IN REPLY REFER TO

August 5, 1983

Mr. T. J. Montgomery
Property Superintendent
Inspiration Mines, Inc.
P.O. Box 1559
Claypool, Arizona 85532

Re: DMEA 4153 (zinc)
The New Jersey Zinc Company
Independence and Lawson Areas
Hawkins and Hancock Counties, Tennessee
Contract Idm E-950

Dear Mr. Montgomery:

Thank you for sending two copies each of two Warranty Deeds conveying the above-referenced property to Inspiration Mines, Inc., pursuant to our request of July 19, 1983.

Should there be any production from the property before the royalty obligation period ends on May 10, 1988, royalty payments should be made payable and mailed to:

Chief, Office of Minerals Exploration
U.S. Geological Survey M.S. 939
Denver Federal Center - Box 25046
Building 25, Rm. 2502
Denver, Colorado 80225

The purchaser should be advised to deduct royalties from the amount due on each shipment. Each check should be accompanied by suitable sales evidence - such as copies of settlement sheets - showing the name of the purchaser, the quantity and grade of the products sold, and the price and charges, certified to be correct by the purchaser.

Sincerely yours,

J. William Hasler

Hawkins and Hancock Counties, Tennessee
Contract Idm E-950

Dear Mr. Hasler:

I am replying to your letter of July 19, 1983, to Mr. John Ellis. As per your request in the letter, I am enclosing two copies each of the two Warranty Deeds conveying the property to Inspiration Mines, Inc. One Deed conveys the property in Hawkins County and the other the property in Hancock County.

Please note the last paragraph on page 3 of each document which preserves the Government's right to a percentage royalty on production as specified in the contract.

Yours truly,

INSPIRATION MINES, INC.

SPECIAL WARRANTY DEED

THIS DEED made as of the 11th day of July, 1983, by and between Gulf & Western Industries, Inc., a Delaware Corporation, authorized to do business in Tennessee, party of the first part, and INSPIRATION MINES, INC., a Delaware Corporation, authorized to do business in Tennessee, party of the second part:

W I T N E S S E T H

That for and in consideration of the sum of ten ($10.00) Dollars, cash in hand paid and other good and valuable considerations, the receipt of which is hereby acknowledged, the party of the first part has this day granted, bargained, and sold and does by these presents grant, bargain, sell and convey unto the party of the second part its successors and assigns, subject to the reservation and exception hereinafter set out, all its right, title and interest in and to all land, real property rights and interests, tenements and hereditaments of the party of the first part situate, lying and being the Third District of Hawkins County, Tennessee, including without limitation all metals, minerals, ores, ore-bearing materials and rocks of any and every kind, including limestone, in, under or upon the same, and all mines, mining rights, water rights, buildings, dwellings, physical plants and facilities, and other improvements thereon.

The property hereby conveyed includes, without limitation, all property acquired by party of the first part and its predecessor in title, The New Jersey Zinc Company, a New Jersey Corporation, under and by virtue of the instruments recorded in the Register's Office for Hawkins County, Tennessee, listed in Exhibit "A" attached hereto, being 3,070.27 acres more or less, and excluding and excepting all property listed therein as heretofore conveyed away, and all of which are made a part hereof, and to which instruments reference is hereby made for a more complete description thereof. Reference is also made to the following documents evidencing successions to title:

(1) Agreement of Merger dated February 25, 1966, Charter Book 2, Page 371, merging The New Jersey Zinc Company, a New Jersey Corporation, into Gulf & Western Industries, Inc., the surviving corporation.

(2) Deed from Gulf & Western Industries, Inc., to ZINMINCO, INC., a Delaware Corporation, dated January 25, 1966, Deed Book 147, Page 483.

(3) Change of name by Charter Amendment, from ZINMINCO, INC., to The New Jersey Zinc Company, a Delaware Corporation, dated June 9, 1966, File No. 1082, in the Office of the Secretary of State, State of Tennessee. Charter Book 2, Page 371.

(4) Merger of The New Jersey Zinc Company into Gulf & Western Industries, a Delaware Corporation, dated May 24, 1974, Deed Book 274, Page 245.

Party of the first part, however, specifically reserves and excepts to itself its successors and assigns forever, all its right, title and interest, in fee simple in and to the freehold mineral estate in all oil and gas, and all hydrocarbons, minerals and substances associated with the extraction thereof, on, in or under the properties herein described and conveyed.

Party of the first part covenants and warrants that the location of any drill site or service installation in regard to oil and gas prospecting or production by party of the first part or its successors and assigns pursuant to the reservation contained herein shall require party of the second part's consent; provided however, that any such consent shall not be unreasonably delayed or withheld. The withholding of consent to the location of any such site or installation within any of the following perimeters, both surface or subsurface, shall be deemed reasonable:

(a) 200 feet from any house or other building, barn or structure now on the land;

(b) 200 feet from any use or restriction heretofore reserved by party of the first part's predecessors in interest or such other areas where such predecessors in interest have agreed to waive the use of the surface thereof by written instrument recorded in the records of the county where the land affected thereby is located; or

(c) 500 feet from active or projected subsurface mining operations or an area of the surface or subsurface where such surface or subsurface mining operation will be adversely affected thereby. The determination by party of the second part of active surface or subsurface mining operation area or projected surface or subsurface mining operation areas shall be made by the party of the second part as a prudent mining operator.

It is the intention of the party of the first part to convey to party of the second part, subject to the reservation and exception above set out, all its right, title and interest in all of the land and real property rights and interests acquired by party of the first part from or through its division, The New Jersey Zinc Company, or the predecessor in interest of said division, The New Jersey Zinc Company, a Corporation, in said Hawkins County, Tennessee, whether described in the instruments hereinbefore referred to or otherwise.

To have and to hold the same, together with all the hereditaments and appurtenances thereto belonging or in any wise appertaining, to the party of second part its successors or assigns forever.

Party of the second part, however, by accepting this conveyance, covenants and agrees on behalf of itself its successors and assigns to be bound by, and does hereby assume, all of the terms, covenants and conditions contained in all conveyances referred to and listed in Exhibit "A" attached hereto and further subject to the right of the US Department of the Interior to a percentage royalty on production and lien

587

for the payment thereof, under party of the first part's agreement with the Defense Minerals Exploration Administration of the US Department of the Interior, dated respectively May 10, 1956, (Contract #Idm E-950) May 22, 1956, (Contract #Idm E-956) June 30, 1958, (Contract #Idm E-982) and February 26, 1958, (Contract #Idm E-1174), and to indemnify and save harmless party of the first part, its successors and assigns, from any and all liabilities hereafter accruing under the provisions of said conveyances.

And the party of the first part, for itself and its successors does hereby covenant with the party of the second part, its successors and assigns that the party of the first part has not made, done, executed or suffered any act or thing whereby the above described premises or any part thereof now are or at any time hereafter shall or may be imperiled, charged or encumbered in any manner whatsoever except for 1983 taxes, which are prorated, and the matters set out above, and the party of the first part will warrant and defend its title thereto against the lawful demands of all persons claiming by, through or under the party of the first part, but not further or otherwise.

IN WITNESS WHEREOF, the party of the first part has caused this deed to be signed by its respective officers, duly authorized as of the date first above written.

SPECIAL WARRANTY DEED

THIS DEED made as of the 11th day of July, 1983, by and between Gulf & Western Industries, Inc., a Delaware Corporation, authorized to do business in Tennessee, party of the first part, and INSPIRATION MINES, INC., a Delaware Corporation, authorized to do business in Tennessee, party of the second part:

W I T N E S S E T H

That for and in consideration of the sum of ten ($10.00) Dollars, cash in hand paid and other good and valuable considerations, the receipt of which is hereby acknowledged, the party of the first part has this day granted, bargained, and sold and does by these presents grant, bargain, sell and convey unto the party of the second part its successors and assigns, subject to the reservation and exception hereinafter set out, all its right, title and interest in and to all land, real property rights and interests, tenements and hereditaments of the party of the first part situate, lying and being the First, Second and Third Districts of Hancock County, Tennessee, including without limitation all metals, minerals, ores, ore-bearing materials and rocks of any and every kind, including limestone, in, under or upon the same, and all mines, mining rights, water rights, buildings, dwellings, physical plants and facilities, and other improvements thereon.

The property hereby conveyed includes, without limitation, all property acquired by party of the first part and its predecessor in title, The New Jersey Zinc Company, a New Jersey Corporation, under and by virtue of the instruments recorded in the Register's Office for Hancock County, Tennessee, listed in Exhibit "A" attached hereto, being 3,137.47 acres more or less, and excluding and excepting all property listed therein as heretofore conveyed away, and all of which are made a part hereof, and to which instruments reference is hereby made for a more complete description thereof. Reference is also made to the following documents evidencing successions to title:

(1) Agreement of Merger dated November 30, 1965, merging The New Jersey Zinc Company, a New Jersey Corporation, into Gulf & Western Industries, Inc., the surviving corporation.

(2) Deed from Gulf & Western Industries, Inc., to ZINMINCO, INC., a Delaware Corporation, dated February 25, 1966, Deed Book 29, Page 204.

(3) Change of name by Charter Amendment, from ZINMINCO, INC., to The New Jersey Zinc Company, a Delaware Corporation, dated June 9, 1966, File No. 1082, in the Office of the Secretary of State, State of Tennessee.

(4) Merger of The New Jersey Zinc Company into Gulf & Western Industries, a Delaware Corporation, dated May 24, 1974, Miscellaneous Book 14, Page 444.

Party of the first part, however, specifically reserves and excepts to itself its successors and assigns forever, all its right, title and interest, in fee simple in and to the freehold mineral estate in all oil and gas, and all hydrocarbons, minerals and substances associated with the extraction thereof, on, in or under the properties herein described and conveyed.

Party of the first part covenants and warrants that the location of any drill site or service installation in regard to oil and gas prospecting or production by party of the first part or its successors and assigns pursuant to the reservation contained herein shall require party of the second part's consent; provided however, that any such consent shall not be unreasonably delayed or withheld. The withholding of consent to the location of any such site or installation within any of the following perimeters, both surface or subsurface, shall be deemed reasonable:

(a) 200 feet from any house or other building, barn or structure now on the land;

128

(b) 200 feet from any use or restriction heretofore reserved by party of the first part's predecessors in interest or such other areas where such predecessors in interest have agreed to waive the use of the surface thereof by written instrument recorded in the records of the county where the land affected thereby is located; or

(c) 500 feet from active or projected subsurface mining operations or an area of the surface or subsurface where such surface or subsurface mining operation will be adversely affected thereby. The determination by party of the second part of active surface or subsurface mining operation area or projected surface or subsurface mining operation areas shall be made by the party of the second part as a prudent mining operator.

It is the intention of the party of the first part to convey to party of the second part, subject to the reservation and exception above set out, all its right, title and interest in all of the land and real property rights and interests acquired by party of the first part from or through its division, The New Jersey Zinc Company, or the predecessor in interest of said division, The New Jersey Zinc Company, a Corporation, in said Hancock County, Tennessee, whether described in the instruments hereinbefore referred to or otherwise.

To have and to hold the same, together with all the hereditaments and appurtenances thereto belonging or in any wise appertaining, to the party of second part its successors or assigns forever.

Party of the second part, however, by accepting this conveyance, covenants and agrees on behalf of itself its successors and assigns to be bound by, and does hereby assume, all of the terms, covenants and conditions contained in all conveyances referred to and listed in Exhibit "A" attached hereto and further subject to the right of the US Department of the Interior to a percentage royalty on production and lien

for the payment thereof, under party of the first part's agreement with the Defense Minerals Exploration Administration of the US Department of the Interior, dated respectively May 10, 1956, (Contract #Idm E-950) May 22, 1956, (Contract #Idm E-956) June 30, 1958, (Contract #Idm E-982) and February 26, 1958, (Contract #Idm E-1174), and to indemnify and save harmless party of the first part, its successors and assigns, from any and all liabilities hereafter accruing under the provisions of said conveyances.

And the party of the first part, for itself and its successors does hereby covenant with the party of the second part, its successors and assigns that the party of the first part has not made, done, executed or suffered any act or thing whereby the above described premises or any part thereof now are or at any time hereafter shall or may be imperiled, charged or encumbered in any manner whatsoever except for 1983 taxes, which are prorated, and the matters set out above, and the party of the first part will warrant and defend its title thereto against the lawful demands of all persons claiming by, through or under the party of the first part, but not further or otherwise.

IN WITNESS WHEREOF, the party of the first part has caused this deed to be signed by its respective officers, duly authorized as of the date first above written.

Claypool, Arizona 85532

Re: DMEA 4153 (zinc)
The New Jersey Zinc Company
Independence and Lawson Areas
Hancock and Hawkins Counties, Tennessee
Contract Idm E-950

Dear Mr. Ellis:

This office has just been advised through the law offices of McCampbell and Young, Knoxville, Tennessee, that the New Jersey Zinc Company has conveyed its real property in Hancock and Hawkins Counties, Tennessee to Inspiration Mines Inc., subject to the above-referenced contract.

Enclosed is a copy of the certification of discovery or development that covers all the land described in Article 2 of the contract.

By the terms of the Exploration Project Contract, as amended, and the certification, all minerals mined or produced from May 10, 1956, to May 10, 1988, are subject to the Government's percentage royalty as set forth in the contract until the sum of $36,613.56 is repaid to the Government.

Royalty payments should be made payable to Chief, Office of Minerals Exploration and mailed to the U.S. Geological Survey, Mail Stop 933, Denver Federal Center, Building 25, Rm. 2502, Denver, Colorado 80225. The purchaser should be advised to deduct royalties from the amount due on each shipment. Each check should be accompanied by suitable sales evidence - such as copies of settlement sheets - showing the name of the purchaser, the quantity and grade of the products sold, and the price and charges, certified to be correct by the purchaser.

Your attention is called to Article 2(d), particularly, of the contract, relating to the preservation of the Government's right to a percentage royalty on production.

Pursuant to Article 2(d) of the contract, please furnish this office with two copies of the instrument of conveyance showing the lien, or encumbrance for the preservation of the Government's right to a percentage royalty on production and payment thereof.

When production starts, please notify this office. Thereafter, if production ceases for any extended period, please notify this office at six-month intervals.

Sincerely yours,

J. William Hasler

Contract Nos. Idm-E-982, Idm-E-1174,
Idm-E-956, Idm-E-950

Gentlemen:

Please be advised that on the date hereof The New Jersey Zinc Company has conveyed subject to the above referenced contracts all of its real property in Hancock, Hawkins and Grainger Counties, Tennessee, to Inspiration Mines, Inc., which has on the date hereof assumed the said contracts. All correspondence relating to the above contracts should hereafter be addressed to Inspiration Mines, Inc., P. O. Box 1559, Claypool, Arizona, 85532, Attention John Ellis, Vice President.

Yours truly,

Memorandum

To: George C. Selfridge, Chief, Division of Field Operations
Office of Minerals Exploration, Washington 25, D. C.

Through: Robert A. Laurence, U. S. Geological Survey, Knoxville

From: Helmuth Wedow, Jr., U. S. Geological Survey, Knoxville

Subject: Geologic Review---DMEA-4153, Idm-E950 (Zinc)
Independence-Lawson area
Hancock and Hawkins Counties, Tennessee
The New Jersey Zinc Company

This memorandum is submitted in lieu of the Geology and Ore Reserves Section of the Formal Field Team Report on the subject project in response to the memorandum of L. G. Houk of May 19, 1960.

The Independence-Lawson DMEA project area is the northeasternmost known zinc-bearing area in the Copper Ridge zinc district of East Tennessee. Although most of the project area lies in Hancock County, some of the southwestern tracts of the Lawson sector are in Hawkins County. As elsewhere in the Copper Ridge district, the exploration area is underlain by the Longview, Kingsport, and Mascot formations of the upper part (approximately 1,000 feet) of the Lower Ordovician Knox dolomite group and the basal several hundred feet of the Middle Ordovician Chickamauga limestone group; the two groups are separated by a profound unconformity. The structural setting is

REPORT IN LIEU FINAL FIELD REPORT

generally homoclinal in the northwest limb of the Greendale syncline that lies in the thrust shingle block bounded by the Saltville fault above and to the southeast and by the Copper Creek fault below and to the northwest. Locally, the bedrock attitude averages about N. 60° E., 55° SE. Shear zones and tear faults with steep dips and only small stratigraphic displacement cut the beds at angles close to normal to the strike. Small local warps, generally mostly obscured by the strong regional dip, but with trends at various angles to the general bedrock strike, also occur.

In the search for zinc ores in the project area under the DMEA contract a total of 33 holes was drilled---23 and 10 in the Independence and Lawson sectors respectively---aggregating 24,134 feet. Prior to the DMEA program 47 holes had been drilled and had discovered about a half million tons of 5 percent zinc ore. In addition, one non-DMEA hole was drilled off pattern in the Lawson sector during the program. Hole depths of the DMEA drilling ranged from 325 to 1,329 feet, averaging 733 feet. All holes penetrated to the approximate horizon of the top of the Longview dolomite---the so-called T-bed.

The ore bodies discovered in the Independence area occur mostly in the lower Kingsport limestone member (i. e., R- and S-beds). Such ore as is found in the upper Kingsport member lies in the lower few tens of feet above the top of R-bed. Selected stratigraphic and zinc intensity data for the Independence-Lawson DMEA holes are summarized in table 1. As in other Copper Ridge exploration areas,

the occurrence of zinc mineralization appears to be related closely to: (1) holes with median values of the ratio pTu:pTl, and (2) holes with high values of the ratio pTr:pTs. (Where in both cases, pT is the drill-hole penetration thickness---or isochore value, and u, l, r, and s are the upper member, lower member, R-bed, and S-bed, respectively, of the Kingsport formation.) These relationships appear to be due mostly to the thinning of R-bed and the upper part of S-bed, as can be seen in table 2 where these relationships are compared statistically. The cause of the thinning is probably due mostly to the solution-removal of limestone or to compaction of beds after dolomitization, or both. Conversely, thickening of the upper member occurs generally by collapse into the "void" left by the thinning of the lower units. Both processes develop the porosity needed for the emplacement of the sulfide minerals and their associated gangue. For example, the dolomitization of the limestone, in spite of the later compaction, develops an interrhomb porosity that is filled by the sphalerite and other later minerals of the "disseminated" or so-called replacement type of ore. The collapse of the upper member forms a fracture porosity that was filled by the sphalerite and sparry dolomite of the "fracture-filling" or "crackle-breccia" type.

Of the 33 DMEA holes drilled in the Independence-Lawson area only six are classified as ore, eight are "shine", eight are trace holes, and eleven are barren. The six ore holes, however, made ten separate ore penetrations, that is, a compact run with a minimum of 50 feet-percent units of zinc; three of these runs were in one hole and two

runs in each of two of the others. The locations of these holes are shown on figure 1 where the shape of the ore body is also inferred---such inference being based chiefly on such factors as general distribution of zinc intensity as related to the isochoring of various stratigraphic units and the contouring of the pT ratios mentioned above. Indicated ore, that is, ore in areas of about 10,000 square feet in the vicinity of each ore hole, amounts to about 130,000 tons with an average grade of 6.6 percent. On the basis of the shape of the "DMEA" ore body as interpreted on figure 1 and assuming an average pT of 15 feet, an additional 360,000 tons of similar grade is inferred---for a total of 490,000 tons. This total agrees favorably with that of the Operator whose estimate of the ore shown by the six holes amounted to about 520,000 tons but with only 4.3 percent zinc. The difference in grade is ascribed chiefly to the Operator's inclusion of dilution to a minimum pT of 18 feet for each ore run. The half million tons of ore found in the "DMEA extension" together with the reported half million tons found by the earlier drilling in the area excluded from the DMEA contract brings the total indicated-inferred reserve for the area to about one million tons with a grade of about 5 percent zinc. It is judged that with a like amount of additional drilling, this reserve could be at least doubled, although the additional ore would probably lie in considerably deeper ground, that is, at depths exceeding 1,000 feet. Fruitful areas for additional exploration are the obvious extensions shown on figure 1 and the general area between Holes IN-59 and -49.

Although the contract footage was not completed, sufficient ore was discovered to warrant certification of the project.

Memorandum

To: Operating Committee, OME - Washington, D. C.

From: OME Field Team, Region V - Knoxville, Tennessee

Subject: DMEA-4153, Idm-E950 (zinc) The New Jersey Zinc Co. New York, N.Y. Independence Area, Hancock and Hawkins Counties, Tennessee

Enclosed are three copies of a supplement to the Operator's final report, which provides the additional information requested in our letter of August 21, 1959.

Although the Operators conclusion that the deposit is not economically mineable at the present time is well supported, we consider the certification of discovery to be justified by the definite possibility that this deposit may be economic within the 32-year period which expires on May 10, 1988.

OPR'S FINAL REPORT SUPPLEMENT

Independence - Lawson Area

Sector I Copper Ridge Belt

Hancock-Hawkins Counties, Tennessee

DMEA Docket No. 4153 Contract Idm E 950 (Zinc)

Ore Potential

Independence: Twenty-three holes were drilled under DMEA in the vicinity of previously discovered ore. In six of these holes ten ore penetrations were made. These penetrations were used to calculate a tonnage and grade estimate for the area tested.

For purposes of calculation the grade and thickness of a given penetration was extended half way to an adjacent ore hole or 75' along strike and 50' in the dip direction if not adjacent to an ore hole.

Thus, four of the six holes (IN-48, IN-50, IN-61 and IN-62) were calculated on the basis of blocks 100' x 350' or 35,000 square feet. The other two holes (IN-54 and IN-56) were calculated on the basis of blocks 100' x 150' or 15,000 square feet. To obtain cubic footage in each block the vertical thickness of each ore penetration was used, with a minimum of 18'. This is equivalent to a 10' stratigraphic thickness.

A tonnage factor of 11.4 cubic feet per ton was used to convert cubic feet to tons.

The cut-off grade used was about 3% although in I-62 one run, downgraded to 2% by dilution was used because of its proximity to higher grade mineralization.

The tonnage thus calculated is about a half million tons grading about 4¼% zinc as tabulated below:

Hole No.	Thickness	Area	Cu. Feet	Tons	Grade
IN-48	25'	35,000	875,000	76,754	3.00% Zn
	18'	35,000	630,000	55,263	3.81% Zn
	18'	35,000	630,000	55,263	3.41% Zn
IN-50	18'	35,000	560,000	49,123	3.15% Zn
IN-54	22'	15,000	330,000	28,947	11.13% Zn
IN-56	27'	15,000	405,000	35,526	8.19% Zn
IN-61	18'	35,000	630,000	55,263	4.02% Zn
	18'	35,000	630,000	55,263	3.66% Zn
IN-62	18'	35,000	630,000	55,263	5.70% Zn
	18'	35,000	630,000	55,263	2.00% Zn
Total				521,928	4.3% Zn

This estimate includes dilution for those runs of mineralization of less than 18' in thickness but accounts for no dilution of runs in excess of 18'. Insufficient drilling has been done to determine whether or not this mineralization occurs as one body or in several shoots.

It is considered that this deposit is not economically mineable at this time for a combination of reasons.

1. Relatively low tonnage. This would mean a high cost per ton to amortize the initial investment.

2. The thin, steeply dipping nature of the mineralization. The size and attitude of the deposit as it is presently interpreted indicate that mining and development costs per ton would be relatively high.

3. The remote location of the property. The geographically isolated location of deposit would impose higher transportation costs for obtaining supplies and materials and for shipping concentrates.

It must be borne in mind that this tonnage estimate is a generalized figure that is considered reasonable based on the sparse available data. This approximate tonnage estimate is meant to indicate, in a gross way, the amount of ore that might reasonably be expected to exist within the limits of the area tested.

Structure

The accompanying map (see AX-TENN-964-a and AX-TENN-965-a) shows structure contours drawn on the top of the Lower Kingsport (R bed).

While several small structural anomalies are present, no prominent folds or faults are evident. There appears to be no obvious structural control of the ore based on this interpretation.

SOLICITOR

SEP 16 1959

INTERIOR DEPT.

Mr. S. S. Goodwin
Vice President
The New Jersey Zinc Company
160 Front Street
New York 38, New York

Re: Docket No. DMEA-4153 (Zinc)
The New Jersey Zinc Company
Independence Area
Hancock and Hawkins Counties, Tennessee
Contract No. Idm-E950

Dear Mr. Goodwin:

Enclosed is a certificate of discovery or development that covers all the land described in Article 2 of the contract.

By the terms of the Exploration Project Contract, as amended, and the certification, all minerals mined or produced from May 10, 1956, to May 10, 1988, are subject to the Government's percentage royalty as set forth in the contract until the sum of $36,613.58 is repaid to the Government.

Royalty payments should be made to the Executive Officer, OME Field Team, Region V, Room 11, Post Office Building, Knoxville 2, Tennessee, by the purchaser with checks drawn payable to the Office of Minerals Exploration. The purchaser should be advised to deduct royalties from the amount due on each shipment and send the check to the Executive Officer. Each check should be accompanied by suitable sales evidence - such as copies of settlement sheets - showing the name of the purchaser, the quantity and grade of the products sold, and the price and charges, certified to be correct by the purchaser.

You are requested to notify the Executive Officer of any changes in ownership or production rights that may have any effect on the Government's right to its percentage royalty. Your attention is called particularly to Article 2 (d) of the contract relating to the preservation of the Government's right to a percentage royalty on production. Also when production starts, please notify the Executive Officer. Thereafter, if production ceases for any extended period, please notify him accordingly at six-month intervals.

Sincerely yours,

George C. Selfridge

Acting Director

Re: Docket No. DMEA-4153 (Zinc)
The New Jersey Zinc Company
Independence Area
Hancock and Hawkins Counties, Tennessee
Contract No. Idm-E950

Dear Mr. Fredell:

Enclosed is a copy of a certification of discovery or development related to Exploration Project Contract No. Idm-E950.

The contract was dated May 10, 1956, with the Government participating to the extent of 50 percent in an exploration project estimated to cost $214,300.00. Actual expenditures were $73,227.16, with the Government's share being half of such amount, or $36,613.58.

The total amount of work provided for under the contract consisted of 70,000 feet of diamond drilling and auxiliary churn drilling. Work actually completed consisted of 24,134 feet of such drilling.

The discovery consisted of replacement deposits of zinc ores occurring in the Kingsport (dolomite) formation, lying in the plane of the bedding. The estimated ore reserve resulting from the work of exploration under the contract consists of 500,000 tons, with a grade of 5 percent zinc.

Sincerely yours,

George C. Selfridge
Acting Director

Memorandum

To: E. D. Talbert, Acting Chief, Contract ~~Administration~~ and Audit Division, OME - Washington

From: OME Field Team, Region V - Knoxville, Tennessee

Subject: DMEA-4153, Idm-E950(zinc) The New Jersey Zinc Co. Independence Area, Hancock and Hawkins Counties, Tenn.

The subject contract was terminated on February 10, 1959 effective January 15, 1959. However, no work was done after August 1, 1958, when a recess was authorized in Amendment No.10, executed on September 23, 1958.

The July 1958 voucher was forwarded for payment on August 21, 1958; therefore we do not have a final voucher to hold in suspense pending final audit.

The following units of work have been completed and verified by our Field Examiners:

1) A total of 24,134 feet of diamond drilling was completed in 33 drill holes.

2) 56 analyses of core samples were made.

3) A final engineering and geological report has been received.

As this is a "long form" contract, I am requesting Mrs. Helen Miller to send you her file. A report of review is requested.

Note: A mistake of 1-foot was made in the addition of drill footage in our interim reports (see the March 27, 1958 interim report).

Subject: DMEA No. Idm E 950
INDEPENDENCE-LAWSON AREA
COPPER RIDGE BELT, TENNESSEE
FINAL REPORT

Dear Mr. Laurence:

Enclosed, herewith, are four copies of the final report covering the work done under DMEA 4153, Contract Idm E 950 in the Independence-Lawson area of the Copper Ridge Belt.

This report was prepared by Mr. E. W. Renshaw and presents in concise form the essential data obtained in this project. A complete set of detailed logs for each of the holes drilled is included as an appendix to the report.

Very truly yours,

THE NEW JERSEY ZINC COMPANY

Johnson Crawford

Assistant Manager of Mines

A. D. Hoagland/jf

Re: DMEA-4153, Idm-E950-Zinc.
Independence Area
Hancock & Hawkins Counties
Tennessee

Dear Mr. Crawford:

Receipt of four copies of the final geological report on the Independence project is acknowledged. Three copies have been forwarded to our Washington office for review.

We note with interest the statement that the drilling indicated an additional half million tons which added to the previous reserves indicates a total of about a million tons of 4% zinc. We feel that this statement should be supported by figures showing how the estimate was arrived at. What cut-off grade and thickness was used? How much area was controlled by each drill hole? Is the total in one single orebody, or in several separate shoots? Is the deposit not economically mineable because the total is too small, or because it is scattered in too many shoots, or solely because of present price and market conditions? To properly evaluate the results of the project, we need more basic data to support the generalizations expressed in the report. Also, copies of the structure-contour maps mentioned on page 5 would be most helpful.

To facilitate reading the drill logs, would you please send me four copies of a list of your abbreviations, so that one can be appended to each report? We, in the Field Office, are fairly familiar with your abbreviations, but many of them will be "Greek" to our Washington staff.

Sincerely yours,

Robert A. Laurence
Executive Officer, OME
Field Team, Region V

Independence - Lawson Area

Sector I Copper Ridge Belt

Hancock-Hawkins Counties, Tennessee

DMEA Docket No. 4153 Contract Idm E 950 (Zinc)

Summary

Exploration in the Independence-Lawson Area of Sector I of the Copper Ridge Belt was conducted from 1952 to 1958. Early in 1956 The New Jersey Zinc Company entered into a contract with the Defense Minerals Exploration Administration to conduct an exploration program for zinc in the Independence Area. Between May 1956 and May 1957 twenty-three holes were drilled under the DMEA contract. In 1958 the Lawson Area was included, by amendment, to the project area. Ten holes were drilled at Lawson under DMEA during 1958.

The diamond drilling done under DMEA is tabulated as follows:

	No. of Holes	Footage	Costs
Independence	23	18,191	$50,249.00
Lawson	10	5,943	22,978.18
	33	24,134	$73,227.18

Independence: Work to date has indicated the possibility of about a million tons of zinc ore with a grade of 4½ to 5% zinc.

Lawson: Only one hole penetrated ore grade mineralization (9 feet of 4.61% zinc).

Location

The Independence-Lawson project covered by DMEA contract Idm E-950 is comprised of 11 properties totalling about 1100 acres

in Hancock and Hawkins Counties, Tennessee. These properties extend along Copper Ridge from a point about 3 miles from the Virginia State line southwesterly about 20,000 feet (see Index Map AX-TENN-B-1289).

History

There are no known exposures of zinc mineralization in the Kingsport formation in the Independence area. Outcrops of this formation are rare except in the cross valleys of War and Willis Creeks where these streams cut through Copper Ridge. In the early months of 1952, geologic mapping and geochemical sampling by The New Jersey Zinc Company revealed the presence of strongly mineralized areas in the soils over the sub-outcrop of the Kingsport formation.

In July of 1952 diamond drilling was begun to test these geochemical anomalies and by February 1954, 47 drill holes totalling 26,480 feet had been completed. This drilling showed extensive zinc mineralization and a zone estimated to contain about a half million tons grading about 4% zinc.

In May 1956, DMEA contract Idm E 950 providing for 35,000 feet of drilling at an estimated cost of $107,150.00 was approved by the government. The purpose of the additional drilling was to further establish the gross ore potential of the area. Drilling under this contract was begun in the same month. By May 1957, twenty-three holes totalling 18,191 feet had been completed under the DMEA contract.

In November 1957, an amendment was made to the subject contract providing for an additional 35,000 feet of diamond drilling and the inclusion of the Lawson area at the southwestern

extremity of the contract area. By July 1958, ten holes totalling 5943 feet were completed in the Lawson area under the DMEA contract.

Property

The properties included within the Independence project area are shown on maps AX-TENN-B-568, AX-TENN-B-569a and AX-TENN-B-570A and are tabulated below:

I. Properties Covered by Contract Idm E 950

M. B. Horton property - purchase of mineral and mining rights to 186.7 acres and surface to 50 acres made 4/29/57

Flora Horton property - purchase of 61 acres of mineral and mining rights made 5/7/57

D. H. Darnell property- purchase of 108.7 acres of mineral and mining rights made 5/14/57

Floyd Edens property - purchase of 23.1 acres of mineral and mining rights made 5/27/57

Ralph Garrett property- purchase of 32.0 acres of mineral and mining rights made 5/27/57

W. H. Horton property - purchase of 75 acres of mineral and mining rights and 18.8 acres of surface made 6/10/57

E. F. Gilliam property- purchase of 32.1 acres of mineral and mining rights made 8/1/57

H. L. Gilliam property- purchase of 73.08 acres of mineral and mining rights made 11/15/57

L. W. Horton property - 250 acres under option

R. Williams property - 187 acres under option

G. M. Horton property - 62 acres under option

II. Properties Dropped from Contract Idm E 950

T. J. McMillan & T. Hilton	104 Acres	✓ Option	terminated

Geology

The Independence Area lies along the southeast slope of Copper Ridge at elevations ranging from 1300 feet at Willis Creek to 1950 feet at the crest of Copper Ridge. The southeast slope of the ridge is underlain by the Upper Longview, Kingsport, Mascot and Chickamauga formations of Lower and Middle Ordovician Age. These formations form a homoclinal structure dipping southeast about 56°. The strike is quite uniform and averages about N 60° E.

Stratigraphy

Data from the diamond drill core permitted the compilation of a detailed stratigraphic column of the Mascot and Kingsport formations. Correlations of marker beds can be made from hole to hole within the area and major stratigraphic units can be correlated

with other areas on Copper Ridge where drilling has been done.

Mascot Formation: At Independence the Mascot is approximately 410 feet thick. It consists of fine-grained dolomites, dark grey to buff in color and often characterized by reddish mottling particularly in the upper 1/3 - 1/2 of the formation. The lower 1/2 of the formation has numerous sandy zones. These zones are a few inches to a few feet thick and consist of quartz sand grains in a fine dolomite, a chert matrix sandstone or a chert pebble conglomerate. The zones can usually be used as marker beds. One such marker, a few inches of white chert matrix sandstone, marks the base of the Mascot.

Kingsport formation: The Kingsport is about 210 feet thick at Independence. The Upper Kingsport (100') consists of fine-grained light grey to buff dolomites characterized by numerous sandy straticulate zones and fine dolomite beds containing chert nodules. These light colored fine dolomite beds are often bleached almost white near ore. Ore in the Upper Kingsport occurs in white gangue dolomite between breccia blocks of fine dolomite.

The Lower Kingsport (110') consists mostly of limestone with thin interbedded fine dolomites. In and near the ore zones the limestone section is all or partially altered to coarse crystalline dolomite. Ore in the Lower Kingsport occurs as replacement ore in the coarse dolomite and filling openings in breccias in the coarse dolomites.

Structure

Diamond drilling at Independence has revealed no large structural anomalies. Structure contours and sections reveal

several small structures but their relation, if any, to the ore is not understood.

Two drill holes at Lawson penetrated a fault zone with extensive associated mylonite and fracturing. The apparent displacement on this fault is on the order of 150 feet. There is no known ore associated with this fault but there is weak pyrite and very weak sphalerite mineralization in the fault zone.

Drilling

The holes drilled in this area are shown on the plan maps and sections accompanying this report, (Appendix A). Also enclosed are copies of the drill logs (Appendix B). Those holes drilled under the DMEA program were along strike and dip fences at least 400 feet apart with holes at least 100 feet apart on the fences.

Independence: Twenty-three holes were drilled in the vicinity of the previous ore discovery. In six of these holes ten penetrations of mineralization were made having an average grade and drill hole penetration distance of 6.6% zinc and 15.2 feet respectively. The limits of the mineralized zone have not been defined nor has drilling within this zone been at close enough spacing to reveal a detailed picture. The mineralization occurs within the Kingsport formation in relatively thin bodies that lie in the plane of the bedding.

Lawson: No previous diamond drilling had been done in this area but geochemical and geologic data suggest that ore might be present in the area. This area was added to the contract by Amendment No. 5 and eleven holes were drilled. Ten of these were drilled under the DMEA contract. One, not covered by the contract,

was drilled at Company expense. Five other holes penetrated small amounts of sub-ore grade zinc mineralization. Three holes contain substantial amounts of pyrite, but no ore grade zinc mineralization was found associated with it. The chances of discovering an ore body of the magnitude of the Independence ore zone appear to be remote. The Company's property interests in the vicinity of the Lawson drilling have been terminated and the properties deleted from the contract.

Conclusions

Drilling done by the Company, previous to the DMEA contract, had indicated at Independence about half a million tons grading approximately 4% zinc.

Six of the DMEA drill holes made penetrations indicating possibly an additional half a million tons of 4½% to 5% zinc.

The million tons thus indicated occurs in thin, steeply dipping lenses. Because of the nature and attitude of these occurrences there is doubt that they can be mined economically except under extraordinary conditions.

Drilling of the portion of the Lawson Area judged to be most favorable for the occurrence of ore on the basis of geology and geochemistry failed to disclose ore. For this reason and because the results of drilling failed to generate new insight to guide additional exploration the area is now judged to have poor potential.

Re: Docket No. DMEA-4153 (Zinc)
The New Jersey Zinc Company
Independence Area
Hancock and Hawkins Counties,
Tennessee
Contract No. Idm-E950

Dear Mr. Laurence:

Your memorandum dated February 27, 1959, to the Operating Committee states you recently learned that on April 2, 1958, the Operator obtained a 5-year option on the 35-acre Hiram Herron tract "for the purpose of making detailed geochemical studies along the outcrop" and not for any purposes of the contract. The Herron tract adjoins the L. W. Horton tract which immediately adjoins the contract land. The L. W. Horton tract, optioned to the Operator on June 5, 1956, was added to Annex 1 by Amendment No. 11, dated January 14, 1959. Your memorandum asks whether the Herron tract should be added to the land described in the contract by an amendment, pursuant to the "contiguous" provision of paragraph numbered 1 of Annex 1, prior to execution of the Termination Agreement by the Operator.

It is our view that in the circumstances of this case the parties did not intend and the Operator could not be required by amendment to add the Herron tract as "contiguous" land. Accordingly, there seems to be no obstacle to execution of the Termination Agreement.

Sincerely yours,

George C. Selfridge

Memorandum

To: Associate Solicitor, Division of Minerals Resources

From: Chief, Division of Base Metals

Subject: Review of Memorandum dated February 27, 1959 from Mr. Robert A. Laurence, ExecutiveOfficer, Region V, re Docket No. DMEA-4153, The New Jersey Zinc Company, Independence Area, Hancock and Hawkins Counties, Tennessee, Contract No. Idm-E950, Zinc.

We call your attention to the self-explanatory memorandum of Mr. Laurence, Executive Officer, Region V, dated February 27, 1959, (also to map which we have attached to his memo).

We agree with Mr. Laurence that the Hiram Herron (or Hiram Herring) tract is of no concern to us. Do you concur?

Memorandum

To: Operating Committee, OME, Washington, D. C.

From: Field Team, OME, Region V, Knoxville, Tennessee

Subject: DMEA-4153, Idm-E950 (Zinc)
The New Jersey Zinc Company, New York, New York
Independence area, Hancock County, Tennessee

This week, we were advised by the Operator that, on June 5, 1956 they had secured a 5-year option to the L. W. Horton property which adjoins the original Independence contract area on the northeast. It is shown on the Operator's map AX-TENN-570 which accompanies the application, but not on the contract map, figure 2A. No contract work has been done on or near this property.

Accordingly, we drafted and forwarded to the Operator, Amendment No. 11, dated January 14, 1959, providing for the addition of this 250-acre tract to the contract, and advised them to withhold signing the Termination Agreement until Amendment 11 had been executed.

However, we now learn that on April 2, 1958, the New Jersey Zinc Company secured a 5-year option on the 35-acre Hiram Herron tract (incorrectly designated as Hiram Herring on map AX-TENN-570). This was not for purposes of the contract, but to enable them to make detailed geochemical studies along the outcrop areas adjacent to the zone "TR" as shown on the map. It appears to us that this property is not automatically added under the provisions of paragraph 1 of "Special Agreement Concerning Land," as it is not "contiguous to the premises described in this Contract" but instead is contiguous to contiguous lands added by amendment, and is more than 3800 feet from the nearest point in the original contract area.

Therefore, we have not prepared an amendment to add this property. The Operator has agreed to postpone execution of the Termination Agreement until we receive a ruling on this.

Will you please advise us whether or not we are required to add the Hiram Herron property, under the terms of the "Special Agreement Concerning Land?"

Contract No. Idm-5950

Dear Mr. Laurence:

This is with reference to your memorandum of February 2, 1959 (pertaining to land deletions) and your other memorandum, of the same date, covering contract termination.

Both features have been provided for in the proposed Termination Agreement (two pages), the original and four copies of which are enclosed. All copies have been signed by the Acting Director for the Government. Also enclosed are two extra copies for the use of the Field Team.

If the agreement meets with your approval, kindly present it to the Operator for approval and signature and, when completed, distribute all the copies in the usual manner. Otherwise, and if any proposed change should lie beyond your delegated authority, return all copies to us with your recommendations.

TERMINATION AGREEMENT

It is agreed this ____ day of _____, 1959, between the United States of America, acting through the Department of the Interior, Office of Minerals Exploration, hereinafter called the "Government," and the New Jersey Zinc Company, hereinafter called the "Operator," parties to that certain Exploration Project Contract No. Idm-E950 (Docket No. DMEA-4153), dated May 10, 1956, as amended, hereinafter called the "Contract," that:

1. Pursuant to the provisions of Article 2 of the Special Agreement Concerning Land in Annex I, the following parcels of land are hereby deleted from the land referred to in Article 2 of the Contract and described in Annex I, as amended:

Name of Property Owner	Acres
M. B. Horton	~~230~~ 283
H. C. Anderson	100
Emma Brickley and L. Brickley	70
C. C. Lawson and Claude Lawson	146
N. M. Moneyhun	40
Kyle Johnson and wife Dinah Johnson	100
Hilton - McMillan	
M. C. Herron	

The Operator:

(a) certifies that the lands have no known value for mineral production;

(b) has, prior to the execution of the respective amendment, surrendered or otherwise disposed of all its interest, title, and equity in such lands, and any minerals produced therefrom, including any option, lease, or permit thereto, without any consideration whatsoever, including future compensation, for such surrender or disposition, other than relief from the cost of maintaining such interest;

(c) agrees that no benefit from such lands or any production of minerals therefrom will accrue to the Operator or to any of its subsidiaries, directly or indirectly, during the period expiring thirty years from the date of this Contract;

(d) agrees that if the Operator or any of its subsidiaries acquires any interest, title or equity in such

Long
Lenger
Agr'd Sol. No.

lands or any minerals produced therefrom, or derives any benefit therefrom, before the expiration of thirty ~~25~~ years from the date of this Contract, the lands with respect to which such interest, title, or equity is acquired, and any minerals produced therefrom, shall be deemed subject to this Contract and any certification from the date that the Operator or its subsidiaries acquired such interest, title, or equity, or any benefit therefrom, until the expiration of thirty ~~25~~ years from the date of this Contract, or until the total net amount contributed by the Government without interest is fully repaid, whichever occurs first.

2. Effective January 15, 1959, the Contract and all obligations of the parties thereunder, except as otherwise herein expressly provided shall be and are hereby terminated.

3. The Government shall contribute only to the allowable costs of work performed prior to January 15, 1959.

4. The Operator shall promptly perform all winding-up and settlement actions provided for in the Contract, including the rendering of the final report and final account.

5. All rights of the Government respecting certification of discovery or development, percentage royalty and liens to secure the payment thereof, reports (including preservation of Operator's records), accounts, audits, and the right to recover any overpayment, are hereby preserved.

6. The Operator hereby releases and agrees to save the Government harmless from all claims or demands under or arising out of said Contract, except as otherwise provided in this termination agreement.

IN WITNESS WHEREOF, these parties have executed this agreement as of the day and year first above written.

Memorandum for the Docket

From: Chief, Division of Base Metals

Subject: Justification for Termination Agreement for
Docket No. DMEA-4153 (Zinc)
The New Jersey Zinc Company
Independence-Lawson Area
Hancock and Hawkins Counties
Tennessee
Contract No. Idm-E950

In two memorandums, both dated February 2, 1959, the Field Team recommends certain land deletions and likewise a contract termination. The requested land deletions are in order. Likewise, we see no reason to object to a contract termination. An ore discovery has been made and the project will be certified, it appears that the discovery may be in the order of half a million tons, of around 5.5% zinc grade. These figures are, of course, only tentative, subject to the proper final report.

Memorandum

To: Operating Committee, OME - Washington

From: Field Team, OME - Region V - Knoxville, Tennessee

Subject: DMEA-4153, Idm-E 950-Zinc. Independence-Lawson areas, Hancock and Hawkins Counties, Tennessee
The New Jersey Zinc Company, Jefferson City, Tenn.

Enclosed are the original and two copies of a letter from the Operator, requesting termination by mutual agreement.

Although the drilling to date has discovered a significant amount of ore-grade material, the tonnage is not adequate to justify development under present conditions. It is unfortunate that the Operator does not wish to complete the authorized work. Undoubtedly they would have done so, had the zinc market conditions been more favorable.

Work was resumed by January 1, in accordance with Amendment No. 10, but no footage was drilled and therefore there will be no January voucher. Accordingly, the July 1958 voucher, paid in August, becomes the final voucher.

In view of the reluctance (one might almost say refusal)of the Operator to complete the project, we recommend preparation of the requested Termination Agreement, effective January 15, 1959. Certification will be recommended.

January 29, 1959

Mr. R. A. Laurence, Executive Officer
DMEA Field Team, Region V
Room 13, Post Office Building
Knoxville 2, Tennessee

Subject: DMEA 4153, Idm E 950 - ZINC
INDEPENDENCE-LAWSON AREAS
HANCOCK AND HAWKINS COUNTIES, TENNESSEE

Dear Mr. Laurence:

This is to advise you of our desire to terminate DMEA contract Idm E 950 covering exploration diamond drilling in the Independence and Lawson areas of the Copper Ridge Belt.

Diamond drilling in the Independence area was begun under this contract in May, 1956 and 23 holes had been drilled when work was recessed in May, 1957. Six of these holes penetrated zinc mineralization of ore grade and thickness. As of this date, a total of 18,191 feet of drilling had been done at a cost of $55,211.57.

In November 1957, amendment number 5 provided for an additional 35,000 feet of diamond drilling and enlarged the project to include properties within the Lawson area. Drilling under this amendment began in February, 1958 and by July of the same year, 11 holes (10 covered by the contract) were completed. None of these holes found zinc mineralization of ore grade and thickness and only one hole penetrated mineralization in possibly significant amounts. The project was then recessed until January 1, 1959. During the recess period, geochemical material, including auger drill testing on the Lawson area were subjected to additional analytical tests and re-evaluation and the geology and diamond drill results were reviewed in an effort to distinguish exploration targets sufficiently attractive to warrant further diamond drilling.

A crew of geologists and surveyors have resumed

work under the contract on the C. C. Lawson, M. C. Herron, Claude Lawson, Emma Brickey and H. C. Anderson properties. A strike fence of holes was laid out on the Anderson property, lines were cut, and survey control was carried into this area. The purpose of this proposed line of diamond drill holes was to test the weak geochemical anomaly on this property. It has now been concluded that this anomaly does not warrant exploration under present conditions. This conclusion is considerably influenced by the unfavorable results obtained in the test drilling of the similar but larger C. C. Lawson geochemical anomaly. Total drilling under the Independence-Lawson contract has been 24,134 feet at a cost of $73,227.18.

Notwithstanding the considerable portion of the contract remaining unexpended, no further exploration of the Independence-Lawson area is considered warranted at the present time. We regret that approval could not be secured for the proposed amendment to the subject contract so as to permit additional drilling on the adjacent Eidson properties. Here, we feel is an opportunity to prove additional tonnages of zinc ore. Had this amendment been approved, it would not have been necessary to terminate this contract.

Yours very truly,

THE NEW JERSEY ZINC COMPANY

Subject: DMEA 4153, Idm E 950 - ZINC
INDEPENDENCE-LAWSON AREAS
HANCOCK AND HAWKINS COUNTIES, TENNESSEE

Dear Mr. Laurence:

Exploration diamond drilling under the subject contract has failed to discover ore in the portion of the contract area referred to as the Lawson area. Although the test of this area is not considered to be conclusive, indications of ore potential are not sufficiently encouraging to warrant further diamond drilling here at the present time. Option agreements are being terminated on the properties listed below and request is hereby made for an amendment deleting these properties from the contract:

- M. B. Horton 230?
- H. C. Anderson 100
- Emma Brickey 70
- C. C. Lawson and Claude Lawson 146
- N. M. Moneyhun 40
- Kyle Johnson (Amendment # 8) 50
- Helton-McMillan (Amendment # 9) 104
- M. C. Herron

The M. C. Herron property, lying between C. C. Lawson and Claude Lawson was originally intended to be included in the contract. This property, although shown as part of the contract area on the map accompanying Amendment # 5, was not specified in the properties listed. Our option on the M. C. Herron property is being terminated and this property should also be deleted from the contract.

Yours very truly,
THE NEW JERSEY ZINC COMPANY

Re: EMRA-4153, Idm-8950-Zinc
Independence area
Hancock and Hawkins Counties,
Tennessee

Dear Mr. Crawford:

We have just been advised by our Washington office that the proposal to combine Contracts Nos. Idm-8950 (Independence) and Idm-8956 (Ridgem), as requested in your letter of December 4, 1958, cannot be done under the existing regulations. This has been discussed with Mr. Hoagland.

Therefore, the drilling remaining under Idm-8950 must be done on the Independence-Lawson area, and should be completed by August 1, 1959, as provided in Amendment No. 10.

Sincerely yours,

Robert A. Laurence

Contract No. Idm-E950

Dear Mr. Laurence:

We have your memorandum of December 11, 1958, regarding the possibility of combining Dockets DMEA-4153 and 4177 into one project.

We can recognize the logic of your recommendation and the matter was referred to the Office of the Associate Solicitor. He has given the proposal a thorough study and has advised us that, under existing regulations, no such action could be taken by us.

Will you please advise the Operator accordingly.

Sincerely yours,
