Re: Field-Team Semi-Annual Reports
on Certified projects, Region IV
for period ending July 31, 1958

Dear Sirs:

We are assured that for the 6-month period ending July 31, 1958, there were no pertinent production or development activities, and no royalties are due the Government under any of the six DMEA Project Contracts which have been certified in Region IV, listed as follows:

| Docket No. | Operator | Project Contract No. |
|---|---|---|
| DMA-197X (manganese) | Westmoreland Manganese Corp. | I-DMA-E8 |
| DMA-2002X(manganese) | Westmoreland Manganese Corp. | Idm-E139 |
| DMA-1088X(zinc) | Shelton Mining Co. | Idm-E122 |
| DMA-1371X(lead,etc.) | National Lead Co. | Idm-E48 |
| DMA-2202X(mercury) | Amerimex Mining Co. | Idm-E468 |
| DMEA-2485(lead-zinc) | Dale Mining Co. | Idm-E325 |

Sincerely yours,

Clinton C. Knox
Executive Officer
DMEA Field Team, Region IV

Machinery and Electric Company, and Mr. Thomas C. King, all of the remaining officers, directors and stockholders acquired their stockholdings for cash consideration.

None of the present stockholders, officers, or directors has ever engaged in promoting other mining corporations (whereby stock was offered to the public) except Mr. Reynolds and Mr. King, who under a Prospectus dated November 19, 1954, are revealed to have an interest in the Columex Mining Corporation at Albuquerque, New Mexico.

## RECAPITALIZATION

The Company was originally incorporated for $50,000.00 divided into 500 shares of Common stock of the par value of $100.00 per share. Prior to recapitalization, the Company had issued 293 shares of Common stock for $29,300.00 cash and 82 shares of Common stock for property received from the Joplin Machinery and Electric Company. This resulted in a total issue of 375 shares. However, as described under the caption "Transactions with Management" the agreed consideration for the 82 shares was property valued at $20,700.00. Thereafter, on December 31, 1954, the Company by approval of its Board of Directors and all of its then stockholders recapitalized for $800,000.00, divided into 150,000 shares of Preferred stock of $5.00 par value and 375,000 shares of no par value Common stock.

The par value of the Preferred stock amounts to an aggregate of $750,000.00 which, plus the agreed and stated consideration previously paid in for the Common stock amounting to $50,000.00, equals $800,000.00.

In order to strengthen the financial structure of the Company and to provide for Common stock to be made available by the Prospectus, the stockholders donated back to the Company 40% of the 375 shares of $100.00 par value Common stock.

In connection with the recapitalization of the Company, it was agreed to exchange 1000 shares of no par value Common stock for each share of the $100.00 original Common stock previously issued to the stockholders. As a result of this action, the then stockholders exchanged the remaining 225 shares of $100.00 par value Common stock for 225,000 shares of no par value Common stock.

None of the 150,000 shares of Preferred stock ($5.00 par value) has been sold, issued or subscribed for as of the date of this Prospectus.

To further strengthen the financial standing of the Company, each of the present stockholders, except the Joplin Machinery and Electric Company, Mr. James V. Reynolds, and Mr. Thomas C. King, have pledged their individual credit to enable the Company to obtain a bank loan of $29,300.00. This loan was obtained as emergency operating capital. Each of the stockholders signed a note to the extent of the stock owned by each, and such notes were deposited with the Southeast State Bank of Kansas City, Missouri, as collateral for such bank loaning $29,300.00 on an unsecured note of the Company.

It is presently contemplated that the same group of stockholders may be required to pledge their individual credit again within the next 90 days for another loan of $29,300.00 if the need for such additional operating funds becomes necessary.

## MAPS

The maps on pages 19 to 22 afford a generalized picture of the Company's property in relation to the State of New Mexico. While the maps are prepared to scale, they do not purport to be exact, but are intended solely for the purposes stated herein.

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. Under no circumstances is it to be considered a prospectus, or as an offer to sell, or the solicitation of an offer to buy the securities referred to herein. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. Under no circumstances is it to be considered a prospectus, or as an offer to sell, or the solicitation of an offer to buy the securities referred to herein. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

## CAPITALIZATION

The capitalization of the Company as to (1) authorized Capital Stock, (2) the amount outstanding as of December 31, 1954 and (3) the amounts to be outstanding upon completion of financing contemplated by this Prospectus is as follows:

| Title of Stocks | Amount Authorized | Amount Outstanding as of Dec. 31, 1954 | Amount to Be Outstanding If All Shares Offered Hereby are Sold |
|---|---|---|---|
| Preferred Stock* ($5.00 Par Value | 150,000 shares | 0 | 150,000 shares |
| Common Stock (No Par Value) | 375,000 shares | 225,000 shares | 375,000 shares |
| Funded debt: | | | |
| None** | 0 | 0 | 0 |

*Dividend rate is 5% and non-cumulative.

**Reference is made to the notes and mortgage listed under the caption "Transactions with Management" and to the Southeast State Bank note discussed under the caption "Recapitalization."

There are no options or stock purchase warrants outstanding or presently authorized.

## OFFERING

The Company is offering 150,000 units of stock to the public at a price of $5.00 per unit, which price has been arbitrarily fixed since there is no established or quoted market for the stock of the Company. A unit consists of one share of Preferred stock of the par value of $5.00 and one share of no par Common stock. If the stock offered hereunder is completely sold, 150,000 units will return to the Company $750,000.00 less commissions and expenses. It is the practical intention of the Company to sell one share of Preferred stock for the par value of $5.00 per share and donate one share of Common no par value stock to the purchaser of the preferred. This plan, the Company is advised, will result in the purchaser having no investment in the Common stock and the adjusted basis of the Preferred stock will be $5.00 per share.

At the completion of the offering under this Prospectus, the original stockholders of the Company (as set forth under the caption "Management") will own 225,000 shares of the Common stock and the public will own 150,000 shares of such Common stock. The public will own all of the 150,000 shares of Preferred stock.

## STATEMENT OF POLICY AND UNDERTAKING

The statements made hereafter as to the rights, privileges and special features of the Preferred and/or Common stock should be analyzed in conjunction with the following paragraph which may affect or limit such rights, privileges or features.

## PREFERRED STOCK

### Preferential Status

If the Preferred stock shall not be redeemed and retired wholly, and until it is redeemed and retired, such stock will have a preferential position in regard to dividends, redemption, and entitlment in event of liquidation.

### Dividend Rights

The holders of Preferred stock are entitled in preference to the Common stock to non-cumulative dividends at the rate of 5% per share as such dividends may be declared by the Board of Directors out of the net profits, or out of the net assets of the Company available for dividends under the existing laws of the State of Missouri.

### Redemption

Out of a sinking fund to be established for this purpose, the Company plans to redeem as rapidly as possible all of the Preferred shares offered by this Prospectus. The redemption price is to be not more than $5.25 per share. The redemption will be made at the discretion of the Board of Directors from the funds available, if any, in such sinking fund, and in the event the sinking fund is not sufficient to redeem all of the Preferred stock at one time, then the shares to be redeemed out of the funds available, if so decided by the Board of Directors, shall be those shares selected by lot or such other reasonable means as the Board of Directors may direct.

### Sinking Fund

By amendment of the Articles of Incorporation, the Board of Directors is required to set aside in a special account and each year deposit therein 25% of the net profits of the Company, if any, after taxes for the preceding fiscal year as and for a sinking fund to be utilized to call or redeem at not more than $5.25 per share the Preferred stock as described above under "Redemption". The shares redeemed by the sinking fund shall not be reissued by the Company.

### Liquidation Rights

In the event of liquidation, voluntary or involuntary, the holders of the Preferred stock shall be entitled to receive, in preference to the Common stock, up to $5.00 per share but no more.

### Voting Rights

The holders of Preferred stock shall not be entitled to vote in any proceeding of the Company except for the creation or increase of senior securities, which new or additional securities would have a priority over existing shares or would be entitled to any preferential treatment over existing shares. The holders of Preferred stock will be entitled to vote at any proceding of the Company on such matters as to which the Revised Statutes of Missouri, 1949, specifically provide for votes to be cast by the holders of non-voting Preferred stock.

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. Under no circumstances is it to be considered a prospectus, or as an offer to sell, or the solicitation of an offer to buy the securities referred to herein. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. Under no circumstances is it to be considered a prospectus, or as an offer to sell, or the solicitation of an offer to buy the securities referred to herein. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

that such of the officers and directors as devote substantial time to the Company's operations will receive reasonable compensation from the proceeds of the stock offered hereunder or from the profits of the Company, if any. At the present time, Mr. Raymond E. Bair is directly in charge of the operations, heretofore referred to as "Red Bluff 3 & 9 Operation" and is receiving no remuneration except the reimbursement of travel expenses. Although the Company has 6 officers, compensation will be paid to such officers only as the operations of the Company demand all or substantially all of their time. In its initial stage of development the Company contemplates that Mr. Raymond E. Bair and Mr. James V. Reynolds will be the only compensated officers. Thereafter as operations are intensified additional officers will be compensated as their services are used.

For his services, Mr. Bair will receive compensation of $850.00 per month, plus travelling expenses. Mr. Reynolds will receive $600.00 per month and travelling expenses, plus 1½% royalty on all property acquired by the Company after March 1, 1955 through Mr. Reynolds' efforts.

Mr. King has reentered the field of Independent Consulting Engineer and is not to be employed by the Company.

The Company reserves the right to vary or change any of the foregoing purposes, order of priority or amounts as it appears, in the opinion of the management, in its best interest to do so.

In the event the proceeds of this offering prove to be insufficient to carry on the planned program, the Company may be required to provide additional funds to meet such deficiency. No plans have been formulated to secure such additional funds nor does the Company have any assurance of being able to obtain any additional funds when and if needed. If it appears necessary in the best judgment of the management to secure additional funds by the issuance of other securities senior to the securities covered under this offering, appropriate requests to the stockholders of the Company would be made for such authority. Failure to obtain additional funds, if needed, or failure to authorize the issuance of senior securities may result in substantial losses to the purchasers of the Preferred and Common stocks offered herein, depending upon the circumstances and conditions existing at the time of the need for additional funds.

## PRESENT PLANS IN EVENT ONLY A PORTION OF THE CONTEMPLATED PROCEEDS ARE RECEIVED

In the event all the contemplated proceeds are not received, it is the intention of the management to use such proceeds as are received in furthering the contractual phase of its uranium undertakings. The proceeds are to be used to enable the Company to contract with the owners of proven ore bodies for the removal of such ores on a profit sharing basis. The profits earned from such operations, if any, would be used to carry out a limited exploration program on the Company's properties. Also such portion of the proceeds as are raised and as would be needed would be used to reduce the Company's outstanding indebtedness as of the date such proceeds are received.

No arrangement has been made or will be made for return to the subscribers of funds paid in as a result of this offering, if sufficient funds are not raised to undertake the proposed program.

## INTERESTS OF PROMOTERS

The stockholdings of the present stockholders have been set forth under the caption "Securities held by Directors, Officers and Others". With the exception of James V. Reynolds, Joplin

| 100 hrs. @ $12.50 per hour | 1,250.00 | |
| Technical supervision | 4,150.00 | |
| Supplies | 1,275.00 | |
| Technical Services | 1,500.00 | |
| Total estimated project cost | | $ 17,675.00 |

## RE-CAP OF USE OF PROCEEDS

| | |
|---|---|
| Reduction of Indebtedness | $ 74,300.00 |
| For contracting operations | 415,185.00 |
| Zuni, Sierra and Grant County property | 139,665.00 |
| Elephant Lode Property | 17,675.00 |
| | $646,825.00 |

The amounts estimated above for the contracting business shall be used primarily for the financing of contracts covering the removal of proven ore bodies owned by any individual entering into contract with the Company. The cash requirements for financing the foregoing contracts cannot be determined at present and will depend on the amount of activity that develops in connection with such contracts. It also includes general operating capital for the Company's use and includes reasonable compensation for the Company's officers.

None of the Officers, Directors or Stockholders of the Company will receive any compensation for their services rendered, as officers or directors, prior to March 1, 1955. It is contemplated

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. Under no circumstances is it to be considered a prospectus, or as an offer to sell, or the solicitation of an offer to buy the securities referred to herein. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

### Preemptive Rights

None of the holders of any class of stock of the Company shall be entitled to any preemptive or other prior rights to purchase or subscribe for any stock of the Company of any class now or hereafter authorized or for any obligation or evidences of indebtedness or other securities as may be issued. All such stock or other securities as may be issued may be disposed of pursuant to resolution of the Board of Directors to such purchasers or subscribers and upon such terms as may be deemed advisable by the Board of Directors.

### Liability to Assessment

All shares of stock of the Company issued for a purchase price, fixed at or prior to the date of issuance thereof by the Board of Directors (but in case of shares having par value, at not less than the par value thereof) shall be fully paid and non-assessable.

## COMMON STOCK

### Dividends

Whenever dividends are paid on the Preferred stock and the required funds have been set aside in the sinking fund to be established for the redemption of the Preferred stock, the Directors may declare and pay dividends for a like period on the Common stock out of the assets of the Company legally available therefor.

### Voting Rights

At all meetings of the stockholders, whether annual or special, all voting rights shall be vested exclusively in the holders of Common stock of the Company, except for the statutory voting rights of holders of Preferred stock under the circumstances described above. Each holder of Common stock of the Company shall be entitled to one vote for each share of stock standing of record in his name on the stock record books of the Company. Cumulative voting of the shares for the election of Directors shall be permitted.

### Preemptive Rights

No stockholder of any class shall be given any preemptive rights. Reference is made to the caption "Preemptive Rights" under the description of Preferred stock above.

### Liquidation Rights

In the event of liquidation, whether it be voluntary or involuntary, the net assets of the Company shall be distributed first to the holders of the Preferred stock as heretofore described, and the balance of the net assets, if any, shall be distributed ratably among the holders of the then outstanding shares of Common stock.

### Liability to Assessment

Stock of the Company when issued at par value, or at the stated consideration agreed upon by the Board of Directors, shall not be liable for assessment or further calls, and shall be fully-paid.

## MANAGEMENT

The names and addresses of the officers and directors of the Company are as follows:

| Name and Address | Position with Company | | Previous Experience |
|---|---|---|---|
| Raymond E. Bair<br>5704 W. 61st Terrace<br>Mission, Kansas | President and Director | 1934-1948 | Superintendent of mining and quarry operations with J. A. Tobin Construction Co. |
| | | 1948-date | Secretary-Treasurer of Union Construction Co., of Kansas City, Kans. |
| Joseph M. Clark<br>6001 Reinhardt Drive<br>Mission, Kansas | Vice-President and Director | 1944-1945 | Pilot and squadron operations officer—U. S. Air Force |
| | | 1945-1949 | Field Superintendent, List & Clark Construction Co. |
| | | 1949-1953 | General Superintendent, List & Clark Construction Co. |
| | | 1953-date | Vice-President of List & Clark Construction Co. |
| Buford V. Everett<br>515 Clay Street<br>Plattsburg, Missouri | Vice-President and Director | 1926-1941 | Fifteen years in grading and earth moving business. Five years of this period was partner in Everett Brothers Construction Co., which engaged in all forms of heavy construction work and related lines. |
| | | 1941-1953 | Partner and half owner of Everett & Clark, Contractors engaged in rock quarrying, excavating, mining and construction. |
| | | 1953-date | President of Everett Quarries, Inc., successors to Everett & Clark. |
| James V. Reynolds<br>and<br>Joplin Machinery & Electric Company<br>903 South Madison<br>Webb City, Missouri | Vice-President and Director | 1945-1946 | District Manager of United Zinc Smelting Corporation of Joplin. |
| | | 1946-1950 | President of Consolidated Mining Company of Joplin. |
| | | 1950-date | President of Joplin Machinery & Electric Company—dealers and distributors of mining machinery and equipment. |
| Aubrey S. Owen<br>Route #1<br>Gashland, Missouri | Treasurer and Director | 1946-date | Vice-President and Treasurer of Funkhouser Machinery Co.—dealers and distributors of heavy contractors' machinery and equipment i.e. bull dozer cranes, crushing plants, diesel engines, etc. |

Board of Directors. It is the present plan and intention of the Company that the net proceeds will be applied in the order and priority stated as follows:

**Payment of Company's Obligation per Financial Statement of December 31, 1954:**

| | | |
|---|---|---|
| Payment of notes and mortgage to Joplin Machinery & Electric Company | $45,000.00 | |
| Payment of note to Southeast State Bank | 29,300.00 | |
| Total obligations to be paid | | $ 74,300.00 |

**For Public Contracting Operations:**

Spread of Equipment—

| | | |
|---|---|---|
| One— ¾ yard Diesel Engine, Northwest Shovel | $19,410.00 | |
| Freight to Grants, New Mexico | 1,300.00 | |
| One— HD-5 Allis-Chalmers Front End Loader | 11,065.00 | |
| Freight | 500.00 | |
| One— 315 Cubic foot Diesel-driven Portable Air Compressor | 10,000.00 | |
| Freight | 500.00 | |
| One— MW-12 Joy Wagon Drill, equipped with TM-400 Drill, mounted on Used Ford Tractor | 3,500.00 | |
| Freight | 300.00 | |
| One— D-7 Caterpillar Tractor equipped with Dozer and dual drum power take-off | 18,000.00 | |
| Freight | 1,000.00 | |
| One— Model 70 Caterpillar Scraper (12-15 yard) | 9,500.00 | |
| Freight | 1,000.00 | |
| Two—Tandem Dual 4-ton trucks with dump beds | 17,000.00 | |
| Two—Model L-47 Joy Hand-held Drills | 750.00 | |
| One—300-amp Portable Gasoline Driven Welder | 750.00 | |
| | $94,575.00 | |
| Two spreads of equipment, as listed above, to be purchased for a total cost of | | $189,150.00 |
| One—Joy Class 225-AC Truck Mounted Rotary Blast Hole Drill and freight—to be used between locations where above equipment is spread and operated | | 23,240.00 |
| Estimated amount to be used for general operating capital and for items as listed below: | | 202,795.00 |

Jeeps, Pick-up Trucks, Air Hose, Couplings, Drill Steel, Drill Bits, Blasting Powder and Batteries, Galvinometers, Repair Tools, Field Assay Equipment, Fuel Drums and Pumps, Portable Storage Facilities, Hand Tools, Geiger Counters, Scintillators, Payrolls, Comprehensive and Public Liability Insurance, Local Taxes, Licenses and Permits,

tract business and in the exploration and development of other claims and permits owned by the Company. The Company has no assurance that the purchaser will exercise the option granted him on November 11, 1954. He has until February 5, 1955, in which to exercise such option. During the interim, he has commenced building the road provided for under the contract. The option-purchaser has also engaged mining engineers and other employees and has started an exploratory program.

The mine is not easily accessible at the present time, and requires approximately 3 miles of road to be built from a well-maintained forestry road in order to gain access to it. This condition will be remedied by the option-purchaser without expense to the Company.

The Company owns 3 of the 13 claims in fee, and the remaining 10 claims were acquired by the filing of claims on Federal lands.

The Company understands that the mine was in operation in the early 1930's, but has no geological reports or production figures on which to base its former value if any.

There are several underground openings on the Springtime property of an undetermined depth due to the presence of water therein.

The foregoing references as to leases and other contracts covering the Company's properties do not purport to be a complete statement of all of the terms and conditions of such leases and/or contracts. A copy of each lease, permit, claim notice, contract, and/or warranty deed is on file with the Company at its office at 415 Commerce Trust Building, Kansas City, Missouri, and is available for examination.

## USE OF PROCEEDS

In the event that all of the shares being offered are sold, the net proceeds to the Company after deducting the underwriter's commission, but before deducting the expense of the offering will be $693,750.00. The expenses of the issue are estimated to be $46,925.00 consisting of the following:

| | |
|---|---|
| Registration Fees | $ 75.00 |
| Transfer Taxes, Transfer and Registrar Fees | 10,500.00 |
| Accountants' Fee | 350.00 |
| Fees and expenses of Underwriter's counsel (Messrs. Gage, Hillix, Moore, Park & Jackson) | 2,000.00 |
| Fees and expenses of Company's counsel (Messrs. Langworthy, Matz & Linde) | 2,000.00 |
| Fees and expenses of Company's General Counsel (Messrs. Watts & Shafer) | 25,000.00 |
| Printing | 4,250.00 |
| Blue sky and related expenses | 1,500.00 |
| Advertising | 1,000.00 |
| Miscellaneous | 250.00 |
| Total Estimated Expense | $46,925.00 |

The proceeds of $693,750.00 less the estimated expenses of $46,925.00 will leave a total of $646,825.00 to be added to the general fund of the Company and will be used as directed by its

## PROMOTERS

The 15 individuals listed under the caption "Management" took the initiative in organizing the Company and therefore are promoters of the Company, as that term is defined in the General Rules and Regulations under the Securities Act of 1933, as amended. In addition Mr. Thomas C. King is listed herein as a promoter since he was an employee of the Joplin Machinery and Electric Company. Mr. King was not a stockholder in the Missouri Uranium Corporation on August 10, 1954 when he estimated the ore content of Red Bluff 3 & 9 (see paragraph "Public Contracting" under the caption "BUSINESS"). Mr. King's experience and personal data is as follows:

| | |
|---|---|
| Thomas C. King<br>4911 Inspiration Drive<br>Albuquerque, New Mexico | 1943 Graduated from University of Arizona with B. S. Metallurgical Engineering.<br>1943-1946 U. S. Navy.<br>1946-1950 Metallurgist with Eagle-Picher Mining and Smelting Company, Joplin, Missouri.<br>1950-1954 Manager, Western Mining Division of Joplin Machinery & Electric Company. |

## SECURITIES HELD BY DIRECTORS, OFFICERS, AND OTHERS

The following table lists the officers and directors who are stockholders and others known to own 10% of the Common shares of the Company; (There are no holders of Preferred stock as of the date of this offering.)

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. Under no circumstances is it to be considered a prospectus, or as an offer to sell, or the solicitation of an offer to buy the securities referred to herein. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. development, and exploration work to determine if any of such property had value. Insofar as is known to the Company, there are no producing uranium mines in Sierra or Grant Counties, New Mexico.

The Sierra and Grant County permits are located near well-maintained roads, but considerable access road building must be done by the Company in certain instances.

The title to the Sierra and Grant County property is assured to the Company by the nature of the prospecting permits issued by the State of New Mexico. No prospecting work whatsoever has been done by the Company on these properties, but will be commenced prior to March 1, 1955.

**Elephant Lode:**

The property described as the Elephant Lode Group consists of 9 claims and 1 mill site in Catron County, New Mexico, in Township 9 South, Range 9 West, and Sections 26, 27, 34 and 36. The nearest town is sixteen miles distant and is easily accessible over excellent forest and state highways. The nearest railroad point is Engel about 68 miles away and is readily accessible over excellent highways for the entire distance. Preliminary examination of the Elephant group indicates the possibility of the existence of gold and silver bearing ores. However, sufficient work has not been done by the Company as of the date of this Prospectus in order to make any representation as to the quality or quantity or even the very existence of such gold and silver ores on this property. If further exploration work indicates the existence of such ores, the Company intends to commence production within a reasonable length of time.

The Company owns the Elephant Lode Group in fee and has no royalty obligations to any land owner or leaseholder.

**Davidson Group:**

The Davidson Group consists of 20 claims located approximately 25 miles northwest of Farmington, New Mexico. This group is presently under negotiation for sale because the Company in its initial stages of development desires to centralize operations in the Grants area insofar as possible. The Company intends to do no operation or development work on the Davidson Group. If it is unable to sell such group, the Company intends to let such group revert to the land owners which may be done without financial penalty to the Company.

**Springtime Group**

The Springtime group consists of 13 claims on which a gold and silver mine formerly existed. The mill site of the mine was destroyed in the early 1930's by fire and was not rebuilt at that time because of the low market price of gold and silver. On November 11, 1954 the Company entered into an option contract for the sale of the Springtime Group to a resident of the State of Texas. The contract provides that the purchaser—as consideration for the option—will construct certain roads and spend funds in the exploration, drilling, testing and assaying of the mineralization in such mine. If the purchaser exercises his option to purchase, the Company will receive $35,000.00 cash plus an overriding royalty of 5% of any gold and silver mined from the Springtime mine. The Company made the decision to sell this particular property because of the large capital investment required to rehabilitate the mine and construct a mill site. It was felt by the Board of Directors of the Company that a large expenditure of funds on the Springtime mine could be more profitably used by the Company in the furtherance of its con-

29, dated July 15, 1954, certain information concerning occurrences of uranium ores in such counties. The Bureau of Mines of New Mexico stated in its Circular 29 as follows:

### Grant County

"White Signal District—Uranium occurs in sub-ore and ore-grade at many points throughout the district, principally as autunite and torbernite occurring along quartz-pyrite veins cutting Precambrian granite. Uranium was noted as early as 1920 in the district but no production has come from the district to date.

"Burro Mountains—Uranium mineralization is found associated with fluorite at the following properties: Langford Mine—S 25, T 22S., R 16 W.; Hines Mine—S 34, T 21 S., R 14 W.; Purple Rock Mine—S 22, T 18 S., R 18 W. Minor amounts of autunite and uranophane are present at the Hines and Langford properties.

"Gold Hill District—Uranium and thorium mineralization is found associated with Precambrian pegmatite dikes. Euxenite, allanite, and samarskite have been noted.

"Black Hawk District—Uranium occurring possibly as pitchblende with Ni, Co, and Ag are found on the dumps of the Black Hawk and Alhambra Mines in S 20, 21, 28 and 29, T 18 S., R 16 W."

### Sierra County

"Highly radioactive materials have been found near the south end of the Caballo Mountains, southeast of the Caballo reservoir. Uranium and in places thorium mineralization occurs in interstitial chlorite and in seams and fractures in a highly altered granite mass. Some fluorspar and minor amounts of galena are present.

"An occurrence of pitchblende-type mineralization has been found in minor amounts along a thin shear zone in Precambrian schist at the southern limits of Truth or Consequences.

"Uranium mineralization has been found at the Terry Bros. property (also known as the Hanosh Prospect) near Monticello. Mineralization which includes some uranophane is found with dark purple fluorite in brecciated chert.

"Uranium mineralization is found at the Blanchard Hanson property on the west side of the Caballo Mountains 5 miles south of Truth or Consequences. Mineralization occurs in dark purple fluorite and includes some uranophane.

"Minor points of uranium mineralization occur at many other scattered points along the Caballo Mountains.

"Other uranium occurrences are reported from the Winston, Hermosa, Cuchillo areas, but have not been verified."

The Company emphatically makes no representation that any of its Sierra and Grant County property is located near or adjacent or even in the general area of the uranium mineralization occurrences as noted above in the Bureau of Mines Circular 29. However, based on such report, the Company believed the property involved in these two counties to be worthy of prospecting,

*Percentage based on 225,000 shares, i.e., exclusive of Treasury Shares.

**The holder of record of this stock will be the Joplin Machinery and Electric Company of which Mr. James V. Reynolds is President.

## TRANSACTIONS WITH MANAGEMENT

The Company acquired all of the claims, permits, and participations set forth under the caption "Properties" from the Joplin Machinery and Electric Company, a corporation organized under Missouri laws, whose principal address is Engineers Building, Joplin, Missouri. Mr. James V. Reynolds is President of Joplin Machinery and Electric Company. Under the terms of the contract, the Joplin Machinery and Electric Company exchanged all of such properties for 82 shares of the original Common stock of the Company, $55,441.91 in cash and notes and an over-riding royalty of 2½% of the gross income from such properties. In accordance with the terms of a prior contract between the Joplin Machinery and Electric Company and Mr. Thomas C. King, the provisions of which are not pertinent to this Prospectus, Mr. King is to receive a portion of the stock, cash, notes, and over-riding royalties as compensation earned while employed by the Joplin Machinery and Electric Company. In addition to the land, claims, permits and mining participations received by the Company under the aforementioned contract, the Company also received $9,546.29, consisting of trucks, automobiles, geiger counters, scintillators, surveying instruments, and assorted office equipment, all presently located in the Company's Mining Division Office at Grants, New Mexico.

tain ownership of such claims. The assessment work usually consists of surveys, discovery cuts, road building, or some similar activity directly on the property involved. The Company will have one year from the date of recording of the Federal Claims in which to do such assessment work. The Company intends to do the $100.00 assessment work per claim on such claims as the Company's geologist recommends.

All of the Zuni claims—both State and Federal—are located in the Cibola National Forest in Northern Valencia and Southern McKinley Counties, New Mexico, in the area of the Zuni Mountains. These mountains form the southern boundary of the San Juan Valley which is a physiographic division of the Colorado Plateau. The areas under claim to the Company are approximately 30 miles west-northwest from Grants, New Mexico, and 15 miles southeast from Gallup, New Mexico. The property is arranged in two separate but parallel northwest-southeast trending tracts bordering the central core of the Zuni Mountains.

Thus far in the limited prospecting work done on the Zuni claims, airborne surveys indicate the presence of radioactive anomalies. However, no representation is made by the Company that the existence of aerially detected radioactive anomalies indicate the presence of uranium ores.

Radioactive anomalies may arise from sources other than uranium and do not in any case show whether a commercial deposit of uranium ore exists.

The Company employed Dr. Waldemere Bejnar, Consulting Geologist of Socorro, New Mexico. Dr. Bejnar made no field study of the properties and states in his report: "The geology of the area under lease has only been studied by the writer on geologic maps." In his evaluation, Dr. Bejnar states as follows: "The area of the Zuni Mountain Leases is in the general area of the most productive uranium properties in New Mexico. This fact is enough incentive to prospect the area. The formations believed to outcrop on these leases are not the most favorable since no major deposits are known in the Chinle and Permian beds in this part of New Mexico. However, producing mines in the Chinle and Shinarump formations are known in the states adjoining the northwest corner of New Mexico. In central and northeastern New Mexico prospects are known in the Permian beds. In view of the possibilities that exist plus the location of several aerial detected radioactive anomalies, it appears that continued prospecting from the air and on the ground is warranted."

The entire Zuni area is easily accessible by well-maintained forestry roads joining up with Highway 66. A limited amount of access roads from the forestry road to particular sections will be necessary.

### Sierra and Grant County Claims

The Company has permits from the Commissioner of Land of the State of New Mexico for 37,430 acres of land located in Sierra and Grant counties. These prospecting permits are issued under the same conditions and terms as heretofore set forth under the caption "Zuni Claims".

These permits were obtained under date of December 1, 1954. The Company has not had the opportunity to prospect any of the Sierra and Grant County permits, but acquired such permits based on the fact that the Bureau of Mines of New Mexico has published in its Circular

(1) The 216 Zuni-Federal claims and 10 of the Springtime claims are subject to $100.00 assessment work per claim per year in order to retain such claims. Therefore, $22,600.00 must be spent each year if all Federal claims are retained.

**General Statement concerning Company's Properties:**

The location of the property held by the Company has been set forth in the previous table and is also shown on the maps contained in this Prospectus. Except as may be shown in succeeding paragraphs, there have been no improvements, underground openings, or any development whatsoever on any of the Company's properties. The work done to date by the Company has consisted entirely in the acquisition of claims and permits.

The title to all of the Company's properties has been verified in so far as possible by the Company's attorneys, Messrs. Watts and Shafer, and no major defects or impairment of title have been noted. The royalties payable on the claims and permits have been set forth heretofore under this heading.

Except as stated in succeeding paragraphs, there have been no operations by any previous operators on any of the Company's properties.

**Zuni Claims:**

The Zuni claims are described as "State" and "Federal" because of different ownership. Those described as State claims are prospecting permits obtained from the State of New Mexico. Under the applicable regulations of the Commissioner of Land of the State of New Mexico prospecting permits are issued on various State owned land. These permits allow the holder thereof to prospect on such State land for a period of one year. Upon the discovery of any valuable ores or minerals, application is made to the State of New Mexico for a lease covering such property. At the present time the State of New Mexico is requiring a royalty of 5% as the consideration for granting a mining leasehold on such State properties for a 5 year period.

The claims described as Zuni-Federal claims are upon lands owned by the Federal government on which mining claims or lode locations have been made on behalf of the Company by the placing of appropriate notices, monuments and markings on the property, and the filing of such lode locations in the County in which such property is located. While the Zuni-State claims are certain as to title because such permits are issued by the Commissioner of Land of the State of New Mexico, there is no assurance of title on the Zuni-Federal claims. A title search of the Los Lunas County Recorder's Office reveals no prior filing of claims on the Zuni-Federal claims owned by the Company. Likewise, no indication of prior notices, monuments, or markings were discovered on any of such claims. The Company has no assurance that its claim to such Federal land is legally clear and valid, but believes that it has taken all of the necessary steps to protect its right to such Federal lands.

The Zuni-State permits require that the permittee shall begin prospecting work within 90 days from the date of such permit. These permits were granted on August 23, 1954, and September 29, 1954, and prospecting work is presently underway on such property. In addition, the Company has conducted a limited airborne survey of the entire Zuni area in an attempt to locate radioactive anomalies.

The Zuni-Federal claims, which were recorded on September 29, 1954, October 11, 1954, and December 9, 1954, require at least $100.00 assessment work to be done each year in order to main-

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. Information contained herein is for informative purposes only, and is subject to correction and change without notice. Under no circumstances is it to be considered a prospectus, or as an offer to sell, or the solicitation of an offer to buy the securities referred to herein. No offer to buy or sell any such securities should be made and no order to purchase the securities herein referred to will be accepted unless and until a registration statement under the Federal Securities Act of 1933 relating to the securities herein referred to has become effective.

Because of the intangible value of the undeveloped properties, and the inability to determine the worth for which the stock was issued, the value of the assets received for the issuance of said stock was determined by the Board of Directors to be $20,700.00. The transaction between the Missouri Uranium Company, the Joplin Machinery and Electric Company, Mr. James V. Reynolds, and Mr. Thomas C. King was not an arm's length transaction.

No representation is made that the value of the assets, claims, permits, leases and other mining participations received by the Company in exchange for stock, cash, notes and the agreed over-riding royalty is greater than or has less value than the particular value of the stock, cash, notes, and over-riding royalty agreement delivered for such properties.

As of the date of this offering, $45,000.00 in notes is due to the Joplin Machinery and Electric Company as a part of the cash consideration of $55,441.91. The notes are secured by a mortgage against all such property received from the Joplin Machinery and Electric Company. The notes are payable at the rate of $5,000.00 per month starting March 1, 1955 and bear 5% interest from December 13, 1954, until paid. The contract provides that the notes may be paid in advance at any time without interest penalty except for such interest as is actually due from the issuance date to the date of payment.

When the Company recapitalized in December, 1954 (See caption "Recapitalization") so as to provide for 150,000 shares of $5.00 par value Preferred Stock and 375,000 of no-par value Common stock, the Joplin Machinery and Electric Company et al, agreed to donate back to the corporation 40% of its par value Common shares. Under the terms of the contract of purchase, the $8,200 of "original Common stock" issued as a part of the purchase price as set forth above, was issued as follows:

| | |
|---|---|
| Joplin Machinery and Electric Co. | $6,900 |
| James V. Reynolds | 100 |
| Thomas C. King | 1,200 |
| Total | $8,200 |

Thereafter the above parties donated 40% of their stock to the Company and exchanged the balance for 49,200 shares of no par value Common stock which is now held as follows:

| | | |
|---|---|---|
| Joplin Machinery and Electric Co. | 41,400 | shares |
| James V. Reynolds | 600 | shares |
| Thomas C. King | 7,200 | shares |
| Total | 49,200 | shares |

No officer, director or stockholder has any direct or indirect material interest by contract, option, or otherwise in the issuer, or of any assets proposed to be acquired or operated by the Company except as set forth in the Prospectus.

## LITIGATION

As of the date of this Prospectus, there is no litigation pending or threatened against the Company.

## LEGALITY

Legal matters in connection with the stock offered hereby, are being passed upon for the Company by Messrs. Langworthy, Matz and Linde, Union National Bank Building, Kansas City, Missouri and for the Underwriters by Messrs. Gage, Hillix, Moore, Park & Jackson, Bryant Building, Kansas City, Missouri.

## MISCELLANEOUS

The Company will mail annually to its stockholders, audited financial statements which shall contain at least a Balance Sheet, Profit and Loss Statement, and a Surplus Reconciliation covering each fiscal year. The Company also plans to mail semi-annually to its stockholders unaudited financial reports.

## UNDERWRITING

The Company has entered into an underwriting contract with Dale E. Klepinger and Associates (hereafter called "Underwriter") with respect to the stock offered hereunder. The Underwriters associate other underwriters or selling groups with it.

The price per unit to be paid by the Company to the Underwriter is 7½% or 37½¢ per each unit sold for $5.00. The commission of 37½¢ constitutes the sole commission or discount payable to the Underwriter, who has no options whatsoever to acquire any portion of the stock of the Company.

The Underwriter has entered into what is known as a "best efforts" underwriting contract, by which it will act as Agent for the Company and use its best efforts to sell the 150,000 units offered herein. There is no obligation on the part of the Underwriters to subscribe for, purchase, or take up any of the stock offered hereunder.

Under the terms of the contract, the Underwriter is to be reimbursed for all expenses incurred by it, with the exception of its normal office overhead. It is provided by the contract that the Company shall pay all expenses of printing the Prospectus, advertising, transfer and registration fees, a reasonable fee for the Underwriter's counsel, based on prevailing rate for the services rendered and such other expenses as are incidental to the sale of the stock to the public.

## EXPERTS

The financial statement contained in this Prospectus and the financial statement contained in the Registration Statement have been examined by Peat, Marwick, Mitchell & Co., independent certified public accountants, whose certificate with respect thereto, appears herein and is included in the Prospectus and in the Registration Statement in reliance upon the report of said firm and upon their authority as experts in making said report.

The geological reports which have been prepared for the use of the Company and are entirely preliminary in nature, were prepared by Dr. Waldemere Bejnar of Socorro, New Mexico, an independent contracting geologist. Portions of Dr. Bejnar's geological report were included in the Prospectus and in the Registration Statement in reliance upon his opinion as an expert in giving such report.

A registration statement relating to the securities referred to herein has been filed with the Securities and Exchange Commission, but has not yet become effective. New Mexico (approximately 50 miles from the center of the Company's major holdings). An allowance for haulage in the amount of 6¢ per ton mile for the transportation of ores from the mine to the receiving station is paid by the A.E.C. up to a maximum of 100 miles. The Company believes that the 6¢ per ton mile allowance will adequately pay the entire transportation costs for the hauling of ores from the mine sites to the receiving station at Bluewater. Although another receiving station is located near Farmington, New Mexico, it presently appears that the Company will not use the facilities of that receiving station because of the greater transportation distance involved.

A depletion allowance of 23% of gross income (limited to 50% of net income) is allowable under the current Internal Revenue laws in the computation of income taxes for uranium produced.

The Company makes no attempt herein to predict the future trend of its business or results of exploration, drilling, or other operations, or to forecast its earnings, or to estimate future events, developments or changes, such as costs and availability of labor and equipment, competition, government regulations and changes in tax rates, market pricing, transportation rates and drilling or production costs.

## PROPERTIES

The Company presently holds mining leases, permits, and claims covering approximately 57,356 acres and divided into 2,891 claims and permits. The leases, permits and claims are described as follows: (See map for approximate locations.)

| Name | Nearest Location | Number of Claims | Approx. Acreage | Royalty Payable* | Nature of Ownership or Title |
|---|---|---|---|---|---|
| Zuni-State Claims | Grants, New Mexico | 762 | 15,240 | 6% | State Permits |
| Zuni-Federal Claims | Grants, New Mexico | 216(1) | 3,840 | 2% | Filing of Claims |
| Sierra and Grant Claims | Sierra and Grant County, New Mexico | 1,871 | 37,430 | 2½% | State Permits |
| Elephant Lode | Socorro, New Mexico | 9 | 173 | 0 | Owned in fee |
| Davidson Group** | Farmington, New Mexico | 20 | 413 | 12½% | Lease |
| Springtime*** | Socorro, New Mexico | 13(1) | 260 | 0 | 3 claims owned in fee, balance by filing of claims |
| | | 2,891 | 57,356 | | |

*Exclusive of 2½% royalty payable to Joplin Machinery & Electric Company et al. See caption "Transactions with Management."

**Presently under negotiation for sale.

***Presently under option for sale. Option must be exercised by February 25, 1955.

If the exploratory work planned by the Company reveals the existence of ore bodies, then the Company will enter into the second phase of its planned operations; namely, that of producing ores from its properties. The extent of the development to be done on the Company's properties depends on the favorable outcome of the exploration work.

**Purchase and Sale of Claims and Permits:**

A minor phase of the Company's planned operations includes the purchase and sale of claims and permits. By this is meant, the Company plans to purchase from time to time or to acquire under lease certain lands, claims, and permits as may be made available to it by other land owners. Such of the claims and permits as are adaptable to the Company's planned operations and which bear a reasonable promise of containing uranium or other valuable minerals, will be added to the Company's present properties for exploration, development, and possible production. Such land as is acquired and which is not adaptable to the Company's planned operations because of location or capital investment required, will be made available for sale or lease to any individual, partnership, or corporation interested in acquiring such property upon a mutually agreeable basis. To illustrate this phase of the Company's operations, reference is made herein to the sale of a group described as the Springtime Group. (See the caption "Properties" for details.)

## URANIUM

At the present time under existing laws, the United States government through its Atomic Energy Commission is the sole purchaser of uranium mined in this country. Under the existing purchasing program, as set forth by the A.E.C. in the Federal Register, Docket 53-8782 and Docket 53-8783, and as set forth in Domestic Uranium Program 5, as revised, the A.E.C. has established a guaranteed minimum price schedule for uranium $U_3O_8$ until March 31, 1962. Under such price schedule, payment is now made by the A.E.C. for ores assaying 0.10% or more of uranium. In addition to paying a price ranging from $1.50 per pound for ores assaying 0.10% or more up to $3.50 per pound for ores assaying 0.20% or more per ton, certain grade premiums, mine development allowances, an initial production bonus and haulage allowances are paid for the uranium ores produced.

The grade premium payments are made at the rate of 75¢ per pound for each pound of uranium in excess of 4 pounds found in each ton of ore and a further grade premium of 25¢ per lb. for each pound in excess of 10 pounds of uranium found in each ton of ore. The mine development allowance is 50¢ per lb. for each pound of uranium found in each ton of ore and is paid by the A.E.C. for the maintenance and increased development of mines yielding uranium ores. In accepting the mine development allowance, the seller must agree to spend such allowance for the development or exploration of their properties and satisfy the A.E.C. that such expenditures were actually made.

The A.E.C. also pays an initial production bonus of $3.50 per pound for the first 10,000 pounds of $U_3O_8$ produced by a seller. The eligibility for such bonus is determined by application made to the A.E.C. and certification by such Commission as to eligibility for payment thereof.

At the present time, there are two receiving and buying stations in the general area of the Company's property. The nearest station is that of Anaconda Copper Company at Bluewater,

# PEAT, MARWICK, MITCHELL & CO.

**CERTIFIED PUBLIC ACCOUNTANTS**

## ACCOUNTANTS' REPORT

To the Board of Directors,
Missouri Uranium Corporation:

We have examined the statements of assets and capitalized expenses, liabilities and capital shares of Missouri Uranium Corporation (a Missouri corporation) as of December 31, 1954 and the statements of expenses and of cash receipts and disbursements for the period from May 14, 1954 (date of incorporation) to December 31, 1954. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the accompanying statements present fairly the assets and capitalized expenses, liabilities and capital shares of Missouri Uranium Corporation at December 31, 1954 and its expenses and cash transactions for the period from May 14, 1954 to December 31, 1954 in conformity with generally accepted accounting principles.

PEAT, MARWICK, MITCHELL & CO.

On August 10, 1954, Mr. Thomas C. King, Metallurgist and Mining Consultant for Joplin Machinery and Electric Company, prepared an initial drilling grid based on the drilling which had been done on the two claims by the Trust. Mr. King estimated that the Red Bluff 3 and 9 claims contained ore bodies as follows:

Red Bluff No. 3—1,520 tons of 0.17% $U_3O_8$—estimated value of $17,571.20*

Red Bluff No. 9—2,115 tons of 0.23% of $U_3O_8$—estimated value $72,967.50*

*Before production costs.

Mr. King did not estimate the percentage of uranium by chemical analyses, but estimated the percentage of uranium by using Geiger Counter probes which had been correlated to chemical analyses at the Anaconda Copper Corporation's buying station in Bluewater, New Mexico. The correlation of the Geiger Counter was made by adjusting such counter to specimens of ore which had been determined by Anaconda Copper through chemical analyses to contain certain percentages of uranium.

The Company makes no representation that either the tonnage or percentage of uranium ($U_3O_8$) estimated by Mr. King will prove to be correct. Without chemical analyses, the stated grades of $U_3O_8$ estimated by Mr. King are indicative only, rather than conclusive. Furthermore, uranium ore bodies as such, are small and occur at irregular intervals and depths.

It is the Company's intention to make its services available for the removal of uranium ores (or any other ores or minerals) from the land or claims owned by any individual desiring to utilize the Company's services. It is the Company's further intention to use such profits, if any, from its public contracting business for the exploration, development and possible production of ores on the Company's own claims if such ores are discovered. Likewise, it is the Company's intention to use the bulk of the funds received from the present offering to further its public contracting operations. (See caption "Use of Proceeds").

**Production on Company's Claims:**

The Company, as of the date of this Prospectus, is not in production on any of its claims or permits (for description see the caption "Properties"). The very recent acquisition of claims and permits, coupled with the lack of adequate financing, has prevented the Company from carrying out anything other than a cursory exploration program. Limited prospecting has been done on the Zuni claims and permits by the Joplin Machinery and Electric Company. This Company owned the claims for about six to eight months before selling them to Missouri Uranium Corporation. During the time that the vendor owned the property, the principal work consisted of airborne surveys of the Zuni area. While the airborne surveys indicated the presence of several radio-active anomalies (in connection with anomalies see cautionary statement in reference thereto under the caption "Zuni Claims"), vendor sold the claims to the Company before it performed any ground exploratory work on such claims. However, no drilling, exploratory or development work has been done on any of the Zuni, Sierra, or Grant County permits which comprise the great majority of the Company's property. Until sufficient core drilling, airborne surveys, assays, scintillator surveys, and geologists' investigations are made, it will be impossible for the Company to determine if it has any claims or permits on which uranium ores or any other minerals are present.

## BUSINESS

It is believed by the Company that mining operations are actually divided into three distinct categories, namely—

1. **Contract or removal.** The removal of ores from proven ore bodies under operating contracts with the persons owning such ore bodies.
2. **Mining.** The actual mining, production and sale of ores, if any, from the Company's own claims and permits.
3. **Sale of Claims.** The sale of claims and permits to individuals, partnerships or corporations which might desire to buy the same.

### Public Contracting

Due investigation by the Company has revealed the fact that in some instances individuals have discovered proven ore bodies and then lacked the proper financing and/or operational "know how" necessary to profitably remove the ores from their property. Therefore, the Company, as a major phase of its planned operations, is making itself available as a public contractor for the removal of uranium ores from proven ore bodies on a profit sharing basis. In other words, the Company intends to supply the operating capital, heavy equipment, i.e., bulldozers, power shovels, compressor, drills, trucks, etc., and the technical "know-how", supervision, and man power with the property owner supplying the proven ore body. Then the profits of the operation will be divided upon a previously agreed basis.

The Company presently rents all of its heavy construction equipment from Funkhouser Machinery Company, List and Clark Construction Company and Newlin Machinery Company. The machinery is rented under a plan whereby the rentals may be applied towards the purchase price of such machinery. The rental rates are those presently prevailing in the industry. The Company intends to purchase as quickly as it can, all of the necessary heavy construction equipment which will be required. If such equipment is obtained from any company with which an officer or director of Missouri Uranium Corporation is affiliated, the price to be paid for such equipment shall be determined by competitive bids. The Company intends to purchase all of its heavy construction equipment on a competitive bid basis and no purchase will be made from companies which have officers and directors affiliated with Missouri Uranium Corporation, unless the bids of such companies are the lowest of the bids received.

The first contract entered into by the Company for the removal of ores from a proven ore body covered two claims described as Red Bluff 3 and 9. The contract, a copy of which has been filed with the Registration Statement and may be obtained upon payment of the fee described by the Regulations of the Securities Exchange Commission, Washington, D. C., provides for the Company to furnish everything necessary for the removal of the proven ore bodies on these claims. The two claims are located about ten miles northwest of Grants, New Mexico, and are under lease to a Trust which pays a 20% royalty to the land owners. The contract basically provides that the profits of the operations, after deduction of royalty and operating costs, will be divided equally between the Company and the Trust owning the lease. (In November, 1954, the Company began shipping machinery and supplies to the Red Bluff site. It is now engaged in removing the "overburden", i.e., waste rock and sand, preparing for the actual mining which will commence in February, 1955.)

After many conferences had been held with men who were engaged in mining or quarry work and in the heavy construction industry, it was found that a considerable number of them were interested in forming this specialized mining corporation. The initial group of heavy contractors, contractors' machinery manufacturers and representatives, and mining men decided to invite other stockholders particularly skilled in general business methods and operations, banking and law.

After incorporation, the Company began to acquire claims on which to prospect for uranium. Although the Company believed that it had adequate "know-how" to conduct profitable mining operations, it became apparent very early in its history that it would be necessary to bring in individuals who had had particular experience in uranium. After casting about for several months, it was found that Mr. James V. Reynolds of Joplin, Missouri, had an organization which the Company believed would suit its purposes.

Mr. Reynolds had been in the lead and zinc mining industry in the Joplin area as President of the Joplin Machinery and Electric Company for many years until the lead and zinc prices began to fall to unprofitable lows. At that time, about two and one-half years ago, Mr. Reynolds began to branch out into the uranium field. He started an organization consisting of himself, a mining engineer, a metallurgist, and several day laborers. His mining organization was located in Grants, New Mexico and has functioned in that area since 1952. Mr. Reynolds' organization did not produce any uranium ore, but limited its activity to the acquisition and sale or lease of land.

The Company contacted Mr. Reynolds to see if the efforts of the two Companies could be consolidated. It was the joint opinion and belief that the experience which the Company's stockholders had had in mining operations, heavy construction work, and earth moving operations, applied to the claims and permits owned by Mr. Reynolds' organization, might produce a successful operation. After a few weeks of negotiations, the Joplin Machinery and Electric Company and the Company joined efforts with Mr. Reynolds' corporation becoming one of the major stockholders in the Company.

### PURPOSE OF THE PRESENT OFFERING

The purpose of the present offering is to secure financing to enable the Company to contract with the owners of proven uranium ore bodies for the removal of such ores on a profit sharing basis, to secure adequate financing to carry on a planned program of exploration and development work on the Company's properties, as hereinafter described, and to the extent that funds are available to commence preliminary mining operations in areas deemed suitable by the results of such exploration work.

No representations is made or intended that the exploration work planned by the Company will result in the discovery of any uranium ore.

The Company has not attempted thus far to secure operating contracts for the removal of uranium ores, because of the absence of sufficient funds with which such contracts could be carried out if obtained. However, as the result of its preliminary work on the Red Bluff site (see caption "Public Contracting") several individuals have approached the Company's representatives in Grants, New Mexico with the request that the Company consider mining out their property. These requests have been answered by the Company to the effect that if and when sufficient financing is obtained the Company will contact such individuals and enter into negotiation with them for contracts, if their property contains known bodies of uranium ore.

While the Board of Directors is required to set aside 25% of the Company's profits, if any, after taxes, as a sinking fund for the redemption of said preferred stock, it may determine not to declare dividends from profits if such course, in its judgment, is for the best interest of the Company's business.

As is more fully described herein under the caption "Transactions with Management," pages 30-31, the Company paid to Joplin Machinery & Electric Co., James V. Reynolds and Thomas C. King, 49,200 shares of its present common stock, $10,441.91 in cash and $45,000.00 in promissory notes in return for all of the Company's mining properties, permits, and claims and for trucks, automobiles, Geiger Counters, Scintillators, and other surveying and prospecting instruments and equipment which are now in the use and possession of the Company. In addition, the sellers retained an overriding royalty of 2½% of the gross income of such mining properties. The value of the properties and equipment, so acquired, were fixed by the judgment and action of the Board of Directors and were acquired by the sellers at a cost of $39,100.27. In addition, the Company issued and sold 175,800 shares of its common stock for a cash consideration of $29,300.00. Therefore, 225,000 shares of common stock have been issued to the promoters and management for cash in an amount of $29,300.00, and properties, claims and equipment which cost $39,100.27, totaling $68,400.27, or at the rate of $0.304 per share of common stock.

Giving effect to the complete sale of the proposed offering, purchasers of the preferred and common stock herein offered will have provided 91.64% of the cash and cost of the properties, claims and equipment received by the registrant and will hold 40% of the voting control in addition to 100% of the Company's preferred stock, whereas the promoters and management will retain 60% of the voting control by reason of their ownership of the common stock not embraced in this prospectus.

## THE COMPANY

The Missouri Uranium Corporation was incorporated under the laws of the State of Missouri on May 14, 1954. The Company is qualified to do business as a foreign corporation in the states of New Mexico and Utah. Its principal office is located at 415 Commerce Trust Building, 10th and Walnut Streets, Kansas City, Missouri. The Mining Division Office is in the Fidel and Rouse Building, Grants, New Mexico.

The Company will endeavor to obtain contracts for the mining of proven deposits of uranium ores and plans exploration for uranium deposits on the Company's properties. The properties presently held by the Company are in the exploratory stage and are without known bodies of commercial ore.

The Company has not yet operated any uranium mining properties on a contract basis, but has entered into contract for the removal of the uranium ores believed to be on Red Bluff 3 and 9 (see caption "Public Contracting" for status of the Company's first contract.)

The Company was organized as the result of visits made by some of its present stockholders to uranium mining areas in Utah. As a result of these visits to producing areas, it was decided to organize a specialized uranium mining corporation in which the initial stockholders would be selected because of their particular ability to serve the corporation by reason of experience and technical background. (See caption "Management" for detailed listing of experience of the Company's stockholders.)

## MISSOURI URANIUM CORPORATION

## NOTES TO FINANCIAL STATEMENTS

## DECEMBER 31, 1954

1. **Unrecovered contract mining costs:** These costs represent costs of removing the overburden and preparation for mining at the mining claims known as Red Bluff No. 3 and No. 9. These claims are not owned by the company and are being mined under contract on a division of profits basis. At December 31, 1954, no ore had been mined.

2. **Equipment and non-operating properties:** The equipment and non-operating properties were acquired from promoters under a contract dated December 13, 1954 whereby the company issued 82 shares of the then outstanding common stock of a par value of $100.00 per share (49,200 shares after subsequent exchange and donation; see note 5) for the equipment and the land known as the Springtime and Elephant Lode groups; the consideration for the remaining non-operating properties was $55,441.91, consisting of cash paid, $6,750.00, cash payable by January 5, 1955, $3,691.91, and a first mortgage note payable, secured by all properties, $45,000.00. An overriding royalty of 2½% of gross income from the properties was retained by the sellers.

3. **Note payable to bank:** The note payable to bank is secured by individual promissory notes of various stockholders in the total amount of $29,300.00.

4. **5% preferred stock:** So long as any of the preferred shares are outstanding, and before any dividends are paid on any class of its stock, the company shall deposit each year in a special sinking fund for the redemption of the preferred stock the lesser of (1) 25% of the net income for the year, or (2) an amount sufficient to redeem all preferred stock then outstanding at the price of $5.25 per share. Such fund is to be used to redeem the preferred stock at a price not to exceed $5.25 per share at times and in the manner to be determined by the Board of Directors.

5. **Common stock:** On December 31, 1954, the authorized common stock of the company was changed from 500 shares with a par value of $100.00 per share to 375,000 shares without par value. 40% of the 375 shares of $100.00 par value common stock then issued and outstanding, or 150 shares, was donated to the company as treasury stock, with each stockholder donating 40% of his individual holdings. The common stock without par value was then issued in exchange for the $100.00 par value common stock at the ratio of 1,000 for 1, resulting in the 225,000 shares outstanding at December 31, 1954 and the 150,000 shares held in the treasury.

# MISSOURI URANIUM CORPORATION

**(A Missouri Corporation)**

## REGISTRATION STATEMENT

Missouri Uranium Corporation (herein sometimes referred to as the "Company") has filed with the Securities and Exchange Commission, Washington, D. C., a registration statement (herein together with all amendments thereto, sometimes referred to as the "Registration Statement") under the Securities Act of 1933, as amended, with respect to 150,000 shares of Preferred Stock of the par value of $5.00 per share (herein sometimes referred to as "Preferred Stock") and 150,000 shares of Common Stock of no-par value (herein sometimes referred to as "Common Stock"). For further information with respect to the Company and to the Preferred and Common Stock, reference is made to the Registration Statement.

Except where otherwise indicated, this Prospectus speaks as of its date of issue. Neither the delivery hereof nor any sales made hereunder shall under any circumstances create any implication there has been no change in the affairs of the Company since the date hereof. Statements contained in this Prospectus as to the contents of any contract or other document referred to are not necessarily complete and in each instance reference is hereby made to the copy of such contract or other document as is indicated herein to be filed as an exhibit to the Registration Statement, each such statement being qualified and exemplified in all respects by such registration.

IN CONNECTION WITH THIS OFFERING, THE UNDERWRITERS MAY OVERALLOT OR EFFECT TRANSACTIONS WHICH STABILIZE OR MAINTAIN THE MARKET PRICE OF THE PREFFERED STOCK AND OF THE COMMON STOCK AT A LEVEL ABOVE THAT WHICH MIGHT OTHERWISE PREVAIL IN THE OPEN MARKET. SUCH STABILIZING, IF COMMENCED, MAY BE DISCONTINUED AT ANY TIME.

## INTRODUCTORY STATEMENT

As will be seen from the prospectus under the captions "Purpose of Offering," page 5, "Business," page 6, and "Use of Proceeds," pages 14-16, the Company plans to engage in the business of contracting with owners of mining properties for the removal of ores for such owners on a profit-sharing basis and also to conduct a program of prospecting and exploration to a view of possible development of the Company's properties and claims, described herein on pages 9 to 14. While the exploratory work will be predominantly in search of uranium deposits, it cannot be stated at this time that the Company has known reserves of that mineral.

The underwriter, mentioned herein at page 32, has made no firm commitment for the securities offered in this prospectus, and there is no assurance that such funds will be raised by it to complete the program outlined under the caption "Use of Proceeds," as shown on pages 14 to 16. If less than the full amount of the funds here sought is realized, priority will be given to the Company's contracting and profit-sharing business.

The offering price to the public of $5.00 for a unit of one share of $5.00 par value 5% preferred stock (non-cumulative) and one share of common stock (no par value) has been fixed by the Company's charter and action of the Board of Directors.

Mr. and Mrs. Dennis Patterson

Neosho, Missouri

Dear Mr. and Mrs. Patterson:

After the completion of the approved exploration work under the contract identified above, we asked to be informed about changes in the status of the property and production from it during the period of royalty obligation.

To assist you to furnish this information and to assure the accuracy of our records, please answer the questions on the back of this letter and return two copies to this office with copies of any pertinent documents.

Sincerely yours,

W. R. Griswold, Chief
Division of Minerals

Re: Semi-Annual Reports on
Certified projects, Region IV
for period ending Dec. 31,1957

Dear Sirs:

Transmitted herewith are three copies of the subject report on Projects Contract I-DMA-58 and Idm-E139, Westmoreland Manganese Corporation (DMA-197X and -2002X) which was evidently the only deposit with DMEA production during that period.

There was no activitiy at deposits on any of the other four Certified DMEA projects of Region IV listed as follows:

| Docket No. | Operator | Project Contract No. |
|---|---|---|
| DMA-1088X (zinc) | Shelton Mining Co. | Idm-E122 |
| DMA-1371X (lead,etc.) | National Lead Co. | Idm-E48 |
| DMA-2202X (mercury) | Amerimex Mining Co. | Idm-E468 |
| DMEA-2485 (lead-zinc) | Dale Mining Co. | Idm-E325 |

Sincerely yours,

CCK/id

Semi-Annual Report

on

Certified Project

by

Clinton C. Knox, DMEA Field Team, Region IV

July 31, 1957

Period: ending June 30, 1957 Field examination: None

Operator: Dale Mining Co., 811 Kentland Drive, Neosho, Mo.

Mine name: Patterson

Location: Aroma, 3 miles south of Granby, Newton County, Mo., - Tri-State Zinc Mining district

Docket: DMEA-2485(lead-zinc)

Project Contract: Idm-E325, dated 6/22/52

Certification: Issued 2/6/56

No work done on this project since abandonment September 28, 1956. The status is believed to remain the same as given in the last Semi-Annual Field Team Report dated April 23, 1957.

Department of the Interior
Washington 25, D. C.

Re: Certified projects, Region IV

Dear Sirs:

Transmitted herewith are the original and three copies each of the Semi-Annual Reports as of December 31, 1956 covering the following six projects which have been Certified in this region:

| Docket No. | Operator | Project Contract No. |
|---|---|---|
| DMA-197X &-2202x(Mn) | Westmoreland Corp. | I-DMA-E8 & Idm-E139 |
| DMA-1088X (Zn) | Shelton Mng. Co. | Idm-E122 |
| DMA-1371X (Pb,Cu,Co,Ni) | National Lead Co. | Idm-E48 |
| DMA-2202X (Hg) | Amerimex Mng. Co. | Idm-E468 |
| DMEA-2485 (Pb,Zn) | Dale Mng. Co. | Idm-E325 |

Of the above, no work has been done on the Shelton and National Lead deposits since completion ofthe work on those DMEA exploration projects and none appears likely in the foreseeable future. In two brief production efforts, Dale Mining Co. repaid over half of its DMEA loan, but then disbanded all its operations and relinquished its mining leases so that no additional royalty is expected from that deposit in the foreseeable future. The two Westmoreland Certifications and that of Amerimex are in much the same category in that those corporations are defunct which were parties to the DMEA project contracts, and Guarantors thereunder have not responded to our efforts to collect the Government's royalty on production which has been obtained by the present operating concerns. According to the available information production continuing by the U. S. Managanese Corporation on the Westmoreland deposits amounted to 1,716 long dry tons of manganese ore and concentrate with an estimated gross sales value of $163,040 as of the close of 1956. The Terlingua Mercury Corporation from November 1954 until its financial collapse in November 1956, produced about 5,620 tons of mercury-bearing material recovering $89,306 worth of mercury, from the Fresno mining claims previously included under the Amerimex Certification.

Therefore, it appears unlikely that any efforts on the part of this Field Team would result in the collection of any DMEA royalties in the forseeable future.

Sincerely yours,

Signed/ Clinton C. Knox

Production Inspection and Semi-Annual Report

on

Certified Project

by

Clinton C. Knox, DMEA Field Team, Region IV

April 23, 1957

Period: ending Decmeber 31, 1956 Field examination: Feb. 13, 1957

Operator: Dale Mining Co., 811 Kentland Drive, Neosho, Mo.

Mine name: Patterson

Location: Aroma, 3 miles south of Granby, Newton County, Mo., Tri-State mining district

Docket: DMEA-2485(lead-zinc)

Project Contract: Idm-E325, dated 6-22-52

Certification: issued 2-6-56

Expiration date: 6-22-64

Total amount of Contract: $31,104.00

Total accepted project costs: $21,820.80

Total Government participation at 50 percent: $10,910.40

Royalty payments this period: $1,456.04

Previous royalty payments: $4,866.65

Total royalty paid to date: $6,322.69

Percent Government participation repaid: 57.95

Royalty due on production to date: none

Royalty remarks: Following disbanding of all operations September 28, 1956, a royalty audit was made February 13, 1957, by C. E. Fisher, DMEA Auditor, assisted by this writer. There appears to be little likelihood in the foreseeable future for rehabilitation and resumption of any operations on this property. The Operator notified me in writing February 13, 1957, that its leases had been relinquished and has not responded to my

letter of February 26, 1957 advising that the Owner's Consents to Lien thus should be reassured as being in effect.

Original estimate of DMEA reserves(Field Team Final Report)
Mines [X] Survey [ ] Joint [ ] - 240,000 tons, 3.00% Zn 0.10% Pb

Revised estimate of DMEA reserves(Field inspections 8-7-56 and 2-13-57)
Mines [X] Survey [ ] Joint [ ] - no revision justified

Increase of reserves by work performed
subsequent to DMEA project work - none

| | | | | | |
|---|---|---|---|---|---|
| Production DMEA ore | (this period) -- | 11,330 tons, | 2.10% Zn | 0.04% Pb |
| | (previous) - | 70,113 " | 1.25% " | 0.01% " |
| | (to date) - | 81,444 " | 1.40% Zn | 0.02% " |

Production Operator's ore found subsequent to DMEA work - none

Investment data and Remarks:

None since Patterson mine dewatering and rehabilitation during November and December 1955 (see Knox's letter to DMEA Operating Committee 10-26-56 for those investment estimates).

Semi-Annual Report

on

Certified Project

by

Clinton C. Knox, DMEA Field Team, Region IV

August 29, 1956

Period: ending June 30, 1956 Field examination: 8-7-56

Operator: Dale Mining Company, 811 Kentland Drive, Neosho, Mo.

Mine name: Patterson

Location: Aroma, 3 miles south of Granby, Newton County, Mo., Tri-State mining district

Docket: DMEA-2485 (lead-zinc)

Project Contract: Idm-E325, dated 6-22-52

Certification: issued 2-6-56

Expiration date: 6-22-63, or upon repayment of the $10,910.40 Government participation, whichever occurs first

Total amount of contract: $31,104.00

Total accepted project costs under the Contract: $21,820.80

Total Government participation: 50 percent or $10,910.40

Royalty payments this period: $3,980.16

Previous royalty payments: $886.49

Total royalty payments to date: $4,866.65

Government participation repaid: 44.6 percent

Royalty due on production to date: none- royalty being paid promptly and evidently correctly by the Operator upon receiving the purchaser's settle-sheets from the total concentrate sales each month.

The estimate of 240,000 tons of reserves indicated by 15 of the 35 exploratory holes churn drilled under the DMEA project contract, as given in the Final Field Team Report by Knox, dated March 29, 1956, yet appear substantially correct. On the basis of the 70,113 tons of that calculated ore reserve reportedly mined and milled to June 20, 1956, the tonnage of zinc-cadmium and a little lead concentrates recovered in the Stark City mill of the Dale Mining Co. and the available mill tailing sample analyses, the actual zinc content apparently will average much less than the calculated 3.00 percent given in that report. Only two of the project holes have been cut to date, however, in the mine stopes.

A total of 843 tons of zinc concentrate containing from 62.5 to 64.6 percent zinc and from 0.47 to 0.54 percent cadmium, and 4.5 tons of lead concentrate containing 82 percent lead, was recovered from the 34,734 tons of ore reportedly mined and milled this period of resumed production beginning in December 1955. Of course, a few tons of concentrates remained on hand at the close of the period.

During the previous productive period from April through October 1953, a total of 242 tons of zinc concentrate and 4 tons of lead concentrate reportedly was produced during the mining of 35,379 tons of that calculated ore reserve subject to DMEA royalty.

Thus royalty has been paid DMEA on a total of 1,105 tons of concentrates produced to date amounting to $97,333.26 in total sales which evidently have been reported honestly.

Apparently about 30 percent of the reserves indicated by the project work under the DMEA Contract has been mined. No exploratory drilling or underground development drifting has been done since discontinuance of the project drilling March 4, 1955.

During the underground inspection by Knox August 7, 1956, Mr. Blevins, Partner and Mine Boss for the Big Four Mining Co. which rehabilitated and operated the mine under a contract arrangement since last November, explained that it was [redacted] proving to be an unprofitable operation for anyone concerned. He said that there was insufficient operating margin for development drifting or to maintain and replace the old worn underground mechanized deisel equipment, so it would only be a question of time until abandonment again would be mandatory unless the stope faces reached a better grade of ore. He also mentioned that the Geological and Engineering Departments of the Eagle-Picher Company recently had made a thorough examination there and photographed each stope working face.

Copy - DMEA Op. Comm.

DEPARTMENT OF THE INTERIOR
BUREAU OF MINES
P. O. BOX 431
JOPLIN, MISSOURI

May 6, 1955

Memorandum

To: DMEA Operating Committee, Department of the Interior, Washington 25, D. C.

From: Clinton C. Knox, Mining Engineer, Bureau of Mines, Region IV

Subject: Interim Field Team Report
Project Contract Idm-E325
Dale Mining Co., 811 Kentland Drive, Neosho, Mo.
Patterson mine, near Granby, Newton County, Mo.
Docket DMEA-2485 (lead-zinc)

Churn drill exploration on the cited project was recessed March 4 with completion of hole No. 29 on the Operator's Patterson lease. This writer last inspected the project on the afternoon of February 22, accompanied by the Churn Driller. Then on February 25, Mr. Gerald Klepinger, representing the Operator, phoned to state that granting of a long recess of the project work, or possibly a termination of the contract by mutual consent, had become imperative. Verbal approval of a temporary recess was given then and confirmed February 28 in the Executive Officer's letter to the Operator.

With the last Monthly Report received covering the drilling of holes No. 28 and 29 during February 1955, the Operator also submitted a written reiteration and explanation of its request to suspend work on this project until the price of zinc increases and it could resume profitable mining. In view of all the unfortunate circumstances, therefore, approval of that request is recommended and/or the time for completion of the contract should be extended for at least 12 months by an appropriate further amendment to the proviso under item 1 of the contract Amendment No. 3 which became effective last July 9. In any case, issuance of "Certification" upon the termination or completion of the contract is also recommended.

Field Team authorization for the Government's 50 percent participation payment on $300 of the costs claimed in the above-mentioned February report has been withheld under this "unit-price" contract to assure rendition of the Operator's Final Reports whenever demanded by the Government. Thus while the costs of this

project now approved total $21,520.80, the total acceptable overall cost to date, subject to the audit, is $21,820.80, half of which is the Government's share, leaving $4,641.60 of the Government's contract commitment yet unexpended.

During 34 months that the subject project contract has been in force, only 34 holes (28 on the Patterson and 6 on the Clark lease), aggregating 9,092 feet of churn drilling, has been completed thereunder. In addition, drilling of hole No. 22 was completed at 275 feet in depth and No. 26 was abandoned at 40 feet, costs for both of which were not considered allowable under the contract.

An extensive sheet-ground-type ore deposit is inferred from the data on the drilling done to date (see attached sketch map) which appears to justify the allowable maximum drilling set by contract Amendment No. 3. The ore reserves so far definitely indicated, however, by sampling results from the most favorable-appearing 15 of those 35 widely spaced holes completed to date, were estimated to total only about 240,000 tons averaging 3.00 percent and 0.10 percent, respectively, in zinc and lead content(see attached tabulated calculations). That indicated mineable tonnage obviously would not warrant reopening of the Patterson mine in the face of the present zinc market outlook, nor justify building a mill there under any most optimistic mining economy that reasonably might be expected in the distant future.

With the allowable maximum drilling set by Amendment No. 3, about 14 additional proposed holes were to have been completed by June 22, 1955, in the effort to assure that building of an adequate mill there eventually could be economically feasible. A price for 60 percent zinc concentrate of about $115 per ton, as was in effect when this project contract was let June 22, 1952, undoubtedly would justify drainage, rehabilitation of this Patterson mine, and mining of the present indicated reserves, providing that the company's Stark City mining and milling operations also could be resumed.

The $65-per-ton-price received for zinc concentrate during 1953 while mining a small part of the reserves which had been indicated as a result of this project contract, could not sustain the operations so they were disbanded in September of that year. Also the Operator reportedly lost a suit in Federal court for previous concentrate sales at prices above the allowable ceiling. Efforts to recoup 1953 zinc mining losses in a uranium mining venture near Holbrook, Arizona, in 1954, are understood to have failed. Then in August 1954 disasterous caving to the surface of the mine at the company's old Joplin-type Stark City mill resulted in costly damage to that plant and necessity to abandon the better ore reserves that were being mined there. Subleasing operations since undertaken in the Picher mining field of Oklahoma are understood to have been unprofitable to date. Rerun of

tailings (none of which reportedly originated from Patterson mine ore) and manufacture of concrete building blocks in progress at the Stark City mill is believed to provide only for operating expenses including those for continuing the employment of company's key personnel there. As a consequence of these unforeseen financial reverses suffered by the Operator, the recess of exploratory work under the subject project contract appeared imperative.

No ore has been produced which was subject to the Government's percentage royalty since the Patterson mine was abandoned in September 1953. The milling recovery reported by the Operator from the Patterson mine ore production, April through September, 1953, which was subject to the Government's percentage royalty under the contract, amounted to 246.45 tons of zinc concentrate and 4.30 tons of lead concentrate, sold for a total of $17,798.98 on which the royalty amounting to $886.49 or 5 percent, was paid to the Government. On the basis of the mined areas and stope heights indicated on the map recently submitted by the Operator, the total Patterson reserves mined which was subject to the Government's percentage royalty was calculated to be 31,500 tons (see attached sketch map). The reported average content of the zinc concentrate was 61.46 percent zinc and the lead concentrate was 64.80 percent lead. Assuming that the milling efficiency was 80 percent on zinc and 88 percent on the lead, the calculated zinc and lead contents in that 31,500 tons would appear to have been only 0.60 percent and 0.01 percent, respectively. But analysis of the reported sampling data on the holes No. 2, 3 and 6 which are nearest to areas from which the calculated 31,500 tons were mined (see those drill hole logs), assays, and the attached map) indicated that the weighted average content of the stoped zone should have been about 2.00 percent zinc (no lead reported), after allowing for some zinc-bearing strata which evidently have been left in the stope roof and floor. To date, however, the actual production data requested in the Executive Officer's March 31 letter to the Operator, have not been received to adequately support its derivation of the royalty to the Government.

Check samples split from hole 24 churn drill cuttings, as stated in the January 28 Field Team's project inspection report, were found by the Rolla laboratory of the Bureau of Mines to contain somewhat less zinc than the Operator had reported. Check samples split exactly the same way from hole 27 contained more zinc and lead than the Operator reported according to the attached copy of the Bureau of Mines' "Analytical Report" (also see the "Certificate of Analysis" submitted in the Operator's January Report). Therefore, the Operator's sampling accuracy is concluded to be about as good

as could be expected on any Tri-State churn drilling exploration. All must be more or less a compromise with accuracy due to inherent characteristics of the ore-bearing strata here.

Re: Project Contract Idm-E325
Dale Mining Company
Newton County, Missouri
Docket DMEA-2485 (lead-zinc)

Dear Sirs:

Transmitted herewith are the two copies of this Operator's MF-104 Report for February, 1955, with your second copy of the attachments that were sent to you on March 15. Please note that I since have corrected some drill hole location numbers on this print of the Operator's map as you may wish to do on the one sent to you then.

Upon receiving this report on March 8, and the prints of the maps on March 11, it was approved and forwarded to the Certifying Officer at Bartlesville on March 15 with the instruction to withhold payments of the Government's share on $300 of the Operator's Claim to secure rendition of its Final Reports to the Government. Notice that it had been certified accordingly was received today, as per the attached Memo copy.

Sincerely yours,

Clinton C. Knox
Executive Officer
DMEA Field Team, Region IV

Signature Clinton C. Knox Title Mining Engineer Date March 15, 1955

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Clinton C. Knox Title Executive Officer Date March 15, 1955

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

February, 1955

Project DMM - 2405 (Lead-zinc)  Project Contract KM- 1305

Patterson Lease
Deer Creek, Morton County, Mo.

Core drill holes No. 28 & 29

Attached hereto are the MI-104 and MI-104A reports for the February project work, with the log and sample assays for holes 28 and 29, located with the concurrence of the field team Executive.

No though the assay of hole 28 wouldbe as good as hole 27. In pressing hole 28 the drill cuttings at the drill hole site looked assayed as the cuttings of hole 27.

In drill hole 29, which started into chimes of lead and zinc we evidentally have gone into the footwall of this ore body.

## INSTRUCTIONS

*Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Docket DMEA-2485 (lead-zinc)

Dear Sirs:

Transmitted herewith are the two copies of the Operator's January 1955 Report on the subject exploration project, as required by your Office.

The original of this report was received, approved, and forwarded to the Region IV Finance Officer at Bartlesville, Okla., on Feb. 2. Notice that it had been certified for the Government's participation payment was received today, as per the attached Memo copy.

Sincerely yours,

Clinton C. Knox
Executive Officer

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. DMn-E325 in accordance with the terms of the contract.

Signature Clinton C. Knox Title Mining Engineer Date Feb. 2, 1955

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature Clinton C. Knox Title Executive Officer Date Feb. 2, 1955

## MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF–104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF–104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF–104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF–104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF–200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF–200; and delete word "Independent" if the contract reported is on Form MF–200 (A). Also, report work paid for on a unit basis under contract Form MF–200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF–104 when submitted for reimbursable expenses incurred under contract Form MF–200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF–200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF–104 is required to be documented. The four copies of Form MF–104 are not to be thus supported.

Form MF–104 submitted for reimbursement under fixed price contracts on Form MF–200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF–104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Churn drill holes No. 26A and 27

Attached hereton are the MF-104 and MF-104A Reports for the January project work, with the log and sample assays for holes 26A and 27, located with concurrence of the Field Team Executive.

Since abandoning hole 26 we moved 30' south and drilled hole 26A. This hole showed 45' of sub-marginal zinc mineralization.

With the approval of the Field Team Executive we drilled hole 27. This showed very good zinc and lead mineralization.

## INSTRUCTIONS

*Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: DMEA Operating Committee, Washington 25, D. C.

From: Clinton C. Knox, Bureau of Mines, Box 431, Joplin, Missouri

Subject: Interim Field Team Report, Project Contract Idm-E325
Dale Mining Co.
811 Kentland Drive, Neosho, Mo.
Docket DMEA-2485 (lead-zinc)
Patterson Mine
near Granby, Newton County, Mo.

The project was inspected by me on the afternoon of January 6, 1955, accompanied by Mr. Gerald Klepinger, Executive Partner of subject company. Since the last inspection there on December 30, churn drilling of holes No. 24 and 25 had been completed at 265 and 266 feet in depth, respectively, hole No. 26 had to be abandoned at 40 feet, and drilling of hole No. 26A was in progress at 240 feet in depth.

Ore encountered from 247½ to 255 feet in hole 24 was reported by the Operator to contain 4.50 percent "jack"(60% Zn) which checked reasonably well, with the average 2.32 percent zinc (no lead) content of the Bureau of Mines' three cutting sample splits from that ore zone analyzed by the Rolla laboratories (see attached copy of the analytical Report). Hole 24 is located 190 feet north of hole 3, thus extending the indicated reserves accordingly.

Hole 25, located about 155 feet northwest of 24, indicated only sub-marginal zinc mineralization.

Churn drilling of hole 26, located 200 feet east and 50 feet south of No. 3, was abandoned by the Operator due to difficulties with a crevice, "slide" and boulders. Its relocation 15 feet and 30 feet farther east and south, respectively, and designation as hole No. 26A was approved. Only a trace of zinc mineralization was in evidence in the cutting samples examined from 210 to 215 feet and on the 240-foot horizon reached at the time of this inspection. Lithology of the churn drill cuttings then from the upper Reeds Spring strata, however, assured sufficient proximity to the inferred eastward extension of the ore-making structural trend from the Patterson mine workings, to prompt the instant approval given for the Operator's proposed location of hole No.

27, 153 feet south of No. 26A.

Check samples split for the Field Team on January 21 by the Sampler from the Bureau of Mines' neighboring Racine-Spurgeon Project, visually indicated good zinc-lead ore from 215 to 222½ feet in hole 27, but the analyses have not been received. Consequently, upon telephonic request from the Operator on January 22, its proposed location for hole No. 28, about 100 feet south of 27, was approved.

A continuation of churn drilling on hole locations along a line southward from hole No. 27 is recommended to clearly cross section the above-mentioned inferred eastward ore trend. Then some closely spaced drilling might be warranted in certain areas such as around hole 27, to indicate the extent of reserves on the 2200 foot ore level which apparently are prone to be "spotty" as compared to the Reeds Spring ore deposit in this locality.

From last July, when Contract Amendment #3 was executed, up to the close of 1954, only six of the churn drill holes completed by the Operator were considered acceptable under the terms of the contract, and only their costs on the Monthly MF-104 Reports have been approved by this Field Team Office. Therefore the total, as of the close of 1954, was 30 completed holes which were acceptable, aggregating 8,017 feet of churn drilling on the project since the start of work in July, 1952, under the subject contract and the three subsequent amendments thereto. The total approved overall project costs to the close of 1954 was $19,240.80 of which the Government has reimbursed the Operator for half.

Re: Project Contract Idm-E325
Dale Mining Company
Patterson Mine
Newton County, Missouri
Docket DMEA-2485 (lead-zinc)

Dear Sirs:

Transmitted herewith are the two copies of the Operator's December, 1955, Report on the subject exploration project, as required by your Office.

The original of this report was received, approved, and transmitted to the Region IV Finance Officer at Bartlesville, Okla., on January 7, and notice that it had been certified for the Government's participation payment was received today, as per the attached Memo copies.

Sincerely yours,

Clinton C. Knox
Executive Officer
DMEA Field Team, Region IV

To: Gilmore C. Knox, Executive Officer, DMEA Field Team, Region IV.

From: L. A. Hill, Acting Chief, Division of Administration, Region IV.

Subject: December Voucher - Contract IDM-E-325

The above mentioned voucher was numbered DMEA-41 and paid in the amount of $319.20 on January 14, 1955 by R. E. Waters, Symbol 411, Dallas, Texas.

Please note that amount in column "Totals previously Reported" should be $18,602.40 instead of $18,996.40 and totals in column "Totals to Date" should be $19,240.80 instead of $19,236.80. Please make these corrections on your copies.

## MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Docket DMEA-2485 (lead-zinc) Project Contract Idm-E325

Patterson Lease
Near Granby, Newton County, Mo.

Churn drill holes No. 25 and 26

Attached hereto are the MF-104 and MF-104A Reports for the December project work, with the log and sample assays for hole 25, located with the concurrence of the Field Team Executive, as per the sketch attached to his December 2 letter. Since churn drilling of hole 26 had to be abandoned at 40 feet in depth, after much time had been lost due to encountering difficulties, no claim was made on the MF-104 for the cost of that drilling.

The sub-marginal zinc mineralization in the samples from hole 25 indicated the northward limitation of the ore found last month in hole 24.

Although retarded by a heavy snow storm after Christmas, drilling of hole No. 26A is in progress, located about 240 feet S65°E of hole 3, as approved by the Field Team Executive, confirmed by his December 22 letter.

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: DMEA Operating Committee, Washington 25, D. C.

From: Clinton C. Knox, Joplin, Missouri

Subject: Interim Report, Project contract Idm-E325
Dale Mining Company
811 Kentland Drive, Neosho, Mo.
Docket DMEA-2485 (lead-zinc)
Patterson Mine
near Granby, Newton County, Missouri

This project was inspected by me on the afternoon of November 23, 1954. Since the last inspection there on September 30, churn drilling of holes No. 21, 22, and 23 had been completed and No. 24 was in progress at 145 feet in depth.

Referring to the map submitted with the Field Team's Interim Report of last June 4, the locations of those holes were confirmed to be as follows:

Nearly at the X-12 site I recommended, hole No. 21 is 400 feet N 49° E of hole No. 3.

Contrary to any tentative site previously proposed by the Operator, authorized by the Contract (Amendment #3), or approved by the Field Team, Hole No. 22 had been drilled at 97 feet due north of hole No. 3.

Presumably near enough to my recommended sites X-10 and X-11 to be regarded as acceptable by the Field Team and the Government under the contract authorization, drilling of hole 23 at 97 feet due east of hole 22, had been completed, and hole 24 at 96 feet due north of hole 22, was in progress.

The following results were indicated by that drilling:

Reported analyses of samples taken from depths of 205 to 212½ feet in hole 21 average 2.65 percent zinc on that upper submarginal ore level which also was indicated by holes No. 17, 18, 19, and 20. But in hole 21 significant zinc mineralization also was reported from 237½ to 240 feet in depth which is in the Reeds Spring formation where the ore was found in hole No. 3.

Hole No. 22 indicated that same Reeds Spring ore level and reserve calculated in the Interim Report of last June 4 to be within the orbit of No. 3 hole.

Hole 23 indicated only traces of zinc-lead mineralization. No minable ore reserves are believed to have been indicated.

The following recommendations are made:

1. The Field Team should approve the Operator's Monthly Reports and claims for the costs of drilling holes No. 21, 23, and 24, but not for hole 22.

2. The Operator should obtain prior formal approval from the Field Team for any hole to be drilled in proposed locations other than those authorized by Contract Amendment No. 3.

3. The Operator should submit with its Monthly Reports the required "narrative description of progress made, results accomplished, any unusual difficulties encountered.....illustrated with..... map, logs, and assays", etc.

4. In order to possibly justify continuation of the project to completion of the contract, the proposed hole sites I recommended on the map with the June 4 Interim Report, X-9, -3, -6, -8, -1, and -2, apparently should be drilled in that sequence during the next three months. Unless drilling of some of those 6 holes plus hole No. 24, now in progress, indicates possible ore extensions warranting of further exploratory drilling, the deposit then would appear to be delineated to the extent that DMEA is permitted to participate.

During the past 5 months since Contract Amendment #3 was executed last July to permit drilling of an additional 24 holes this year, only 5 of those holes had been completed when the project was inspected. One of those apparently not subject to Field Team

approval, a total of only 28 acceptable holes, aggregating 7,496 feet of churn drilling, had been completed since the start of the project work in July, 1952, under the subject contract and the three subsequent amendments thereto.

No check sampling has been done by the Field Team.

No ore has been produced since the Patterson mining operations were disbanded in September 1953.

Nearly at the X-12 site I recommended, hole No. 21 is 400 feet N 49° E of hole No. 3.

Contrary to any tentative site previously proposed by the Operator, authorized by the Contract (Amendment #3), or approved by the Field Team, Hole No. 22 had been drilled at 97 feet due north of hole No. 3.

Presumably near enough to my recommended sites X-10 and X-11 to be regarded as acceptable by the Field Team and the Government under the contract authorization, drilling of hole 23 at 97 feet due east of hole 22, had been completed, and hole 24 at 96 feet due north of hole 22, was in progress.

The following results were indicated by that drilling:

Reported analyses of samples taken from depths of 205 to 212½ feet in hole 21 average 2.65 percent zinc on that upper submarginal ore level which also was indicated by holes No. 17, 18, 19, and 20. But in hole 21 significant zinc mineralization also was reported from 237½ to 240 feet in depth which is in the Reeds Spring formation where the ore was found in hole No. 3.

Hole No. 22 indicated that same Reeds Spring ore level and reserve calculated in the Interim Report of last June 4 to be within the orbit of No. 3 hole.

Hole 23 indicated only traces of zinc-lead mineralization. ¶ No minable ore reserves are believed to have been indicated.

The following recommendations are made:

1. The Field Team should approve the Operator's Monthly Reports and claims for the costs of drilling holes No. 21, 23, and 24, but not for hole 22.

2. The Operator should obtain prior formal approval from the Field Team for any hole to be drilled in proposed locations other than those authorized by Contract Amendment No. 3.

3. The Operator should submit with its Monthly Reports the required "narrative description of progress made, results accomplished, any unusual difficulties encountered.....illustrated with..... map, logs, and assays", etc.

4. In order to possibly justify continuation of the project to completion of the contract, the proposed hole sites I recommended on the map with the June 4 Interim Report, X-9, -3, -6, -8, -1, and -2, apparently should be drilled in that sequence during the next three months. Unless drilling of some of those 6 holes plus hole No. 24, now in progress, indicates possible ore extensions warranting of further exploratory drilling, the deposit then would appear to be delineated to the extent that DMEA is permitted to participate.

During the past 5 months since Contract Amendment #3 was executed last July to permit drilling of an additional 24 holes this year, only 5 of those holes had been completed when the project was inspected. One of those apparently not subject to Field Team

approval, a total of only 28 acceptable holes, aggregating 7,496 feet of churn drilling, had been completed since the start of the project work in July, 1952, under the subject contract and the three subsequent amendments thereto.

No check sampling has been done by the Field Team.

No ore has been produced since the Patterson mining operations were disbanded in September 1953.

Re: Project Contract Idm-E325
Dale Mining Co.
Patterson Mine
Newton County, Missouri
Docket DMEA-2485 (lead-zinc)

Dear Gerald:

Your MF-104 Report, received on November 17, covering the two holes churn drilled on your project during September and October, 1954, has been approved in part, by this office and the original transmitted today to the Regional Finance Officer, U. S. Bureau of Mines, Amarillo, Tex., for certification for the Government's 50 percent payment.

Only the cost of drilling the first of those two holes, No. 21, amounting to $636.00, half of which is to be the Government's share, was approved. That for drilling hole No. 22 was not approved because its location was not authorized by Contract Amendment No. 3, nor did you justify, request, or receive prior Field Team approval as required before such a departure from the contract authorization.

In response to your requests during our conversation on November 30, however, I approve of the locations of holes No. 23 and 24, drilled during November.

Based on some zinc ore visually indicated by panning when the Bureau's Sampler took 8 check samples from hole No. 24 last Tuesday, I hereby approve your proposed location of hole 25 as shown on the attached sketch map, to be drilled about 150 feet northwest of No. 24. Those 8 check samples, each representing your drill hole cuttings for a 2½-foot interval were taken from 235 to 255 feet in depth in hole 24, and on which I will request analyses by the Bureau's Rolla Laboratories.

Likewise, your next six tentative drill hole sites which I approve also are indicated on the attached sketch map. Please notify me in advance of any changes that might become preferable.

Also attached herewith are five copies of each of the forms on which to make your November report.

Very sincerely yours,

Clinton C. Knox
Executive Officer

Memorandum

To: L. T. McElvenny, Chief, Mining Branch, Rolla, Missouri

From: C. C. Knox

Subject: Field Team check sampling of churn drill hole cuttings on DMEA Project Contract Idm-E325, Dale Mining Co., Patterson Lease, Near Granby, Newton County, Mo.

The eight samples described in the attached request for Analytical Report, are being submitted under separate cover.

These requested analyses are for a routine check of the Operator's sampling required of the Field Team occassionally on DMEA projects.

RECEIVED
DEC 2 6 1954

DALE MINING COMPANY

Narrative Report
November, 1954

Docket DMEA-2485 Zinc and Lead

Patterson Lease
Holes 23 & 24

Due to Mr. C. C. Knox's letter of December 2, 1954, in which hole No. 22 was disapproved, I have deducted 275' from the total drilling and $660.00 from the cost on this drilling project under amendment No. 3.

Enclosed find forms MF 104 and MF 104A, the drill logs, and sample assays on the above holes drilled during November.

In protest of the disapproval of hole No. 22, it was drilled for the purpose of getting back on the main run of ore, if it went out that direction from the mine, so seemed very important to drill before holes 23 and 24. Holes 23 and 24 which have just been completed and proposed holes 25 and 26 will show if our run of ore extends to the north or to the east.

## MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(Instructions on reverse)

(For Government use only)

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

## MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF–104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF–104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF–104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF–104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF–200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF–200; and delete word "Independent" if the contract reported is on Form MF–200 (A). Also, report work paid for on a unit basis under contract Form MF–200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF–104 when submitted for reimbursable expenses incurred under contract Form MF–200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF–200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF–104 is required to be documented. The four copies of Form MF–104 are not to be thus supported.

Form MF–104 submitted for reimbursement under fixed price contracts on Form MF–200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF–104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Re: Project Contract Idm-E325
Dale Mining Co.
Newton County, Mo.
Docket DMEA-2485 (lead-zinc)

Dear Gerald:

Your Monthly Report and MF-104 claim received on December 13, for the two holes churn drilled on your project during November, 1954, has been approved in this office today and the original forwarded for Certification for payment to the new Regional Finance Officer at the regional headquarters of the Bureau of Mines recently moved to 218 Federal Building, Bartlesville, Okla.

Enclosed herewith are five copies each of forms MF-104 and MF-104A for use in preparing your December project reports.

Also consider this as formal approval of the location of hole No. 26A, about 25 feet southeast of hole No. 26, the location of which was previously approved. I regretted to learn from your long distance telephone call yesterday, that drilling in hole 26 had to be abandoned at 40 feet in depth due to crevices, bad slides, boulders, etc., but that sometimes may be unavoidable in Tri-State explorations. The changed location you proposed no doubt may be just as favorable. Also I regret to say, as you know, that I will not approve Government participation in costs of abandoned holes.

With the best of the Season's Greetings, I remain

Very sincerely yours,

Clinton C. Knox
Executive Officer
DMEA Field Team, Region VI

Memorandum

To: DMEA Operating Committee, Washington 25, D. C.

From: Clinton C. Knox, Mining Engineer, Bureau of Mines, Joplin, Mo.

Subject: Interim Report, Project Contract Idm-E325

Dale Mining Co.
811 KentlandDrive, Neosho, Mo.
Docket DMEA-2485 (lead-zinc)
Patterson Mine
Near Granby, Newton County, Mo.

The above-cited project was inspected by me on the morning of September 30, 1954. Since the last project inspection on August 18, churn drilling of holes No. 19 and 20 had been completed and, following a 2-week recess in September while the drilling contractor put down a well for a farmer one mile north where zinc ore reportedly was encountered, project hole No. 21 was in progress at 130 feet in depth.

With reference to the map attached to the Field Team Interim Report of last June 4, hole No. 19 is located as verbally approved by the Executive Officer, 100 feet S45° W of hole 18; hole 20 is located likewise 100 feet S45° W of 19; and 21 likewise approved is about 175 feet S10° W of hole 20.

I recommended that the Operator include concise drill hole location data with the logs submitted in its future Monthly Report to assure the Field Team that the previously approved drilling sites are being occupied, that a 2½-foot sampling interval be maintained when possible, and a resumption of submitting copies of the analytical laboratories "assay certificates" with the Operator's Monthly Reports.

Since the start of the exploratory work in July 1952, under the subject project contract and three subsequent amendments thereto, 26 holes, aggregating 6,966 feet of churn drilling had been completed and the 27th hole was in progress at 130 feet in depth on September 30, 1954.

No check sampling has been done by the Field Team.

No ore has been produced since the Patterson mine was closed down a year ago.

## MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Re: Project Contract Idm-E325
Dale Mining Co.
Patterson Mine
Newton County, Mo.
Docket DMEA-2485 (lead-zinc)

Dear Sirs:

Transmitted herewith are two copies of the Operator's March Report on the subject exploration project, as required by your office.

The original of the March Report had been forwarded to the Regional Finance Officer on last April 12; that of the April Report on August 25. Notice was received today that both were certified for the Government's participation payments, as per voucher data you will want to post as in the attached copy of the Finance Officer's August 30 letter to me.

You will recall that your two copies of the above-mentioned April Operator's Report, were transmitted to Washington prematurely for your advance information, with my Interim Report on the subject project of last June 4.

Sincerely yours,

Clinton C. Knox

Re: Dale Mining Company
Contract Idm-E325

Dear Mr. Knox:

The April report for the Dale Mining Company was certified for payment today, in the amount of $308.40.

The schedule was numbered DMEA 6.-77 and was dated August 30, 1954.

The March report was numbered DMEA 6.-75, dated April 14, 1954, and was in the amount of $649.20.

Yours very truly,

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

## MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

UNITED STATES
DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS ADMINISTRATION
[redacted]

P. O. Box #431
Joplin, Missouri

August 25, 1954

Memorandum

To: DMEA Operating Committee, Washington 25, D. C.

From: Clinton C. Knox, Mining Engineer, Bureau of Mines, Joplin, Missouri

Subject: Interim Report, Project Contract Idm-E325
Dale Mining Co.
811, Kentland Drive, Neosho, Mo.
Docket DMEA-2485 (lead-zinc)
Patterson Mine
Near Granby, Newton County, Mo.

The above-cited project was inspected by me on the afternoon of August 18, 1954. Work had been resumed following a recess of the project churn drilling from April 29 until August 9, 1954, when the Operator had obtained new Owners' Consents to Lien and signed Amendment No. 3.

## Summary and Recommendations

At the time of this project inspection, churn drilling of the first hole under Amendment No. 3, designated as hole No. 19, was in progress at 220 feet in depth in the lower Grand Falls strata, and marginal-appearing zinc mineralization had been encountered.

That hole is located S45°W, 100 feet from the previously drilled hole No. 18 (see map attached to the Field Team's Interim Report of last June 4). At the Operator's request for some curtailment at least in the initial scope of the drilling program specified in Amendment No. 3, and recognizing the prolongation of the depressing zinc market outlook, the Executive Officer verbally had approved that location which is somewhat at variance with tentative locations as shown on the map attached to Amendment No. 3.

In the attempt which must be made to find an eastward extension of the principal ore trend indicated in the Patterson mine, using the least possible amount of drilling, locations recommended for the next few holes to be drilled are at about 200-foot intervals along a line extending from hole 19 southwesterly through a point roughly 200 feet east of hole No. 3, the second drilled under the subject contract in August, 1952.

Whenever a significant extension of the Patterson mine's sheeted-type Reeds Spring ore primarily being sought on this project, is indicated in a churn drill hole, the Field Team will make a routine split of ore-bearing cutting samples and have some check-analyses run. However, no check sampling yet has been done by the Field Team.

Bench leveling to obtain the collar elevations of all holes drilled would afford a more comprehensive study of the structural geologic relationship to this unusual deposit at the Patterson mine. That study also is expected to furnish useful geologic information to the Bureau of Mines for its extensive research geophysical, and check churn drilling project being conducted by this writer in a 5-square-mile area surrounding the comparable-appearing Winchester deposit near Racine, Mo.

## Work Completed

Prior to the recent resumption of drilling permitted by Amendment No. 3, all the 12 holes specified under the original project Contract Idm-E325, let June 22, 1952, and the additional 12 holes permitted upon approval of Amendment No. 1 on April 11, 1953, had been completed on April 29, 1954, with an aggregate total of 6,433 feet of churn drilling at an overall cost of $15,432.20. No Operator's Monthly Reports yet are due since that received for April which just now has been approved for the Government's 50 percent participation payment.

The Operator's royalty payments as due the Government under the subject contract amounted to $886.49 for 244 tons of zinc and lead concentrates produced from the Patterson mine prior to being forced to disband all operations there last September due to the zinc market collapse.

In addition to this project inspection last week, I also viewed the Operator's catastrophic mine cave in which just had occurred at its nearby Dungy mine in Stark City, Mo., where small-scale mining and milling operations had been continuing. Presumable due to resorting to robbing of higher grade ore in some old underlying pillars and possibly aggravated by water seepage from the Dale Company's central milling plant, a large surface area near the west wall of that mill had

dropped, carrying down two large thickening tanks, the ore bins, the zinc concentrate on hand, and an office building. Replacing of the lost structures and equipment already is underway, however, so that some productive operations soon could be resumed. But additional financial burdens now are placed on this small operator which is one of the few in the Tri-State still striving to do a little exploration work.

Memorandum

To: DMEA Operating Committee, Washington 25, D. C.

From: Clinton C. Knox, Mining Engineer, Bureau of Mines, Region VI

Subject: Interim Field Team Report
Project Contract Idm-E325
Dale Mining Co., 811 Kentland, Neosho, Mo.
Docket DMEA-2485 (Lead-Zinc)

The above-cited project at the Operator's Patterson mine, 3 miles south of Granby in the north-central part of section 30, T. 25 N., R. 30 E., Newton County, Mo., was inspected by the writer on March 26, 1954.

Following a 2-month recess of the project work, holes No. 16 and 17 on the Patterson lease had been drilled during March, 1954, and since the churn drilling of No. 18, the final hole under the existing contract, was completed in April, after which the project work is again in recess. On April 14, the Operator requested a third amendment to the subject contract to permit drilling an additional 24 exploratory holes to more clearly indicate the extent of the ore deposit that had been found (see attached copies of the Operator's April 14 request, the Operator's April Report, and my proposed draft of the requested amendment).

Field Team approval of the Operator's April Report is being withheld pending approval of a proposed Amendment No. 3, or issuance of a project termination notice and receipt of the Operator's Final Report.

## Summary and Conclusions

During the 23 months that the project contract has been in force, 24 holes, aggregating 6,433 feet of churn drilling has been completed at an overall claimed cost of $15,439.20. An extensive sheet ore deposit has been indicated and inferred from the results of 15 of those widely spaced holes. An estimated 188,900

ton ore reserve with an average 2.74 percent zinc content has been indicated by 10 of those holes which were more nearly contiguous while an additional 350,000-ton reserve reasonably can be inferred from the data on the other five favorable holes drilled on this project together with that available from neighboring data, geologic structural information, and underground mine exposures.

Since the previous Project Inspection Report for the Field Team by E. T. Perkins on January 8, 1954, churn drilling of holes No. 16, 17, and 18 were completed on the Patterson lease. Only insignificant zinc mineralization was reported to have been found in hole 16, completed at 265 feet in depth. Samples from 276-foot hole 17 were reported to contain 1.30 percent zinc from 215 to 217½ feet, and 3.05 percent from 225 to 227½ feet in depth. Samples from 257-foot hole 18 contained 1.10 percent zinc from 215 to 220 feet in depth feet in depth, and 2.15 percent from 222½ to 227½ feet.

The Operator's royalty payment to the Government as due under the subject contract amounted to $886.49 for the 240 tons of zinc concentrate and 4 tons of lead concentrate produced prior to being forced to disband mining there last September due to the collapse in the zinc market.

## Recommendations

1. Approval of Amendment No. 3 of which a proposed draft and justification is attached herewtih, is recommended to permit continuing the project work under the subject 'short-form' contract.

## Work completed

All the exploratory churn drilling specified under the existing contract is considered to have been completed successfully and in accordance therewith.

The Field Team has been sympathetic to the slow prosecution of the project work because of the low price of zinc which has made it difficult for this small operating company to finance the project work. The Operator is prepared, however, to continue this rate of small-scale exploration in order to be in a better operating position when the price does begin to rise.

The efficiency of the project operations apparently is above the part of most small Tri-State district mining concerns. The Operator admittedly has failed to find competent engineering and geologic consultation in this region which fact the Field Team recognizes as a serious handicap to small mining concerns here that cannot support an engineering staff of their own. For example correct surveys,

maps, and ore reserve estimates suggested by the Field Team to accompany the Operator's April 14 request for Amendment No. 3, could not be obtained until the latter part of May, and then they are admittedly inadequate. The Operator's Monthly Report likewise barely presented the details necessary to be acceptable by the Field Team.

From a geologic standpoint, insufficient data yet is available to clearly indicate the ore-bearing trends through the Patterson and Clark leases. Partial data, obtained on a confidential basis, on the ASRCO's Moss property, adjoining on the north as shown on the attached print of the writer's work map, gives some clues as to the possible extensions of the ore deposit of the Dale Mining Co. The deposit at the Patterson mine is the first example, however, that this writer has been in the Tri-State, of an apparently true sheet ore deposit in the Reeds Spring formation. It lies beneath the well-known, locally termed typical 'sheet-ground' horizon, or Grand Falls 'N-O-P-Q' beds in which broad sheeted ore deposits are found in many areas throughout this region.

Ordinarily spacing of exploratory holes 100 to 200 feet apart is sufficient to indicate the extent of these sheet-ground-type deposits. Contrary to this Patterson deposit, Reeds Spring ore usually has been found in narrow, nearly vertical shear zones or gashes throughout many of the Tri-State mining areas.

Judging from attempted contouring on the top of the Short Creek oolitic limestone, the elongated structural basin in which the Patterson mine is located, trends northwesterly about to hole No. 11 on the Clark property line where it possibly splits into three narrow fingers. The northeasterly one extending to the ASRCO's Moss Mine where only the Reeds Spring ore horizon was found to be mineable in 1941. The middle finger possibly continues northwesterly to (Federal) holes No. F-1, F-2, and F-3 as indicated on the attached map, 700 feet west of the Moss shaft. The trend of the southwesterly striking third 'finger' is inferred by the data from hole 6, recently drilled on the Clark tract. The spotty ore on various shallower horizons as indicated by the other holes on the Clark tract, the Moss tract, and by the most recently drilled Patterson holes 15, 17 and 18, are inferred to be on structural noses or ridges between the fingers, or on the flanks of the Patterson structural basin. The main stem of that basin is inferred to extend southeasterly from Patterson hole No. 3, in which direction no exploratory drilling yet is known to have been done. The foregoing analyses, based however on meager geologic data, is the justification for the proposed additional drill hole locations on the writer's attached work map.

Because the Field Team could frequently make the 25-mile trip to this project and became well acquainted with the Operator and methods being used, no check sampling or assaying was deemed justifiable.

The ore reserve estimates indicated by the drilling to date, also are attached herewith. An additional 350,000-ton reserve reasonably can be inferred which might be mineable under a higher zinc price.

Clinton C. Knox
Mining Engineer

Narrative Report

Docket DMMA 2405 | Zinc & Lead

Patterson Lease

Hole 10

Enclosed find forms IT-10b and IT-10bA and the drill log on the above hole. Also a map showing the location of the 26 holes drilled in this contract.

There last two holes, No. 17 & No. 10, which have good zinc assays are very encouraging for a ore body in this new area. We are more drilling to show the extent of this ore body.

Sincerely yours,

Gerald Klepinger

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Docket DMEA-2485 (lead-zinc)

Dear Sirs:

Transmitted herewith are two copies of the Operator's Monthly Report on the subject project for December, 1953, and two copies of that for January, 1954, both with forms MF-104, 104-A and other appropriate attachments as required by the Washington Office of DMEA.

The originals of the above-mentioned reports were transmitted to the Regional Finance Officer, U. S. Bureau of Mines, Amarillo, Texas, on Jan. 6 and Feb. 16 respectively, and notices of their having been scheduled for payment were received today as I have posted on the enclosed copies of the MF-104 vouchers.

Very sincerely yours,

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF–104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF–104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF–104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF–104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF–200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF–200; and delete word "Independent" if the contract reported is on Form MF–200 (A). Also, report work paid for on a unit basis under contract Form MF–200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF–104 when submitted for reimbursable expenses incurred under contract Form MF–200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF–200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF–104 is required to be documented. The four copies of Form MF–104 are not to be thus supported.

Form MF–104 submitted for reimbursement under fixed price contracts on Form MF–200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF–104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

JAN 11 1954

Memorandum

To: W. P. Williams, Executive Officer, DMEA Field Team Reg. VI

From: E. T. Perkins, Mining Engineer,

Subject: Inspection report of operations of the Dale Mining Company Granby, Missouri

The writer spent January 5, 1954 at the Dale Mining Company's operations near Granby, Missouri, which are under the supervision of Gerald Klepinger, Neosho, Missouri.

At the completion of Hole No. D-5 on the Clark Lease September 8, 1953 drilling was recessed and then Hole No. D-7 was started October 19, 1953 and completed November 5, 1953 at a depth of 265 feet. From 220 to 225 feet, 3.80% zinc was indicated and from 250 to 257½, 8.50% zinc. This completed the drilling on the Clark lease.

The drill rig was then moved back to the Patterson lease and Hole No. 13 completed at a depth of 276 feet with zinc shines indicated from 235 to 250 feet.

Hole No. 14 completed at a depth of 260 feet indicated zinc shines from 237½ to 242½ feet.

At the time of the inspection, January 5, 1954, Hole No. 15 had reached a depth of 220 feet with indications of zinc and some lead from 210 feet.

In order that these holes would show in proper relation to the holes drilled earlier on the Clark and Patterson leases and also show their relation to the underground workings, standard surveying methods were used to tie all the holes together and the locations were then plotted on the mine map.

Since the mine recessed operation and the underground equipment was removed to the surface October 12, 1953, no ore has been produced.

INTERIM REPORT

DMEA Docket No. 2485, (Lead-Zinc)
Dale Mining Company
811 Kentland Drive, Neosho, Missouri
Contract No. Idm-E325

The above-referenced project was visited and inspected by the writer on December 17, 1953. Since this project is within a few miles of the Region VI DMEA office in Joplin the project is visited much more often than the formal written Interim Reports indicate.

Summary and Recommendations

The subject project was recessed from September 8, 1953 to October 19, 1953. Field inspection on December 17, 1953 showed that churn drilling operations were being conducted by the operator in an efficient manner. The project is a successful one in that new ore has been discovered and the operator has already made a substantial repayment of exploration costs to the Government from the sale of newly discovered ore.

The original contract Idm-E325 provided for the drilling of 12 churn drill holes on the Patterson lease at a total cost of $7,776.00. Upon the completion of the 12 holes the Operator asked for a new DMEA contract to conduct exploration on the adjoining Clark lease. Instead of a new contract the Operating Committee extended the original contract to include the Clark lease. Amendment No. 1, dated April 11, 1953 provided for 24 holes at a total cost of $15,552.00. On the original Clark Owner's Consent to Lien the amount $7,776.00 was entered - making Clark liable for the costs expended on both parcels. No specific sum was entered on the Patterson's Consent to Lien. In the best interests of the

Government and the Operator six of the drill holes proposed on the Clark lease were transferred to the Patterson lease by Amendment No. 2, dated October 7, 1953. Thus, if the total of 24 holes are completed only six will be on the Clark lease and 18 will be on the Patterson. At the execution of Amendment No. 2 new Owner's Consents to Lien were received from the Lessors. Although paragraph 4, "Changes and added provisions" were left blank on the latest Consents to Lien the Lessors and the Operator have asked that the amount of their liability be entered upon their respective Owner's Consent to Lien.

In view of the above the writer recommends that, if possible, the amount $1,920.00 be entered on the Clark Owner's Consent to Lien, and $5,856.00 be entered on the Patterson Consent to Lien. In accordance with a letter from C. O. Mittendorf, to all Executive Officers, dated July 6, 1953, the amounts may be entered on the forms by the phrase, "Liability for percentage royalty under this Consent to Lien is limited to the sum of $_____."

## Work Completed

On the date of the inspection the Operator had completed a total of 20 churn drill holes on the Patterson and Clark leases. The 20 holes represent a total of 5451.5 feet of drilling at a cost of $13,083.60. The unit cost is $2.40 per foot. On December 17, 1953 the twenty-first hole was being drilled and was at a depth of 50 feet. Total authorized units is 6,480 feet, thus the contract is about 85 percent completed. Locations of drill holes are shown on the attached map.

At the termination of the originally authorized 12 holes the Operator exceeded the authorized footage of 3,240 feet by 76½ feet. The excess drilling was disallowed by the Field Team on the Operator's February, 1953 Monthly Report, MF-104. The Operator was reimbursed for only that amount of footage which would bring the total footage to the total authorized. Later when Amendment No. 2 was executed the contract period, amount, and authorized units were increased. Consequently it now appears that the Operator's claims for the over-drilling in February 1953 have been validated and the Operator is due reimbursement for the excess footage. The correction of 76½ feet of drilling at a cost of $183.60 is not reflected in succeeding monthly MF-104s.

Exploration work on this project is continuing its earlier successes in finding new ore reserves in the vicinity of the Patterson and Clark shafts. The ore is found in the Keokuk series of the Boone limestone at a depth of 220-250 feet.

Narrative Report

Docket DMM 2405 Zinc & Lead

Hole No. 6 on Clark Lease
Hole No. 13 on Patterson Lease

Enclosed find forms MT-104 and MT-104A, and the drill log on the 2 above holes.

This No. 6 hole which is very good gives us good reason to think there is a considerable body of ore in this area.

In hole No. 13 we are trying to find the ore that comes across the line from the Red Bird Mining Co., on the North.

Sincerely yours;

Gerald Klepinger

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

## INSTRUCTIONS

*Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: W. P. Williams, Executive Officer, DMEA Field Team, Region VI

From: Edwin T. Perkins, Mining Engineer, Field Team, Region VI

Subject: Inspection visit to Dale Mining Co., Granby, Newton County, Missouri, DMEA Docket No. 2485, Contract No. Idm-E325

The writer spent October 12, 1953 at the Dale Mining Company's operations near Granby, Missouri, which are under the supervision of Gerald Klepinger, Neosho, Missouri.

Amendment No. 1 to the contract provided for 12 additional holes to be drilled on the Clark tract in the E½ of the NE¼ of the NW¼, Sec.30, T. 25 N., R. 30 W., and adjoining the Patterson tract on the west.

Five of the 12 holes under the contract had been completed.

Hole No. D-1 completed at 270 feet in depth, encountered shines of zinc from 220 to 240 feet in depth.

Hole No. D-2, completed at 258 feet in depth encountered 1.65% of zinc from 247½ to 252½ feet in depth.

Hole No. D-3, completed at 264 feet in depth, encountered shines of zinc from 235 to 260 feet in depth.

Hole No. D-4, completed at 275 feet in depth encountered shines of zinc from 235 to 267½ feet in depth.

Hole No. D-5, completed at 265 feet in depth encountered 1.23 percent zinc from 235 to 252½ feet in depth.

At the completion of Hole No. D-5, September 8, 1953, drilling on the Clark tract was recessed to enable the Dale Mining Co. to drill several much needed water wells for neighboring farmers.

Mining operation on the Patterson tract was suspended September 11, 1953 and at the time of the visit all underground equipment had been brought to the surface and stored.

Under the contract 484,300 lbs. of zinc concentrate had been produced to the time the mine was closed down. Five percent of the total amount received from the sale of this ore, amounting to $858.59, has been paid to the Government.

The accompanying sketch shows the location of the five churn drill holes recently put down. The survey of the underground workings made after the close of the operation on September 11, 1953, shows the mined-out area as of September 22, 1953.

(For Government use only)

## INSTRUCTIONS

*Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Memo

To: W. P. Williams, Executive Officer, DMEA Field Team, Region VI

From: Edwin T. Perkins, Mining Engineer, Field Team, Region VI

Subject: Inspection visit to Dale Mining Co., Granby, Newton County, Missouri, DMEA Docket No. 2485, Contract No. Idm-E325

The writer spent August 20, 1953 at the Dale Mining Company's operations near Granby, Missouri, which are under the supervision of Gerald Klepinger, Neosho, Missouri.

Amendment No. I to the Contract provided for 12 additional holes to be drilled on the Clark lease in the E½ of the NE¼ of the NW¼ of sec. 30, T. 25 N., R. 30 W., and adjoining the Patterson lease on the west.

At the time of the visit churn drilling was being continued under the amended contract and Hole No. 4 had reached a depth of 260 feet. It was expected that the ore-bearing horizon would be encountered within the next 15 or 20 feet.

Hole No. 1, completed at 270 feet in depth, drilled under the amended Contract and located 40 feet south and 100 feet east from the Clark shaft, encountered only shines of zinc ore.

Hole No. 2, completed at 258 feet in depth and located 110 feet south and 20 feet east from the Clark shaft, encountered five feet of ore-bearing ground from 247½ to 252½ feet containing 1.65% zinc.

Hole No. 3, completed at a depth of 264 feet and located 120 feet south and 70 feet west from the Clark shaft, encountered shines of zinc from 235 to 260 feet.

Proposed Amendment No. II provides for a total of six holes to be drilled on the Clark lease and the remaining six of the twelve holes, provided in Amendment No. I, are to be drilled on the Patterson lease, northeast of the Patterson shaft, at locations tentatively designated, but subject to the approval of the Field Team.

Ore is being mined on the Patterson lease from the headings extending to the southeast and to the southwest of the Patterson shaft, and 100 tons per 8-hour shift are being hoisted, trucked to, and concentrated at the Dale Mill on the Dungy tract at Stark City, four miles east from the mine.

Four payments of 5% of the sale value of each of the four cars of concentrates produced during the months of March, April, May and June, totaling $538.53, have been paid to the Government.

SEMI-ANNUAL REPORT ON CERTIFIED DMEA PROJECT

For the Period January 1, 1953--June 30, 1953

Project:

Dale Mining Company
Neosho, Missouri (Tri-state District)
Docket No. DMEA-2485-lead zinc
Contract No. Idm-E325

Inspectors:

W. P. Williams, Exec. Off., Region VI
E. T. Perkins, USBM Field Team Member, Region VI

Inspection Dates:

February 16, 1953 (E. T. Perkins)
May 31, 1953 "
June 26, 1953 (W. P. Williams)

Production:

Field inspection discloses that the above project has produced zinc ore and that royalty payments have been made to the Government during the period January 1, 1953--June 30, 1953.

The attached summary shows the amount of production and royalty payments made during the specified period.

Memorandum

To: Operating Committee, DMEA

From: W. P. Williams, Exec. Off., Region VI

Subject: Semi-Annual Report on Certified Projects

Enclosed herewith are originals and two copies each of semi-annual reports covering the following Certified Projects in Region VI during the period January 1, 1953--June 30, 1953. The following list includes all projects that have been certified to date in Region VI.

Westmoreland Manganese Corp.
Batesville, Arkansas
Docket No. DMA-197X (2002)-Manganese
Independence County, Arkansas
Contract Idm-E8 (E139)

Shelton Mining Company Base Metals
Joplin, Missouri
Docket No. DMA-1088X - Lead zinc
Contract No. Idm-E122

Dale Mining Co.
Neosho, Missouri (Tri-state District) Base Metals
Docket No. DMEA-2485-Lead zinc
Contract No. Idm-E325

The Dale Mining Co. Contract is still in force. No Certification has been issued, but royalty payments already made to the Government by the Operator will make certification necessary upon completion of the Contract.

Memorandum

To: W. P. Williams, Executive Officer, DMEA Field Team, Region VI

From: Edwin T. Perkins, Mining Engineer, Field Team, Region VI

Subject: Inspection visit to Dale Mining Company near Granby, Newton County, Missouri, DMEA Docket No. 2485, Contract No. Idm-E325

The writer spent June 29, 1953 at the Dale Mining Company's operation near Granby, Missouri. Gerald Klepinger, Neosho, Missouri is manager.

Churn drilling on the Clark lease, conducted under Amendment No. 1 of the original designated contract, continued with the completion of Hole No. 3, at a depth of 264 feet. Zinc shines were indicated from 235 feet to 260 feet in depth. At the completion of this hole, drilling was temporarily suspended, and the drill rig moved to the Dungy lease at Stark City, which is being operated by the Dale Mining Company, in order that an air hole could be drilled. At the completion of this air hole, the drilling will be resumed on the Clark lease.

Drill Holes No. 1 and 2 were to partly serve as check drilling of some holes put down at an earlier period. Hole No. 1 proved to be blank. Hole No. 2 indicated 1.65 percent zinc from 247½ to 252½ feet in depth. This drilling is also expected to indicate an extension of the ore body indicated on the Patterson lease.

While no mining operations have been started on the Clark lease, the shaft has been concreted from the surface down to solid rock. A drill hole located near the shaft has been enlarged and cased, to afford pumping and ventilating facilities, the better to permit the rehabilitation of the shaft, which may need some additional sinking, as well as cleaning out.

Drilling on the Patterson lease indicated 300,500 tons of recoverable ore reserves, from which it is expected that 11,004 tons of 60 percent zinc concentrate may be recovered, along with a small amount of lead concentrate. Mining from the Patterson lease is currently producing 500 tons of ore per 16 hour shift. This ore is being hauled to and concentrated at the Company's modern, Joplin-type mill at Stark City,

11

four miles to the east. A part of this production has come from the area covered by the drilling done under this original project on the Patterson lease. To date, three payments totaling $429.56 have been received at the Field Team office to apply on repayment of the Government's half, which was expended on the $7,776.00 part of the project.

The Patterson mine operations are entirely mechanized and are at the 260-foot level. The headings are being extended to the southwest of the shaft and to the east of the blower hole. The milling indicates about a 3 percent recovery.

The Dale Mining Company is doing good work and has been going ahead inspite of the low price of concentrate, which is on a basis of $65.00 for 60 percent zinc concentrate or 11 cents metal East St. Louis market.

Zinc-Lead
Contract Idm-E325

Dear Sirs:

Transmitted herewith are two copies of the monthly report for the subject Exploration Project for May, 1953 on Forms MF-104 and MF-104A with appropriate attachments, as required by the Washington office of the Defense Minerals Exploration Administration.

The original was forwarded to U. S. Bureau of Mines, Amarillo, on June 4, 1953 and notice of its certification has been received today.

Very truly yours,

W. P. Williams
Executive Officer

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memo

To: Operating Committee

From: W. P. Williams, Executive Officer, Field Team, Region VI

I am sending you herewith the original and three copies of an Interim Report of a Field Team inspection on the subject project. The Field Team inspection and report were made by Edwin T. Perkins, Mining Engineer, U. S. Bureau of Mines.

On March 5, 1953 you sent to us the original and five copies of Amendment #1 to the subject contract. On that same date you advised us that before the amendment could be executed it would be necessary for the operator to obtain the Owner's Consent to Lien on the Clark Lease. On March 9, 1953 we wrote to the operator, Mr. G. E. Klepinger, Dale Mining Co., informing him that before the amendment could be executed he should obtain the required Owner's Consent to Lien.

We have had no communication from the operator since that time, but we are under the impression that he is attempting to obtain the required Owner's Consent to Lien.

Memorandum

To: W. P. Williams

From: Edwin T. Perkins

Subject: Dale Mining Company, DMEA Docket No. 2485, Contract Idm-E325
Zinc and Lead
Field Team inspection made February 16, 1953

Summary and Conclusion

The Dale Mining Company, G. E. Klepinger, Manager, Neosho, Newton County, Missouri, operating the Patterson Lease in the NW$\frac{1}{4}$, NE$\frac{1}{4}$ Sec. 30, T. 25 N., R. 30 W., three miles south and 3/4 miles east of Granby, Newton County, Missouri, under the above-captioned exploration project contract, endeavored to extend the limits of an area which had been explored by several churn-drill holes and within which mining and production of zinc-lead ore had been in progress.

The 50/50 subject project contract with the Dale Mining Company dated June 22, 1952, called for churn drilling of 12 holes at an overall cost not to exceed $7776.00, one-half of which, or $3888.00 was to be paid by the Government. These 12 holes were completed March 2, 1953 with a total of 3316$\frac{1}{2}$ feet of drilling and at a total cost of $7959.60, which exceeded the amount of the contract. However, the proposed Amendment #1 increases the amount of the contract to $15,552.00 and extends the time, which addition of $7776.00 is to cover the cost of the same number of holes to be drilled on the Clark Lease which adjoins the Patterson Lease on the west.

The drilling under the subject exploration project contract on the Patterson tract indicates an ore reserve of 300,500 rock tons from which 11,004 tons of 60 percent zinc concentrate may be recoverable. The drilling indicates that there will be a recovery of a small amount of lead concentrate also.

| | | | Available Rock Tons | | 300,500 | | 8,267.00 |

8,267 ÷ .6 = 13,780 tons available 60% zinc concentrate
13,780 x .8 = 11,004 tons recoverable 60% zinc concentrate

Work completed

The average leased by the Dale Mining Company consists of 160 acres in the NE$\frac{1}{4}$, Sec. 30, T. 25 N., R. 30 W. The operations, however, have been confined to the 40 acres in the NW$\frac{1}{4}$, NE$\frac{1}{4}$ of Sec. 30. Several churn-drill holes, put down as early as 1910, showed zinc-lead are in a sheet ground formation ranging from 240 to 280 feet in depth. A shaft was sunk and some zinc-lead ore was produced from several short drifts. Operations were discontinued during the period of depression.

April 12, 1952 the ground was leased by Dennis Patterson, the owner, to the Dale Mining Company, the shaft cleaned out and repaired, mining was begun, and ore produced which was cleaned over the concentrating plant of the Dale Mining Company at Stark City, 4 miles to the east.

There are no figures available of the amount of this production, but it is estimated that 65,500 rock tons have been mined yielding an estimated 2,000 tons of 60 percent zinc concentrate and 200 tons of lead concentrate.

The limits of this latest development and production were established and the above designated exploration project contract drawn up to extend the limits of the ore deposit. Sphalerite and galena occur with some calcite in sheet ground of chert and dolomite of the Reeds Spring formation. The present ore headings are from 10 to 12 feet in thickness and a high grade of zinc concentrate and a good grade of lead concentrate are made.

Recommendations

The drilling under this exploration project contract indicates an extension of the ore body to the northwest toward the east line of the Clark tract, with an average thickness of 10 feet and it is estimated that there are 300,500 tons of indicated recoverable ore reserves from which 11,004 tons of 60 percent zinc concentrate may be recoverable along with a small amount of lead concentrate. The results of this drilling which brings the indicated ore deposit toward the Clark land, warrants the extension of the exploration project to include additional drilling on that tract, as set out in Amendment No. 1.

Dear Sirs:

Transmitted herewith are two copies of the monthly report for the subject Exploration Project for February, 1953 on Forms MF-104 and MF-104A with appropriate attachments, as required by the Washington office of the Defense Minerals Exploration Administration.

The original was forwarded to U. S. Bureau of Mines, Amarillo, on March 18, 1953 and notice of its certification has been received today.

Very truly yours,

W. P. Williams

## FINAL REPORT

DMA Docket No. 2485 Zinc & Lead

Contract No. I - 325

Dale Mining Company; Neosho, Missouri

Location of Property- All NE; Sec. 30 T. 25 R. 30

DEPARTMENT OF THE INTERIOR
Bureau Mines Exploration
RECEIVED
APR 6 1953

We have completed the last 2 holes of this 12 hole diamond drilling contract. Since hole #11 and #4 are both good holes it gives us a good indication of that to right and on the West lease to the West.

We started our first hole 7-15-52 and completed the last hole 3-2-53.

This ore body that we have drilled out seems to be in about the same rock and about the same level so that we are now mining. We attached that for ore reserve.

The total cost of the project was $959.00 of which the Government share was $500.00. During the month of March 1953, we will be mining 20% of this drilled ore reserve. Therefore, we will start paying 5% of the gross ore sales that is mined in this ore reserve.

I wish to thank all who have helped us on this drilling contract and especially those in the Joplin office.

Sincerely Yours;

Gerald Klepinger

Dale Mining Co.

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(Instructions on reverse)

(For Government use only)

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memo:

To: Operating Committee, DMEA

From: W. P. Williams, Executive Officer, DMEA Field Team, Region VI

Subject: Interim report - DMEA Docket No. ~~2299~~ 2485, Contract No. Idm-E~~280~~ 325, Dale Mining Company, Lead-Zinc

Transmitted herewith is an interim report prepared by E. T. Perkins, Mining Engineer of Field Team, Region VI, covering the above referenced DMEA project.

The last churn drill hole in this project is now being drilled and the Field Team's Final Report will be forthcoming as soon as this hole is finished.

I should like to point out that the last two holes drilled by the operator on this project showed good ore. The operator has a new DMEA application for exploration assistance on the tract adjoining the present project. His application does not show results determined in the last two holes. The Operating Committee may wish to consider the results of these holes because I believe they lend a more favorable aspect to the new application.

Memo

To: W. P. Williams, Executive Officer, DMEA Field Team, Region VI

From: Edwin T. Perkins, Mining Engineer, Field Team, Region VI

Subject: Inspection visit to Dale Mining Company, Granby, Newton County, Missouri. DMEA Docket No. ~~2299~~ 2485, Contract No. Idm-E~~280~~ 325

The writer spent February 16, 1953 at the Dale Mining Company's operations near Granby, Missouri, which are under the supervision of Gerald Klepinger, Neosho, Missouri.

Churn drilling is being continued under the above designated contract. Hole No. 11 was completed at a depth of 270 feet with zinc and some lead ore indicated from 250 to 260 feet. Hole No. 12 had reached a depth of 20 feet and with the completion of this hole, the project work will be finished. These two drill holes are northwest from the other holes drilled under this contract and are within 40 feet of the west property line.

The operator will furnish a completed map, drill records and a final report containing estimates of ore reserves.

Ore is being mined at approximately the 260 foot level from the east and south headings which are approaching the limit of the area excluded from this project operation.

The shaft is in excellent condition. The underground operations are entirely mechanized, using jumbo-drilling machines, both slusher and high-lift loaders, and Diesel-truck hauling to the hopper at the shaft. From the surface hopper, the ore is hauled four miles east to the company's mill at Stark City. The mill is the conventional type with jigs, tables and float machines.

A high grade concentrate is produced containing some cadmium for which they are paid, as well as for the zinc content. The concentration is about 25:1 which is a little higher ratio than one would expect from the results showing in the drilling records.

Dear Sirs:

Transmitted herewith are two copies of the monthly report for the subject Exploration Project for January, 1953 on Forms MF-104 and MF-104A with appropriate attachments, as required by the Washington office of the Defense Minerals Exploration Administration.

The original was forwarded to U. S. Bureau of Mines, Amarillo, on February 9, 1953 and notice of its certification has been received today.

Very truly yours,

W. P. Williams

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(Instructions on reverse)

(For Government use only)

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Dale Mining Co.

Dear Sirs:

Transmitted herewith are two copies of the monthly report for the subject Exploration Project for November, 1952 on Forms MF-104 and MF-104A with appropriate attachments, as required by the Washington office of the Defense Minerals Exploration Administration.

The original was forwarded to U. S. Bureau of Mines, Amarillo, on December 3, 1952 and notice of its certification has been received today.

Sincerely yours,

David Gallagher

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Dale Mining Co.

Dear Sirs:

Transmitted herewith are two copies of the monthly report for the subject Exploration Project for October, 1952 on Forms MF-104 and MF-104A with appropriate attachments, as required by the Washington office of the Defense Minerals Exploration Administration.

The original was forwarded to U. S. Bureau of Mines, Amarillo, on November 28, 1952 and notice of its certification has been received today.

Sincerely yours,

David Gallagher

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Docket D.M.E.A. - 2485 ( Zinc-Lead)

NARRATIVE REPORT

Hole # 1

Hole # 2

October, 1952 Project Contract IdM.-E 325

During the month Churn Drilling of the Fourth and Fifth Holes on the project was completed. ( No. 1 and No. 2 as located on the map attached to the contract.)

Hole No. 1 was started October 14,1952, and completed October 30,1952 at a cost of $ 2.40 per. foot, for a depth of 270 feet. Water was struck at 255 feet. This was a blank hole.

Hole No. 2 was started October 1,1952 and completed October 14,1952, at a cost of $ 2.40 per. foot, for a depth of 288 feet.

Shines of zinc or mineralization was encountered from a depth of 237½ feet to 242½ feet. Good Zinc ore was indicated by samples from a depth of 242½ feet to 247½ feet, with fair zinc shines from 247½ feet to 260 feet. This has an assay average for the depth of 242½ feet to 260 feet of 3.09 Zinc, or 6.47 blend of 60% ZnS.

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Dale Mining Co.

Dear Sirs:

Transmitted herewith are two copies of the monthly report for the subject Exploration Project for August, 1952 on Forms MF-104 and MF-104A with appropriate attachments, as required by the Washington office of the Defense Minerals Exploration Administration.

The original was forwarded to U. S. Bureau of Mines, Amarillo, on September 23, 1952 and notice of its certification has been received.

Sincerely yours,

David Gallagher

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

U. S. GOVERNMENT PRINTING OFFICE 205675

DALE MINING COMPANY
Docket DMEA-2485 (Zinc-Lead)

Narrative Report

August, 1952 Project Contract Idm-E325

During the month, churn drilling of the second hole on the project (No. 12, on the attached log) was completed at 270 feet in depth on August 23, 1952. Its location is that designated as No. 12 on the map of the proposed locations, previously attached as a part of the project contract.

As submitted in the drill hole logs, the zinc content of the two cutting samples which were assayed from hole No. 12, exceeded those of hole No. 3 which was previously drilled and described in the July Monthly Report. That was the first hole drilled on the project and its location was likewise designated as No. 3 on the map of proposed locations, previously attached as a part of the contract.

No unusual difficulties were encountered.

Re: Docket No. DMEA 2485
Contract No. Idm-E325
Dale Mining Company

Dear Sirs:

Transmitted herewith are two copies of the monthly report for the subject Exploration Project for July, 1952 on Forms MF-104 and MF-104A with appropriate attachments, as required by the Washington office of the Defense Minerals Exploration Administration.

The original was forwarded to U. S. Bureau of Mines, Amarillo on August 7, 1952 and notice of its certification has been received today.

Sincerely yours,

David Gallagher
Executive Officer
DMEA Field Team, Region VI

CERTIFICATION BY GOVERNMENT REPRESENTATIVE:

I certify that to the best of my knowledge and belief the contractor submitting this voucher is operating a Defense Minerals Exploration Administration project under Contract No. E-325 in accordance with the terms of the contract.

Signature Wm. P. Williams Title Geologist Date 8-7-52

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature David Gallagher Title Ex. Off. Date Aug. 7, 1952

# MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

*Preparation of Form MF-104—Operator's Monthly Report and Voucher.*—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

## INSTRUCTIONS

*Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.*—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.
