INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection report, DMEA-4712 (Lead-Zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract Idm-E1134

The East Page mine was visited April 10, 1961, and the project was inspected in the company of Stanley H. Huff, Assistant Geologist. Troy Tower, Superintendent, was interviewed in the office. The last inspection was made by S. W. Zoldok, Mining Engineer, Bureau of Mines, on April 27, 1960. All work at the mine was reportedly stopped by a strike on April 20, 1960, but after this announcement the union agreed to continue working on a day-to-day basis. Work was finally halted early in June and was not resumed until late in December 1960.

Since Mr. Zoldok's inspection the 3070 level east drift has been advanced 381.58 feet for a total drive of 4,543.9 feet. The rock is purple to green-grey argillite with some quartzite. The beds strike S. 80°-85° E. and dip steeply north to steeply south. The ground is very heavy, probably because of a strong fault exposed by caving of the south wall of the drift. In order to get away from the heavy ground the Operator requested permission to turn the drift about 13° northerly from the present bearing. This change was authorized February 17, 1961.

Diamond drill hole H30-662N was completed at 1,057 feet; H30-607N was completed at 1,010 feet, and H30-600S was completed at 753.5 feet. No significant mineralization was found in any of these holes.

No DMEA work was in progress and the last 320 feet of timbering had been sprag-braced. Mr. Tower said that work had been discontinued about the 25th of February but would be resumed although he did not know when. I have written to S. Norman Keston advising him that the company should request a recess.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- FEBRUARY 1961

Advance for February in the 3070 - East Page Drive was 114.0 feet for a total under the OME contract of 4,543.9 feet. In this advance, the rock is predominantly purple to green-grey argillite with some quartzite, and strikes S. 80° to 85° E. and dips steeply north or south. The rock continues to be extremely heavy throughout the advance. Caving ground on the south side of the drive has partly exposed a strong fault which dips moderately to the south and appears to parallel the heading. This fault is probably the cause of the present heavy ground and may be a footwall branch of the Dodo fault.

In DDH 30-600S advance was 371.5 feet to a completed depth of 753.5 feet. The total drilling in the project is now 7,933.5 feet. The rocks cut in this advance are dark-grey to purple argillites and argillaceous quartzites to 680.0 feet and light greenish-grey quartzite from this point to the end of the hole. Significant faulting and brecciation occurs between footages 645.0 and 651.5.

The geology of the advance in the 3070 - East Page Drive and in DDH 30-600S is shown on Plate 1. Core logs for the footage drilled are attached.

Respectfully submitted,

Original Signed by

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- JANUARY 1961

Advance for January in the 3070 - East Page Drive was 73.0 feet for a total under the OME contract of 4,429.3 feet. In this advance, the rock is predominantly purple to green-grey argillite with some interbedded quartzite, and continues to strike S. 80° to 85° E. and dip steeply north or south. Numerous faults, chloritic bedding plane partings and closely spaced fracturing make heavy ground throughout the advance. A small amount of crystal-like pyrite occurs within particular beds, however no significant sulphide mineralization is exposed. The advance was in heavy ground caused by the proximity of the fault mentioned in the report for May 1960, which has been named the Dodo fault.

In DDH 30-600S, advance was 218.0 feet to a depth of 382.0 feet. The total drilling in the project is now 7,562.0 feet, of which 7,362.0 feet were drilled under the OME contract. The rocks in the hole are purple to grey-green quartzite and argillaceous quartzite, with local sections of purple to green argillite. The Exile fault zone was cut from footage 229.0 to 242.0 and consists of about 9 feet of moderate faulting and brecciation and a 4-foot gouge and shear zone.

The geology of the advance in both the 3070 - East Page Drive and the drill hole is shown on Plate 1. Core logs for the footage drilled are attached.

Respectfully submitted,

S. NORMAN KESTEN

I certify that the above bill is correct and just and that payment therefor has not been received.

Date Feb. 8, 1961 *Payee American Smelting and Refining Co.

Per J. L. Kieser Title Manager

*When a voucher is signed or receipted in the name of a company or corporation, the name of the person writing the company or corporate name, as well as the capacity in which he signs, must appear. For example: "John Doe Company, per John Smith, Secretary," or "Treasurer," as the case may be.

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

Pursuant to authority vested in me, I certify that this account is correct and proper for payment in the amount of:

$ 1560 80

Signature _____ (Authorized Certifying Officer)

Date 2/23/61 Vou. No. 3411

(See other side)

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. ..... in accordance with the terms of the contract.

Signature ..... Title ..... Date .....

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature ..... Title ..... Date .....

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT - - MAY 1960

Advance for May in the East Page Drive was 127.0 feet for a total under the OME contract of 4,356.9 feet. In this advance, the rock is interbedded light-grey to purplish quartzite and dark-purple argillite and argillaceous quartzite which strike S. 80° E. and dip steeply north or south. A strong undulating fault zone is exposed near the present face. The footwall branch of this zone strikes about N. 80° W. and dips 27° to 35° south. The stronger hanging wall branch strikes N. 45° W., dips 24° to 28° SW. and correlates with the faulting and brecciation encountered in DDH 30-607N from footage 326.0 to 353.0. The bedding attitudes are relatively undisturbed through the faulted area. No mineralization is exposed.

In DDH 30-607N, advance was 263.0 feet to completion at 1,010.0 feet. The rock is predominantly purple to grey-green argillite and argillaceous quartzite which is bleached and calcareous. A dark-green to black basic dike occurs from footage 855.0 to 863.8. Significant faulting and brecciation was penetrated from 942.0 feet to the end of the hole. This is probably the hanging wall part of the Osburn fault zone.

DDH 30-600S was collared and drilled at approximate coordinate 14,000 E to a depth of 164.0 feet. The rock is interbedded light-grey quartzite and purple argillite and argillaceous quartzite which locally are bleached and calcareous. Relatively weak faulting occurring from footage 123.0 to 164.3 is probably related to the Exile fault which lies a short distance south of the face of the hole.

Total diamond drilling under the OME contract is 7,344.0 feet.

Plate 1 is a plan showing the geology of the advance in DDH 30-607N and Plate 2 is a plan showing geology of the advance in DDH 30-600S and in the East Page Drive. Core logs for the footages drilled are also attached.

Respectfully submitted,

REMARKS:

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Signature ..... Title ..... Date .....

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF–104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF–104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF–104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF–104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF–200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF–200; and delete word "Independent" if the contract reported is on Form MF–200 (A). Also, report work paid for on a unit basis under contract Form MF–200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF–104 when submitted for reimbursable expenses incurred under contract Form MF–200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF–200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF–104 is required to be documented. The four copies of Form MF–104 are not to be thus supported.

Form MF–104 submitted for reimbursement under fixed price contracts on Form MF–200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF–104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE DRIVE
PROGRESS REPORT - - APRIL 1960

Advance for April in the East Page Drive was 193.5 feet for a total under the OME contract of 4,229.9 feet. In this advance, the rock is predominantly grey-green to purple argillaceous quartzite with interbedded quartzite and argillite. The bedding and numerous chloritic bedding plane faults continue to parallel the drive and dip steeply north or south. A significant fault is exposed striking N. 20° E. and dipping 46° to 47° W. No mineralization is exposed.

In DDH 30-662N, advance was 190.0 feet to 1,057.0 feet, where the hole was stopped. The rock is predominantly grey to light-green argillite and argillaceous quartzite which is bleached and calcareous. A black fine-grained basic dike was cut from footage 977.0 to 990.0. Very poor core recovery from footage 952.5 to the end of the hole may indicate the nearness of the Osburn fault.

DDH 30-607N was collared and drilled at approximate coordinate 13,925 E to a depth of 747.0 feet and is continuing. The hole penetrated predominantly purple to grey-green argillite with interbedded quartzite and intermediate rocks. Locally the rock is bleached and calcareous. A zone of strong faulting and brecciation was encountered from footage 326.0 to 353.0.

Total diamond drilling under the OME contract is 6,917 feet.

Plate 1 is a plan showing geology of the advance in DDH 30-662N, and Plate 2 is a plan of the geology of the advance in the East Page Drive and in DDH 30-607N. Core logs for the footages drilled are also attached.

Respectfully submitted,

MEMORANDUM

To: D. R. MacLaren, Acting Field Officer, Region I

From: S. W. Zoldok, Mining Engineer, Bureau of Mines

Subject: Interim inspection report, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The project was inspected on April 27, 1960, accompanied by J. N. Butler, Jr., mining engineer. The previous inspection was made on February 25, 1960, by R. D. Sample, geologist, U. S. Geological Survey.

All the senior mine officials were in Wallace negotiating a new contract with the mine-mill union. The rumor is that negotiations are deadlocked, neither side willing to compromise.

Since Mr. Sample's visit the 3070 level east drive has been advanced 250 feet. The drift continues in thin bedded purple argillite and quartzite. Numerous bedding plane faults parallel the drift and close timbering is required. The drift has cut a number of cross faults roughly parallel to the Exile Fault zone.

Diamond drill hole H30-662N was advanced to 890 feet, and a seventh hole H30-607N was at 616 feet. No significant mineralization was penetrated.

Contract Measurements (3070 DE)

Drifting:

Previously reported to T.S. 1-8	3,785.32 ft.
T.S. 1-8 to T.S. 1-9	181.0 "
Total to T.S. 1-9	3,966.32
T.S. 1-9 to face	196.00
Total drifting to April 27, 1960	4,162.32 ft.

Authorized 13,485 raise drifts JMJ

Timbering:

Previously reported to T.S. 1-8	3,260.26 ft.
T.S. 1-8 to T.S. 1-9	181.00 "
Total to T.S. 1-9	3,441.26
T.S. 1-9 to end of timber	187.0
Total timbering to April 27, 1960	3,628.26 ft.

706 XCS (No. 1 XCS)
714 XCN (No. 1 XCN)

Same as inspection report dated January 12, 1960.

Car siding excavations:

Previously reported	14,678 cu.ft.
At T.S. 1-8 + 146 ft.	367 cu.ft.
At T.S. 1-9 + 164 ft.	367 cu. ft.
Total to April 27, 1960	15,412 cu. ft. 1/

1/ Maximum authorized under contract 14,800 cu.ft.

Diamond drill stations:

800 XCS - 25 ft.	650 XCS - 25 ft.
823 XCN - 25 ft.	662 XCN - 25 ft.
751 XCS - 25 ft.	600 XCS - 25 ft.
767 XCN - 25 ft.	607 XCN - 25 ft.

Total to April 27, 1960 - 200 ft.

Diamond drilling:

Hole	H30 - 800S	927 ft.
"	H30 - 823N	755 "
"	H30 - 751S	1086 "
"	H30 - 767N	1145 "
"	H30 - 650S	1200 " 2/
"	H30 - 662 N	890 "
"	H30 - 607N	616 "

2/ Only 1,000 ft. reimbursable
Total to April 27, 1960 - 6,419 ft.

Status of contract:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: 263,723.35 (thru March 1960)

	Authorized	Completed
Drifting and/or crosscutting (3070 DE - 4162.32) (714 XCN - 234.70) (706 XCS - 31.50)	12,485 ft.	4,428.52 ft.
Diamond drill stations	300 ft.	200 ft.
Core drilling	11,855 ft.	6,419 ft.
Car sidings	14,800 cu.ft.	14,800 cu.ft.
Timbering (3070 DE - 3628.26) (714 XCN - 64.5) (706 XCS - 29.5)	3,950 ft.	3,722.26 ft.
Rock bolts (3070 DE - 872) (714 XCN - 258)	4,000	1,130

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. ..... in accordance with the terms of the contract.

Signature ..... Title ..... Date .....

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature ..... Title ..... Date .....

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- MARCH 1960

Advance for March in the 3070 East Page Drive was 97.3 feet, to a total under the OME contract of 4,036.4 feet. The rock exposed is predominantly purple argillite with occasional thin beds of purple argillaceous quartzite and quartzite. Bleaching and sericitization in the faulted sections gives the rock a grey-green color. The bedding and numerous weak bedding plane faults continue to parallel the drive and dip steeply north or south. Two strong faults are exposed early in the advance, the strongest of which strikes about N. 35° W. and dips 0° to 22° SW. and makes heavy ground to the present face. Significant faulting near the face strikes N. 75° W. and dips 65° to 70° W.

A diamond drill station has been cut on the north side at approximate coordinate 13,930 E and on the south side at approximate coordinate 14,000 E.

DDH 30-662N was drilled 671 feet to a depth of 867 feet, for a total diamond drill footage to date of 5,980 feet. The rock is predominantly purple to grey-green argillite and argillaceous quartzite, with the exception of a section of light-grey quartzite from footage 280 to 350. Locally the rock is bleached, sericitized and calcareous. The Exile fault zone was encountered from footage 180 to 235 with additional significant faulting and brecciation occurring between footages 422 to 433, 449 to 452 and 460 to 467.

Plate 1 is a plan showing the geology of the advance in the 3070 East Page Drive and in DDH 30-662N. Core logs for footages 190 to 890 are also attached.

Respectfully submitted,

Original Signed by

REMARKS:

INT.-DUP. SEC., WASH., D.C.

M50943

D. R. Maclaren, Alternate Acting Executive Officer, OME Field Team, Region I

March 23, 1960

S. W. Zoldak, Mining Engineer

American Smelting and Refining Company, Contract Ide-M134
Monthly operating report for February 1960

You will note that the Operator's narrative and contractor's invoice give the length of DDH-6[illegible] as 1,2[illegible] feet, whereas only 1,000 feet was vouchered. This is proper as the drill hole left the claim boundary at 1,000 feet and the last 200 feet was in land not subordinated under the contract. See S. Norman Keston's letter of December 18, 1959 to Weisenborn and our reply of December 22, 1959.

S. W. Zoldak

Date Mar. 16, 1960 *Payee American Smelting and Refining Co.

Per J. L. Kiesser Title Manager

*When a voucher is signed or receipted in the name of a company or corporation, the name of the person writing the company or corporate name, as well as the capacity in which he signs, must appear. For example: "John Doe Company, per John Smith, Secretary," or "Treasurer," as the case may be.

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

Pursuant to authority vested in me, I certify that this account is correct and proper for payment in the amount of:

$ 7,807.63

Signature (Authorized Certifying Officer)

Date 4/4/60 Vou. No. 3920

(See other side)

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. ..... in accordance with the terms of the contract.

Signature ..... Title ..... Date .....

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature ..... Title ..... Date .....

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

O.M.E.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- FEBRUARY 1960

Advance for February in the East Page Drive was 167.7 feet, for a total under the OME contract of 3,939.1 feet. In this advance, the rock is purple argillite containing occasional thin beds of purple quartzite, which locally are moderately bleached. Several strong flat faults continued to make heavy ground in the first part of the advance, however, faulting is relatively minor in the last 100 feet of advance. The bedding and numerous bedding plane faults parallel the drive and dip steeply north or south.

In DDH 30-650S, advance was 234 feet, to 1,200 feet, where the hole was stopped. The hole penetrated light-grey to light-green quartzite which locally is somewhat argillaceous and highly fractured. Significant faulting and brecciation was encountered between footage 1,015.0 to 1,021.8. Strong faulting, which is probably the Spring fault zone, occurs between footages 1,046.5 - 1,054.0 and 1,064.3 - 1,070.0.

DDH 30-662N was collared at approximate coordinate 13,375 E and drilled to 196.0 feet. After penetrating purplish argillite and argillaceous quartzite, it encountered the Exile fault at about footage 180 and was still in the fault zone at the end of the period.

Total diamond drilling under the OME project is 5,309.0 feet.

Plate 1 is a plan showing the geology of the advance in the 3070 East Page Drive and in DDH 30-650S, in February. DDH 30-662N will be shown on maps accompanying the report for March. Core logs for the footages drilled are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

Memorandum

To: OME Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim inspection report, Docket No. DMEA-4712 (Lead-Zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The project was visited and inspected on February 25, 1960. The previous inspection was made by S. W. Zoldok, Mining Engineer, Bureau of Mines, on December 22, 1959. Troy Tower, Superintendent, was absent from the mine due to a meeting with the board of negotiators and leaders of the labor union. Labor problems continue to be of major importance in the Coeur d'Alene mining district.

A short conference regarding the contract and progress was held at the mine office with C. J. Ward, Assistant Superintendent; John Butler, Chief Engineer; Stanley Huff, Assistant Geologist; and Milton Melcher, Assistant Engineer.

Underground development, mining, and mill processing is on a 5 day per week schedule with one shift on production and two shifts on development and exploration, including the DMEA program. The mill continues on a 3 shift per day schedule and processes about 500 tons of ore per day. Some development and exploration work is being done on the 3400 level, or 330 feet below the 3070 level of the DMEA program.

An underground inspection of the 3070 level was made, accompanied by Mr. Melcher. Progress of the east drive since the last inspection was measured and recorded. The main easterly crosscut continues in a N. 83° E. direction and the east face is now approximately 202 feet beyond the face reported by Mr. Zoldok on December 22, 1959. The last advance was all through thin-bedded, light-colored, argillaceous and siliceous rocks of the St. Regis formation which is badly fractured by joints and bedding plane shears. It slabs readily. Timbering was required to within 5 feet of the working face. At approximately 250 feet back from the present face the east drive intercepted a strong relatively flat-dipping fault which strikes N. 70° W. and dips from 30° to 40° to the SW. The main fault consists of 3-4 feet of gouge on the hanging wall and

45-50 feet of badly brecciated and shattered rock on the footwall. The ground is very heavy and required much timbering and retimbering throughout the zone. Tentatively, this zone is referred to as the "Exile Fault Zone." The present face is in a little stronger rock and the company believes they are through the zone of brecciation. DDH 30-650S was completed at 1,200 feet in depth and is believed to have reached the Spring Fault to the south. According to the company map affixed to Amendment No. 3, the final 200 feet of this hole apparently is outside the ground included in the contract. No significant mineralization was reported. The drillers have moved to the 662NXC and were drilling DDH 30-662N. They had reached a depth of 91.2 feet at the time of inspection. This hole is expected to reach the Osburn Fault Zone to the north in less than 1,000 feet.

Contract Measurements (3070 DE)

Drifting:

Previously reported to Temporary Sta. 1-7	3,617.82 ft.
T.S. 1-7 to T.S. 1-8	167.50 "
Total to Temporary Station 1-8	3,785.32 "
T.S. 1-8 to face	127.20 "
Total drifting to February 25, 1960	3,912.52 ft.

Timbering:

Previously reported to T.S. 1-7	3,092.76 ft.
T.S. 1-7 to T.S. 1-8	167.50 "
Total to Temporary Station 1-8	3,260.26 "
T.S. 1-8 to end of timber	122.20
Total timber to February 25, 1960	3,382.46 ft.

714 XCN (No. 1 XCN) (Coordinate 12,880 E)

No advance was made on this crosscut to the north and the measurements are the same as reported by Zoldok as of December 22, 1959 -- 234.7 feet of advance to the north with the first 64.5 feet timbered and the balance of 170.2 feet rock bolted.

706 XCS (No. 1 XCS)

As previously reported the crosscut remains at 31.5 feet with the first 29.5 feet timbered.

Car siding excavations:

No siding excavations were made since the last inspection and the total to December 22, 1959, remains the same at 14,678 cubic feet.

Diamond drill stations:

Remains the same as December 22, 1959 -- 150 feet.

Diamond drilling:

Hole H30 - 823N	755.0 ft.
" H30 - 800S	927.0 "
" H30 - 751S	1,086.0 "
" H30 - 767N	1,145.0 "
" H30 - 650S	1,200.0 "
" H30 - 622N	91.2 "
Total to 2/25/60	5,204.2 ft.

APPROVAL BY ~~DMEA~~ ONE EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ L. R. MacLaren Title acting alternate Exec. Officer Date Feb. 19, 1960

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- JANUARY 1960

Advance for January in the 3070 East Page Drive was 55.1 feet, for a total under the OME contract of 3,371.4 feet. For this advance, the rock is predominantly purple argillite with minor purple argillaceous quartzite and quartzite. The bedding and minor bedding plane faults continue to parallel the drive and dip steeply south. Strong fracturing and several minor flat faults associated with the Exile fault continue to make heavy ground.

In DDH 30-650S, the rocks penetrated are purple argillite, argillaceous quartzite and quartzite of the St. Regis formation to 568.0 feet. From footage 568.0 to 966.0, the rock is predominantly light-grey quartzite. Significant faulting brecciation and shearing occur between footages 471.0 - 474.0, 533.0 - 545.0, 698.0 - 699.0, 807.0 - 825.6 and 844.5 - 870.6. No sulphide mineralization was encountered. Caving ground necessitated casing the hole and reducing to BX core at 966.0 feet.

Plate 1 is a plan showing the geology of the work in the 3070 East Page Drive and of the advance in DDH 30-650S, in January. Core logs for the footages drilled are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

S. NORMAN KESTEN

I certify that the above bill is correct and just and that payment therefor has not been received.

Date Jan. 18, 1960 *Payee American Smelting and Refining Co.

Per J. C. Kiesser Title Manager

*When a voucher is signed or receipted in the name of a company or corporation, the name of the person writing the company or corporate name, as well as the capacity in which he signs, must appear. For example: "John Doe Company, per John Smith, Secretary," or "Treasurer," as the case may be.

→ NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

Pursuant to authority vested in me, I certify that this account is correct and proper for payment in the amount of:

$ 6440.37

Signature Dorothy F. Long
(Authorized Certifying Officer)

Date 1/22/60 Vou. No. 2340

(See other side)

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. 61134 in accordance with the terms of the contract.

Signature /s/ Stephen W. Zoldok Title Mining Engr. Date 1-20-60

APPROVAL BY ~~DMEA~~ OMR EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Exec. Officer Date Jan. 21, 1960

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Mining Engr.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT - DECEMBER 1959

Advance for December in the 3070 East Page Drive was 101.5 feet for a total under the CME contract of 3,716.3 feet. Early in the advance a strong fault zone was encountered, striking approximately N. 65° W. and dipping 19° to 32° SW. The main structure consists of up to 6 feet (horizontal width) of light-grey to brown gouge with associated strong faulting, fracturing and bleaching extending up to 15 feet into the hanging wall and 50 feet into the footwall. The rock in both walls of the fault remains predominantly purple argillite with the bedding paralleling the drive and dipping steeply south. The name "Exile" is applied to this structure.

DDH 30-751S advanced 230 feet to completion at 1,086 feet. DDH 30-650S was started at approximate east coordinate 13,500 and was advanced 323 feet during the period. The two holes bring the total diamond drilling for the project to 4,236 feet.

In DDH 30-751S, the rock is light-grey quartzite, which locally is strongly sericitized and contains sparsely disseminated pyrite. Significant faulting, which is probably the Spring fault zone, was encountered between footages 1,037.5 and 1,058.4. From footage 1,058.4 to the end of the hole, the rock remains light-grey quartzite with less sericitization than the preceding rocks. In DDH 30-650S, the hole penetrated predominantly dark-purple argillite and quartzite to 321.0 feet. Significant faulting and shearing was encountered between footages 61.5 and 93.5. Numerous calcite blebs and thin fracture fillings along with weak to moderate silicification were encountered between footages 294.0 and 321.5.

Plate 1 is a plan showing the geology of the work in the 3070 East Page Drive in December and of the advance in DDH 30-650S. Plate 2 is a plan showing geology of the advance in DDH 30-751S. Core logs for the footages drilled are also attached.

Respectfully submitted,

MEMORANDUM

To: OME Field Team, Region I

From: S. W. Zoldok, Mining Engineer, Bureau of Mines

Subject: Interim inspection report, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The project was inspected on December 22, 1959, accompanied by Mr. Troy Tower, superintendent, and J. N. Butler, Jr., engineer. The previous inspection was made on October 1, 1959, by R. D. Sample, geologist, U. S. Geological Survey.

The 3070 level east drive is still in thin bedded purple argillite and argillaceous quartzite. The bedding dips steeply to the south, and the drift requires timbering to within 5 to 8 feet of the face.

A strong fault striking N. 70° W. and dipping about 30° to the south was intercepted at 1026 feet east of station No. 1616 or 3648 feet from the I.P. of the contract. The fault consists of 3 feet of gouge on the hanging wall and about 45 feet of intensely brecciated material in the footwall. The entire distance through the fault was spiled. The Operator believes there is a possibility that this might be the Cate fault.

The exploration is being done on 2 shifts per day and 5 days per week. No significant mineralization has been disclosed to date.

Contract Measurements (3070 DE)

Drifting:

Previously reported to Sta. No. 1616	2,621.82 ft.
Sta. No. 1616 to Temp. Sta. 1-1	172.5 "
T.S. 1-1 to T.S. 1-2	155.6 "
" 1-2 to " 1-3	127.0 "
" 1-3 to " 1-4	126.2 "
" 1-4 to " 1-5	116.7 "
" 1-5 to " 1-6	182.2 "
" 1-6 to " 1-7	115.8 "
Total to Temporary Station 1-7	3,617.82 "
T.S. 1-7 to face	93.00 "
Total drifting to December 22, 1959	3,710.82 ft.

Timbering:

Previously reported to Sta. No. 1616 + 4.27 ft. =		2,101.03 ft.
Total to Sta. 1616	2096.76 ft.	
Sta. 1616 to T.S. 1-1	172.50 "	
T.S. 1-1 to T.S. 1-2	155.60 "	
" 1-2 to " 1-3	127.00 "	
" 1-3 to " 1-4	126.20 "	
" 1-4 to " 1-5	116.70 "	
" 1-5 to " 1-6	182.20 "	
" 1-6 to " 1-7	115.80	
Total to T.S. 1-7	3092.76 ft.	
T.S. 1-7 to end of timber	85.00 "	
Total timber to Dec. 22, 1959	3177.76 ft.	

714 XCN (No. 1 XCN) (Coordinate 12,880 E)

This crosscut has been advanced 234.7 feet to the north. The first 64.5 feet is timbered, as previously reported, and the balance of 170.2 feet is rock bolted.

	Crosscutting	Timber	Rock Bolts
I.P. to 64.5'	64.5'	64.5'	-
64.5' to 234.7'	170.2'	-	258
Total to 12-22-59	234.7 ft.	64.5 ft.	258 1/

1/ There are 34 five-foot sections in 170.2 feet and maximum allowable bolts are 34 x 7 = 238. If necessary, an adjustment of 20 bolts will be made as the crosscut is advanced.

706 XCS (No. 1 XCS)

As previously reported the crosscut remains at 31.5 feet with the first 29.5 feet timbered.

Car siding excavations:

Previously reported	13,898 cu. ft.
At T.S. 1-2 + 111 ft.	260 " "
At T.S. 1-4 + 60 ft.	260 " "
At T.S. 1-5 + 160 ft.	260 " "
Total to 12-22-59	14,678 cu. ft.

Diamond drill stations:

800 XCS	- 25 ft.	767 XCN	- 25 ft.
823 XCN	- 25 ft.	650 XCS	- 25 ft.
751 XCS	- 25 ft.	662 XCN	- 25 ft.

Total to 12-22-59 - 150 ft.

Diamond drilling:

Hole H30 - 823N	755 ft.
" H30 - 800S	927 "
" H30 - 751S	1086 "
" H30 - 767N	1145 "
" H30 - 650S	17 "
Total to 12-22-59	3930 ft.

Status of contract:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: 225,064.04 (thru Nov. 1959)

	Authorized	Completed
Drifting and/or crosscutting (3070 DE - 3710.82 ft.) (714 XCN - 234.70 ft.) (706 XCS - 31.50 ft.)	12,485 ft.	3,977.02 ft.
Diamond drill stations	300 ft.	150 ft.
Core drilling	11,855 ft.	3,930 ft.
Car siding excavations	14,800 cu.ft.	14,678 cu. ft.
Timbering (3070 DE - 3177.76) (714 XCN - 64.5) (706 XCS - 29.5)	3,950 ft.	3,271.76 ft.
Rock bolts (3070 DE - 872) (714XCN - 258)	4,000	1,130

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E 1134 in accordance with the terms of the contract.

Signature /s/ Stephen W. Zoldak Title Mining Engr. Date 12-18-59

APPROVAL BY ~~DMEA~~ ONE EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Exec. Officer Date Dec. 18, 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Stephen W. Zoldok, Mining Engr.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT - NOVEMBER 1959

In the 3070 East Page Drive, advance in November was 131.4 feet for a total under the OME contract of 3,614.8 feet. Advance in 650 Crosscut South, a diamond drill station, was 21.0 feet, to completion at 32.6 feet. In the drive and crosscut, the rock is predominantly thin-bedded purple argillite with some interbedded purplish argillaceous quartzite. Irregular and discontinuous bleaching, sub-parallel to the bedding, is exposed late in the advance. The bedding and numerous strong bedding faults parallel the drive and dip steeply south. Heavy ground was encountered throughout the advance.

DDH 30-751S advanced 356.0 feet to footage 856.0, bringing total diamond drilling for the project to 3,683.0 feet. The rock is predominantly light-grey quartzite which locally is strongly bleached. Several 1/4- to 3/4-inch quartz and quartz-siderite stringers were encountered between footages 653.0 and 678.5, followed by gentle folding and faulting to 695.0 feet. Significant faulting was encountered from 745.0 feet to the last core logged at 776.0 feet. The increased flow of water along with the loss of sludge necessitated casing and reducing to BX size core at about 850 feet.

Plate 1 is a plan showing the geology of the work in the 3070 East Page Drive in November, and Plate 2 is a plan of DDH 30-751S. Core logs for footage 540 to 890 in DDH 30-751S also are attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN
S. NORMAN KESTEN

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E 1134 in accordance with the terms of the contract.

Signature /s/ Stephen W. Goldoke Title Mining Engr. Date 11-20-59

APPROVAL BY ~~DMEA~~ OME EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Area Officer Date Nov. 30, 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- OCTOBER 1959

In the 3070 East Page Drive, advance in October was 145.5 feet, for a total under the OME contract of 3,483.4 feet. There was no advance in 714 XCN but 662 XCN, a diamond drill station at coordinate 13,375 E, was completed at 31.1 feet, and 650 XCS, a diamond drill station at coordinate 13,500 E, was advanced 11.6 feet. In the drive and in the crosscuts, the rocks are predominantly light-grey, argillaceous quartzites and purple argillites. The bedding and numerous minor bedding-plane faults have strikes of N. 80° to 85° E., or about parallel to the drive, and dip steeply either north or south. Several relatively weak faults, striking northwesterly, and dipping southwesterly, were encountered. A subparallel fault structure in the south wall of the drive occasioned considerable difficulty in driving 650 XCS.

DDH 30-767N advanced 208 feet and was stopped at 1,145 feet. Core recovery continued to be very poor throughout this advance, being mainly mud and small to large fragments of quartzite. When the drillers encountered difficulties and it seemed likely that casing would be required, the hole was stopped. If, as has been suggested, the last 236 feet represent the Osburn Fault Zone, then the dip of the zone from surface is about 55°. This is the dip at which the zone was projected when the project was being laid out. None of the sludge samples showed values in silver, lead, or zinc.

DDH 30-751S, at approximate coordinate 12,500 E, was drilled to 500 feet and is continuing. It penetrated purple argillite, and light-grey quartzite and argillaceous quartzite, to 155 feet. Beyond this footage, the rocks are predominantly light-grey quartzite, probably of the Revett formation. Several quartz stringers less than one inch wide were encountered and one of these, at 72 feet, contained several blebs of galena. No significant faulting was encountered.

Total diamond drilling to date is 3,327 feet.

Plate 1 is a plan showing the geology of the work accomplished in October. Core logs for footage 960 to 1,145 in DDH 30-767N and for footage 0 to 500 in DDH 30-751S also are attached.

Respectfully submitted,
Original Signed by
S. N. KESTEN

S. NORMAN KESTEN

December 7, 1959

OME Certifying Officer, Region I

American Smelting and Refining Company, Contract No. Iam-21134
Monthly operating report for October 1959

The subject monthly operating report has been processed and forwarded to the Disbursing Officer for payment.

The difference in the drilling costs claimed by the Operator and those certified for payment is explained as follows:

The Operator claimed 1,145 feet of drilling at $6.60 per foot, or $7,557.00. However, invoices from the driller show an average actual cost of $6.33 per foot, or $7,253.54:

49'	AX	@	$5.20	=	$ 254.80
283'	"	@	5.74	=	1,624.42
168'	"	@	5.74	=	954.32
33'	"	@	6.50	=	214.50
404'	"	@	6.50	=	2,626.00
63'	"	@	6.50	=	409.50
145'	"	@	8.00	=	1,160.00
1145'					$7,253.54 = $6.33 per ft.

Memorandum

To: OME Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim inspection report, Docket No. DMEA-4712 (Lead-Zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was visited and inspected on October 1, 1959. The previous inspection was made by S. W. Zoldok, Mining Engineer, Bureau of Mines, on August 5, 1959. A short conference regarding the contract and progress was held at the mine office with Troy Tower, superintendent of the Page mine, C. J. Ward, assistant superintendent, and John Butler, engineer.

From the conference it was learned: underground development and mining was now on a 5-day-per-week schedule with 2 shifts per day; the mill was running only 4 days per week at maximum capacity of 500 tons of ore per day; a new contract had been let for the exploration drilling; Boyles Brothers had pulled out in July after finishing their minimum drilling contract; the new drilling contractors operate on a 5-day-per-week schedule with 2 shifts per day; and they are now averaging about 16.5 feet of drilling per day.

An underground inspection of the 3070 level was made, accompanied by Mr. Tower. The main crosscut continues in a N. 83° E. direction through light-colored, thin-bedded, argillaceous and siliceous rocks, believed to be the St. Regis formation. The ground is badly broken by joints and bedding plane shears, and slabs readily. It is necessary to timber within a few feet of the face. Considerable water is also encountered. No significant mineralization or structures have been found in the latest contract advances.

Contract Measurements (3070 DE)

Main Drift

Previously reported to Sta. No. 1616	2,621.82 feet
Sta. No. 1616 to face	718.00 "
Total advance to 10/ 1/59	3,339.82 feet

Timbering

Previous timber advance reported (Sta. No. 1616 + 4.27 ft.)	2,495.76 feet
Sta. No. 1616 to face minus 10 ft. - 708 ft. Advance 708 - 4.27	705.73 "
Total timber in 3070 DE to 10/ 1/59	3,201.49 feet

714 XCN (No. 1 XCN) (Coordinate 12,880 E)

This crosscut has been advanced 234.7 feet to the north. The first 64.5 feet is fully timbered and the remainder rock bolted. No count of the rock bolts were made.

706 XCS (No. 1 XCS) (Sta. No. 1616 + 235 ft.)

No advance has been made on this crosscut since the previous visit and the measurement from the main drift to the face remains at 31.5 feet with 29.5 feet of timbering.

Car siding excavations:

Previously reported to 8/ 5/59	13,898 cu. ft.
Sta. 1616 + 67.5 ft.	260 " "
Total to 10/ 1/59	14,158 cu. ft.

Diamond drilling

Previous reported (Hole H30-823N)	755 feet
Hole H30 - 800S	927 "
Hole H30 - 767N	937 "
Total to 10/ 1/59	2,619 feet

The drillers report no core recovery in hole H30-767 N. from 923 to 937 feet.

Signature /s/ Wesley G. Agnew Title Acting Exec. Date 10-28-59

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

O.M.E.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT - SEPTEMBER 1959

In the 3070 East Page Drive, advance in September was 191.8 feet, for a total under the OME contract of 3,337.9 feet. In 714 XCN, advance was 12.9 feet, for a total of 234.7 feet. The rocks exposed in the drive are light grey quartzites and argillaceous quartzites, and purple argillites. The bedding, and the bedding-plane faults, which are particularly noticeable in the argillite, strike N. 80° to 85° E. and dip very steeply either north or south. A strong fault in the latter part of the advance strikes N. 60° W. and dips 30° SW., making heavy ground.

DDH 30-767N advanced 404 feet to 937 feet, and is continuing. The corrected total diamond drill hole footage for the project is 2,619 feet. The rocks penetrated to 742 feet continue to be, alternately, purple argillite and light grey quartzite, both of which are locally calcareous. The calcareous material appears to be a form of alteration which is strongest along planes parallel to bedding. Zones of significant faulting and brecciation occur at footages 528.0 to 532.5, 540.6 to 551.3 and 567.6 to 575.0. Any one or all of these zones might be correlated with the fault zone in DDH 30-823N between footages 402 and 413. From 742 feet, the rocks are predominantly light grey, locally thick-bedded quartzite, with the bedding making a large angle with the core. From 839 to 894, average core recovery, which had been better than 75%, was 21%, and it is inferred from the appearance of the sludge, and from the reports of the drillers, that most of the unrecovered material is very soft and washed out readily. However, there is little gouge. From 894 to 909, recovery is 78%, and the rock is light grey argillite and argillaceous quartzite. From 909, recovery is less than 10%, and the drillers report mud, but no squeezing and no markedly increased water flow. It is suggested that the hole entered the hanging wall of the Osburn Fault Zone at 839 feet, encountered a "rib" of rock which had somehow been protected from the grinding action in the fault zone, and then entered the intensely faulted zone at 909 feet.

No mineralization has been intersected.

Plate 1 is a plan showing the geology of this work. Core logs for footages 540 to 960 are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN
S. NORMAN KESTEN

(See other side)

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E 1134 in accordance with the terms of the contract.

Signature /s/ Stephen W. Zoldok Title Mining Engr. Date Oct. 22, 1959

APPROVAL BY ~~DMEA~~ OME EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ Wing L. Agnew Title Acting Exec. Date 10-28-59

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT - AUGUST 1959

In the East Page Drive, advance in August was 126.1 feet, for a total to date of 3,146.1 feet. In 714 XCN, advance was 40.3 feet, for a total of 221.8 feet. In both headings, the rocks continued to be dark-grey to purple argillites and light-grey to purple quartzites and argillaceous quartzites. The bedding and several minor bedding-plane faults strike east and dip steeply north and south. Occasional thin discontinuous quartz stringers are exposed.

DDH 30-767 was advanced 201 feet from 332 to 533 feet, bringing the total drill footage in the project to 2,264. Core from the footage drilled is predominantly light-grey quartzite with minor purple bands, and the remainder is grey to green to purple argillite and argillaceous quartzite. Bedding is at a large angle to the core. Throughout the month, the contractor experienced great difficulty resulting from caving ground, and had to follow the bit closely with casing. However recognizable faulting is confined to the following footages: 292 to 299; 442 to 450; 528 to 535. No mineralization has been intersected.

A plan showing the geology of the work is on Plate 1. Core logs for footage 260 to 540 are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

S. NORMAN KESTEN

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

APPROVAL BY ~~DMEA~~ DME EXECUTIVE OFFICER OR ALTERNATE:

Signature /S/ A. E. Weissenborn Title Exec Officer Date Sept. 4, 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- JULY 1959

In the East Page Drive, advance in July was 95.3 feet, for a total to date of 3,020.0 feet. In 714 XCN, advance was 22.7 feet, for a total of 181.5 feet. A new crosscut, 706 XCS, was started, and advance was 31.5 feet. All three openings continued to penetrate dark-grey to purple argillites and light-grey, argillaceous quartzites. The bedding and minor bedding-plane faults strike east and dip north and south. Occasional, discontinuous, quartz stringers less than 3/4 of an inch wide occur along bedding-plane partings.

DDH 30-767N was resumed by a new contractor and advanced from 49 to 332 feet, bringing the total drilling to date to 2,063 feet. The hole penetrated dark-grey to purple argillites and light-grey quartzites and argillaceous quartzites. A strong fault zone was encountered at footage 209.5 to 217.5 and weak fault and breccia zones at footages 152.0 to 154.5 and 224.5 to 225.5. In the last 60 feet of advance, the core from which has not yet been logged, the rock penetrated appears to be made up of a larger proportion of grey to grey-green quartzite, and a smaller proportion of darker, argillaceous rocks.

A plan showing the geology of the work is on Plate 1. Core logs for part of DDH 30-767N are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MEMORANDUM

To: OME Field Team, Region I

From: S. W. Zoldok, Mining Engineer, Bureau of Mines

Subject: Interim inspection report, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The project was inspected August 5, 1959, accompanied by Mr. Troy Tower, superintendent. The previous inspection was made on June 25, 1959, by R. D. Sample, U. S. Geological Survey.

The mine continues to operate on a 4-day per week basis.

The 3070 level east drive is still in thin bedded argillaceous quartzites striking parallel with the drift and dipping almost vertically. Timber is being carried to within 5 feet of the face.

No mineralization has been disclosed in the drift or diamond drill holes.

Contract Measurements (3070 DE)

Drifting:

Previously reported to Sta. No. 1616	2,621.82 ft.
Sta. No. 1616 to face	409.00 "
Total advance to 8-4-59	3,030.82 ft.

Timbering:

Last set measured April 10, 1959 was at Sta. No. 1612 + 479.00 ft. for a total of 2,101.03 ft.

Sta. No. 1612 to 1613	136.37 ft.
Sta. No. 1613 to 1614	110.39 ft.
Sta. No. 1614 to 1615	116.47 ft.
Sta. No. 1615 to 1616	111.50 ft.
Total	474.73 ft.

New measuring point is at Sta. No. 1616 / 4.27 ft.

Previous timber advance reported	2,101.03 ft.
Sta. No. 1616 - last set 399 ft.	
Advance - 399 - 4.27	394.73 "
Total timber in 3070 DE to 8-5-59	2,495.76 ft.

714 XCN (No. 1 XCN) (Coordinate 12,880 E)

This crosscut has been advanced 181.5 feet to the north. The first 64.5 feet is fully timbered, the next 102 feet is rock bolted (184 bolts) and the last 15 feet is bald.

	Drifting	Timber	Rock Bolts
I.P. to 64.5'	64.5 ft.	64.5 ft.	-
64.5' to 166.5'	102.0 ft.	-	184.0 1/
166.5' to 181.5'	15.0 ft.	-	-
Totals to 8-5-59	181.5 ft.	64.5 ft.	184.0 1/

1/ There are 20.4 five-foot sections in 102 feet and maximum allowable bolts are 20.4 x 7 = 142.8. If necessary, an adjustment will be made as the crosscut is advanced.

706 XCS (No. 1 XCS) (Sta. No. 1616 / 235 ft.).

This crosscut is not surveyed in yet.

	Drifting	Timber	Rock Bolts
I.P. to 29.5'	29.5'	29.5 ft.	none
29.5' to 31.5'(face)	2.0'	-	-
Totals to 8-5-59	31.5 ft.	29.5 ft.	none

Car siding excavations:

Previously reported	13,463 cu.ft.
At Sta. No. 1616 / 7 ft.	260 " "
At 706 XCS / 35 ft.	175 " "
Totals to 8-5-59	13,898 cu.ft.

Diamond drilling:

Previously reported (Hole H30-823N)	755 ft.
Hole H30 - 800S	927 "
Hole H30 - 767N	359 "
Totals to 8-5-59	2,041 ft.

Status of contract:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: $174,619.15 (thru June 1959)

Work Item	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	3,243.82 ft.

I certify that the above bill is correct and just and that payment therefor has not been received.

Date July 16, 1959 *Payee American Smelting and Refining Co.

Per J. C. Kinnear Title Manager

*When a voucher is signed or receipted in the name of a company or corporation, the name of the person writing the company or corporate name, as well as the capacity in which he signs, must appear. For example: "John Doe Company, per John Smith, Secretary," or "Treasurer," as the case may be.

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

Pursuant to authority vested in me, I certify that this account is correct and proper for payment in the amount of:

$ 4404.35

Signature Lorell F. Long
(Authorized Certifying Officer)

Date 8/13/59 Vou. No. 2312

(See other side)

(For Government use only)

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. 61134 in accordance with the terms of the contract.

Signature /s/ Stephen W. Zoldok Title Mining Engr. Date 7-27-59

APPROVAL BY ~~DMEA~~ ONE EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ Wing G. Agnew Title Acting Exec Date 8-3-59

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Date July 16, 1959 Operator American Smelting and Refining Company

Per J. L. Kinsor Title Manager

REMARKS:
a - 100 feet allowable under contract.
b - 1009 rock bolts allowable under contract.

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT -- JUNE 1959

In the East Page Drive, advance in June was 70.3 feet, bringing the total to date to 2,924.7 feet. In 714 XCN, advance was 85.2 feet, for a total to date of 158.8 feet. The opening continued in dark-grey to purple argillites and argillaceous quartzites. Near the present face, heavy ground occurs under and between two strong faults which strike N. 25° W. and dip about 80° west. The bedding and minor bedding-plane faults strike east and dip north and south. In the crosscut, the rocks are interbedded purple argillites and grey to purplish quartzites and argillaceous quartzites. The attitude of the bedding is the same as in the East Page Drive.

DDH 30-800S was advanced 131.0 feet to 927.0 feet. The core continued to be quartzite, with a strong fault zone between 770 and 837 feet. There is a locus of faulting at 790 to 796 feet and another, stronger, at 819 to 837 feet. Beyond that footage, the rock is somewhat broken, and at 923 feet a second major fault zone was encountered. Mud and rock fragments twice filled the hole to within 200 feet of the collar, and the hole was stopped at 927 feet. The first fault zone is tentatively identified as the Curlew, the second as the Spring.

DDH 30-767N was collared at about 12,325 E. and had been advanced to 49 feet when drilling contractors terminated their operations. Rocks penetrated are purple argillites and grey to purplish quartzites.

Total diamond drilling to date is 1,731.0 feet.

A plan showing the geology of the work is on Plate 1. Core logs for the last part of DDH 30-800S are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this report is correct and complete to the best of their knowledge and belief.

Date June 18, 1959 Operator American Smelting and Refining Company

Per J. C. Nieser Title Manager

NOTE.—Title 18, U. S. Code (Crimes), section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

REMARKS:
a - 100 feet allowable under contract.
b - 872 rock bolts allowable under contract.

(Instructions on reverse)

(For Government use only)

June 22, 1959

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE UNIT
EAST PAGE PROJECT
PROGRESS REPORT - MAY 1959

In the 3070 East Page Drive, advance in May was 84.4 feet, for a total of 2,854.4 feet to date. A crosscut, 714 XCN, was turned off at approximate coordinate 12,880 E. and advanced 73.6 feet. The main drive continued in dark-grey to purplish argillites and argillaceous quartzites, with no appreciable change in bedding attitudes. Bedding plane faults are numerous but discontinuous. The crosscut exposed grey to purplish argillites with occasional thin beds of argillaceous quartzite.

DDH 30-880S advanced 511.0 feet to footage 796.0, bringing the total diamond drilling in the project to 1,551.0 feet. Light-grey quartzites with minor local thin beds of argillite were cut. The angle between bedding and core varies between 65° and 80°. Narrow quartz stringers, some of which are mineralized with coarse pyrite, occur between footages 429 and 650. Silicification was observed in the general vicinity of the quartz. Occasional minor faults were logged with faults of some significance at footages 495 to 507, 544 to 546, 567 to 572.

A plan showing the geology of the work is on Plate 1. Core logs for the relevant portion of the drill hole are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

Memorandum

To: OME Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim inspection report, Docket No. DMEA-4712 (Lead-Zinc) American Smelting and Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The above project was inspected June 25, 1959. A short conference was held at the mine office with Mr. Troy Tower, Superintendent of the Page mine, Mr. C. J. Ward, Assistant Superintendent, Mr. John Butler, Engineer, and Mr. Dave Flitcher, Assistant Geologist.

All underground development, mining and milling are still on a 4-day-week schedule (Tuesday through Friday). The staff and engineering divisions continue on a 5-day-week schedule (Monday through Friday). Ore production comes from the Tony vein and supplies the 500-ton-per-day mill, which runs at capacity 4 days per week. The Boyles Brothers, who have been diamond drilling on the 3070 level, have pulled out all their equipment after completing their minimum contract agreement. It is claimed they were losing money under the contract. This pulling out by the Boyles Brothers means that the company will now have to negotiate for a new drilling contract on the 3070 level. It is expected that any new drilling contract will be at a higher rate than the one with the Boyles Brothers.

An underground inspection of the 3070 level was made, accompanied by Mr. Tower. The 3070 level east drive has been advanced 290 feet beyond survey station No. 1616 for a total advance of 2,911.82 feet under the DMEA contract. The east face is still in light-colored argillaceous quartzites which slabs badly and the entire advance requires timbering within a few feet of the face. No significant mineralization or structure was encountered in the last advance east until at the present face where a fault zone about 4 feet wide was intersected. This zone strikes about N. 23° W. across the face and dips 79° W. At this

point it was originally planned to start the first crosscut south to the south boundary line, but because of the possibility of bad and heavy ground in the fault zone, the crosscut will be started back from the present face about 30 or 40 feet.

The first crosscut north (714 XCN) has advanced for a total of 142 feet with the first 64.5 feet timbered. It is expected that the north crosscut will require less timber than the main east crosscut as it will be driven at almost right angles to the bedding and shear planes. This crosscut is expected to be driven 1,000 feet or more to reach the Osburn fault zone to the north. However, progress at the several faces has been slowed with the 4-day-week work program.

Measurements (3070 DE)

Previously reported to Station No. 1612	2,147.09 feet
Station No. 1612-1613	136.37 feet
Station No. 1613-1614	110.39 feet
Station No. 1614-1615	116.47 feet
Station No. 1615-1616	111.50 feet
Station No. 1616-face	290.00 feet
Total east drift advance to 6/25/59	2,911.82 feet

Diamond drilling

The first core hole, at the end of 823 XCN as reported in E. G. Erickson's memorandum of April 13, 1959, reached a depth of 755 feet but the hole caved and has been abandoned for the present. The second core hole (DDH-30, 800 XCS) reached a depth of 927 feet and was discontinued in some badly caved ground. No mineralization was reported. The third core hole (DDH-30, 767 XCN) was stopped after 39 feet when the Boyles Brothers moved their equipment out of the mine. No further core drilling can be expected until a new drilling contract has been negotiated.

Signature s/ A. E. Weissenborn Title Exec. Officer Date May 22, 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
EAST PAGE PROJECT
PROGRESS REPORT - APRIL 1959

In the 3070 East Page Drive, advance in April was 184.8 feet, for a total of 2,770.0 feet to date. In the early part of the advance, the rocks continue to be purplish, argillaceous quartzites and argillites, making heavy ground underneath a northerly-striking fault which dips flatly to the west. The rocks gradually become more quartzose until, after 100 feet advance, they are predominantly grey quartzites with minor, purple-banded, argillaceous quartzites. The bedding and minor bedding-plane faults generally strike east and dip north and south. A number of minor faults striking N. 45° W. to N. 20° E. and dipping steeply west are exposed. (Please see Plate 1.)

In DDH 30-823N, the fault zone from 401 to 413 feet presented such difficulties that no further advance could be made, and the hole was stopped at 755 feet.

DDH 30-800S was collared at about coordinate 11,990 E. and drilled southerly for 285.0 feet, bringing total diamond drill advance for the project to 1,040 feet. Between the collar and 117 feet, there is a change from green and purple quartzite and argillaceous quartzite (St. Regis?) to predominantly light-grey, dense quartzite (Revett?). A shattered zone, with some gouge, at footage 220 to 229 feet is the only significant structure encountered.

A plan of the drill hole is shown on Plate 1 and core logs for the relevant portion of the hole are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN
S. NORMAN KESTEN

Memorandum

To: OME Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim inspection report, Docket No. DMEA-4712 (Lead-Zinc), American Smelting and Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The above project was inspected May 7, 1959, accompanied by Masao Kaneko, Chief Mining Engineer, Mitsui Mining and Smelting Co., Ltd., Tokyo, Japan. Mr. Kaneko is a guest of the United States Government and is on an inspection tour of major mining operations in western United States and parts of Canada. He was introduced to and held conferences with Mr. Troy Tower, Superintendent of Page Mine, Mr. C. J. Ward, Assistant Superintendent, Mr. John Butler, Engineer, and Mr. Dave Flitcher, Assistant Geologist.

We were accompanied underground to the 3070 level by Mr. Tower who showed Mr. Kaneko several of the workings and faces of the Tony vein which, at the present time, is supplying the ore for the 500-ton mill. All underground development, mining, and milling are now on a 4-day week work schedule. The staff and engineering divisions are still on a 5-day-a-week schedule. Curtailment of production was necessary because of low metal prices.

The 3070 level east drive had been advanced 164.50 feet beyond survey station No. 1616 for a total advance of 2759.90 feet. At this fartherest advance the company is starting their first northerly crosscut to intersect the Osburn fault. The crosscut station is just being cut which will probably delay the eastward advance for a short time.

The east face is still in argillaceous quartzites which slabs badly and requires timbering most of the way. In a few places roof bolts are sufficient to hold the back and sides. No significant mineralization or structure has been encountered in the east drift.

Signature /s/ Wm. L. Agnew Title Acting Exec. Date 5/7/59

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - MARCH 1959

In the 3070 level East Page Drive, advance in March was 143.3 feet, for a total of 2,585.2 feet to date. The heading advanced through thin-bedded, purple argillites and argillaceous quartzites which in the present face strike S. 85° E. and dip 88° north. The strongest of the numerous cross faults encountered strikes north, dips 26° west and consists of up to one foot of gouge and brecciated wall rock. Penetration of the fault showed no change in the strike of the bedding but revealed an abrupt change in dip from 65° south in the hanging wall to 88° north in the footwall. (Please see Plate 1.)

DDH 30-823N was advanced 357.0 feet to 755.0 feet from the collar. 'A' casing was placed to 629 feet, and 'AX' core recovered from that point. Caving at 664 feet made additional casing necessary, so the casing was pulled to permit reaming, which was in progress at the end of the month.

A zone of strong faulting was encountered between 401 and 413 feet, and intermittent evidence of less important faulting is logged from 434 to 465 feet and at 515 and 710 feet. Beyond the major fault, the rock is predominantly quartzite, with narrow argillaceous sections. Tentatively it is considered that the rocks south of the fault are of the St. Regis formation and those north belong to the Revett. About two feet of basic dyke were encountered at 697 feet. A plan of the drill hole is shown on Plate 2, and core logs for the relevant portion of the hole are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

S. NORMAN KESTEN

MEMORANDUM

To: OME Field Team, Region I

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim inspection report, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The project work was inspected April 10, 1959, accompanied by C. J. Ward, assistant mine superintendent, and S. W. Zoldok, mining engineer, Bureau of Mines.

The 3070 level east drive had been advanced 487 feet beyond survey station No. 1612 for a total advance of 2634.09 feet under the DMEA contract.

There has been no change in the ground conditions or the rock type. The rocks penetrated are argillaceous quartzites and the bedding is almost vertical striking with the line of the drive. There has been some faulting along the bedding and some cross faulting causing the ground to be short and slabby, necessitating support. The drive is timbered by standard drift sets that are placed within a few feet of the face before each blast.

No mineralization has been disclosed in the drive to date.

Measurements (3070 DE)

Previously reported to Sta. No. 1608		1,893.74 ft.
Sta. No. 1608 - 1611		132.06 "
Sta. No. 1611 - 1612		120.89 "
Sta. No. 1612 - last set	(479.00 ft.)	
Sta. No. 1612 - face		487.00 "
Resurvey correction to Sta. No. 1608		0.40
Total drift advance to 4/10/59		2,634.09 ft.

Timbering

Previous total timber advance reported to Sta. No. 1551 + 699.34 ft.	1,798.68 ft.
Sta. No. 1551 + 699.34 ft. - last set 4/10/59	301.95 "
Resurvey correction	.40 "
Total timber to 4/10/59	2,101.03 ft.

All 4 drill stations excavated to date, namely; 823XCN, 800 XCS, 767 XCN, and 751 XCS, have exceeded the allowable maximum of 25 feet per drill station.

Core Drilling

The first core hole from the end of 823 XCN had reached a depth of 755 feet; however, the hole had caved and on the date of the inspection the drillers had been able to re-enter the hole to a depth of only 423 feet. A core barrel, bit and a string of casing have been lost in the caved section between 413 feet and 455 feet. A week has been lost fishing and reaming. The drillers believed they could bypass the cave and re-enter the hole.

Rock Bolting

Previously allowed	872 bolts
Bolts allowed since last inspection	none
Total allowed to date	872 bolts

Status of contract as of April 10, 1959:

Date of contract:	Sept. 18, 1957
Termination date:	Sept. 1, 1962
Amount of contract:	$660,206.00
Amount spent:	133,459.52 (thru Feb. 1959)

Work Items	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	2,634.09 ft.
Drill stations	300 ft.	100 ft.
Core drilling	11,855 ft.	755 ft.
Car siding excavations	14,800 cu. ft.	13,463 cu.ft.
Timbering	3,950 ft.	2,101.03 ft.
Rock bolts	4,000	872

APPROVAL BY ~~DMEA~~ OME EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Exec. Officer Date April 1, 1959

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE PROJECT
PROGRESS REPORT - FEBRUARY 1959

In the 3070 level East Page Drive, advance for February was 131.7 feet for a total of 2,441.9 feet to date. The heading encountered light-grey to purple, argillaceous quartzites which easterly become greenish in color. Numerous chloritic stringers parallel the bedding which in the present face strikes S. 85° E. and dips 85° South. (Please see Plate 1.)

The diamond drill station at approximate coordinate 12,325 E. (767 XCW) was advanced 11.7 feet to completion at 35.6 feet. The station at approximate coordinate 12,480 E. (751 XCS) was advanced 31.3 feet to completion. Rocks exposed are essentially the same as in adjacent portions of the drive.

DDH 30-823W was advanced 284.0 feet for a total of 398.0 feet to date. The hole penetrates predominantly light-grey to purple, argillaceous quartzites with interbedded argillites and quartzites. Locally the rock is sandy, moderately bleached and sericitized. Moderately strong fault zones were encountered at the following footages:

176.0' to 200.0'
228.0' to 247.0'
325.0' to 330.0'

A strong fault occurs at 331.0 feet with the rock being highly fractured through the remainder of the advance. Caving from 320 feet necessitated reaming and casing was placed to 336 feet. Caving beyond that point was caught up by the liberal application of rod grease. No significant mineralization was intersected. Plate 2 is a plan of the drill hole. Core logs for the relevant portion of the hole are also attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE PROJECT
PROGRESS REPORT - JANUARY 1959

In the 3070 East Page Drive, advance for January was 175.8 feet for a total of 2,134.4 feet to date. The heading cuts light-grey to purple argillites which locally are moderately bleached and sericitized. The bedding and numerous bedding-plane faults strike approximately N. 85° E. and dip 85° to 88° North. The rock is cut by several sets of well developed joints and numerous cross faults. The strongest of these faults, exposed approximately 80 feet west of the present face, strikes north and dips 80° West. The structure consists of up to 2 feet of slightly chloritic, gritty gouge with heavy smears of dark-green to grey gouge on both walls. Several 1/4- to 1/2-inch wide, lenticular, quartz-siderite stringers occur along bedding-plane partings. (Please see Plate 1.)

The diamond drill station at 11,990 E, 800 XCS, was advanced 5.1 feet to a total of 28.3 feet, to fulfill the requirements of the drillers for a 20-foot pull. The rocks are essentially the same as in the main drive.

The diamond drill station at 12,325 E, 767 XCS, was driven 23.9 feet. The rocks in the crosscut are essentially as in the main drive.

DDH 30-823N was collared at the face of 823 XN and advanced 114.0 feet. (Please see Plate 2.) The rocks penetrated are purple argillite and light-grey to purple, argillaceous quartzites, which locally are moderately bleached and sericitized. The bedding is generally at 75° to 80° to the core, but varies from 65° to 85°. Core recovery was relatively poor to 61 feet, averaging 61%. However, there was no positive evidence of faulting or shearing and it is presumed that the softer portions of the rock were washed out. Sludge sampling was not begun until 80 feet, but there is no evidence in the core of the proximity of veining or mineralization. Between footage 61 and 114.5, core recovery was much better, approximating 100%. By inadvertence, all the sludge from 80 feet was assayed and that for 110 to 115 feet showed 3.6 oz. Ag per ton. This is believed to be because of the use of a dirty bag, and in the future, new or laundered bags will be used. However, the core from this section will be split and assayed.

The core log for the drilling advance is attached.

Respectfully submitted,

MEMORANDUM

To: OME Field Team, Region I

From: E. G. Erickson, Mining Engineer, Bureau of Mines

Subject: Interim inspection report, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected February 10, 1959, accompanied by Mr. A. T. Combs, assistant manager of the company's Northwest operations, and Troy Tower, mine superintendent.

The 3070 level east drive had been advanced 439 feet and the timber 430 feet beyond survey station No. 1608. The total length of the drive under the contract is 2332.66 feet.

The bedding is almost vertical and the direction of the drive is parallel. The walls are slabby and there are numerous gouge seams indicating movement. The ground may be classified as quite short and blocky argillaceous quartzite. Support is necessary and standard type drift sets are used. The caps are 7'6", and the posts are 8 feet long and slightly battered toward the walls. Sets are 5-foot center to center except at car stations, where a 6-foot set will be placed to accommodate the newly acquired Granby self-dumping type mine cars.

Measurements (3070 DE)

Drift advance:

Starting point of contract - Sta. No. 1605 1/	1624.40 ft.
Sta. No. 1605 - 1606	93.48 "
Sta. No. 1606 - 1608	175.86 "
Sta. No. 1608 - face	439.00 "
Total drift advance to 2/10/59	2332.74 ft.

1/ Sta. No. 1605 replaced Sta. No. 1551 and Sta. No. 1552 omitted in resurvey.

Note: Rock sections reported in the last interim report dated December 24, 1958, are incorrect. The untimbered rock sections are $7\frac{1}{2}$'x$9\frac{1}{2}$', and the timbered rock sections are 10'x10'. (minimum sections)

Measurements (3070 DE) (continued)

Timber advance:

Total timber previously reported to Sta. 1551+406.96'	1506.3 ft.
Sta. 1551+406.96' - last set (2/10/59)	292.38 "
Total timber to 2/10/59	1798.68 ft.

3070 - 800 XCS (drill station No. 2) 7'x9'

Number 2 drill station crosscut was extended to a total length of 27.5 feet.

3070- 767 XCN (drill station No. 3) 7'x9'

Drill station crosscut was driven a total of 35.3 feet without support at least for the present.

Core Drilling

The first drill hole from the end of 3070-823 XCN had reached a depth of 342 feet. No significant ore mineralization has been exposed to date. Core recovery was reported to be about 70 percent. Log of hole and pertinent data will be submitted when hole is completed.

The drillers are using a steel sludge box having 2 rows of 4 baffled compartments which allows sludge to be collected in one row while the sample is taken from the other row.

Rock Bolting

Previously allowed	872
Additions since last inspection	None
Total allowed to date	872

Status of contract as of February 10, 1959:

Date of contract: Sept. 18, 1957 Amount of contract: $660,206.00
Termination date: Sept. 1, 1962 Amount spent: 113,141.00 (thru Dec. 1958)

Work Items	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	2332.74 ft.
Drill stations	300 ft.	75 ft.
Core drilling	11,855 ft.	342 ft.
Car siding excavations	14,800 cu.ft.	12,022 cu.ft.
Timbering	3,950 ft.	1,798.68 ft.
Rock bolts	4,000	872

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE PROJECT
PROGRESS REPORT - DECEMBER 1958

In the 3070 East Page Drive, advance for December was 207.6 feet for a total of 2,134.4 feet to date. The heading encountered light-grey to purple argillites and argillaceous quartzites which locally are highly sericitized and moderately bleached. The bedding and numerous weak to moderate bedding-plane faults strike N. 85° E. and dip steeply to the north. The rock is highly fractured and cut by a well developed set of joints and numerous cross faults. The strongest of these faults, exposed several feet west of the last face mapped, strikes N. 60° W. and dips 35° SW. Two basic dikes, 6 inches to 14 inches wide, striking N. 20° E. and N. 20° W. lying nearly vertical, were encountered early in the advance. These dikes may be the downward extension of the group of dikes that is exposed on the extreme east end of the Tony vein on and above the 2565 intermediate level. Several 1/4-inch to 1/2-inch wide, discontinuous, quartz-siderite stringers occur along bedding-plane partings.

A 50-scale map showing the geology of the advance is attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MEMORANDUM

To: OME Field Team, Region I

From: E. G. Erickson, Mining Engineer, U. S. Bureau of Mines

Subject: Interim inspection report, Docket No. DMEA-4712, American Smelting & Refining Co., East Page Mine, Shoshone County, Idaho, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The East Page project was inspected December 16, 1958, accompanied by Mr. Troy Tower, superintendent.

3070 Drift East

The 3070 drift east had been advanced 347.5 feet beyond survey station No. 1552 for a total advance under the contract of 2034.16 feet. There has been no significant change in the ground conditions or formation since the last interim report dated November 20, 1958. The drift is being supported by standard timber sets and timber is kept within a few feet of the face.

The drift is operated two shifts per day and five days per week. Three miners are employed in the heading and a full cycle, including a 5-foot round and a set of timber, is presently maintained each shift resulting in an advance averaging 10 feet per day. Two trackmen were raising track to final grade, ballasting, surfacing track and cleaning ditch. The section of drift through the Curlew vein that had to be spiled and timbered has required repairs from time to time. The standard of work is good.

Measurements (3070 DE)

Drift advance:

Starting point of contract - Sta. No. 1552	1686.66 ft.	1/
Sta. No. 1552 - face (12/16/58)	347.5 "	
Total drift advance to 12/16/58	2034.16 ft.	

1/ Corrected to recent survey.

Note: Rock section timbered drift 7'x9'. Untimbered drift rock section 8'x10' (minimum sections).

Measurements (3070 DE) (continued)

Timber advance:

Total timber previously reported to Sta. 1552+95'	1260.6 ft.	
Corrected total	1256.6 ft.	1/
Sta. No. 1552+95' - last set (12/16/58)	249.7 ft.	
Total timber to 12/16/58	1506.3 ft.	

1/ Previous error in footage between Sta. No. 1545 and Sta. 1552 and measurement ahead of Sta. 1552; net difference - minus 4 feet.

3070 - 800 XCS (drill station No. 2) 7'x9'

The center line 3070 - 800 XCS is located at survey Sta. 1552+219.5' which is also the location of a car transfer sideswipe. The total length of the XCS drill station is 23 feet. The car transfer is timbered and the drill station crosscut is rock bolted. Car transfer excavation was 315 cu. ft. for the interim period since the last inspection, making a total of 11,707 cu. ft.

Rock Bolting (completed since last inspection)

Total length	No. 5 ft. sections	7 bolts X no. sections	Bolts installed	Allowable bolts
3070 - 823 XCN				
188 ft.	37.6	263	389	263
3070 - 800 XCS				
23 ft.	4.6	32.2	70	32
Total bolts previously allowed				577
Total to date				872

Status of contract as of December 16, 1958:

Date of contract: Sept. 18, 1957 Amount of contract: $660,206.00
Termination date: Sept. 1, 1962 Amount spent: 93,974.40 (thru Oct.)

Work Items	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	2,034.16 ft.
Core drilling	11,855 ft.	none
Drill stations	300 ft.	48 ft.
Car siding excavations	14,800 ft.	11,707 cu.ft.
Timbering	3,950 ft.	1,506.3 ft.
Rock bolts	4,000	872

MEMORANDUM

To: OME Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected November 13, 1958, accompanied by Mr. Troy Tower, superintendent.

The 3070 east drift had been driven 1,862.5 feet since the start of the drift. The face was in a quartzite believed to be the transition zone from the St. Regis to Revett formations. The strike of the bedding of the quartzite is about the same as the bearing of the drift, so unless the direction of the drift is changed the drift may continue in the transition zone for some distance.

The 3070-823 north crosscut was started at Sta. 1552 in a northeasterly direction to be used as a car transfer-storage and station for DDH No. 1.

In accordance with Amendment No. 1, an accounting has been made of the rock bolts in the main crosscut so that an adjustment may be made of the total allowable bolts.

The company's operations have returned to a 2-shift, 5-day basis.

The following work had been completed to date:

3070 Level East Crosscut

Distance previously reported to Sta. 1545 (includes correction of 0.17 feet for resurvey at Sta. 1543 to 1545)		1,430.36 ft.
Sta. 1545-1550	N. 83° 13' E	126.01 ft.
Sta. 1550-1551	" "	67.99 ft.
Sta. 1551-1552	" "	62.26 ft.
		1,686.62 ft.
Sta. 1552-face	" "	176.00
		1,862.62 ft.

3070-823 North Crosscut (Diamond Drill Sta. No. 1)

Sta. 1552-1553	N. 22° 07' E	25.79 ft.
Sta. 1553-1554	N. 7° 13' E	91.18 ft.
		116.97 ft.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE PROJECT
PROGRESS REPORT - NOVEMBER 1958

In the 3070 East Page Drive, advance for November was 136.0 feet for a total of 1,926.8 feet to date. The drive exposes light-purple to grey, medium-grained argillaceous quartzite, which is well sericitized and strongly bleached. A few, very thin, discontinuous, quartz-siderite stringers occur along bedding-plane partings. The bedding and a few, weak, bedding-plane faults strike N. 85° E., and dip steeply to the north. Cross faulting is relatively weak.

800 DDH Crosscut South, being driven as a diamond drill station, advanced to a total of 23.2 feet. Geologic features are similar to those in the main drive.

A 50-scale map showing the geology of the advance is attached.

Respectfully submitted,

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

December 15, 1958

Due to the fact the MF-104A and the Operator's Progress Report do not agree, the following explanation is given. (Mr. S. W. Zoldok did not feel this should be returned to the Operator for correction).

In accordance with Field Team letters written November 24 and November 26, 1958 to the Operator, a revised MF-104A for the month of October was submitted. However, the progress report submitted was not revised and, therefore, the footages for advance of the 3070 East Page Drive and 823 Crosscut North do not agree with the revised MF-104A or the accountant's revised report.

The total footage advance of 1,790.8 is in accord with the revised MF-104A for October; however, the advance for October is shown as 28.4 ft. instead of 65.2 ft. The 823 Crosscut North was started in September and at the end of the month had been advanced 36.8 ft. Reimbursement was made for the 36.8 ft. for September. This crosscut was completed in October for a total length of 188 ft., but in order to conform to the terms of the contract, this footage was converted to 25 ft. for diamond drill station and 163 ft. of car transfer which, in turn, was converted to 10,269 cu. ft. In other words, the 28.4 ft. represents the net footage for October after taking credit for the 36.8 ft. paid for in September. The total net of 1,790.8 ft. remains unchanged.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE PROJECT
PROGRESS REPORT - OCTOBER 1958

In the 3070 East Page Drive, advance for October was 65.2 feet for a total of 1,790.8 feet to date. The drive exposes dark-grey to purple argillite and grey to buff bleached argillaceous quartzite. The bedding and numerous weak bedding-plane faults parallel the drive and dip steeply to the north. Principally because of the character of the rock exposed in the 823 Crosscut North, the rock penetrated by the drive from the Curlew vein east to the present face is now tentatively identified as the transition zone between the Revett formation to the south and the St. Regis formation to the north.

In 823 Crosscut North, which was driven as a diamond drill station and for car storage, advance for October was 156.7 feet for a total length of 193.5 feet. The heading encountered thin-bedded dark-grey to purple argillite, which is locally highly bleached, and lesser amounts of light-grey argillaceous quartzite. The rock has been tentatively identified as the St. Regis formation. The bedding and a few weak bedding-plane faults strike approximately N. 85° E. and dip steeply to the north, with the exception of a 35- to 40-foot section where faulting has folded and overturned the beds.

A 50-scale map showing the geology of the advance is attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - SEPTEMBER 1958

During September, the East Page Drive advanced 94.5 feet, and 3070 - 823 Crosscut North advanced 36.8 feet, bringing the total advance to date to 1,762.6 feet. The rocks exposed are light to medium-grey quartzite containing a few darker grey, slightly purple bands. Locally, the quartzite is argillaceous and buff colored. The bedding and numerous weak bedding-plane faults parallel the drive and dip steeply north. The rock is much more competent than previously.

The new heading 3070 - 823 Crosscut North has been turned off to be used as car storage. It will also be used as a diamond drill station for DDH No. 1 (North). A station for DDH No. 2 (South) will be provided further east, offset from the crosscut to such an extent that not too much ground will be open in one locality. Permission for these modifications to the original plan has been given by DMEA.

A 50-scale map showing the geology of the advance is attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MEMORANDUM

To: OME Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-4712 (Lead-Zinc), American Smelting and Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The above project was inspected jointly with John D. Bardill, Engineer, Bureau of Mines, on September 24, 1958. Troy Tower, Supt. of Page Mine Division, was contacted at the mine office but was busy with a team from the U. S. Bureau of Mines making a dust count of the mine and mill. One of the mine foremen, Mr. James, accompanied the inspectors to the DMEA workings on the 3070 level.

Crosscutting continues on the 3070 level in a N. 83° E. direction through the light-colored, thin-bedded, siliceous rocks of the Burke formation. The total distance of the DMEA crosscut is now about 1708 feet. The last 800 feet is heavily timbered as the ground is highly fractured and the sides slab badly. Rock bolts are insufficient. The crosscut is still running almost parallel with the lines of schistosity and this condition is partially responsible for the slabbing along the sides. The back holds well until slabbing occurs along the sides.

About 20 feet back from the face a crosscut to the north has been started. This crosscut will be driven for a possible 200 feet and be used for a train switch and for a drill station at the face. This will be the first drill hole on the DMEA contract. Crosscutting to the north should require less timbering as the advance will be at right angles to the lines of schistosity or foliation of the rocks.

Both the underground work and 500-ton mill are on a 4-day per week working basis.

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected September 24, 1958, accompanied by R. D. Sample, geologist, U. S. Geological Survey, and Mr. James, foreman.

The 3070 east drift had been driven about 1,710 feet since the start of the contract. The crosscut is still in heavy ground requiring timbering.

At survey station 1545 + 246 feet (about 1,676 feet from the start) a crosscut is being driven to the north from the main crosscut and will be used as a car storage and transfer and diamond drill station. The crosscut had been driven 19 feet.

The following work had been completed to date:

3070 Level East Crosscut

Distance previously reported to Sta. 1528			1,229.29 ft.
Sta.	1528 - 1543	N 83° 13' E	100.30
	1543 - 1545	" "	100.60
			1,430.19
	1545 - face	" "	280.00
			1,710.19

No. 1 crosscut north 19 ft.

Timbering

Previously reported to Sta. 1528	723.3 ft.
Sta. 1528 - 1543	100.3

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - AUGUST 1958

During August, the East Page Drive advanced 108.6 feet for a total of 1,631.1 feet to date. The present face is approximately 300 feet west of the first of the proposed exploratory diamond drill holes. The drive intersected a relatively strong, northwest-striking, nearly vertical fault approximately 68 feet west of the last face mapped. The folding resulting from the fault indicates that the ground east of the fault has moved south. To the west of the fault, the rock is interbedded grey to purple argillite and quartzite and to the east, light green-grey to buff, slightly argillaceous quartzite. The previously encountered faintly purple beds occur in the present face only along the stronger bedding plane slips, indicating that at least part of the purple color is a result of alteration.

A 50-scale map showing geology of this advance is attached.

Respectfully submitted,

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - JULY 1958

During July, the East Page Drive advanced 170.2 feet for a total of 1,522.5 feet to date. The rocks penetrated are purplish argillaceous quartzite with thin white sandy beds. Strike is essentially parallel to the drive (N. 83° E.) and dip is 70° to 85° N. The rocks are cut by bedding plane slips and minor cross-slips. A stronger slip or fault striking N. 25° E. and dipping 80° W. has up to 3/4" gouge.

Because of the relationship between the bearing of the drive and the attitude of bedding and bedding plane slips, it was necessary to timber throughout the advance.

A 50-scale map showing the geology of this advance is attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952); however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 LAST PAGE DRIVE
PROGRESS REPORT - JUNE 1958

During June, the East Page Drive advanced 133.0 feet for a total of 1,352.3 feet to date. The drive exposes purple to light-gray argillites and interbedded sandy argillaceous quartzites. For most of the month's advance, the bedding and numerous bedding-plane faults strike approximately N. 65° E. and dip steeply to the north. In the present face, the bedding parallels the drive and dips steeply to the north. A few minor cross faults and joints are exposed. Poor ground conditions necessitated timbering throughout the month's advance.

A 50-scale map showing the geology of this advance is attached.

Respectfully submitted,

Original Signed by

MEMORANDUM

To: DMEA Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-4712 (Lead-Zinc), American Smelting and Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

An inspection of this property was made on July 9, 1958, by R. D. Sample, Geologist, Geological Survey, and John D. Bardill, Engineer, Bureau of Mines. After a review of the maps and discussion of the project with Mr. Troy Tower, Mine Superintendent, and Mr. John Butler, Mine Engineer, Mr. Butler accompanied the inspecting team to the 3070 level.

The east crosscut continues in a N. 83°13'00"E. direction through the light-colored, thin-bedded, siliceous rocks of the Burke formation for a total distance of 1,390 feet to the face. The last 500 feet is heavily timbered as the ground is highly fractured and the sides slabby. Some of the timber and track were being replaced because of the heavy ground. No significant mineralization or structures have been found so far in this crosscut.

All underground work at the mine is on a two-shift per day, 4 days per week basis. The 500-ton mill is also on a 4-day per week working basis.

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Co., East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected July 9, 1958, accompanied by R. D. Sample, geologist, U. S. Geological Survey, and John Butler, company engineer.

The 3070 east crosscut had advanced approximately 1,392 feet since the beginning of the contract. The ground is still heavy, necessitating timber.

At Sta. 1528 + 30 ft. a car transfer was cut on the south side excavating 315 cu. ft.

The following work had been completed at the time of the inspection:

3070 Level East Crosscut

Distance previously reported to Sta. 1505		804.26 ft.
Sta. 1505 - 1519	N 83° 13' E	90.35
1519 - 1526	" "	97.47
1526 - 1527	" "	116.16
1527 - 1528	" "	121.05
		1,229.29 ft.
1528 - face	" "	163.30
		1,392.59 ft.

Timbering

Sta. 1501 + 12' to 1501 + 140'	128.0 ft.
1502 + 85' to 1504 + 97.5'	265.0
1519 + 4.7 to 1528 + 163' (face)	493.3
	886.3 ft.

Sideswiping for Car Transfers

Previously reported	808 cu. ft.
At Sta. 1528 + 30'	315
	1,123 cu. ft.

Status of the contract and work completed as of July 9:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: 59,458.00 (thru May 1958)

	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	1,392.59 ft.
Diamond drilling	11,855 ft.	0
Diamond drill stations	300 ft.	0
Car siding excavations	14,800 cu.ft.	1,123 cu. ft.
Timbering	3,950 ft.	886.3 ft.

Signature /s/ W. C. Weisenborn Title Exec. Officer Date July 10, 1958

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - MAY 1958

During May, the East Page Drive advanced 198.5 feet for a total of 1,219.3 feet to date. The drive exposes purple to light gray argillites and interbedded sandy argillaceous quartzites. The bedding and numerous bedding plane faults strike approximately N. 65° E. and dip approximately 85° northerly. Two parallel reverse faults in the present face strike N. 80° E. and dip 60° to 65° southerly. In the hanging wall of these faults, the bedding becomes flatter, dipping 65° northerly. Poor ground conditions necessitated timbering throughout the month's advance.

A 50-scale map showing the geology of this advance is attached.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-4712 (lead-zinc) American Smelting & Refining Co., East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected May 28, 1958, accompanied by R. D. Sample, geologist, U. S. Geological Survey, and Troy M. Tower, mine superintendent.

The 3070 level east crosscut had advanced about 1,190 feet since the beginning of the contract. The crosscut is in Burke formation.

The Operator has timbered approximately the last 300 feet rather than rock bolt the ground. Several sections that had been rock bolted did not stand and were timbered over.

Footnote 2 of Exh. A.

At Sta. 1505 + 235 feet a car transfer was cut on the south side, excavating 315 cubic feet.

The following work has been completed since the start of the contract:

3070 Level East Crosscut

Distance previously reported to Sta. 1503		608.07 feet
Sta. 1503 - 1504	N.83° 13' E	96.61
Sta. 1504 - 1505	N.83° 13' E	99.58
		804.26
Sta. 1505 - face	N.83° 13' E	385.50
		1189.76 ft.

Timbering

Sta. 1501 + 12' to 1501 + 140'	128.0
Sta. 1505 + 95' to Sta. 1505 + 385.5'	290.5
Sta. 1502 + 85' to Sta. 1502 + 350'	265.0
	683.5

Sideswiping for car transfers

Previously reported	593 cu. ft.
At Sta. 1505 + 235 ft.	315 " "
	808 cu. ft.

Status of the contract as of May 28, 1958:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: 49,292.00 (thru April)

	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	1,189.76 ft.
Diamond drilling	11,855 ft.	0
Diamond drill stations	300 ft.	0
Car siding excavations	14,800 cu. ft.	808 cu. ft.
Timbering	3,950 ft.	683.5 ft.
Rock bolts	4,000 bolts	618 bolts

There has been no ore production subject to DMEA royalty payment.

June 3, 1958

MEMORANDUM

To: DMEA Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-4712 (Lead-Zinc), American Smelting and Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

R. D. Sample and John D. Bardill, Mining Engineer, U. S. Bureau of Mines, inspected the above project on May 28, 1958. Mr. Troy Tower, mine superintendent was met at the mine office and accompanied the inspectors underground to the 3070 level where DMEA work is in progress.

The east crosscut on the 3070 level continues in a N. 83°13' E.' direction and is now cutting through light-colored, thin-bedded, siliceous rocks of the Burke formation. The ground is still very heavy with the sides slabbing badly. Roof bolts will not hold this ground and it must be heavily timbered. A short strip of the crosscut, about 25 feet, was anchored by a combination of steel roof bolts and coarse chicken wire. This experiment is not too successful in holding the loose ground, and the Operators may soon have to timber this section. The DMEA project had progressed to a total of 1,190 feet at the time of inspection. Work is on an 8-shift per week basis. About 5 feet of advance is made per shift. Small faults and fractures have been encountered, but no mineralization has been found. Near the face the formation is predominantly purple and green argillite with less faulting and fracturing but still requiring timber.

Below the 3070 level, the Operators had established a station on the 3400 level. Their plans were to conduct an exploration program on that level by crosscutting and drilling. However, since the Operators have gone on a 4-day per week work basis, this plan has been temporarily shelved. All equipment has been removed from the 3400 level and the station is now flooded.

Milling proceeds on a 4-day per week basis and processes about 500 tons of ore per day.

May 20, 1958

MEMORANDUM

To: DMEA Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-4712 (Lead-Zinc), American Smelting and Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was visited May 15, 1958 by R. D. Sample, U. S. Geological Survey and John D. Bardill, Mining Engineer, U. S. Bureau of Mines. Mr. Troy M. Tower, mine superintendent, was met at the mine office. Mining in general and the DMEA program in particular were discussed. The inspectors were informed that beginning May 18, 1958, the Page mine operations would be on a 4-day basis. This change will reduce the production of ore from about 10,000 tons per month to 8,000 tons per month or about 20 percent, and will likewise reduce the rate of progress of the DMEA work.

The 3070 level east crosscut has advanced about 1,128 feet since the start of the DMEA contract. The ground continues to be loose and heavy and requires heavy timbering. The back holds fairly well but the sides slab badly. In a few places where previously installed roof bolts did not support the ground, it has been necessary to add timber sets. Crosscutting continues on a 2-shift per day basis and about 5 feet of progress is made per shift or 10 feet per day.

Mr. Tower reports that the company is adjusting their sand filling plant to increase the amount of sand fill for the stopes. The present sand fill plant processes about 100 tons of sand per day from the mill tailings but the mine could use more.

Signature /s/ A. E. Weissenborn Title Exec. Officer Date May 29, 1958

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit; that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - APRIL, 1958

During April, the drive advanced 139.1 feet for a total of 1,020.8 feet to date. The early portion of the advance was through buff and green argillaceous quartzite finely banded with gray to gray-green argillaceous quartzite. After crossing a strong slip which dips steeply to the north and strikes about N. 75° E., or at a small angle to the bearing of the drive, the drive entered purple and green argillite and green to gray argillaceous quartzite. The purplish coloration in part crosses the bedding and is most obvious along slips and joints, but in part it conforms with the bedding. The soft, faulted, argillaceous rocks caused poor ground conditions and necessitated timbering and spiling. At the end of the period, the face was in predominantly purple and green argillite, with less prominent faulting, and progress was somewhat less difficult.

Respectfully submitted,

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. C. Weissenborn Title Exec. Officer Date April 30, 1958

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIESTER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - MARCH 1958

During March, the drive advanced 203.7 feet for a total of 881.7 feet to date. The work exposed light grey to buff quartzite which is highly fractured throughout the first 130 feet of advance. In the last 70 feet, the ground is sufficiently competent to make timbering unnecessary. The bedding parallels the drift and dips steeply to the north. No mineralization is exposed in the month's advance.

Plate I is a 50-scale geologic plan of the pertinent portion of the 3070 level.

Respectfully submitted,

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-4712 (lead-zinc) American Smelting & Refining Co., East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected March 7, 1958, accompanied by Mr. T. M. Tower, mine superintendent.

The 3070 level east crosscut had advanced 713 feet since the start of the contract. Approximately the last 160 feet is in bad ground and cuts diagonally across what may be the Curlew vein.

A 24-foot section was rock bolted with chain link fencing which now appears will not hold the ground and may have to be timbered. Eighty-two bolts were used.

Some sideswiping to enlarge the drift for timbering which was formerly rock bolted was disallowed.

The following crosscut advance has been made since the start of the contract:

Previously reported DMEA crosscut advance to Survey Station No. 1502		452.18 ft.
Sta. 1502 to Sta. 1503	N 83° 13' E	155.89
		608.07
Sta. 1503 to face		105.00
		713.07

Crosscut was timbered from

Sta. 1502 + 100 ft. to Sta. 1503 + 102 ft. or 158 feet

Sideswiping for car stations since start of contract

At Sta. 1496 + 70 ft.	216 cu. ft.
At Sta. 1497 + 45 ft.	209
At Sta. 1501 + 49 ft.	168
	593 cu. ft.

Status of contract as of March 7, 1958 was:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: 26,762.35 (thru Jan. 1958)

	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	713.07 ft.
Diamond drilling	11,855	0
Diamond drill stations	300	0
Car siding excavations	14,800 cu. ft.	593 cu. ft. 594
Timbering	3,950 ft.	301 ft.
Rock bolts	4,000	608
Core boxes	290	0
Assays	4,200	0

There has been no DMEA production from this project.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KLEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - FEBRUARY 1958

During February 1958, the East Page Drive was advanced 125.0 feet for a total of 678.0 feet to date. Advance was through highly fractured and sheared Revett quartzite. The Curlew Vein was intersected at approximately 40 feet east of the face at last month's end and, as seen in the heading, strikes N. 70° W. and dips 44° SW. There is a 2-inch to 3-inch seam of black pyritic gouge and chlorite, with no significant values, with 4 feet of discontinuous barren quartz stringers in the hanging wall. The footwall, for a width of 8 to 10 feet, consists of highly brecciated and sericitized quartzite, containing unusually large amounts of disseminated pyrite.

Plate I is a 50-scale geologic plan of the pertinent portion of the 3070 level.

Respectfully submitted,

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - JANUARY 1958

During January 1958, the East Page Drive advanced 97.3 feet for a total to date of 553.0 feet. Advance was through thin-bedded, light grey to buff slightly argillaceous quartzites. The beds strike northwesterly and dip steeply northeasterly, but at the face at the end of the period the bedding is overturned and dips steeply to the southwest. There are numerous minor bedding plane faults. Advance was curtailed by the necessity for timbering but near the face rock bolting was resumed.

Plate I is a 50-scale geologic plan of the pertinent portion of the 3070 level.

Respectfully submitted,

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-4712 (lead-zinc) American Smelting & Refining Co., East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was visited January 30, 1958, accompanied by R. D. Sample, geologist, U. S. Geological Survey, and T. M. Tower, mine superintendent.

The 3070 level east crosscut is in St. Regis quartzite. Rock bolting proved somewhat ineffective in the ravelly ground so the crosscut was timbered for 143 feet. Rock bolting with chain link fencing is being tried.

Rock bolts are being counted weekly at the time the crosscut advance is measured for the contract miners.

The following advance was measured since the last inspection:

Previously reported DMEA crosscut advance to survey station 1501		374.09 ft.
Sta. 1501 to Sta. 1502	N 83° 13' E	78.09
Sta. 1502 to face		91.0
		543.18 ft.

Crosscut is timbered from Sta. 1501 + 13 feet to Sta. 1501 + 156 feet or 143 feet total.

Status of the contract as of January 30, 1958 was:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: 25,439.77 (thru December 1957)

	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	543.18 ft.
Diamond drilling	11,855 ft.	0
Diamond drill stations	300 ft.	0
Car siding excavations	14,800 cu. ft.	425 cu. ft.
Timbering	3,950 ft.	143 ft.
Rock bolts	4,000	526
Core boxes	290	0
Assays	4,200	0

There has been no DMEA production from this project.

January 31, 1958

MEMORANDUM

To: DMEA Field Team, Region I

From: R. D. Sample, Geologist, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-4712 (lead-zinc), American Smelting and Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

The above project site was visited and inspected on January 30, 1958 by John D. Bardill, Mining Engineer, U. S. Bureau of Mines, and R. D. Sample, Geologist, U. S. Geological Survey. Mr. Troy Tower, superintendent of the Page mine, was met at the mine and accompanied the examiners to the 3070 level where the DMEA east drift was inspected.

Advance of the East drift through the white quartzites of the Revett formation continues but progress has been slow for the past month due to much sloughing along the back and sides of the drift. Roof bolts were found to be insufficient in many places and the foward progress of the drift was stopped while about 128 feet of timbering was installed. Timbering is now about completed and the last two rounds in the face indicate that roof bolts may again be sufficient to hold the ground.

Mr. Tower states that about 500 tons of ore is being mined and milled per day with most of the production coming from the 2700 level. The mine employs 279 men of which almost 65 percent are employed directly or indirectly with timbering. Eighteen employees work in the mill, and the rest in mining operations. About $2\frac{1}{4}$ million feet of lumber is used in the mine in 1 year. They try to keep the mill heads at 6 percent lead and 10 percent zinc. They also figure $\frac{1}{2}$ ounces of silver for each 1 percent of lead.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE
PROGRESS REPORT - DECEMBER 1957

During December 1957, the East Page Drive advanced 197.4 feet for a total to date of 455.7 feet. Advance was through fine-grained massive quartzites and thin-bedded argillaceous quartzites. General trend of bedding is N. 50° W., 70° NE., and minor faulting parallels the bedding.

Plate I is a 50-scale geologic plan of the pertinent portion of the 3070 level.

Respectfully submitted,

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-4712 (lead-zinc), American Smelting & Refining Company, East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected January 9, 1958, accompanied by Mr. T. M. Tower, mine superintendent.

Starting point of the contract was at survey station No. 1382 + 109.9 feet on the 3070 level east drift.

The crosscut is in St. Regis quartzite and for approximately the last 100 feet or more the formation is ravelly and requires timbering. Rock bolts are ineffective because the formation sloughs away from the bolts.

DMEA work is now on a two shift per day basis, 5 days per week.

Timber was placed from Sta. 1501 + 13 feet to Sta. 1501 + 58 ft. or a total of 45 feet.

A transfer station was cut at Sta. 1496 + 70 feet and another at Sta. 1497 + 45 feet, excavating 216 cu. ft. and 209 cu. ft., respectively.

The following survey data was taken from the company's transit survey and the distances were checked and confirmed.

Sta. 1382 -	Sta. 1496	N 82° - 58' E	64.46 ft.
1496 -	1497	N 83° - 13' E	87.84 ft.
1497 -	1499	N 83° - 13' E	132.26 ft.
1499 -	1500	N 83° - 13' E	95.93 ft.
1500 -	1501	N 83° - 13' E	103.50 ft.
1501 -	face		82.5 ft.
			566.49 ft.
	Less 109.9 ft. to starting point		109.90
			456.59 ft.

Status of the contract as of January 9, 1958 was:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: 11,674.77 (thru November)

	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	456.59 ft.
Diamond drilling	11,855 ft.	0
Diamond drill stations	300 ft.	0
Car siding excavations	14,800 cu. ft.	425 cu. ft.
Timbering	3,950 ft.	45 ft.
Rock bolts	4,000	374
Core boxes	290	0
Assays	4,200	0

Signature /s/ A. E. Weissenborn Title Exec. Officer Date Dec. 30, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE

During November the East Page Drive advanced 176.1 feet for a total to date of 258.3 feet. Advance was through light gray Revett quartzite, but near the month-end face the formation changed to hard, thin-bedded, light gray to buff, argillaceous quartzite. General trend of bedding is N. 50° W., 65° NE. At about 95 feet from the face, there was exposed a strong fault striking N. 60° W. and dipping 85° SW. The fault offsets the bedding, the hanging wall to the southeast.

Plate I is a 50-scale geologic plan of the pertinent portion of the 3070 level.

Respectfully submitted,

Original Signed by
S. N. KESTEN

MEMORANDUM

To: DMEA Field Team, Region I

From: D. R. MacLaren and R. D. Sample, Geologists, U. S. Geological Survey

Subject: Interim Inspection Report, Docket No. DMEA-4712 (lead-zinc), American Smelting and Refining Co., East Page mine, Shoshone County, Idaho, Contract No. Idm-E1134

The above project site was visited and inspected on November 21, 1957. At the mine office the examiners met Mr. Troy Tower, superintendent of Page mine; Mr. Caroll Ward, assistant superintendent; Mr. Dick James, mine foreman; Mr. L. S. Hansen, safety engineer; and Dr. Tomio Horibe, Professor of mining, Tohoku University, Sendai, Japan. Mr. Horibe is on a tour of inspection of mining districts in the western United States.

Mr. Tower accompanied the examiners down the incline shaft from the surface to the 3070 level where the DMEA east drift begins. This drift had already been started by the company about 200 feet from the 3070 level station, but will continue eastward under DMEA contract for another 5,720 feet. A total of 149.5 feet of the DMEA contract east drifting was completed as measured on November 16, 1957. The drift bears approximately N. 83° 15' E. and is driven through the white quartzites of the Revett formation of the Precambrian Belt Series.

The inclined shaft has been deepened to the 3400 level. A short visit was made to this level where a station and ore pocket is being established.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature /s/ A. E. Weissenborn Title Exec. Officer Date Dec. 5, 1957

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM FOR MR. J. C. KIEFFER

PAGE MINE
3070 EAST PAGE DRIVE

During October, the drive advanced 82.2 feet through medium-bedded light gray Revett quartzite, containing disseminated crystals of pyrite. The general strike of the bedding is NW-SE, and the dip is 60° to 87° NE. There are numerous minor faults which are sub-parallel to the bedding.

Plate I is a 50-scale geologic plan of the pertinent portion of the 3070 level.

Respectfully submitted,

MEMORANDUM

To: DMEA Field Team, Region I

From: John D. Bardill, Bureau of Mines

Subject: Routine inspection report, Docket No. DMEA-4712 (lead-zinc) American Smelting & Refining Co., East Page Mine, Shoshone County, Idaho, Contract No. Idm-E1134

This project was inspected October 9, accompanied by Mr. T. M. Tower, mine superintendent, and Mr. Norman Keston, assistant chief geologist.

DMEA project east drift on the 3070 level was started October 3, 1957 at Survey Station 1496 + 45.4 feet. The drift is being driven N. 83° 15' E.

The face of the drift was at Sta. 1496 + 61; an advance of about 16 feet since the start of the contract.

Two accidents in the drift disrupted progress to some extent. On October 7 the nose of one of the miners was severed by a piece of rock when he was drilling overhead for a rock bolt. The next day another miner suffered a bad foot injury when the jackleg of the drill slipped from a block, implanting the stinger in his foot.

DMEA work is on a one-shift per day basis and according to Mr. Tower will remain so for about 90 days. The 3400 level shaft station and sump are being cut and muck is being transferred at the 3070 level station with the result it is badly congested. Supplies and mine personnel only are hoisted on the day shift.

Mr. C. A. Turner, DMEA auditor, accompanied me to the mine and he conferred with Mr. W. J. Murphy, chief accountant, to acquaint him with the procedure for submitting reports and the manner in which records should be kept.

The status of the contract as of October 9, 1957 was:

Date of contract: September 18, 1957
Termination date: September 1, 1962
Amount of contract: $660,206.00
Amount spent: none

	Authorized	Completed
Drifting and/or crosscutting	12,485 ft.	16 ft.
