Mining operations resulting from exploration under this contract were inspected on January 24, 1958. The engineer was accompanied underground by Mr. E. A. Brecky, chief geologist. Mr. Brecky and Mr. A. G. Johnson, General Manager, were interviewed in the Company offices.

Production from this DMEA area from December 1955 to March 1957 came only from development work in sinking the shaft and cutting out the station on the 725 foot level. This being a bedded deposit only one level is necessary. Ore processed to December 31, 1957 totals 19,867.8 tons, having an average content of 41.90 percent CaF_2 and 0.69 percent zinc. Total royalties received amount to $18,578.20 which does not include royalty on 1567.75 tons processed in December 1957 but not sold as of the date of visit.

During November and December only a small amount of ore was produced as an effort was made to confine most work to needed development involving large amounts of waste rock. Development consisted largely of driving 325 feet of drift. The mine is now in a position to produce ore steadily for a considerable time without further development work.

Mine workings as of January 24, 1958 are shown in plan on attached Figure 1. The ore control structures are also indicated on the plan which is the same scale and coordinated with the map accompanying the Operator's final report. All churn drill holes shown were drilled under the DMEA program and values found in drilling were very similar to those found in

College Park gives a lot of interesting narrative but also not bad down facts according to reporting format.

DMBA-2248 (Fluorspar)

" 3338 (" , lead, zinc)

DMBA
2248

mining the areas where holes were encountered. The mining floor level varies only 21 feet from end to end of the workings as indicated on Figure 1 and this difference is accounted for by the regional dip to the northeast.

Structures A-A', B-B' and D-D', Figure 1, trace the strike course of what are locally known as "V" structures. These structures are accepted as being the result of solution of limestone along minor fractures and the subsequent subsidance and collapse of the limestone into a "V" along the strike of the original fracture. These partially open "V" areas were later the course of mineralized solutions. Some of these "V" structures contain angular blocks of limestone which measure, 1 x 1 x 2 feet. It will be noted that these structures are persistant along the strike and very definitely are an ore control.

Line E-E', Figure 1, represents what is locally termed, "open ground". This "open ground" area consists of open caverns and passages formed by solution of the Fredonia limestone. Solution action was not followed by collapse as in the "V" structure. The openings wander about to a certain extent and are usually lined with fluorspar and sphalerite but in places are barren of mineralization. In many instances the original cavern has been completely filled with mineral. The A-A' area contains a far greater percentage of both zinc and lead sulphides than the "V" type structures and for this reason is not being mined at present except to the extent necessary for exploration.

Rosiclare sandstone which forms the back of the workings, usually stands well with only the ore left as pillars for support. Roof bolts are occasionally used but have generally been found to be ineffective due to

small block slabbing above the bolt plate. The bedded ore averages approximately 9 feet in thickness. Mining progresses by advancing a face the full height of the ore and about 20 feet wide. Ore pillars left between drifts contain approximately 25 percent of the total ore. After normal mining is completed the pillars are removed by retreating toward the shaft. Ten percent of the entire ore body is lost when pillars are pulled and 90 percent has been recovered.

Leynor drills are used in advancing the drift faces. No sorting is done and mucking is carried on by the use of either a slusher in conjunction with a mobile loading ramp, or by using an Eimco No. 630 loader equiped with a $\frac{1}{2}$ yard scoop. Both these pieces of equipment are electrically operated on 220 volt current. Both types of mucking equipment deliver directly to 4 ton, rear dump, scrubber equiped diesel trucks. Crushing is done underground and trucks dump onto a 36 inch apron feeder discharging to a 24 x 36 inch jaw crusher driven by a 440 volt, 75 h.p. motor. The soft and friable feed accounts for the low horsepower. Crushed ore is discharged into a 50 ton pocket equiped with 2 measuring chutes with hydraulic gates serving the $2\frac{1}{4}$ ton skips which operate in balance. The hoisting unit includes a 6 man cage above the skip. The ore cycle of skip loading , hoisting and dumping is 60 seconds. The top dump skips discharge into a 250 ton bin, from which the ore is carried 19 miles by 10 ton diesel trucks to the Rosiclare mill.

Recovery from 20,268 tons mined was 8153 tons of fluorspar concentrate averaging 41.74% CaF2 and 135 tons of zinc concentrate averaging 0.69% zinc. As of December 17, 1957 the working faces are in collapsed sandstone. Ore reserve estimates may have to be revised although the adjacent area drilling returned good ore values.

Supplemental Sheet

The Ozark-Mahoning revised their total tonnage estimates as of December 31, 1956. This includes the ore discovered under the DMEA contract and the ore subsequently found by the company.

Block "A" - 374,695 tons - 35.26% CaF_2, 3.35% Zn, 0.82% Pb
Block "B", "C" and "D" - 497,420 tons - 33.80% CaF_2, 1.30% Zn
Bethel Ore - 76,125 tons - 29.00% CaF_2, 1.00% Zn

Total Reserves - 948,240 tons - 33.6% CaF_2, 2.0% Zn

In this reporting period there has been done approximately 600 feet of drift mining on this flat lying ore body.

The company reports that approximately $350,000.00 has been spent in shaft sinking, crosscutting, underground crushing plant and surface facilities. The company books show a total expenditure of $128,629.55 for churn drilling and diamond drilling.

Royalty Remarks

Royalties should come in steadily as soon as the shaft facilities are completed, probably about March 1957.

Other Remarks

Soon after certification the company drilled 6 holes immediately south of contract hole No. 1 and discovered a deposit branching southeastward from the contract-discovered deposit. The 6 holes covered an area 300' along the strike and 260' wide. In 1956 the company drilled 7 additional holes near the southern end of the contract area and found additional ore.

During the past 1½ years a 6' x 15', 3-compartment, vertical shaft has been sunk at a point 100' west of contract hole 15 M. As of Nov. 30, 1956 the shaft bottom is at 775' and is being extended to 790' which will allow mining of ore in the Sub-Rosiclare formation at that level.

The present main workings will be just under the Rosiclare sandstone at the 724' level. The blanket deposit is about 10' thick and averages 48% CaF_2 with very little lead or zinc. At present the 724' station has been cut out in the ore about 65' in a northwesterly direction and 30' northeasterly on the NW side of the shaft. Excavation has also been made below the 724' level for a coarse crusher and skip pockets.

The top 110' of shaft is concreted, followed by 340' of lagged 6' sets , below which is 190' of unlagged sets, the balance being untimbered. No dividers have been placed to allow for lowering crushing equipment next month. Shaft timbers are 6" x 6" oak posts and 6" x 8" wall plates. Mucking was done with a 3/8-cu.yd. clamshell hung directly on the hoisting cable and actuated by a tugger hoist bolted to the clamshell. A 1½-ton bucket was used without crosshead in sinking.

The overall cost of the shaft exclusive of concrete was $120 per foot which is considered by the company to be $20 in excess of what it should be. All work was done on company time.

Hoisting facilities consist of a new 90' timber headframe and a 150 h.p.single-drum electric hoist, hoisting 2½ ton skips in balance.

Further detail on sinking methods, equipment and costs will be found in the "Interim Report on Certified Project" under date of May 1, 1956, and "Field Inspection Report of Certified Project", under date of Dec. 21, 1955.

JAN 10 1957
D.M.E.A.

Interim Report on Certified Project

Docket No. DMEA-2248 (fluorspar)
Contract No. Idm-E255
Operator: Ozark-Mahoning Co.
Location: Hill-Ledford Tract,
Hardin County, Ill.

RECEIVED
MAY 7 - 1956

This project was visited on April 23, 1956 incidental to other DMEA work in the immediate vicinity. The following information was obtained from Mr. A. G. Johnson, Gen. Manager, and Mr. E. A. Brecky, geologist.

The sinking headframe at the new shaft has been torn down to be replaced by a new one which will be 93' high and constructed of treated 12"x 12" timbers. At the time of visit forms were being taken from the concrete foundation for a 5' diameter, single drum, herringbone-gear-drive hoist. The hoist will be driven by a 150 h.p. electric motor. Two 2½-ton skips will be operated in balance.

The shaft was completed at 750' and a 50' drift was driven in ore at the 724' level on a N.45°W. bearing before taking down the sinking headframe. The drift level at the shaft is lower than only the upper of the faulted sections of the bedded deposit. All of the faulted blocks may, however, be mined above the level due to the fact that they incline downward toward the shaft at about 5 percent. Diesel trucks will be used for all underground haulage, the grade to a concrete coarse ore pocket being in favor of the load. An underground crusher will deliver to a concrete shaft pocket.

Previous to sinking this shaft all underground work had been done on a contract basis. All this work is now done on company time. The 6' x 15' inside dimension shaft described in the interim report of December 21, 1955 was sunk on company time at a cost of $120.00 per foot .

This cost is considered by the management to be excessive by $20.00 per foot.

Negotiations are underway to drill a 4- or 5-foot diameter churn drill hole for ventilation. The hole is to be located about 1400 feet southwest of the shaft.

Due largely to lack of steel beams for ore bins, it is expected that drifting will not be resumed until about October 1956.

Additional royalty will be paid soon on a small amount ore produced from the drift but not yet treated.

WASHINGTON 25, D. C.

Field Inspection Report of Certified Contract
by H. L. Burmeister

December 21, 1955

Docket No. DMEA 2248 (Fluorspar-Lead-Zinc)
Contract No. Idm-E255
Ozark-Mahoning Co.
Hill-Ledford Tract, Hardin County, Illinois

RECEIVED
JAN 5 1956

The status of this certified contract was reviewed in the field Dec. 15, 1955. Data were obtained from E. A. Brecky, company geologist and by on site inspection of the shaft being sunk on the property. General Manager A. G. Johnson was not available for interview as he is on an extended trip.

After completion of drilling under this contract the company churn drilled 6 holes for their own account to further delineate the ore in this tract. These holes covered an area measuring 260 feet wide and 300 feet along the strike immediately south of contract drill hole No. 1. Two of the six holes encountered mineable widths of good ore and have thereby extended the width of the ore body explored by DMEA drilling. At present this Tract is being further explored by a drill hole located 140 feet due south of contract drill hole 31M. The hole has not yet reached the ore horizon. Additional drilling is planned to extend the ore zone further to the south.

The shaft being sunk to develop the Hill-Ledford ore is located 100 feet west of contract hole 15M. Work on the shaft was stopped from Jan. 1955 to May 1955 at which time sinking was resumed. The shaft measures 6' x 15' inside concrete or timber and contains 3 compartments. Concrete lining is carried from the collar to a depth of 110' below which timber sets and logging is used to a depth of 440' below the collar. From 440 feet to the present bottom at 720 feet the shaft is in hard self supporting sandstone which has not been timbered. The 8" x 8" oak timber sets are spaced at 10 feet and are logged with random widths of 2" oak planks. A small station is being cut at the 720' level at which point the shaft encountered 18 inches of fluorspar mineralization immediately under the Rosiclare sandstone. No drifting will be done on this level at present.

The shaft will be continued to an approximate depth of 800' at which point drifting will be started in a southwesterly direction. About 1000' of drifting will be done and an air shaft raised or a large diameter hole bored for ventilation before production will start.

At present it is estimated that production may begin during the summer of 1956. In view of the present advance rate this estimate seems optimistic. It is probable that Government royalties on production may be reasonably expected in less than a year from the date of this report.

Operational Data on Shaft Sinking

The following data were obtained during an inspection of the shaft.

The surface plant includes an 18' x 24' hollow block combined office and change room which also contains a charging unit for hat lamp batteries. A small rock bin is integrated with the 8" x 8" timbers used in the 30' headframe. The hoist serving a 5/8" wire rope is powered by a 75 h.p. electric motor.

All work is done on company time with the following equipment:

42" x 42" Cylindrical sinking bucket
55 pound Jackhammer
7/8" hexigon drill steel with tungsten-carbide chisel point bits which require resharpening after 105' of drilling in sandstone and after 300' in limestone.
3/8 cu.yd. mucking clam shell equipped with air tugger hoist.
One "Reda" electrically driven submerged deep well pump.

Sinking Methods

The 42 hole round is drilled to an average depth of 5' with 2 jackhammers. A round contains 8 "V" cut holes and 2 pony cut holes. Standard delay detonators are used in the following sequence for cuts - Pony cuts on zero delay, one inside "V" set on 1st delay, the other inside "V" set on 2nd delay and the outside "V" sets on 3rd delay. Forty percent gelatine powder is used. Mucking is done by the use of the 3/8 cu.yd. clam shell with an integrated air tugger which actuates the jaws. The mucker is hung from the hoisting cable and is raised or lowered by the surface hoistman. Three or four passes are required to fill a bucket. No guides are installed and no sinking crosshead is used. No water problem is encountered as the "Reda" pump is installed at the 744' level of old drill hole No. 2M and keeps the shaft drained by pumping about 100 c.f.m.

Time cycle

Drilling and loading 3-3/4 hrs.
Blasting, clearing smoke and ready to muck about 2 hrs.
Mucking about 12 hrs.
On a 6 day 3 shift basis, advance averages about 5' per day.

COMMENTS

It is probable that the time presently required for the mucking cycle could be greatly reduced by installing guides and a sinking cross-head to reduce bucket spin and increase hoisting speed.

REPORT OF INSPECTION OF CERTIFIED CONTRACT

April 11, 1955

DMEA Docket No. 2248 - (Fluorspar, Zinc, Lead)
Contract Idm-E255
Operator: Ozark-Mahoning Company
Mahoning Mining Division
Rosiclare, Illinois
Property: Hill-Ledford Tract
Hardin County, Illinois

Summary: Work on this contract, dated February 18, 1952, was started March 1, 1952. Stage I, consisting of 33 churn drill holes and totaling 25,500 feet, was completed January 15, 1953. Stage II, consisting of 11 churn drill holes and totaling 9,678 feet, was started August 1, 1953 and was terminated before completion on March 10, 1954. An ore body estimated by Operator at 463,600 tons of 35.5 percent fluorspar, 2.58 percent zinc, and 0.12 percent lead was blocked out by drilling under Stage I. No additional ore was developed under Stage II. The deposit was considered of sufficient quantity and of suitable grade to make an attractive mining ventire and the exploration was certified as a discovery on July 7, 1954.

The total cost of the project was $85,482.54. The Government's share was 50 percent or $42,741.27, which is now due for repayment as royalties from any production prior to February 18, 1962.

Progress of Development Work: Since March 10, 1954 the Operator has drilled 6 additional churn drill holes to aid in delineating the discovery body. This drilling enlarged the ore body and enabled the Operator to better choose a site for the shaft. A working shaft 16' x 8' has now been sunk to a depth of 40' and concreted. A wooden sinking headframe about 50' high has been erected. The hoist has been mounted on a platform in the headframe about 25' above the collar. The compressor has been set. A cinder block change room and office is now being built. The development program will probably require 18 to 24 months. Some production will probably result from the development but not immediately. This development work displays the same high caliber of planning and execution which we have encountered constantly in our association with this Operator.

/s/ G. L. Neumann

College Park, Md.

DMEA
Summary Report
December 31, 1954

Operator:	Ozark-Mahoning Co., Rosiclare, Ill.
Mine & Location:	Hill-Ledford Tract, Hardin County, Ill.
Docket No.:	DMEA-2248 (Stage II - Amended)
Contract No.:	Idm-E255
Commodity:	Fluor-Zinc-Lead
Total Cost:	$122,715.00
Government Participation:	$61,357.50 - 50%
Duration of Contract:	Feb. 18, 1952 to June 30, 1954

The purpose of this contract was to explore for fluorspar in the Hill-Ledford Tract by systematic churn drilling. This tract had been drilled sporadically by different operators over a period of several years.

The original contract, which authorized 25,500 feet of churn drilling, was completed in January 1953. Ore reserves of 463,600 tons averaging 35.5 percent fluorite, 2.58 percent zinc and 0.12 percent lead were indicated. A Certificate of Discovery or Development was issued on May 29, 1953. The contract was amended June 2, 1953 to permit additional drilling to explore for the possible extension of the deposit to the northeast of the certified area. This amendment authorized an additional 25,000 feet of churn drilling at a cost of $60,750.00.

Work under this amendment started in June 1953. On February 2, 1954, Amendment No. 2 extended the termination date of Annex II from February 18, 1954 to June 30, 1954. Results of drilling were discouraging and after churn drilling 9,678 feet in 11 holes at a cost of $23,517.54, Annex II was terminated after commencement but before completion on May 24, 1954. The Certificate of Discovery on the original contract also applies to Annex II.

Following is a summary of costs and footage drilled:

	No. of holes	Feet Drilled	Cost	Gov't share @ 50%
Original contract -	38	25,500	$61,965.00	$30,982.50
Annex II -	11	9,678	$23,517.54	$11,758.77
Totals -	49	35,178	$85,482.54	$42,741.27

The auditor's Report of Review dated June 4, 1954, approved the above expenditures.

The Operator's and Field Team's Final Reports were submitted in July 1954. No production has been made from this certified contract and no royalty repayment to the Government has been made.

DMEA
Summary Report
June 30, 1954

Operator:	Ozark-Mahoning Co., Rosiclare, Ill.
Mine & Location:	Hill-Ledford Tract, Hardin County, Ill.
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Zinc-Lead
Total Cost:	$122,715.00 - Stage II (Amended)
Government Participation:	$61,357.50 - 50%
Duration of Contract:	Feb. 18, 1952 to Feb. 18, 1954, amended to June 30, 1954

The purpose of this contract was to explore for fluorspar in the Hill-Ledford Tract by systematic churn drilling. This tract had been drilled sporadically by different operators.

The original contract, which authorized 25,500 feet of churn drilling was completed in January 1953. Ore reserves of 463,600 tons averaging 35.5 percent fluorite, 2.58 percent zinc and 0.12 percent lead were indicated. A Certificate of Discovery was issued on May 20, 1953. The contract was amended June 2, 1953 to permit additional drilling to explore for the possible extension of the deposit to the northeast of the certified area. This amendment authorized an additional 25,000 feet of churn drilling at a cost of $60,750.00

Work under this amendment started in June 1953. On February 2, 1954, Amendment No. 2 extended the termination date of Annex II from February 18, 1954 to June 30, 1954. Results of drilling were discouraging and after churn drilling 9,678 feet in 11 holes at a cost of $23,517.54, Annex II was terminated after commencement but before completion on May 24, 1954. The Certificate of Discovery on the original contract also applies to Annex II.

Following is a summary of costs and footage drilled:

	No. of holes	Feet Drilled	Cost	Gov't share @ 50 %
Original contract -	38	25,500	$61,965.00	$30,982.50
Annex II -	11	9,678	$23,517.54	$11,758.77
Totals -	49	35,178	$85,482.54	$42,741.27

The auditor's Report of Review dated June 4, 1954, approved the above expenditures.

The Operator estimated that this project increased the reserves of inferred minable ore by 463,600 short tons after deducting 25 percent for pillars and low grade areas. This tonnage was estimated to contain an average of 35.5 percent fluorite, 2.6 percent zinc and 0.12 percent lead.

Operator:	Ozark-Mahoning Co., Rosiclare, Ill.
Mine & Location:	Hill-Ledford Tract, Hardin County, Ill.
Docket No.:	IMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Lead-Zinc
Date of Certification:	May 20, 1953 - (Stage I)

Plans for shaft sinking and development are being made.

There has been no production from the area explored under this contract, therefore, no royalty payments have been received.

April 6, 1954

Mr. W. T. Miller
Executive Officer
Bureau-Survey Field Team
Defense Minerals Exploration Administration
Region VIII
U. S. Department of the Interior
Defense Minerals Administration
College Park, Maryland

Dear Mr. Miller:

Enclosed herewith you will find five copies of Form MF-104, Operator's Monthly Report and Voucher, as well as five copies of Form MF-104A, Operator's Unit Cost and Progress Report for the month of March, 1954.

These forms are in connection with Stage II, amended Exploration Project Contract, Docket No. DMEA 2148, Contract DIIM-2295, dated June 2, 1953 and covers the prospecting which we are now doing on the Hill-Ledford Tract in Hardin County, Illinois.

Very truly yours,

OZARK-MAHONING COMPANY

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Dear Mr. Millar:

Enclosed herewith you will find five copies of Form MF-104, Operator's Monthly Report and Voucher, as well as five copies of Form MF-104A, Operator's Unit Cost and Progress Report for the month of January, 1954.

These forms are in connection with Stage II, amended Exploration Project Contract, Docket No. DMEA 2248, Contract #IDM-2255, dated June 2, 1953 and covers the prospecting which we are now doing on the Hill-Ledford Tract in Hardin County, Illinois.

Very truly yours,

Signature W. G. Miller Title Executive Officer Date 2/5/54

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

JAN 29 1954

DMEA
Field Inspection Report
January 22, 1954
by
G. L. Neumann, Engineer

DMEA Docket No. 2248 - (Fluorspar-Zinc-Lead)
Ozark-Mahoning Co., Rosiclare, Illinois
Property: Hill-Ledford Tract, Hardin Co., Illinois
Contract No. Idm-E255 - (Amended)

Drilling under this amendment to explore a northeastern extension of the already certified Hill-Ledford deposit has been very discouraging. Ten holes have been completed to date for a total of 8828 feet. Only minor mineralization has been encountered and no major breaks in the formation have been indicated.

Work on the southern east-west cross section will continue east for 600 feet with 2 more holes. If results are not more encouraging the drilling on this section will probably be stopped. The operator is preparing an amendment to authorize the use of the remaining footage of the contract to explore an indicated north-south split from the northeast trending main deposit. The operator will also ask for an extension of the time limit specified which was not extended at the time the new contract was added as an amendment to the original contract.

Sufficient evidence exists to indicate a possible split from the discovery deposit and to the east of it. I recommend this amendment and also the time extension.

Progress has slowed down on account of the holiday season and inclement weather. Hole 53M is being drilled 300 feet east of 52M on the east-west cross section of holes 26M, 29M, 44M, 48M and 52M. Hole 54M is planned 300 feet east of 53M. The drilling on the indicated northwest-southeast cross fault was all negative and this work has been stopped.

The usual high caliber of work still prevails on this contract, although the results have been very discouraging.

Signature W. O. Miller Title Executive Officer Date 1/7/54

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

DMEA
Field Inspection Report
by
W. T. Millar

DMEA Docket No. 2248 (Fluorspar-Lead-Zinc)
Contract No. Idm-5255 (Amended)
Operator: Ozark-Mahoning Co.
Address: Rosiclare, Ill.
Property: Hill-Ledford Tract
Location: Hardin County, Ill.

This operation was visited on November 30.

Two churn drill holes, Nos. 47 and 49, were completed at depths of 935 and 923 feet respectively. Holes Nos. 50 & 51 are in progress and expected to be completed during the first week in December. No mineralization has been encountered and there are no indications of fracturing.

Upon completion of holes Nos. 50 & 51 drilling will be continued in the 500-foot strip approved for exploration by amendment and lying southeast of the area originally specified in Stage II of this contract. Only one churn drill will be used after completion of holes 50 & 51 in order to take advantage of the knowledge gained from current drilling and to use the remaining footage to the best advantage.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 83-38475

November 6, 1953

SUPPLEMENTAL SHEET

HILL-LEXFORD TRACT

Status of Holes - Completed and Drilling

M-46	Completed 940 ft. (Previously reported 800')	Bal.	140'
M-47	Drilling - Depth 10-31-53		790'
M-48	Completed 815 ft. (Previously reported None)	Bal.	815'
M-49	Drilling - Depth 10-31-53		750'
	Total		2495'

Remarks:

Attached hereto are copies of logs of churn drill holes No. 46-M and 48-M. Both holes are blank. Results continue discouraging. There is little or no fracturing on open ground which would result in dropping the water level of the holes. On the west side of the highway pumping has now dewatered the orebody so that the pump is idle about sixteen hours per day.

A 400 ft. scale map of the property is also attached showing the up-to-date location of the holes.

DMEA
Field Inspection Report
by
G. L. Neumann, Engineer
October 14, 1953

DMEA Docket No. 2248 - (Fluorspar-Lead-Zinc)
Operator: Ozark-Mahoning Co., Rosiclare, Illinois
Property: Hill-Ledford Tract, Cave in Rock District,
Hardin County, Illinois - Contract Idm-E255 (Amended)

Four churn drill holes have been completed in the northeast trend zone. No mineralization or break in the formation has been cut. Three rigs are now drilling: two in the northeast trend zone and one in the northwest cross fault zone.

Stage II of this contract has so far been disappointing . I believe that the fault has swung to the east in this area instead of holding the northeast trend. The operator is requesting an amendment to test this area, which is in the southeast corner of the tract, and is outside of the area specified in the contract.

Drill holes M-43, M-44, M-45 and M-46 were completed. M-43 and M-44 were in the northeast trend zone. M-46 is in the northwest cross fault zone and M-45 is at the junction of the two zones. None of these holes have cut any mineralization or break in the formation. Holes M-47 and M-48 are now being drilled along the southern limit of the northeast trend zone. Hole M-49 is being drilled in the northwest cross fault zone. None of these holes are close to the ore horizon but the drilling is tighter than holes in a fault zone usually are. All holes have encountered water.

The progress on Stage II, especially since the operator closed contract Idm-E449 and moved the two drills onto Idm-E255, has been up to the usual highly efficient standards set in Stage I. The results to date have been somewhat discouraging. There is an indication of a swing in the fault toward the east from the northeast trend, which was very strong near the center of the Hill-Ledford tract. The operator is planning to request an amendment to the contract to permit exploration in the area covering this possible swing in the fault. It is also highly probable that the drilling may have to go beyond the 950 foot depth limit of the contract to reach the base of the Sub-Rosiclare formation.

Hole M-45 bottomed at 900 feet and the collar of the other holes will be considerable higher than M-45.

No check sampling or assaying was done as no mineralization was in evidence.

The company has been running a pumping test on the area which has been certified as a discovery. The results were very satisfactory. The water table was lowered approximately 650 feet to the 700 foot level. Plans are underway to start on the sinking of a shaft to develop this discovery.

G. L. Neumann

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. IDM-E255 Stge II in accordance with the terms of the contract.

Signature [illegible] Title Mining Engineer Date Oct 12, 1953

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W. T. Miller Title Executive Officer Date 10/12/53

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

SUPPLEMENTAL SHEET

HILL-LEDFORD TRACT

Status of Holes - Completed and Drilling.

M-44	Completed 815 ft. (Previously reported 220')	595 ft.
M-45	Completed 900 ft. (Previously reported 240')	660 ft.
M-46	Drilling - Depth 9-30-53	800 ft.
	Total Footage	2055 ft.

REMARKS

Attached are copies of logs of churn drill holes M-44 and M-45. Both holes are blank, tight and practically full of water, indicating little or no open ground or communion with the mineralized area to the southwest. The pumping which we are doing west of the highway from drill hole No. 2-M has drained the water on the blocked out orebody to an approximate depth of 700 ft. In drill hole No. 6-M the water is drained to a depth of 720 feet, 19-M to a depth of 679 feet and 28-M to a depth of 710 feet. The drop averages from one to two feet per twenty-four hours.

A four hundred foot scale map of the property is also attached showing the location of the holes which have been drilled and are drilling east of the highway. The map also shows the location of 2-M where the pump is located as well as the location of Holes No. 6-M, 19-M and 28-M which are being gauged daily to show the drop in the water table.

DMEA
Field Inspection Report
by
Kenneth M. Earl, Engineer
September 5, 1953

DMEA Docket No. 2248 - (Fluorspar)
Ozark-Mahoning Co., Rosiclare, Illinois
Property: Hill-Ledford Tract, Hardin County, Illinois
Contract No. Idm-E255 (Amended)

The drilling program on the Hill-Ledford Tract, under the terms of the amended contract, was started during the month of August. One hole was completed and three holes are now in progress.

Churn drill hole M-43 was completed at a depth of 905 feet. This first hole was blank. Holes M-44, M-45, and M-46 are in progress at shallow depths.

The usual cooperation and high standard of work experienced under the original contract has been maintained and progress should be speeded up as three drills are now being operated.

Kenneth M. Earl,
Engineer.

Dear Mr. Millar:

Enclosed herewith you will find five copies of Form MF-104, Operator's Monthly Report and Voucher, as well as five copies of Form MF-104A, Operator's Unit Cost and Progress Report.

These forms are in connection with Stage II, Amended Exploration Project Contract, Docket #DMEA 2248, Contract #IDM-2255, dated June 2, 1953 and covers the prospecting which we have now started on the Hill-Ledford Tract in Hardin County, Illinois.

Very truly yours,

Remarks:

This is the start of drilling operations under Stage II, Amended Contract, Denied DMEA, Contract No. XDM-E-255 dated June 2, 1953. Attached is copy of log of churn drill hole M-43. This hole was blank. It is located fairly close to the intersection of the NE trend as well as the northwest trending series of sinkholes.

One hundred foot scale map is attached of a portion of the Hill-Ledford property showing the location of M-43, as well as the holes now drilling, M-44, 45 and 46.

We are now operating three drills.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Interim Report

by: G. L. Neumann, Engineer

1. DMEA Docket No. 2248 - Fluorspar-Zinc-Lead

2. Operator: Ozark-Mahoning Co.
   Rosiclare, Illinois.
   Property - Hill-Ledford Tract, North of Cave in Rock, Hardin County, Ill.

3. Contract No. Idm E255, Amended

4. Summary - Conclusions and Recommendations

This is an addendum to the original contract, which has been certified as a discovery. Work under this amendment will explore the tract to the northeast of the discovery.

5. No work on this section of the contract has as yet been accomplished. A churn drill outfit has been moved to site of the first proposed hole and is being set up.

Holes M-39, M-40, M-41 and M-42 were drilled on company account in addition to the original contract drilling to fill out the structural pattern. A test is now being made with a Redda pump on hole 2-M to check the water flow. If this water can be handled, a shaft will be sunk in this vicinity to develop the discovery deposit.

Subject: Semi-Annual Report on Certified Projects

In reference to your letter of August 14 to Mr. W. T. Millar, Executive Officer, DMEA Field Team, Region VIII, relative to the above subject, there is enclosed the Semi-Annual Report on Certified Projects, Region VIII, for the period January through June 30, 1953.

H. L. Burmeister

Enclosure

DEPARTMENT OF THE INTERIOR
Defense Minerals Administration
RECEIVED
AUG 18 1953

Semi-Annual Report on DMEA Certified Projects, Region VIII

(January 1 to June 30, 1953, Inclusive)

One DMEA Project has been certified during the above period. Data on this project follows:

Docket No.:	DMEA-2248 - (Fluorspar)
Contract No.:	Idm-E255
Operator:	Ozark-Mahoning Company, Rosiclare, Ill.
Mine & Location:	Hill-Ledford Tract, Hardin Co., Ill.
Date of Certification:	May 29, 1953
Production:	None
Royalties due the Government:	None
Royalties paid " "	None

Operator's Interest in the property has not been transferred.

If the water situation can be handled as now appears probable, it is planned to start sinking a working shaft in the near future.

H. L. Burmeister

H. L. Burmeister

DMEA
Summary Report
June 30, 1953

Operator:	Ozark-Mahoning Co., Rosiclare, Illinois
Mine & Location:	Hill-Ledford Tract, Hardin County, Illinois
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Lead-Zinc
Total Cost:	$122,715.00 (Amended)
Government Participation:	50% - $61,357.50
Duration of Contract:	February 18, 1952 to February 18, 1954

Exploration under this contract started on February 18, 1952, and was completed on January 15, 1953. During this period, 33 churn drill holes were drilled, totaling 25,500 feet of drilling at a unit cost of $2.43 per foot. The total cost of this project is $61,965.00 in which the Government's participation through the Defense Minerals Exploration Administration, is 50 percent or $30,982.50. The ore reserves indicated by this exploration are estimated at 463,600 tons averaging 35.5 percent fluorite, 2.58 percent zinc and 0.12 percent lead. The final report by the operator was prepared and a subsequent report on this project by the Field Team recommended a Certificate of Discovery or Development, which was issued on May 20, 1953.

The favorable results of this exploration encouraged the operator to apply for Government assistance in exploring for the extension of this deposit to the northeast. The application was considered favorably and the contract was amended to include the additional exploratory work as Stage II to consist of 25,000 feet of churn drilling at a unit cost of $2.43 per foot. The total cost of Stage II will be $60,750.00, in which the Government's participation is 50 percent or $30,375.00. The total cost of $61,965.00 as authorized by the original contract was increased to $122,715.00 by this amendment.

Provided the results of the additional exploratory work continue to be favorable, the nation's reserves of these critical minerals will be substantially increased thereby contributing to our national security.

Good one!

College Park, Maryland

Field Inspection Report
by
G. L. Neumann, Engineer
February 12, 1953

Operator:	Ozark-Mahoning Co., Rosiclare, Ill.
Mine & Location:	Hill-Ledford Tract, Hardin Co., Ill.
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Lead-Zinc
Total Cost:	$61,965.
Government Participation:	$30,982.50 - 50%
Duration of Contract:	February 18, 1952 to February 18, 1953

Project completed - 25,500 feet of churn drilling finished about January 15, 1953. Certification of Discovery is recommended. Final report is being prepared.

The contract was entirely fulfilled when hole M-38 reached a depth of 448 feet. The hole was finished on company account.

This has been a model project since inception. The layout, planning, application, drilling progress, reports and cooperation with the Field Team were all of the highest caliber. Added to this, a substantial tonnage of suitable grade bedded fluorspar, carrying zinc was indicated by drilling to warrant a Certificate of Discovery.

Signature W. O. Miller Title Acting Exec. Officer Date Feb. 13, 1953

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF–104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF–104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF–104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF–104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF–200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF–200; and delete word "Independent" if the contract reported is on Form MF–200 (A). Also, report work paid for on a unit basis under contract Form MF–200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF–104 when submitted for reimbursable expenses incurred under contract Form MF–200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF–200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF–104 is required to be documented. The four copies of Form MF–104 are not to be thus supported.

Form MF–104 submitted for reimbursement under fixed price contracts on Form MF–200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF–104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

DMEA
Summary Report
January 28, 1953

Operator:	Ozark-Mahoning Co., Rosiclare, Illinois
Mine & Location:	Hill-Ledford Tract, Hardin Co., Illinois
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Lead-Zinc
Total Cost:	$61,965.00
Government Participation:	50% - $30,982.50
Duration of Contract:	From - February 18, 1952 to February 18, 1953

Exploration under this contract entailed 25,500 feet of churn drilling at unit cost of $2.43 per foot, for a total cost of $61,965.00. Government participation is 50 percent or $30,982.50. Status as of January 1, 1953 is 98.5 percent complete.

Good ore has been indicated by drilling and a rough estimate of reserves may reach 400,000 tons of 40 percent fluorite and 2 to 3 percent zinc.

G. L. Neumann, Engineer
January 8, 1953

DEPARTMENT OF THE INTERIOR
Defense Minerals Administration
RECEIVED
JAN 13 1953

Operator:	Ozark-Mahoning Co., Rosiclare, Ill.
Mine & Location:	Hill-Ledford Tract, Hardin Co., Ill.
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Lead-Zind

This project was inspected on January 8 and all work was found to be conducted in accordance with the contract.

Holes M-33, M-34 and M-35 started in November, were completed in December. Hole M-36 was started and completed in December and holes M-37 and M-38 were started but not completed. A total of 2,195 feet of drilling was accomplished in December.

Bad weather somewhat impeded the work in December. There remains 363 feet of drilling in the contract. This will be completed in January 1953 and the final report will be prepared February 1, 1953.

The drilling for December was more spot drilling to clarify certain sections. Holes M-35 and M-36 were blanks so far as mineralization was concerned. This indicates a pinch in the ore body to the northeast. Hole M-33 had a fair showing of ore and M-34 showed fringe ore.

The performance on this contract is again very outstanding in efficiency and cooperation. The project is expected to qualify for a Certificate of Discovery or Development.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Signature W. P. Miller Title Acting Exec. Officer Date Jan 8, 1953

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

		$ 395.10

Status of Holes Drilling and Completed.

M-33	Completed (Previously reported 680 ft.)	Bal.	155 ft.
M-34	Completed (Previously reported 555')	Bal.	220 ft.
M-35	Completed (Previously reported 610')	Bal.	185 ft.
M-36	Completed	Depth	785 ft.
M-37	Drilling (Depth 12-31-52)		610 ft.
M-38	Drilling (Depth 12-31-52)		240 ft.
		Total	2195 ft.

Remarks:

Copies of logs of Holes Nos. 33, 34, 35 and 36-M are attached to this report. There is also attached a 100 foot scale map showing the location of completed and drilling holes. The total footage under the contract will be used up when Hole No. 37-M is completed and 38-M is partially completed. The balance of 38-M will be Ozark-Mahoning expense. We hope to have 37-M and 38-M completed during the month so that final report on this project can be made February 1, 1953.

Holes Nos. 35 and 36-M, located along the east side of the highway were blank. This was disappointing and indicates the possibility of the ore body pinching out to the northeast. There is, of course, the possibility that we are simply in a lean area and that the ore body will widen out and become richer some further distance to the northeast. Hole No. 33-M cut low grade ore, the best of which appeared to be at the Pub-Residore horizon from 777½ - 800 ft. Throughout this section we recovered very few cuttings. Consequently there is a good possibility the ore is better than the assay would indicate. Hole No. 34-M, drilled in about the center of the tract appears to be close to the north edge of the ore body.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Signature W. T. Miller Title Acting Exec. Officer Date 12/4/52

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Remarks:

Copies of logs of drill holes No. 30-M and 31-M and 32-M are attached to this report. Also a map on a one hundred feet to the inch scale is attached showing the locations of completed and drilling holes.

Drill hole No. 30-M showed ore at the base of the Rosiclare sand; however, we were forced to abandon before the Sub-Rosiclare zone was cut by caving grounds. Drill Hole 31-M showed good ore at both the Rosiclare sand and Sub-Rosiclare horizons. M-32 cut some ore at the Sub-Rosiclare horizon but it was not comparable to the material cut in holes to the west which ore we are trying to extend to the east.

DMEA
Field Inspection Report
by
G. L. Neumann, Engineer

Operator:	Ozark-Mahoning Co., Rosiclare, Illinois Hill-Ledford Tract, Hardin County, Ill.
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Lead-Zinc

The Operator's Monthly Progress Report for November 1952 is hereby approved.

Holes M-30, M-31 and M-32 were completed during this period. Hole M-30 showed good structural features and encountered good fluorspar, but this was a difficult hole and had to be abandoned on account of caving ground. Plans are to deepen this hole very soon with a core drill at company expense. Hole M-31 showed the best mineralized zone of any holes on this project. It cut good fluorspar, zinc and lead. This is the first ore containing lead in quantity to be cut during this project. Hole M-32 cut 12.5 feet of fair fluorspar with a good zinc content.

Holes M-33, M-34 and M-35 are now being drilled. Another three holes are contemplated to complete the contract probably in the month of December, if the prevailing good weather continues.

The operation at this contract continues satisfactory and if the favorable results continue, a Certificate of Discovery or Development may be justified.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W. T. Miller Title Acting Exec. Officer Date Nov. 5, 1952

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Remarks:

Copies of logs of Drill Holes No. 27, 28 and 29-M are attached to this report. One hundred foot scale map is also attached showing location of all holes which have been completed as well as those now drilling.

You will note that 29-M is blank. This is disappointing. In order to determine whether the ore continues to the northeast, we decided to back-up and drill close to known ore. Hence the location of 32-M.

DMEA
Field Inspection Report
by
G. L. Neumann, Engineer

Operator:	Ozark-Mahoning Co., Rosiclare, Ill.
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-Lead-Zinc

Progress for the month of October 1952 is favorable.

Holes M-27, M-28 and M-29 were completed during the period. Hole M-27 cut three zones of mineralization 12½', 27½' and 37½' thick between 652½' and 730' below the surface. Assays showed 18.9 to 51.90 percent CaF_2 and 0.48 to 4.57 percent zinc. This is the southermost hole of the project. The operator has filed another application for Government aid in extending this exploration to the southwest on a probable extension of this deposit.

Hole M-28 cut a bed of fluorite from 702½' to 715'. The average assay was 42.60 CaF . Hole M-29 on the northeastern limit of the project was disappointingly a blank hole. Holes M-30, M-31 and M-32 were started during the month. These holes are located to determine the extent of the mineralized zone and to obtain additional data for estimating ore reserves indicated by this project.

The operation of this project continues to be highly satisfactory. The results are encouraging for a discovery certification.

After the three holes started in this period are completed, another six drill holes are contemplated, the completion of which will finish the contract.

Signature McHenry Mosier Title Executive Officer Date October 10, 1952

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Remarks:

Copies of churn drill holes No. 23, 24, 25 and 26-M are attached to this report. One hundred foot scale map is also attached showing location of all holes completed and drilling. Attached hereto is set of cross sections.

Please note the location of 24-M along the N-S crosscut. This hole cut 7½ ft. of good ore from 655-662½ ft. which assayed 43.13 CaF_2 and 2.94 Zn. We are now drilling 27-M which is 100 ft. south and represents the 5th hole along the North-South crosscut. If 27-M cuts good ore we may wish to drill another location 100 feet farther south. Kindly advise whether contract can be amended to cover this situation.

Hole No. 25-M was encouraging inasmuch as we cut good ore from 710-750 ft. which averaged 52.00 CaF_2.

We were surprised when 26-M along the northeast extension failed to cut any ore. Apparently there is a change of strike and the orebody can be picked up farther east. We are now drilling 29-M 150 ft. east of 26-M. This hole takes us out of the block designated by the contract. We assume, therefore, that the contract can be modified so that we can continue with the crosscut to the east until the structure has been crossed.

DMEA
Field Inspection Report
by
G. L. Neumann, Engineer
October 15, 1952

Operator:	Ozark-Mahoning Co., Rosiclare, Ill.
Docket No.:	DMEA-2248
Contract No.:	Idm-E255
Commodity:	Fluorspar-lead-zinc

The Operator's Monthly Progress Report for September 1952 is hereby approved.

Splendid progress has been made again. Also further encouragement for the discovery of a sizeable ore body of good grade still continues to build up.

To date 17,147 feet of the 25,500 feet of the original contract have been drilled. The contract is approximately 68 percent completed. 2,740 feet were drilled in September, 4 holes were completed. This contract should be nearing completion by January 1, 1953 if the weather continues favorable to the drilling.

The set of sections included with the September report are most informative and give a complete picture of structure from the data at hand.

All through, this contract has been handled in a most expeditious manner. It is certainly a pleasure to work with the people responsible for such satisfactory execution of a well planned program.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature McHenry Ulosier Title Executive Officer Date 9-4-52

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

M-20	Completed 8-19-52 (Previously reported 240') Bal.	535 ft.
M-21	Completed 8-16-52 (Previously reported 225') Bal.	618 ft.
M-22	Completed 8-23-52 (Previously reported - None) Bal.	760 ft.
M-23	Drilling (Depth 8-31-52)	525 ft.
M-24	Drilling (Depth 8-31-52)	360 ft.
M-25	Drilling (Depth 8-31-52)	115 ft.
	Total Footage for Month	294.8 ft.

Remarks:

Copies of churn drill holes No. 18-M, 20-M, 21-M and 22-M are attached to this report. Copy of Diamond Drill Hole No. 5 (core) is also attached. This represents the deepening of churn drill hole 5-M which was previously lost at a depth of 720 feet. The cost of this hole was the sole expense of Ozark-Mahoning Company. One hundred foot scale map is also attached showing the location of completed holes as well as holes drilling.

Hole No. 21-M showed 45 ft. of ore from a depth of 735-780 feet which assayed 30.80 CaF2 and 3.95 Zn. You will note that we are continuing with this crosscut to the southeast.

Hole No. 22-M drilling along a M-S crosscut as represented by Holes No. 17,20 and 22 cut 8 ft. of good ore at the base of the Rosiclare from 662 ft. - 670 ft. which assayed 69.70 CaF2. Holes No. 17-M and 20-M were blank suggesting the possibility that the ore may be restricted to a narrow width as we continue to the southwest along the principal NE-SW fault structure.

You will note the location of 25-M new drilling. Upon the completion of this hole we expect to drill a hole approximately 100 ft. west of 25-M as well as a hole approximately 100 ft. east of 25-M. Upon the completion of these holes we should be in a much better position to evaluate the orebody as represented by Holes No. 2-M, 3-M, #13, 5-M, 6-M, 7-M and 22-M.

As reported in the June report we expect to drill a crosscut east of the highway, commencing at a point 150 ft. east of Minerva #2. We have decided to change this location to a point 250 ft. east of #2.

763 - 776	Light brown oolitic lime

Ore face 697 - 705 averages 54.21% CaF2
Ore face 750 - 759 averages 37.00 CaF2
13.20 Zn
0.24 Pb

Average	CaCO3	CaF2	Zn	Pb	SiO2
697 - 705	9.63	54.21			26.06
750 - 755	3.61	47.12	13.28	.43	25.62
755 - 759	14.38	24.40	13.07		33.31

Remarks: This hole was deflected out of the cable tool hole to drill past a bit which was lost at 720 feet. The old hole was back filled to 667 feet with crushed lime and cement and a string of 8 inch pipe was set at this point. Deflection was accomplished

by springing the bottom joint about 1/4 in. in ten feet. The cores from 672 - 675 indicate a deflection of about 1/4 inch per foot or a total of ten feet per 100 feet.

The core recovery in the section from 697 to 705 was good and showed good replacement type of ore.

The core recovery from 750 to 755 was only 50%, however the section drilled firm without evidence of open ground. In all probability the last core was spar in ore which would if recovered improve the assay.

The core recovery from 755 - 759 was 60% and a similar conclusion to the section above it can be drawn, however the cores recovered showed considerable limonite and silicified lime.

Field Inspection Report for August
by
G. L. Neumann

DMEA Docket No. 2248 (Fluorite)
Ozark-Mahoning Co., Rosiclare, Hardin Co., Ill.
Contract Idm-E255

Churn drilling is progressing in a very workmanlike manner. Results while not all positive are on the whole encouraging for a discovery.

With the recently approved amendments, the contract should continue to show good progress.

For the month of August the progress was as follows:

M-18 was advanced from 750 to 785 feet and was a blank. That makes the entire corss section M-13, M-10, M-8, M-15 and M-18 blank and shows a break in the ore zone. Hole M-20 on the southern cross section was advanced from 240 to 775 feet and was blank; Hole M-22 to the south of M-20 in this same cross section was completed to 760 feet and cut 8 feet of good spar. Hole M-24 is now being drilled to the south of M-22, it is down to 360 feet. It should intersect the ore about 640 feet. Hole M-21 on the northern most cross section was advanced from 225 to 843 feet and cut 45 feet ore good fluorspar and zinc. This indicates that the ore has swung to the east or that an easterly spar of the zone is carrying the mineralization. Hole M-23 is being drilled along the highway to the southeast of M-21. It is now down to 525 feet. The favorable horizon is about 700 feet. Hole M-25 was started as the first hole of a new E-W cross section to cut the area just south of the center of the zone being explored. It is now down to a depth of 115 feet.

Future plans call for another cross section to the north of that good cross section composed of holes M-9, M-12, M-16, M-19, M-21 and M-23. Also the continuation of the southern cross section to the south beyond M-24 if M-24 is favorable.

Sections of all drilling are being prepared and will be included in the September Report.

G. L. Neumann
Mining Engineer

DMEA Field Team Inspection Report for July 1952
(Inspection made August 8)

Docket No. DMEA-2248, Contract Idm-E255
Ozark-Mahoning Company, Rosiclare, Hardin County, Illinois

(Fluorspar)

Work is progressing very satisfactorily. The results, while not all positive, are very encouraging. The contract is now nearly one-half completed. No changes are recommended at this time.

Hole 15-M, the fourth hole in a northwesterly-southwesterly cross section near the center of the area being prospected was bottomed at 860 feet. It was a blank hole. Hole 18-M the fifth and final hole in this cross section bottomed at 750 feet and was also a blank. The results from this cross section were discouraging but demonstrate how blank zones can be found in high potential areas.

Hole 16-M was the third hole in an east-west cross section at the present northern end of the project. It bottomed at 855 feet. One hundred forty feet of ore was cut starting just above the Rosiclare hole 19-M, the fourth hole in this strong cross section bottomed at 835 feet. It cut 105 feet of spar averaging 57 percent. Considerable accessory zinc was also present in both holes 16-M and 19-M. Hole 21-M, the fifth hole in this cross section, is now drilling. This hole is now down to 545 feet, the favorable horizon is about 715 feet.

Hole 17-M the first hole in a north-south cross section near the southern end of the zone being explored bottomed at 780 feet. The hole showed no mineralization. Hole 20-M the second hole and hole 22-M the third hole in this cross section are now drilling. Neither hole has yet cut the favorable horizon.

Hole 5-M drilled previous to the DMEA contract was wedged off above the ore horizon and is being cored with a diamond drill. An 8-foot section showed good spar. This work is on company account.

This work is showing fine progress. Three churn drill machines are now working steadily on the contract.

It is contemplated to start another cross section N from the strong cross section, composed of holes 9-M, 12-M, 16-M, 19-M and 21-M in the near future.

Dear Mr. Mosier:

Please find enclosed five copies of Operator's Unit Cost and Progress Report, Form No. MF-104 A and five copies of Operator's Monthly Report and Voucher Form No. MF-104. These reports cover the period ending July 31, 1952.

Attached to the reports are a supplemental sheet, logs of holes completed during the period and five copies of the 100 foot scale map showing all locations to date.

Very truly yours,

OZARK-MAHONING COMPANY
Mahoning Mining Division

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

M-19	Completed		"	835 ft.
M-20	Drilling	7-31-52	"	240 ft.
M-21	Drilling	7-31-52	"	225 ft.
		Total Footage for Month		2840 ft.

Remarks: Copies of logs of Drill Holes 15-M, 16-M, 17-M and 19-M are enclosed with this report; also, maps showing locations of these holes.

Hole No. 15-M was blank but structurally low which is favorable, and indicated the necessity for drilling 18-M. 18-M has reached a depth of 750 feet and is blank to this depth. It also is structurally high. In view of the disappointing results from Holes Nos. 8-M, 10-M, 13-M, 15-M and 18-M, drilling will be discontinued in this area and the rig will be moved to a location 100 feet south of 20-M and designated as Hole No. 22-M. It will be necessary, in order to give enough safe working area, to offset this location about 15 feet west from the north-south line of section formed by Holes Nos. 17-M, 20-M and 22-M.

Hole No. 17-M was blank and showed very little water. The absence of water probably indicates that the hole was drilled on a structural rib. This rig has been moved south 100 feet to Hole No. 20-M.

Hole No. 16-M was completed early in July and the log is included with this report. The hole cut several ore sections. No. 19-M was drilled 70 feet east of 16-M and completed during the month. This hole cut extremely rich spar ore at a depth of 715 to 785 feet and a section of 70 feet shows an assay of 52.77% CaF_2. The deeper zinc sections in this hole were somewhat thinner than is indicated in Holes Nos. 13-M and 16-M. This hole showed few openings and cutting recovery was very satisfactory. Drill Hole No. 21-M is drilling 70 feet east of 19-M. It was necessary to offset to the south on this location to give room for the drill set up near the highway and power lines. The map shows the offset to be slight.

840 - 855 Gray ls., some caved material. Lt. Zn & spar - More cut'gs.

Note:

From a depth of 700 feet on down to the bottom of hole, the recovery of cuttings per screw was anything from a small handful up to a quart. The ground drilled fairly firm but appeared to be full of small vugs. The water from 700' on down was string and clear with black sulphur water at 730 ft.; consequently, most of the cuttings were washed away. In addition, there was a good deal of caved material in the ore cuttings which came from formations overlying the Rosiclare on to the surface.

DMEA Field Examination Report
G. L. Neumann, Engineer

DMEA Docket No. 2248
Contract No. IdaF-255
Ozark-Mahoning Co., Rosiclare, Ill.
Work west of Illinois Highway No. 1 near Lamb, Ill., Hardin Co.
Commodity - Fluorspar, Lead, Zinc
Amount of Contract - $[illegible],[illegible],00
Government Participation - 50 percent - $30,982.50

The property was visited July 10, 1952. Progress Report for June is approved. Holes 15M and 16 M have since been completed. 15M did not show mineralization. 16M cut several bands of good ore very similar to adjacent hole 12M. 19M is drilling 70 feet east of 16M. If 19M has good showing another hole will be drilled next to the highway. 17M is down to 450 feet depth and if showing is cut another line of holes will be drilled to the south in order to determine the position of the east wall. Hole 18M, 70 feet SE of 15M, is now down to a depth of 240 feet, practically at junction of lines 13M - 10M - 8M - 15M - 18M and 4M - 3M - 2M - and Minerva hole 17.

This work is progressing very well and results are very encouraging.

G. L. Neumann

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Signature W. Henry Mosier Title Exec. Officer R-8 Date 7-14-52

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

	Total footage for month	2766'

Remarks

Copies of Holes No. 12-M, 13-M, and 14-M are attached to this report. Map is also attached showing location of completed holes as well as holes now drilling.

Hole No. 12-M showed 10' of good ore at the base of the Rosiclare from 715-725 feet, which assayed 45.92 CaF_2. Scattered ore continued below this showing to a depth of 785 feet. You will note the location of 16-M approximately 70' east of 12-M. This hole has also cut good ore at 700 feet and is still in ore at a depth of 800 feet. As soon as 16-M is completed we expect to move an additional 70' to the east. This location will place us fairly close to the south east boundary of the block delineated by the contract. Consequently we would like to have written approval that the crosscut as outlined by Holes No. 9, 12, & 16 can be continued to the east beyond the line set up by the contract provided we feel same is desireable.

When the above crosscut is completed we may wish to move to the north east about 450' and drill a new cross cut commencing about 150' east of Hole No. 2. Kindly advise whether same is agreeable and will conform to the contract.

Hole No. 13-M is blank. You will note the location of Hole No. 15-M. This also has been completed since the first of July and is blank. The cross cut as represented by 8-M, 10-M, 13-M, and 15-M has been disappointing.

Hole No. 14-M was also blank although there was considerable open ground with a good deal of water. You will note the location of 17-M. From this point we expect to drill a cross section due south spacing the holes at 100' intervals until the mineralized trend has been crossed.

BMSA
Field Inspection Report
June 4, 5, 1952
H. L. Burmeister, Engineer

Docket No. [illegible], Ozark-Mahoning Company
Mechanicsburg, Illinois

(Fluorspar)

On arrival at Mechanicsburg, it was found that the Monthly Progress Report for May 1952 had been sent to College Park the previous day.

Only the monthly cost, footage drilled in May and total footage drilled was entered on the report. The total to date of cost was shown. This total was added on the Company copy and also penciled on each of the Government copies.

Holes No. 12E, 13E and 14E were now drilling. Hole 14E showed some clay from 600 to 700 feet, samples of which were not available. Five feet of shale 50 percent fluorspar was encountered from 715 to 720 feet and a very heavy flow of water from 720 to 725 feet. From 725 to 735 feet spar averaged in decreasing quantities. Assay results will appear in the next report.

The next hole in the same contract line with hole 12E will be drilled to the east on the trend of the long main spur to be moving in a clockwise direction. Hole 13E is at the bottom of the hollow and at 300 feet and shows no mineralization. This hole will be drilled about 300 feet deeper. The next hole in this contract line will also be located to the east.

No difficulty is being encountered in drilling. The contract is 23 percent complete on a footage and cost basis and 22 percent complete on a time basis.

Statements of fact by the operator in the Monthly Progress Report for May 1952 were corroborated.

Contract No. 255
Idm-E

Name of Operator Ozark-Mahoning Company
Docket No. DMA 2268
Total Contract Amount $ 61,965.00
Government Participation: 50 % Amount, $ 30,982.50
Distribution of Expenditures for Month of May 1952

STRATEGIC AND CRITICAL MINERAL EXPLORATION PROGRAM
OPERATOR'S MONTHLY PROGRESS REPORT

Operators are to submit monthly reports to the designated field representative of the Defense Minerals Administration. Reports are to be submitted in quadruplicate prior to the 15th day of the month following the reporting period.

Narrative.—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered is to be furnished.

Maps.—Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

Cost Accounts.—All applicable parts of this form are to be filled in. This report will form the basis for payments of the Government's participating share of expenses. Audits of accounts may be made from time to time.

M-14	(Drilling 5-31-52)		50 ft.

Total footage for month 2558 ft.

Remarks:

Copies of Holes No. 9-M, 10-M, & 11-M are attached to this report. Map is also attached showing locations of completed holes as well as holes now drilling.

Hole No. 9-M showed low grade fluorspar mineralization at both the Rosiclare contact and the Sub-Rosiclare horizon. Strong water and open ground was encountered in the mineralized sections.

Hole No. 10-M cut low grade ore at the Rosiclare horizon and shines at the Sub-Rosiclare contact.

Hole No. 11-M was blank.

docket

DMEA-2248

DMEA Docket 2248
Ozark-Mahoning Company
Mahoning Mining Division
Rosiclare, Illinois

Field Inspection Report by G. L. Neumann, Mining Engineer
May 5, 1952

(Fluorspar)

Exploration program consists of churn drilling of tract known as Hill-Ledford Farm located in Hardin County, west of Illinois Highway No. 1 about 6 miles north of the village of Cave in Rock, Ill. The turn-off from Illinois Highway No. 1 is exactly opposite the turn-off to Lamb, Illinois. The spar mine and mill of the Minerva Oil Company are located at Lamb. Three holes have been completed to date. An aggregate footage of 3,295 feet has been drilled in six holes on the DMEA Contract. The drilling is approximately 13 percent completed in two months of operation. Three rigs are now drilling on holes M-9, M-10 and M-11. The work accomplished to date has been encouraging for making a discovery, although indications point to a slight shifting of the assumed trend of the deposit to the northwestward. A check of the monthly progress for April was made. Due to heavy spring rains and Boggy condition of ground, considerable difficulty has been experienced in getting this project underway. The contract driller, Mr. Durrill Bayles, has also had difficulty in obtaining experienced drillers. The attitude of both the company and the contractor is excellent and good progress should ensue on this project.

Statements of fact by the operator in the Monthly Progress Report for April 1952, were corroborated.

DEFENSE MINERALS ADMINISTRATION

Contract No.
Idm-E 255

Name of Operator Ozark-Mahoning Company
Docket No. DMA 2248
Total Contract Amount $61,965.00
Government Participation: 50 % Amount, $30,982.50
Distribution of Expenditures for Month of April, 1952

STRATEGIC AND CRITICAL MINERAL EXPLORATION PROGRAM
OPERATOR'S MONTHLY PROGRESS REPORT

Operators are to submit monthly reports to the designated field representative of the Defense Minerals Administration. Reports are to be submitted in quadruplicate prior to the 15th day of the month following the reporting period.

Narrative.—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered is to be furnished.

Maps.—Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

Cost Accounts.—All applicable parts of this form are to be filled in. This report will form the basis for payments of the Government's participating share of expenses. Audits of accounts may be made from time to time.

DEPARTMENT OF THE INTERIOR
Defense Minerals Administration
RECEIVED
MAY 6 1952

CERTIFICATION

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this report is correct and complete to the best of their knowledge and belief.

M-11	(Drilling)	Depth 4-30-52		110 ft.
		Total for month		2110 ft.

Remarks:

Copies of Holes Nos. 7 M and 8 M are attached to this report.

Hole No. 7 cut five feet of ore from 690 - 695 feet which assayed 50.81 CaF_2. A two foot opening and strong water was cut from 697 - 699 feet. Consequently, no cuttings were recovered from 695 - 705 feet. The ground, however, drilled firm from 699 - 705 feet. No Sub Rosiclare ore was cut in No. 7 as was the case in No. 6-M. Hole No. 11 M, elevation 412.1, is now drilling, located 102 ft. west, 7 ft. south of 7-M. This location is outside the area delineated by the contract. However, we are proceeding on the theory that the contract has been modified by Mr. Mosier's letter of March 27, 1952, which permits us to drill three holes outside the northwest side line.

Hole No. 8-M was blank. Hole No. 10-M is now drilling. Elevation 402.6. Location 59 ft. north - 28 ft. west of No. 8.

Hole No. 9-M is down to a depth of 710 feet and should be completed within the next week. The location is shown on the map furnished last month.

Status of Holes Completed and Drilling.

M-6 was drilled to a depth of 240 feet prior to February 18, 1952. Hole was completed 3-14-52. Total depth 790 feet. Consequently, 550 feet was for the joint account.

M-7. Drilling. Depth 3-31-52 355 ft.

M-8. Drilling. Depth 3-31-52 280 ft.

Remarks:

Copies of Hole No. 6-M are attached to this report. Minable ore was cut at the Sub-Rosiclare contact. Therefore, the crosscut was continued to the west.

The location of 7-M as well as 8-M is shown on the one hundred foot scale map of the property which is attached. A third drill rig was moved to the property about April 1st. The location of this hole M-9 is also shown on the map.

Distribution of Expenditures for Month of February 18, 1952 - March 31, 1952

STRATEGIC AND CRITICAL MINERAL EXPLORATION PROGRAM
OPERATOR'S MONTHLY PROGRESS REPORT

Operators are to submit monthly reports to the designated field representative of the Defense Minerals Administration. Reports are to be submitted in quadruplicate prior to the 15th day of the month following the reporting period.

Narrative.—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered is to be furnished.

Maps.—Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

Cost Accounts.—All applicable parts of this form are to be filled in. This report will form the basis for payments of the Government's participating share of expenses. Audits of accounts may be made from time to time.

CERTIFICATION

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this report is correct and complete to the best of their knowledge and belief.
