheeled rubber tired trailer on which the pressure pump is mounted.

1--4 x 4 Pickup truck for transportation and supply transport

1--2 x 4 Pickup truck for transportation and supply transport

Propane Oxygen Cutting and welding torch.

Apparatus Cont.

Stillson Wrenches for screwing rods and misc. tools.
Supplies include, gasoline and diesel oil, motor oil, hydraulic oil, Portland cement, calcium chloride (to promote cement setting), bentonite (used as a drilling mud with water), water at the rate of about 7 gallons per minute, grease for drill rods (if, at all possible, the drill rods have a coat of grease, this reduces friction and the destructive "chattering" in the hole), core boxes and blocks of wood for core markers, "Marks a lot" pen and so on.

PROCEDURE

Administration:

Responsibility for the drilling lies on the shoulders of Mr. David Udy who operates as a sole proprietorship. Another endeavor is the operation of a ranch near Lead Ore, Idaho. He has had 17 years of experience in drilling, both as a contractor and as one who has worked for others. His age is about forty; he is married and has three sons that directly assist in the drilling effort; and a fourth, who along with his wife and daughter, remains on the Lemhi to operate the ranch. One son, Tom, will soon leave to return to college, upon completion of which, he will become a policeman. This "family sort of" arrangement seems to promote incentive and efficiency.

The entire crew is camped at the operator's cabin on the road and power line to Elkhorn Hot Springs about three miles from the site. Supplementary quarters are provided by a house trailer and a tent. It is suspected that Mrs. Tom Udy prepares most of the meals, which is a sizable task for a dual shift operation.

Agreed payment for work accomplished is pretty much along the lines of this OME Contract. Incentive payment for the help is interesting, though; each driller gets $1.25 per foot and his

helper gets 75 cents. The senior Mr. Udy mentions that these arrangements, as to equipment and men, were the ones in his experience that have held together and gotten the job done.

The proverbial "hole in the donut" and its recovery are what this entire program is all about. It is known that a diamond impregnated pipe (bit) pressed against solid rock with former turned and cooled will penetrate the rock. Further, if the protroducing "donut hole" (core) is then broken off, it is a factual sample of what has been drilled. So, Udy Drilling, enlist the functions of a Joy 22 drilling machine to turn the bit and press it hydraulically against the rock. They grasp the core with lifter springs (like pulling one's finger from a wicker bottle), break it off and hoist it in its container (the innertube) to the surface through the hole in the center of the rods. The innertube is relieved of its contents, reassembled, and dropped into the hole where it returns and is locked into position by gravity.

The entire operation may become routine with the driller ever alert to core blockage and water circulation and his helper boxing core, cleaning tools, fueling engines, receiving the innertube, dispatching the overshot and miscellaneous details.

The core is received from the innertube first core first in a trough; it is then placed in corrugated paper boxes, each having five rows of 2 feet each. Therefore, each box should theoretically contain ten feet. However, owing to markers (1" x 1¼" x 3/4" wood blocks) and jagged ends the boxes commonly contain less than capacity. Those pieces of core that are too long are tapped with a hammer and broken to fit into the box. The box is marked "start," signalling the point of beginning. The core is laid out, left to right (as one reads a book). Footage is marked at the beginning and end and any points in between that are convenient. The box is marked as to footage and hole number.

It is common while logging core to encounter instances where more core is measured than there are feet of hole to accommodate it. Analytically, the innertube can take a capacity of ten feet of core. This is attached to the end of a string of drill rods that are exactly ten feet long, but the overshot assembly on the end of the core barrel requires another 3 feet. So that when ten 10-foot rods are down the hole and a core barrel on the end of the last core would come from 113 feet. This can be confusing and to "top it off" it may not be possible for the core lifters to break the core at the exact place and thereby slide up aways, leaving several inches or even a foot remaining to be lifted the next run.

Additionally, many times core may have to be lifted premature of the 10 feet owing to blockage and so on. It is virtually impossible to estimate these minute footages.

Nonetheless, over the entire hole length everything evens out and virtually all the core can be reassembled and accounted for. Overall recoveries are marked on the drill logs.

Hole No. 3 165'-167' unaltered

The core upon being received in the boxes is then logged either on the spot or transported from the site and then logged. This amounts to reconstructing the core as it laid in the ground as close as possible and accumulatively measuring it. This figure is recorded along with the marked "drill run" for comparison. In an effort to graphically illustrate the competency of the rock,

the number of broken pieces are counted and posted at the approximate angle on which they broke, usually this amounts to jointing.

The cores are then wetted. This helps bring out the varying colors and crystal boundaries. Marked on the core logs are the degrees of alteration noted. Mineralization is also noted as well as other pertinent data.

Sections of core that are mineralized or suspected of so being are split with a diamond saw located at the Hand Mine at Argenta. This machine amounts to a rotating circular disc 12 inches in diameter whose periphery is diamond dust impregnated. The core is placed lengthwise in a "V" trough and pushed into the disc (about 500 rpm) the lower part of which is running in water. The water keeps the diamond cool and washes away the (cut away) rock. This splitting procedure provides an accurate cross section of core for analysis and leaves a complete file of core for future inspection.

Sample sections of the core are crushed in a lab crusher and a cut sent to a commercial assayer for gold and silver determinations. The roughly ½" reject is placed in marked paper bags and filed with the core, which are stored at the Hand Mine at Argenta.

The assayer's cut is sent by bus to Western Laboratories, which is successor to Goodall Bros., P. O. Box 537, Helena, Montana 59601 (Phone 406 442-3770). These assayers established practice at their present location in 1909 and have done business as assayers, analytical chemists, and shipper's representatives. The latter has significance in that they pit their work against that of the ore buyer and any incompetency would most certainly

disqualify him here. This same concern has represented the writer's family in the sale of some 50,000 tons of ore. The present manager of Western Laboratories, Horace O. Hand, received his initial training at Montana College of Mineral Science and Technology and his practical training at the Hand Mine in Argenta. He is a brother to the writer.

Results of the assays are posted both on cross section and on the drill logs.

Technical responsibility for this program as well as preparation of these reports is charged to William M. Hand, the writer. The writer is a 1948 graduate of the Montana College of Mineral Science and Technology (the old Montana School of Mines) in Butte in the field of mining engineering. He is a registered professional engineer in Montana (969E). Experience since graduating has been in hard rock mining at a family mine at Argenta where crude direct smelting ore is sold to the American Smelting and Refining Co. at East Helena. Duties are technical, administrative and supervisory. Supplementary activites include City of Dillon councilman, president of the Dillon Rotary Club, officer in a fraternal order, active in mining association work, Court appointed executor to the estate of his father. He is married, resides in Dillon with a wife and two children, a son entering high school and a daughter entering Montana State University at Bozeman this fall. His address is 30 S. Arizona Street, Dillon, Montana 59725, and his residence phone is 406-683-4420. He can usually be reached after 6:00 p.m.

Collaring the various holes is accomplished by setting up

the transit on the point "B" close to the drilling machine and backsighting on station "A" on the vein outcrop. "A"-"B" form the base line. From descriptive and graphic geometry, the horizontal and vertical angles are determined that will properly intersect the vein. With this information the horizontal angle is swung and two stakes driven usually by plunging the scope. The drilling machine is then fitted with a 10-foot drill rod and the machine oriented until both points can be sighted through the rod by tilting the drilling head but not moving the base of the machine.

The vertical angle is measured by a Brunton compass and the head chisel marked. The two anchor holes are drilled and the hole collar drilled, anchors inserted, and all cemented and permitted to set fast. Setting usually requires 8 hours. The anchors are then securely attached and the vertical angle checked once again and the final collar pipe drilled in.

Major Feldspar: Orthoclase
Mafic Minerals: Horneblende & Biotite

Felsic Minerals: Quarts
Orthoclase

Observed Structures:
a. Jointing
b. Faulting on joints

Ore Minerals:
a. Quartz
b. iron
c. Galena
c. Pyrolusite (Drendites)

Degrees of Alteration Noted:
a. Unaltered Gr. = "Bird's Eye"
b. Blurred pinkish Orthoclase Crystals
c. Orthoclase softy and Claylike
d. Horneblende to red FeO Blotches
e. Biotite to muscovite

Survey

Footage	Bearing	Inclination

Notes and Conclusions:

1. About 3 inches of ore was encountered at 275 assaying 177 oz./ton in Silve
2. 6 Altered zones were crossed two of which contained quartz; the first proved barren at 175 feet.
3. Structures were encountered as expected.
4. Disregarding the first 24' of hole- 296 feet of hole yielded 295.06' of C
5. The hole was completed "satisfactory"

Notes and Conclusions:

1. Structures encountered in No. 3 hole were extended conformably into Hole 4.
2. Probably the most significant information was the existance of primary sulfides in the unaltered granite from 448 to 457.
3. Of the last 439feet of hole 435.49 feet of core was measured. Equivalent to 99.2% Recover
4. Highest values encountered were 1.3 oz. per ton Silver and trace in gold.

Rock: Granite
Color: Felsic

Major Feldspar: Orthoclase
Mafic Minerals: Horneblende & Biotite

Felsic Minerals: Quartz
Orthoclase

Ore Minerals:
a. Quartz
b. iron
c. Galena
c. Pyrolusite (Drendites)

Observed Structures:
a. Jointing
b. Faulting on joints

Degrees of Alteration Noted:
a. Unaltered Gr. = "Bird's Eye"
b. Blurred pinkish Orthoclase Crystals
c. Orthoclase softy and Claylike
d. Horneblende to red FeO Bloches
e. Biotite to muscovite

Survey

Footage	Bearing	Inclination

Notes and Conclusions:
1. Three altered zones were crossed, ore minerals were hard to detect.
2. 335 feet of hole yielded 333.305 feet of core or 99+% recovery.

Notes and Conclusions:
1. four stronger structures were encountered -a new one marked vn 26 was crossed searching for the unaltered footwall of vn 24.
2. Vn 22 made the best show of values. Assayed 2.1 oz./ton Silver over 1.3' hol
3. Vn 24 assayed 1.0 oz.per ton silver over 5' faces.
4. In 492.5' hole 483.5' core was recovered or about 98% recovery.

Memorandum

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: Interim Inspection
OME-6840 (Silver)
Blue Sky Mining Company
Comet Mine
Beaverhead County, Montana
Contract 2297

I visited with officials of the Blue Sky Mining Co. in Dillon on Wednesday, August 25, 1971. The visit was necessary to assist the Operator in preparing Form 9-1648. Blue Sky Mining Co. had submitted a voucher, dated August 6, which was not made out correctly. They then submitted another voucher, dated August 20, 1971, which, too, was incorrectly prepared. On the latter voucher they had failed to list the work completed in prior months and had failed to insert the correct figures in the units column.

I spent about two hours with Mr. Bill Hand, Engineer for the Operator, in discussing proper procedures for preparing vouchers and then together we prepared another set of forms 9-1648, which were mailed from the Dillon, Montana, post office.

Mr. Hand and I then visited the Hand mine near Argenta, Montana, where the Blue Sky Mining Company core is stored. The core is in cardboard core boxes that are stored in a locked warehouse. Mr. Hand uses a diamond saw, instead of a core splitter, to prepare portions of the core for assay.

Five of the six holes had been completed and the results are discouraging. Assay data indicate 0.3 feet containing 177.0 ounces per ton in drill hole 3; the assays from other parts of the holes range from a trace to 1.3 ounces per ton.

Mrs. David Udy, wife of the drill contractor, telephoned me on August 30, 1971, to learn if the Operator had been paid for any of the drilling. I explained to her the trouble we had in getting a properly prepared voucher. Apparently the Operator is waiting until receipt of the Government's share of the cost before he pays the driller.

It now appears likely that the project will be completed by the end of the first week in September. Drill recovery has been good; samples have been properly prepared for assay, and the Operator's engineering and geologic reports are adequate. The engineer, Mr. Hand, is aware of our requirement for a final report. Unless very favorable results are found in the last hole to be drilled, there seems little chance that the work will result in a Certification of Possible Production.

Re: OME-~~6389~~ 6840 (Silver) Blue Sky
Spokane National Mines, Inc.
New Departure Mine
Beaverhead County, Montana
Contract 2199

Dear Dick:

First, thanks again to you and Mrs. Shoup for comming to our banquet in Butte; I am sure your address "hit the nail on the head".

Dick, I have had the good fortune to be the "Supervisor-Engineer-Geologist-Administrator" for a 75-25%/for/an Office of Minerals Exploration (OME) contract here in Beaverhead County. Officially it is with the Blue Sky Mining Company and comprises diamond drilling some 2,300 feet in the search for silver.

I believe that this made possible for the small miner a means of taking a look and the collection of basic information. The Government's participation is around $24,000 and the operator about $8,000.

Although it is not quite completed and we may not have found a lot--------- its a real good program. Kind of think it should be expanded.

Just my thoughts.

Kindest regards,

Bill Hand,

Memorandum

To : Chief, Office of Minerals Exploration

From : Field Officer, Region I

Subject: Interim Inspection
OME-6840 (Silver)
Blue Sky Mining Company
Comet Mine
Beaverhead County, Montana
Contract 2297

I visited the Comet mine on Monday, July 26, 1971, with Mr. Pierce, the Operator, and Mr. Hand, his supervising engineer-geologist. We visited the diamond drill rig and then spent about an hour examining exposures in the 400-level adit.

Two drill holes had been completed. The altered zone in which the vein occurs was intersected by both holes but the footage required was more than approximated in the contract. Hole No. 3 was 315 feet long and hole No. 4 was 457 feet long. Sulfides were in the altered zone; silver content will be learned from assays of split core.

Core recovery is well above 90 percent. The Operator contracted with a driller for $8.00 per foot. The OME contract allows as much as $9.50 per foot so there will be sufficient funds for the added length of hole that apparently will be required to completely intersect the altered zones.

The project is proceeding satisfactorily. Drill recovery is high; Mr. Hand is doing an excellent job in logging the core and preparing samples for assay. Drilling progress is satisfactory--the project might be completed by September 1, 1971.

1) Attached statement inadequate as it does not include total ~~part~~ cost for move-in mobilization expense.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of two parts.

FIRST, the Operator's Monthly Voucher on Form 9-1648 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and three copies of each of the two sections of this report to the OME regional Field Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, FORM 9-1648

In the left hand column list the items for which costs were incurred during the month, and also the items for which costs were previously reported. For items previously reported, show only UNITS TO DATE and COSTS TO DATE. Items listed should conform to Exhibit A of the contract (Estimated Costs of the Work). The total of COSTS THIS MONTH followed by the Operator's signature constitutes a claim for payment of the Government's share of the costs. The Operator or his agent must sign the certification in the lower left corner.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as unemployment taxes, employee's liability insurance, and depreciation of Operator-owned equipment. The certification may be stated thus, "Certified True Copy", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Field Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Operator's Narrative Report
Docket No. OME-68[illegible] Silver
Contract No. 14-08-0001-2297

Blue Sky Mining Corp.
Comet Mine, Beaverhead County, Montana
For Month of June 1971

Having established the approval of this OME loan the first part of June, efforts were immediately commenced to execute the work commitment.

Bids and estimates were invited and secured to complete the work under the stated specifications and Mr. Richard Udy of Salmon, Idaho (or Lead Ore) was awarded the diamond drilling.

Plans were immediately initiated to locate the collars of the six holes.

The services of W. M. Hand, Registed Professional Mining Engineer, were enlisted to assist in laying out the work, supervise its execution and provide the technical knowledge in logging the core.

Hand has had more than twenty five (25) years of experience in mining at the camp of Argenta where he assisted in the family operation of the Maulden or Hand Mine which is located about twenty (20) miles east of the Comet Mine.

On June 21 a preliminary survey was made to establish the various hole collar elevations. It was soon learned that the holes as laid out would be far too long; in otherwords,the chances were very evident that insufficient footage was available to cut the veins properly.

The day of June 22 was spent in the office trying various collar positions by means of descriptive and graphic geometry. It was soon evident that a drill site would have to be cut yielding to a minor compromise in order to stay within the budgeted hole footage and the cutting of only one drill site.

The best collar position was determined to be about 270 feet north of the vein outcrop and the hole direction altered slightly to intersect the structure at the predetermined target area. Re:attached Illustratio

Having established the need, Wednesday June 23 was spent running a line to the hole collar and determining its elevation and approximately the excavation effort required.

Efforts were immediately begun to hire the needed equipment. Fortunately, a D8 Caterpillar Dozer was readily available and with the exception of mireing in the mud, the site was expeditiously prepared on Friday and Saturday June 25th and 26th on the latter of which the final collar of hole number three (3) was laid out and Mr. Udy so informed.

An attempt was made to ascend Comet Mountain with drilling equipment on Monday June 28th but the rains had made the trek impossible and completion had to await Wednesday June 30th. On Wednesday, rather Thursday July 1, the Joy Diamond drill rig was leveled and positioned to collar and drill Hole No. 3.

Respectfully submitted,
BLUE SKY MINING CORPORATION

Contract 2297

Dear Mr. Pierce:

Enclosed is a three-month supply of the Operator's Monthly Voucher, Form 9-1648. The original and three copies of the completed report forms as well as the narrative, maps, assays, and all technical data, should be submitted for each month in which costs have been incurred under the contract. However, in the event that you do not wish to submit a voucher for any month, the narrative report for the work done in that month is required. Delay in processing can be avoided if reports are submitted promptly to this office.

Also enclosed are three copies of Standard Form 38, entitled "Notice of Nondiscrimination in Employment." In accordance with Executive Order 11246, which is Exhibit B of your contract, you shoul complete one copy and send it to any labor union that may be involved in your OME contract work and should post one or more copies in conspicuous places availabe to employees or applicants for employment.

We would appreciate being advised when the OME contract work has started.

Sincerely,

Willard P. Puffett

Dear Mr. Pierce:

Enclosed are the original and three copies of a proposed contract to explore the subject property. The contract consists of MME Form 50 (seven pages), Annnex I (one page), one Lien and Subordination Agreements, Annex II (one page), Exhibit A (four pages), Exhibit B (one page), and two maps (Figures 1 and 2). All copies of the contract have been signed for the Government.

You or whoever will be in charge of carrying out the project work under this contract are urged to read carefully all the specifications set forth in Exhibit A. Without prior Government approval subsequently confirmed in writing, the Government may refuse to contribute to the cost of any work that does not conform to those specifications. Your attention is specifically directed to Article 10 and Exhibit B. Appropriate forms to meet the compliance requirements will be sent with forms for reporting monthly progress and vouchering.

If the terms and conditions are satisfactory, sign all copies, keep the Operator's copy, and return the other copies to this office.

If any part of the proposed contract is not satisfactory, please return all copies unsigned to this office with a statement of your proposed changes for consideration.

The 7-3/4 percent interest accrues from the dates on which individual payments are made by the Government and like the principal is repayable from royalty on production.

In your letter returning the signed contracts please state whether the claims involved in the project are to be encumbered in any manner as security for repayment of the advance of funds by Cook, Incorporated. You assured me in a telephone conversation that there were to be no encumbrances; however, we need your written statement to this effect.

Sincerely,

Willard P. Puffott

WASHINGTON, D.C. 20240

IN REPLY REFER TO:

May 26, 1971

Memorandum

To: Chief, Office of Minerals Exploration

From: Assistant Solicitor--Mines and Minerals Exploration

Subject: OME-6840 (Silver)
Blue Sky Mining Corporation
Comet Mine
Beaverhead County, Montana

We have approved the subject contract for legal sufficiency and forward it herewith.

The letter which you recently forwarded to us from Mr. William A. Cook, President, Cook, Incorporated, dated May 17, 1971, stating that the Company will make available to the applicant the sum of $8,000 appears to provide sufficient assurance that the applicant will have sufficient funds to pay its share of the project costs. However, the letter does not indicate whether or not the claims involed in the project are to be encumbered in any manner as security for repayment of the advance of funds by Cook, Incorporation. You should determine whether or not this is the case. If so, it will be necessary to secure a Lien and Subordination Agreements from Cook, Incorporated in order to protect the Government's interest.

D R Tindal

Donald R. Tindal
Assistant Solicitor
Mines and Minerals Exploration

Re: OME-6840 (Silver)
Blue Sky Mining Corporation
Comet Mine
Beaverhead County, Montana

Dear Mr. Cook:

Thank you for your letter of May 17, 1971, assuring us that Cook, Incorporated, is ready to make available to Blue Sky Mining Corporation, applicant, 25 percent of the total estimated value of a proposed OME contract to explore the Comet mine. This amount ($8,160) would cover the applicant's share of a contract, and satisfies our request to Blue Sky Mining Corporation for this assurance. We have no instruction concerning how these funds should be transferred or made available to Blue Sky Mining Corporation. Any arrangement mentioned in your letter should be satisfactory to the applicant.

Thank you, also, for the financial statement of Cook, Incorporated.

Sincerely yours,

Harold Kirkemo

ATTN: Mr. Harold Kirkemo
Chief, Office Minerals Exploration

Gentlemen,

OME 6840

At the request of Mr. Roger Pierce, President, Blue Sky Mining Corporation, Dillon, Montana, I am writing to confirm our understanding with his organization regarding underwriting 25% of an exploration loan. I understand that your department is considering Mr. Pierce's application for a loan totaling approximately $32,000.

Cook, Incorporated is ready to make available 25% of the loan value ($8,000 approximately). These funds can be made available to Blue Sky according to your desire eg., certified check, bank draft or check payable to Blue Sky. Would you please let the writer know the best procedure to follow for this transfer in order to satisfy the loan requirement? Enclosed is a copy of our most recent financial statement to indicate our ability to match funds.

Thank you.

Respectfully yours,

COOK, INCORPORATED

Memorandum

To: Assistant Solicitor
Mines and Minerals Exploration

From: Chief, Office of Minerals Exploration

Subject: OME-6840 (Silver)
Blue Sky Mining Corporation
Comet Mine
Beaverhead County, Montana

In response to the two questions on this application you asked us today, we have been advised by phone by Mr. Willard P. Puffett, Field Officer, OME Region I, that:

1. Mr. Roger C. Pierce, President, Blue Sky Mining Corporation, will furnish a current financial statement for the corporation.

2. Cook Incorporated, Bloomington, Indiana, a major shareholder in Blue Sky Mining Corporation, manufactures medical equipment. Mr. William A. Cook will prepare a letter attesting that Cook Incorporated is willing to finance Blue Sky Mining Corporation as needed for an OME contract.

These documents will be submitted to you for review upon receipt in this office.

Re: O.M.E. 6840 (Silver)
Blue Sky Mining Corp.
Comet Mine, Beaverhead County, Montana

Gentelmen:

Thank you for your letter of March 9, 1971. I am sorry about the forms filled out in error.

file OME-6326

Please find enclosed 2 copies of form MME63, completed as requested. I did not realize that a report was necessary when mill returns were being forwarded on production. Also, please find 5 copies of the lien and subordination agreements enclosed.

We, Blue Sky Mining Corporation, hereby acknowledge our obligation on O.M.E. 6326, Contract 2181, however, it would appear that the San Francisco Claim (Survey no.3353) was included in the original contract (O.M.E. 6326). The San Francisco claim is under a different ownership and Blue Sky Mining Corporation does not have possession of the San Francisco claim, due to conditions beyond our control.

We hope we have cleared up the errors in filling out the forms. Thank you for your patience and cooperation.

Very truly yours,
Blue Sky Mining Corporation

Roger C. Pierce

Re: OME-6840 (Silver)
Blue Sky Mining Corporation
Comet Mine
Beaverhead County, Montana

Gentlemen:

Thank you for your letter of March 1, 1971, enclosing additional information, copies of the claim map, and Lien and Subordination Agreements requested in our letter to you dated February 24, 1971.

As the Lien and Subordination Agreements were not properly executed, we are enclosing a sample copy showing exactly how it should be executed and six copies of the form for your use. Please return to this office five copies of the form properly executed.

Although a legal review of the application has not yet been made, it is likely that obligations remaining under provisions of a prior OME Contract (OME-6326, Contract 2181) to explore this property would carry over and be added to the Government's contribution under a new contract. Any royalties on production from the property would be applied first against the accrued interest, then on the principal (amount of the Government's contribution) under the prior contract, and when these are repaid in full, against the interest and principal under the new contract. In no event would more than one royalty be due or payable on the same production. As of February 28, 1971, the outstanding balance on the principal under the prior contract was $9,558.09 and accrued interest totalled $3,585.15.

We will draft a contract following the modified program agreed upon by you and Mr. W. P. Puffett, Field Officer, OME Region I, upon receipt of properly executed Lien and Subordination Agreements, and acknowledgment from you of the obligation remaining from the prior contract on this property.

With reference to Contract 2181, we have not received from you a reply to our letter of January 29, 1971 (Form MME 63), asking to be informed about changes in the status of the property and production from it during the period of royalty obligation. Please furnish this information on the enclosed form letter.

Sincerely yours,

Harold Kirkemo

Re: OME 6840 (silver) your letter 2/24/71
Blue Sky Mining Corporation.

Gentlemen:

(1) Blue Sky Mining Corporation is prepared to furnish our share of the cash funds necessary to complete this project, minus equipment use credit as agreed upon and necessary to complete the program.

(2) H. L. Patterson lease, and extension is planned, as Mr. Patterson is aware of our present exploration, inasmuch as he has signed subordinate agreements. Montana law allows a ½ owner to operate a mining claim without the consent of the other ½ owner, providing for a 10% of net profit to go to the dissenting owner. In short, a ½ owner of a mining claim cannot prevent the operation of the property by the other owner. We do not anticipate this problem, however. It is to his advantage to have this property in operation.

(3) Subordination agreements (M.M.E. Form 52) enclosed as requested.

(4) A claim map showing the relationship of the proposed work to the boundaries of the property enclosed.

If there are any further questions or information needed, I will gladly try to furnish same. Thank you for your consideration.

Very truly yours,

Blue Sky Mining Corporation

Roger C. Pierce, President

Memorandum

To : Chief, Office of Minerals Exploration

From : Field Officer, Region I

Subject: Application appraisal and recommendation
OME-6840 (Silver)
Blue Sky Mining Corporation
Comet Mine
Beaverhead County, Montana

INTRODUCTION

The Blue Sky Mining Corporation has requested OME assistance to explore for silver ore bodies in quartz-filled shear zones cutting granite in the Elkhorn Mining District, about 45 miles southwest of Butte, Montana. Sufficient information is in our files and in the application on which to base a recommendation; a field examination of the property is not needed.

Formerly, Wayne Erickson obtained OME assistance to explore the Comet mine by drifting, crosscutting, and raising from the 400 level (OME-6326). Less than half of the planned work was completed; however, a small ore shoot was found and, according to Amendment No. 1 of Erickson's contract, the Government has a lien on production from the Comet mine until January 30, 1974, or until $9,468.00 is fully repaid with interest at the rate of $6\frac{1}{2}$ percent per annum, whichever occurs first. Value of production since the contract date totals $2,036.32, from which the Government received $101.81. The Government's lien, with accrued interest, now totals approximately $14,000.00.

On-Site Exam

The Blue Sky Mining Corporation proposes to diamond drill from three separate surface drill-sites to explore three different objectives. Estimated total cost of this work is $57,040.00. In this report, I am recommending the drilling of 6 holes from one drill site to test one objective. Total estimated cost of this work is $32,640.00, of which the Government's share at 75 percent participation, is $24,480.00. The work, if successful, will indicate 41,600 tons that contain 457,600 ounces of silver which, at today's prices, has a gross value of $736,736.00.

Instructions Your information

REMARKS: Attached is my report approving a diamond drilling program at the Comet Mine, and a proposed contract. I realize that the lease must be changed or extended on the claims, but I hope you can adjust the contract after receipt of necessary information from Applicant.

M56300-62

INT.-DUP. SEC.. WASH.. D.C.

RECOMMENDATION

I recommend that OME approve a contract to explore, by diamond drilling from a surface drill-site, the Comet ore zone between the 400 and 600 levels of the mine. Expected result of this work justifies the estimated costs of exploration. Ore found as a result of the work can be reached by development from the existing 600 level. There seems little likelihood that the Government's existing lien can be repaid by mining the few ore reserves now assigned to the mine. Additional exploration is necessary to determine if an ore body exists on the applicant's property. If successful, the proposed work will encourage the further development of the mine with consequent production and repayment of the Government's share of the past and proposed exploration costs.

APPLICANT

Blue Sky Mining Corporation
521 S. Washington
Dillon, Montana 59725

Officers include:

President: Roger C. Pierce, 521 S. Washington, Dillon, Montana

Vice President and Secretary : Hazel D. Pierce, 521 S. Washington, Dillon, Montana

Chairman of the Board : William A. Cook, 925 S. Curry Pike, Bloomington, Indiana

PROPERTY

The property consists of 6 unpatented claims that are recorded in the official records of Beaverhead County, Montana, as follows:

Claim	Book	Page
Dox No. 1	164	27 and 28
Dox No. 2	164	29 and 30
Comet No. 1	155	463 and 464
Comet No. 2	155	465 and 466
✓ Comet No. 3	164	25 and 26
✓ Comet Fraction	155	461 and 462

The Blue Sky Mining Corporation owns a half-interest in these claims and is in possession of the other half-interest by virtue of a 3-year lease, dated January 23, 1969, between Blue Sky Mining Corporation and H. L. Patterson, owner of the other half-interest in the claims. expires 1/23/72

Only 2 claims, the Comet Fraction and the Comet No. 3, will directly benefit from the proposed work.

LOCATION AND ACCESSIBILITY

The claims are on the steep southwest slope of Comet Mountain between altitudes of 8,500 and 9,250 feet and extend across the common boundaries of secs. 26 and 27, T. 4 S., R. 12 W. (Figure 1--Composite plan map and longitudinal section showing proposed drilling, Comet Mine, Sec. 26., T. 4 S., R. 12 W., Beaverhead County, Montana).

An unsurfaced access road leads 4.5 miles to the property from the county road near Grasshopper Creek at an altitude of about 6,650 feet. This junction with the county road is 10.85 miles north of the junction with surfaced County Road 278, which leads easterly to U. S. Highway 91, about 3.5 miles south of the city limits of Dillon, Montana.

The Comet mine property is snow covered from early autumn until late spring. Equipment and personnel must be transported over the steep unsurfaced access road, which in bad weather is nearly impassable.

GEOLOGY

Country rock at the Comet mine is coarse grained biotite granite. Ore is along joints or shear zones that strike northeasterly and dip steeply NW. There is some suggestion that ore shoots rake steeply SW.

Ore on the 400 level is in veins of banded milky quartz containing stringers of oxidized argentiferous tennantite and galena. A zone of shearing, locally as much as 15 feet wide, contains concentrations of ore minerals along its hanging wall and footwall, but is relatively barren in the central part. Assay data (see map with final report of OME-6326), show that the vein contains 1 to 2 feet of ore on the hanging wall that assays as much as 55 ounces silver per ton, a central part about 3 feet thick that assays fewer than 5 ounces silver per ton, and a footwall ore band that assays from a few to as much as 126 ounces silver per ton across 0.5 feet. The silver values are not consistent along the vein, and this could reflect erratic original mineralization or the extent of local oxidation and leaching. Selected ore sold from the 400 level contained as much as 70 ounces silver per ton (Table 1). Mine-run ore shipped in 1969 and 1970 contained from 10.48 to 25.23 ounces silver per ton.

The applicant reports that work done in the summer of 1970 found the best values along the footwall of the vein; the hanging wall consisted of much barren quartz.

The work done to date on the 400 level has followed the vein for about 250 feet and found erratic silver values along most of this distance. Raises and stopes have followed the ore for 45 to 80 feet above the 400 level and 1 small stope has followed ore about 30 feet below the 400 level.

A vein, questionably correlated with the one on the 400 level, was cut on the 600 level and contains iron-stained quartzy lenses that assay less than 1 ounce silver per ton.

There are several other veins on the property, all apparently trending northeasterly and dipping steeply. Many of these are shown on the maps with the application in docket OME-6326. None appear to be as richly mineralized as the one explored by the 400 adit.

HISTORY AND PRODUCTION

Information in the application with docket OME-6326 indicates that most of the workings of the Comet mine were excavated prior to 1900. Mining in the main stope on the 400 level took place between 1960 and 1963. Former exploration under OME contract 2181 was from August to December 1964. The Blue Sky Mining Corporation resumed exploration and development in the summer of 1969 and produced about 200 tons of ore before they recessed operations in August 1970. The mine is now idle. There is no record of production before 1900, although the applicant reports some very rich silver ore came from near-surface excavations prior to 1900. Table 1 lists production since 1960.

TABLE 1.--PRODUCTION FROM COMET MINE

APPLICANT'S PROPOSAL

The applicant proposes to explore three areas on his property by diamond drilling from three surface drill-sites. Two holes will explore for an intersection between two veins near the west end line of the Dox 1 claim; two holes will explore downward extensions of the vein exposed in the Upper Telstar adit and open cuts on the Telstar 2 claim; and six holes will explore downward extensions of the vein in the 400 adit level on the Comet Fraction claim. Soil sampling, prior to drilling, is proposed for the area near the west end line of the Dox 1 claim. Total estimated cost of the work is $57,040.00.

Appraisal

The applicant did not justify the drilling of the holes at the Upper Telstar location or near the west end of the Dox claim. He did mention much quartz on the Dox 1 claim and that soil sampling would more closely define the area to be drilled.

Information about the Upper Telstar workings is on the maps with the application of docket OME-6326. The vein on the Telstar 2 claim is exposed in several open cuts at altitudes of about 9,350 feet; in these the vein is about 3 feet thick and contains several rich stringers, 6 to 10 inches thick, in the central part. Assays indicate that the richest part of the vein contains 89.4 ounces silver per ton across 0.5 feet. The Upper Telstar adit intersects the vein at an altitude of about 9,240 feet (approximately 110 feet below the open cuts). The vein is a zone about 20 feet thick, and contains a few stringers of ore minerals. Many assays indicate less than 5 ounces silver per ton; however, one from a sample 5 feet long, shows 18 ounces silver per ton. The adit explores the vein along strike for about 55 feet but there is no stope. Perhaps some shipping ore can be obtained by very careful sorting of the vein material, but the tonnage is limited.

The most work has been done on the vein exposed in the No. 4 adit (400 level). Prior to the work done under OME contract 2181, the adit was 340 feet long and had an ore-bearing vein exposed for 100 feet. Some ore was mined from a small underhand stope and a small overhead stope. The OME drift followed ore for an additional 50 feet, after which it apparently veered away from the ore-bearing structure. Ore found by OME work was estimated to be 1,150 tons containing 11.5 ounces silver per ton.

Blue Sky Mining Corporation resumed mine work in 1969 and 1970 and discovered the northeasterly extensions of the ore followed by part of the OME drift. Drifting and raising followed ore to the northeast for at least 100 feet beyond the work done under the OME contract. The applicant's map shows that the ore contains from 5 to 25 ounces silver per ton, and that the vein is 6 inches to 9 feet thick with the best values along the footwall (see map C-2 with application).

The work on the 400 level has indicated an ore shoot about 250 feet long that contains somewhat erratic values in silver. There are only 100 to 150 feet of backs above the level, and if a mine is to be developed, the vein should be explored below the 400 level. The 600 level, some 400 feet lower than the 400 level, has cut a vein tentatively correlated with the vein in the 400 level; however, assay data indicate less than an ounce of silver per ton in the vein on the 600 level.

There has been no exploration of the vein between the 400 and 600 level except for the small underhand stope in the No. 4 adit. The area between the two levels might contain a minable ore body that could be developed by raising from the 600 level.

An ore zone 250 feet long, extending downdip for 400 feet, and averaging 5 feet thick with an average silver content of 11 ounces silver per ton, will contain 41,600 tons and 457,600 ounces of silver. At today's price for silver ($1.61/ounce), the ore would have a gross value of $736,736.00, of which 5 percent (the Government's royalty) is $36,837.00. It seems, therefore, that there is justification for the Government to participate in an exploration program to determine how far the ore extends below the 400 level.

RECOMMENDED WORK

There is fair justification for drilling the six holes from a single surface drill-site to explore the vein between the 400 and 600 levels. The holes, as proposed by the applicant, will intersect the vein between 100 and 300 feet below the 400 level (Figure 1, longitudinal section). Three holes will intersect the vein about 120 feet below the 400 level; two will intersect the vein about 250 feet below the 400 level; and the third will intersect the vein slightly more than 300 feet below the 400 level. The holes will explore a strike length between 200 and 250 feet. Six holes are about the minimum required to prove the existence of the vein and to determine the degree of mineralization. Any one of the holes might intersect a barren part of the vein, but six holes should prove definitely if the vein is ore bearing. As explained elsewhere in this report, if all holes are successful, a fair reserve of silver ore will be indicated.

The time needed to complete the work will depend in large part on the weather. During periods of wet weather, the drillers might not be able to reach their rig. Snow and cold weather, which can be expected any day of any month at 9,000 feet in Montana, will cause delays. The water supply might be a problem; the applicant states that water can be supplied from the underhand stope on the 400 level. Additional water might have to be trucked from Grasshopper Creek. It is estimated that the drilling can be completed during a four-month period, if drilling can start during the latter part of June.

ESTIMATED COSTS

The drilling will be contracted and the actual costs are estimated from the three bids included in the application. Drill-site preparation and road maintenance will be done by the applicant using a John Deere crawler loader that he values at $8,000.00. The operator of the loader is paid $4/hr. Gasoline, oil, and general upkeep is estimated at about $2/hr. The applicant lists a cost of $14/hr for use of the crawler and operator, which appears reasonable. In a telephone conversation, Mr. Pierce, President of Blue Sky Mining Corporation, agreed that a unit-cost of $500.00 would be satisfactory to him for drill-site preparation and road maintenance during the period of drilling.

The total cost, as shown in the proposed contract below, is $32,640.00, of which $24,480.00 will be the Government's share (75 percent).

ECONOMIC APPRAISAL

As shown above, the completed work, if successful, will indicate 41,600 tons of ore containing 457,600 ounces of silver which, at today's prices, has a gross value of $736.736.00. Five percent (the Government's percentage royalty on production) will be $36,837.00, or nearly 50 percent more than the Government's share of the estimated cost of the exploration.

The Government now has a lien of $9,468.00 plus accrued interest of about $4,500.00 against production from the property until January 30, 1974. There are insufficient known reserves at the property to encourage mining, and unless more exploration is done, there is little possibility of more than a very small amount being paid to the Government before the expiration date of the lien.

If the proposed exploration is completed and successful, at least some of the ore can be mined by raising from the 600 level with only modest development costs. Of course, before all the ore is mined, an intermediate level will have to be driven from the surface.

The Blue Sky Mining Corporation has demonstrated that they are capable of conducting a mining operation. They extended the 400 level, successfully followed the mineralized shear zone, and shipped about 200 tons of ore. They appear to be financially sound and are sincerely attempting to determine if a minable ore body exists on their property.

PROPOSED CONTRACT

Annex I

Property

The land, including all rights pertaining thereto, referred to in Article 2 of the contract consists of 6 unpatented claims in secs. 26 and 27, T. 4 S., R. 12 W., Elkhorn Mining District, Beaverhead County, Montana. These are recorded in the official records of Beaverhead County, Montana, as follows:

Claim	Book	Page
Dox No. 1	164	27 and 28
Dox No. 2	164	29 and 30
Comet No. 1	155	463 and 464
Comet No. 2	155	465 and 466
Comet No. 3	164	25 and 26
Comet Fraction	155	461 and 462

The Blue Sky Mining Corporation owns a half interest in these claims and is in possession of the other half-interest by virtue of a 3-year lease, dated January 23, 1969, between the Blue Sky Mining Corporation and H. L. Patterson, owner of the other half-interest in the claims.

A Lien and Subordination Agreements executed by H. L. Patterson is attached hereto and made part hereof.

EXHIBIT A

The purpose of this project is to explore by diamond drilling from a surface drill-site for silver-bearing ore bodies in and along a quartz-filled shear zone cutting granite.

General Provisions

Holes shall be drilled not less than 100 feet from the outer boundaries of the land outlined on Figure 1.

All drill holes shall be cased through overburden and completed with not less than Standard AX core size or equivalent wire line size.

Diamond drill core shall be stored in boxes identified by hole number with markers in the core sections indicating the depths represented.

Facilities shall be provided for recovering drill sludge, and such sludge shall be retained when drilling in significantly mineralized rock.

Significantly mineralized core from hole intervals not exceeding 5 feet each shall be split and one split assayed for gold and silver. Wherever the core recovery is less than 60 percent, a split of the corresponding retained sludge and a split of the recovered core shall be assayed separately, and the assay results combined according to standard practice to represent a single sample.

The remaining core shall be stored in proper sequence with the unsampled core, and the remaining sludge shall be stored in suitable containers properly identified as to source and location. Stored samples shall be made available for Government inspection and possible use, and may be disposed of with prior Government approval.

All drill holes shall be logged, and true copies and maps or sketches showing the work completed during the reporting period, the location and width of all samples taken, and the geological formations and structures traversed by the drill holes shall be furnished monthly to the Government.

The Operator shall provide such supervision, labor, and technical services as may be required to perform the work in a satisfactory manner.

The location, direction, and extent of each work item shall be subject to Government approval.

The Government will not participate in the costs incurred for incomplete drill holes or for casing left in a hole at the request of the Operator.

Description of the Work

The work shall consist of preparing one surface drill-site and diamond drilling a maximum of 6 holes totaling not more than 2,110 feet, including overburden drilling. The approximate location of the drill holes are shown on Figure 2 entitled "Proposed exploration, Blue Sky Mining Corporation, Beaverhead County, Montana," attached hereto and made part hereof. The number, approximate bearing, inclination, and approximate length of each hole are as follows:

Hole No.	Bearing	Inclination	Approximate Length 1/ Feet
3	S. 38° E.	-48°	330
4	S. 38° E.	-70°	370
5	S. 9° E.	-45°	270
6	S. 9° E.	-67°	390
7	S. 65° E.	-45°	310
8	S. 65° E. 2/	-67°	440
			2,110

1/ No hole shall be drilled for more than 20 feet beyond a vein zone that can be correlated with the vein zone exposed on the 400 level.

2/ If previously drilled holes indicate a SW rake to ore shoot, Hole No. 8, with prior Government approval, may be drilled on a more southwesterly bearing.

Estimated Costs of the Project

Fixed Unit Cost 1/

Drill-site preparation	$250.00	
Road maintenance during project	250.00	
		$ 500.00

Actual Costs

Category (1) Independent Contracts		
Mobilization and demobilization, 1 drill unit	$1,200.00	
Diamond core and overburden drilling, 2,110 feet	$19,517.50	
AQWL $9.00/ft BQWL $9.50/ft		
Water supply $1.75/ft	$3,692.50	
Cementing and redrilling 50 hrs at $14/hr	$700.00	
Reaming and casing 200 feet at $4/ft	$800.00	
Casing lost in hole 200 feet at $2/ft	$400.00	
		26,310.00
Category (2) Personal Services		
None except:		
1 Supervisor-engineer-geologist 4 months at $1,200/month		4,800.00
Category (3) Operating Materials and Supplies		
None except:		
210 cardboard core boxes at $1/box	$210.00	
Cement, cement substitutes, drilling mud, and additives	$200.00	
50 sample sacks at $0.60/sack	$30.00	
Sludge catching and sampling supplies	$40.00	
		480.00
Category (7) Miscellaneous		
Office and accounting expense 4 months at $75/month	$300.00	
Assaying 50 samples for gold and silver at $5/sample	$250.00	
		550.00
Total estimated cost of Project		$32,640.00
Government participation at 75 percent		$24,480.00

1/ Completed job is one unit. Road maintenance will be paid for at conclusion of project.

FEB 24 1971

Re: OME-6840 (Silver)
Blue Sky Mining Corporation
Comet Mine
Beaverhead County, Montana

Gentlemen:

Preliminary review of your application for financial assistance in exploring the Comet Mine indicates that additional information is needed before we can complete the review.

(1) Please state how you propose to furnish your share of the cost of the exploration work.

(2) The lease between H. L. Patterson and Blue Sky Mining Corporation, dated January 23, 1969, will expire in eleven months. Is an extension of this lease planned? In the event of a contract, an extension of the lease probably would be required.

(3) The one copy of Lien and Subordination Agreements (MME Form 52) between H. L. Patterson and Blue Sky Mining Corporation submitted with the application is not acceptable as executed. Please return five copies of the enclosed MME Form 52 properly executed. We suggest the land description in the blank line spaces at the top of the form following the county and state names be filled in as follows: "The unpatented lode mining claims known as Dox No. 1, Dox No. 2, Comet No. 1, Comet No. 2, Comet No. 3, and Comet Fraction located in Section 26, T. 4 S., R. 12 W., M.D.M..,Elkhorn Mining District,". Item 1(a) of the Lien and Subordination Agreements is sufficient to take care of the 1/2 interest which is indicated in the Lease between H. L. Patterson and Blue Sky Mining Corporation. H. L. Patterson's signature under the date on the reverse side of the agreements form is the only one necessary.

(4) Please submit a new claim map showing the relations of the proposed work to the boundaries of the property.

We shall be pleased to continue the processing of your application upon receipt of the requested information. However, nothing in this

letter should be construed as a commitment by the Government to grant an exploration contract.

Sincerely yours,

Harold Kirkemo

Mr. Roger C. Pierce
Blue Sky Mining Corporation
521 S. Washington
Dillon, Montana 59725

Re: Comet Mine
Beaverhead County, Montana
(former OME-6326 (Silver)
contract 2181)

Dear Mr. Pierce:

Additional information is needed before your recent application is forwarded to our Washington, D. C. office.

What claims are to be included as subject of the application? For example, you do not mention the San Francisco lode (Survey No. 3353), on which much of the work in the 400 level was done. This claim might be benefited by the drilling even though none of the planned holes come within 100 feet of its boundaries. A list of those claims specifically included in the project is necessary.

The cost of the drilling needs further justification. Are you going to do the drilling yourself or have it contracted? If contracted, please submit bids from three contractors, if possible. If not to be contracted, the drilling costs need more supporting data. For example, are you going to buy or rent a drill rig? One is not among the items of equipment you have listed. How many men will be working on the rig, what will be their wage scale, and what will be the average length of hole drilled per shift?

The cost of supervision is not ordinarily included in the per-foot cost of drilling. If we know the average drill rate, we can estimate the total length of time for the drilling and, if we know the supervisor's salary, we can then determine the total cost of supervision.

Separate cost data are needed for the preparation of access road and drill sites. We need to know the hourly wage scale of the operator of the John Deere crawler-load, which I assume will be used in this work. Estimated length of time necessary for constructing the road and drill sites should be furnished.

More justification is needed for the existence of the No. 6 and No. 7 veins near the proposed drill station No. 1. Undoubtedly snow covers the ground in the area now and if you have no specific information on file, more information will have to wait until summer. Perhaps a field examination can be planned to gather such data.

I'd appreciate receiving any information you have concerning the underground work done since the OME contract ended. We have your shipping records but underground maps with assay data would be most helpful.

The limited ore shoot found on the 400 level and the modest amount of ore shipped from the Comet mine do not strongly justify the rather costly exploration program you have proposed. Perhaps a more modest program should be considered. Whatever the case, we do need the above requested information to more fully evaluate your proposal.

Sincerely,

Willard P. Puffett
Field Officer, Region I

LIEN AND SUBORDINATION AGREEMENTS[1]

To the United States of America:

That certain land in the County of Beaverhead, State of Montana, described as follows:[2] Dox #1, Dox #2, Comet #1, Comet #2, Comet #3, and Comet Fraction. Above listed claims ½ interest owned by Blue Sky Mining Corporation ½ owned by H.L.Patterson. See attached lease Patterson to Blue Sky Mining Corporation.

hereinafter called the "land", is the subject of a proposed exploration contract, hereinafter called the "Contract", between the United States of America, hereinafter called the "Government" and

Blue Sky Mining Corporation[3]

hereinafter called the "Operator". In consideration for and as an inducement to the Government executing the Contract, the undersigned:

1. (a) Being the owner of an interest in the land, hereby grants to the Government a lien upon all of his right, title, and interest in the land and upon any production of minerals therefrom to secure the payment to the Government of the royalty on production provided for by the Contract, and agrees if the Operator's interest should be surrendered or terminated at any time prior to the expiration of the rights of the United States under said Contract to pay royalty to the Government according to the terms of said Contract; or

(b) Being the holder of a claim, lien, or encumbrance against the land, hereby subordinates his claim, lien, or encumbrance in or against the land and in any production therefrom to the rights of the Government under the Contract with respect to royalty on production and liens to secure same.[4]

2. Undertakes and agrees that property in which the Government may acquire an interest or equity under the Contract may be dismantled, severed from the land, and removed as may be provided in the Contract; and the Government's interest and equity in such property shall be prior and superior to any adverse right or claim of the undersigned.

3. Represents and undertakes that there is no claim, lien, or encumbrance upon the undersigned's right, title, claim, or interest in or against the land other than the following: (If "none" insert the word "none". Do not leave blank.)

United States Government O.M.E. loan no.6326, Contract no. 2181, incurred by Wayne Erickson, Comet et al. Claims.

1/ Production from the land is not required, and in the absence of production there is no obligation to pay royalty to the Government.

2/ Either (a) insert the legal description of the land, or (b) strike out the words "as follows" and insert "in a lease /or contract, deed, or other document/ dated _____, and recorded in Book _____, Page ____, official records of said county". If (b) is used, the book and page of recordation must be inserted above. If the space provided is insufficient, use an Annex and refer to the Annex in the space.

3/ Insert name exactly as it appears in the Application MME Form 40.

4/ Subparagraph 1(a) does not apply to the holder of a claim, lien, or encumbrance.

4. Undertakes and agrees (a) neither to commit any act nor assert any claim in conflict with the provisions of this Agreement; and (b) to give advance notice of the Government's rights under this agreement to any subsequent transferee, mortgagee, encumbrancer, or lessee of any of the undersigned's right, title, claim, or interest in or against the land or any production therefrom, furnishing the Government with two true copies of such notice; and

5. Consents to all amendments (including an agreement of termination) and assignments of the Contract without notice thereof, and undertakes and agrees that this agreement shall extend and apply thereto.

6. Added provisions None (State "None" or "See Annex No. ____".)

Dated this 22 day of December, 1970.
