Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket No. DMEA 4017 (Uranium) Contract I3m-6946, Colamer Corporation (Phillis, Fannie, Jean, and Deeta group) McKinley County, New Mexico - TENTATIVE FINAL PAYMENT

Reference is made to our memorandum of November 1, 1956, whereby we transmitted the final Form MF-104, Operator's Monthly Report and Voucher, for the month of September, 1956, and requested that you withhold the amount of $500.00, from reimbursement to the Operator, pending resolution of matters prerequisite to closing the account.

The Operator's final report has been received; therefore, we recommend that tentative final payment to the Operator be made on the following basis, which is in conformance with the Report of Review of reported project costs by the Contract Administration and Audit Division, DMEA, dated November 7, 1957. The Report of Review includes reinstatement of certain costs previously disallowed by the Finance Office, Region III, and includes additional acceptable costs not yet reported by the Operator. The following relative correspondence is attached:

1. Copy of a memorandum, dated November 6, 1957 from the Acting Executive Officer, DMEA Field Team, Region III, to Donald T. Finch, DMEA Auditor, recommending reinstatement of costs incident to the drilling of Stage III hole No. 184.

2. Copy of a memorandum dated January 2, 1958, from Donald T. Finch, DMEA Auditor, to the Executive Officer, DMEA Field Team, Region III, concerning the procedure to be followed in making tentative final payment to the Operator

RECEIVED
JAN 13 1958
AUDITS
BUREAU OF MINES

Basis for Tentative Final Payment:

Total accepted cost reported to date by the Operator	$58,612.84
Government participation at 75%	43,959.63
Total prior payments	42,563.69
Amount of tentative final payment	$ 1,395.94

As indicated in the Report of Review and in the attached memorandum, dated January 2, 1958, from Donald T. Finch, DMEA Auditor, an additional amount is due the Operator if properly claimed. Sufficient funds to cover the additional amount are to be retained in the account until such time as the Operator submits a supplemental Voucher covering the additional allowable costs, or until the account is otherwise closed.

Acceptable cost subject to claim by the Operator	$ 1,140.61
Less Audit offset	295.72
Balance	844.89
Government participation at 75% (to be claimed)	$ 633.67

Memorandum

To: Donald T. Finch, DMEA Auditor

From: Acting Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 4017 (Uranium) Contract Idm-2940, Calamar Corporation (Phillis, Fannie, Jean, and Dorta group) McKinley County, New Mexico - Disallowance of footage claimed for Hole No. 184.

With reference to the disallowance of costs claimed by the Operator in drilling Hole No. 184, discussed in your memorandum of November 5, 1957, I do not agree with the disallowance for reasons as follows:

1. Hole No. 184, as well as 182, 183, and 185, were offset holes to Hole No. 123.

2. The justification for offsets to Hole No. 123 was based on mineralization found between depths of 425 and 426.5 feet in that hole.

3. The collar elevations of Hole No. 123 and of the four offset holes are about the same, and the sedimentary rocks are essentially horizontal. The principal target of Hole No. 184 was, therefore, a sandstone bed at a depth of about 425 to 430 feet.

4. Hole No. 184 was drilled non-core to a depth of 400 and cored from that point to a depth of 455 feet.

It is my opinion that Hole No. 184 reached the principal objective and was drilled according to the terms of the contract. Acceptance of costs incurred in drilling this hole is recommended.

Memorandum

To: W. H. King, Executive Officer, DMEA Field Team, Region III

From: Donald T. Finch, DMEA Auditor

Subject: Report of Review - Colamer Corporation
Docket No. DMEA 4017 (Uranium), Contract No. Idm-2940
(Sec. 10, T 13 N, R 9 W) McKinley County, New Mexico

Reference is made to the Report of Review dated November 7, 1957, and the request by your staff concerning present and contingent payments due the contractor.

The following schedule of costs and Government participation has been prepared in accordance with a letter from Mr. J. L. Chambers, Director of Contract Administration and Audit Division, DMEA: dated December 3, 1957

COSTS

Total cost claimed by Operator			$58,612.84
Exceptions per schedule attached to Report of Review			
By Finance Officer	$1,194.59		
Less: Reinstatement by audit	906.57	$ 288.02	
Disallowance during Review		7.70	295.72
Total Net Cost Claimed			$58,317.12
Add: Acceptable cost (not claimed) to offset disallowance			295.72
Total Accepted Cost Claimed			$58,612.84
Additional cost allowable		$1,140.61	
Less offset used above		295.72	
Net additional cost if claimed			$ 844.89

GOVERNMENT PARTICIPATION

The contract calls for a 75 percent participation of accepted costs. Therefore, payments as follows are valid and proper: -

On cost claimed	$43,959.63	
On additional cost if claimed	633.67	
Total amount payable if claimed		$44,593.30
Amount payable on audited claim	$43,959.63	
Amount reimbursed	42,563.69	
Balance due on audited claim		$ 1,395.94
Additional amount due Operator if claimed		$ 633.67

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 4017 (Uranium) Contract Idm-E940, Colamer Corporation (Phyllis, Fannie, Jean and Deetta claims) McKinley County, New Mexico - Operator's Monthly Progress Report for the month of September, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended on the following basis, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

Disallowance, Non-Core drilling

Disallow an amount of $8.02, a part of the cost of stand-by time which the Operator has charged to non-core drilling. The cost of stand-by time has been prorated by this office according to the ratio of core footage to non-core footage drilled in Holes 194 and 207, for which stand-by time was charged. All core drilling was performed at the maximum allowable unit cost, therefore the above amount, which was prorated to core drilling, is not allowable. The maximum allowable unit cost for non-core drilling was not exceeded after adding the cost of stand-by time prorated to non-core footage.

Withhold an amount of $500.00 pending possible additional work under the contract, or if additional work is not approved by the Government and performed by the Operator, continue to hold the above amount pending resolution of matters relative to closing the account.

Reconciliation with Amount Reported by the Operator on Form MF-104 for September, 1956

Amount reported on Form MF-104 for Sept., 1956 - - - -	$4,009.80
Amount to be disallowed -	8.02
Total accepted cost for September, 1956	$4,001.78
Government participation at 75 percent - - - - - - - - - -	$3,001.34
Amount to be withheld -	500.00
Recommended payment to the Operator	$2,501.34

Remarks

Date of Report - - - - - - - - - - - - - -	October 3, 1956

Memorandum

Building 20
Denver Federal Center
Denver 2, Colorado
October 22, 1956

RECEIVED NOV 8 1956 D.M.E.A.

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: D. E. Redmon

Subject: Docket DMEA 4017 (Uranium) Contract Idm-E940, Colamer Corporation, Phyllis, Fannie, Jean, and Deetta claim groups, Sec. 10, T. 13 N., R. 9 W., NMPM, McKinley County, New Mexico.
--Progress report for September 1956

An inspection of progress was made September 12, 1956, by W. D. McMillan, Bureau of Mines, accompanied by J. Haly, geologist for the operator.

Six holes were drilled during the period. Hole No. 207 (2700N - 2250W) is classified as a stage II hole (refer to confirming letter from W. M. Traver to Kelsey Boltz, August 24, 1956). Hole Nos. 194, 195, 196, 197, 198, are stage III holes (aforementioned reference). Hole data is as follows:

Hole No.	Plug-bit feet	Core-bit feet	Total feet	% Core recovery	Remarks
194	355	37	392	100	Barren
195	370	25	395	88	Barren
196	360	40	400	100	Barren
197	345	75	420	91	1.0' - .02 eU_3O_8
198	370	51	421	100	2.0' - .02 eU_3O_8
*207	414	108	522	32.9	0.5' - .02 eU_3O_8
Total	2214	336	2550	76	

*Stage II hole authorized to be drilled through the Westwater Canyon member.

Claim for standby time is supported by Minerals Engineering Company driller's logs.

Approved costs are as follows:

Plug-bit drilling - 2214 feet at $0.95 a foot	$2,103.30
Core-bit drilling - 336 feet at $3.50 a foot	1,176.00
Standby time - 3 1/2 hours at $12.00 a hour	42.00
Incidental allowance - 2550 feet at $0.27 a foot	688.50
Total approved costs	$4,009.80

It is recommended that 75 percent of the approved total, or $3,007.35 be approved for payment.

Progress accomplished in September completes approved stage II and stage III drilling. The operator indicates in his narrative report that "...further drilling in this zone is unwarranted."

It is recommended that at least $250.00 be withheld pending receipt of final report.

The operator's narrative report is adequate, as are the lithologic and radiometric logs and recapitulation of mineralization. All are retained in this office along with a complete set of drill contractor's logs. A duplicate set of drill contractor's logs for hole Nos. 194, 195, 196, 197 and 198 are submitted with this report. Only one copy of log for hole No. 207 was received and is retained in this office.

Signature [illegible] Title Executive Officer Date NOV 1 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

(Instructions on reverse)

(For Government use only) D. E. Redmon

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

October 3, 1956

MONTHLY NARRATIVE REPORT OF DRILL SCHEDULE 4017
CONTRACT NO. Ida-1240
MONTH OF SEPTEMBER

During the month of September the following holes were completed:

HOLE NO.	PLUG (FT)	CORE (FT)	SEARCH TIME (HRS.)	DATE COMPLETED
194	355	37	½	9-01-56
195	370	25	-	9-01-56
196	360	48	-	9-01-56
197	345	75	-	9-02-56
198	370	51	-	9-03-56
207	414	103	2	9-03-56
Total	2214	336	3½	

Holes numbers 194 through 198 inclusive were offset holes through the Poison Canyon sandstone near mineralized first stage holes numbers 117, 165 and 179. The mineralization found in these offset holes was slight and occurred only near the upper and lower contacts of the Poison Canyon sandstone. With this information I believe that further drilling in this zone is unwarranted.

Hole No. 207 showed one half foot of 0.025 U_3O_8 (radiometric) @ 417 at the bottom of the Poison Canyon sandstone, and a Poison Canyon sandstone thickness of 52 feet. The sandstone is bleached in this area.

Core recovery this month has averaged 76%

Enclosed with this report are:

1. Lithologic logs
2. Drillers logs
3. Recapitulation of mineralization
4. Radiometric logs
5. One original and four copies of
   (a) MT104
   (b) MT104A
   (c) Monthly narrative
6. Invoice from drilling contractor

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: Docket DMEA 4017 (Uranium) Contract Idm-E940, Colemer Corporation (Phillis, Fannie, Jean and Dasta groups) McKinley County, New Mexico - Operator's Monthly Progress Report for the month of August, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

Except as otherwise noted below, it is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended on the following basis, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

Hole No. 184 was not completed to its objective, therefore the drilling costs and incidental allowance for this hole are disallowed as follows

Disallow

a) The cost of 55 feet of core drilling at $3.50 per foot----------	$192.50
b) The cost of 400 feet of non-core drilling at $0.95 per foot----------	380.00
c) Incidental allowance for 455 feet of drilling at $0.27 per foot----------	122.85
Total amount to be disallowed	$695.35

Reconciliation with Amount Reported by the Operator on

Form MF-104 for August, 1956

Amount Reported	$10,734.36
Amount to be disallowed	695.35
Total accepted cost for August, 1956	$10,039.01
Government participation at 75 percent	$ 7,529.26

Fifteen holes were reported for the period, including Stage III hole No. 184 which was disallowed. Of the fourteen approved holes, three holes (180, 201, 206) were drilled under Stage II and eleven holes were drilled under Stage III.

Remarks

Date of Report----------September 10, 1956
Date Received in Field Office---------September 17, 1956

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shea
Supervising Mining Engineer

From: W. D. McMillan

Subject: DMEA Docket 4017 (Uranium) Contract IAm-2560, Colmmar Corporation, Phillis, Fannie, Jean, and Doris claim groups, Sec. 16, T. 13 N., R. 9 W., NMPM, McKinley County, N. M. -- Progress report for August 1956

An inspection of progress was made on September 5, 1956, accompanied by Jean Baly, geologist for the applicant. Fifteen holes under Stage III were drilled during the period. Hole No. 154 was drilled to a depth of 465 feet but the last 10 feet was lost. The operator claimed payment for 455 feet. In as much as the hole was not completed its cost is disallowed.

Data on the holes from Mineral Engineering Company's logs and the geologic logs are given below.

Hole No.	Non-Core feet	Core Feet	Core Rec. %	Total feet	Remarks Interval	Rad.%	Chem.%

Totals	6151	842		7033			
Claimed	6151	842		6993			
*Disallowed	400	55					
Approved	5751	787					

Approved costs:

5751 feet plug-bit drilling at $0.95 a foot	$5501.45
787 feet core drilling at $3.50 a foot	2754.50
Incidental allowance 6538 feet at $0.27 a foot	1776.06
Chemical analyses 2 at $3.50 ea.	7.00
Total	$10,039.01

It is recommended that 75 percent of the approved total costs amounting to $7529.58 be approved for payment.

The operator's narrative report included geologic and radiometric logs, which are retained in this office. A summary of the drilling results is attached to the report. Core bit drilling was done with NX size bits.

The drilling contractor's logs were submitted in duplicate, and one set is included with this report. Assay Certificate for two samples is also included.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only) Wm. Miller

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

134	393	157	75	8-31-56
135	333	127	76	8-31-56

As usual, the drilling contractor had great difficulty in getting good core recovery in some holes because the Folson Canyon and Westwater sandstones are very friable. However, as inspection reveals, core recovery has improved since the new agreement was made with the drilling contractor to make compulsory five foot runs when recovery falls below 85%.

Included with this report are complete driller's logs of each hole, a recapitulation of all mineralization encountered and the results of two assays.

Respectfully,

COLORADO CORPORATION

Gene K. Eaby

GENE K. EABY,
Geologist.

	10,776.5	1,234.5	12,013		1,819.5	

In order to add incentive for better core recovery, the drilling contract with Minerals Engineering Company was amended on July 18, 1956 to pay for all core footage. Paid core footage, due to low percentage recovery, on the holes drilled prior to July 18, 1956, was 1,819.5 feet as compared with 1,234.5 feet actually drilled as claimed by the operator on Form RF-1044.

Approved costs are for 10,776.5 feet of plug-bit drilling at $0.95 a foot, or $10,239.98, and 1,819.5 feet of core-bit drilling at $3.50 a foot, or $6,368.25, and incidental allowance, 12,013 feet at $0.27 a foot, or $3243.51, a total of $17,851.34.

It is recommended that 75 percent of the approved total, or $12,788.51 be approved for payment.

The operator's narrative report is adequate, as it included radiometric logs of the holes, copies of radiometric logs by the U. S. Atomic Energy Commission, and a geologic log, which are retained in this office.

The drill contractor's logs were submitted in duplicate and one set is included with this report.

179	535	43	67	40	7-26-56

In order to add incentive for better core recovery, on July 18, 1956, the drilling contract with Minerals Engineering was amended as follows:

1. All core footage was to be paid for. (Where as previously if core recovery fell below 80% only the core recovered was paid for.)
2. If core recovery falls below 80% the following run must be a five foot run and must remain five foot runs until 80% recovery is again achieved at which time a ten foot run may follow.

Upon request a certified copy of this amendment to the contract will be suplied you.

Due to the above conditions hole #13[illegible] was partially paid for on the old terms and partially on the new terms making the amount of core paid for more than the 34% recovery would indicate. Core in all holes drilled after July 18, 1956 is paid for 100%.

Great difficulty was experienced in coring the Westwater and recovery was so low even with five foot runs, (in many cases 50% and less), that it was decided to go to wet drilling and plug the Westwater thereby gaining 100% wet samples. This was only done in holes in which we had water return. Those holes in which circulation was lost were cored as usual even though recovery was low in some cases.

Included with this report are complete driller's logs of each hole. All radiometric logs are included plus the log of hole #164 which was excluded last month. Also included with this report is a copy of the recapitulation of the mineralization in all holes drilled to date.

Respectfully,

COLAMER CORPORATION

Gene K. Ealy

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

August 29, 1956

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 4017 (Uranium) Contract Idm-E940, Colamer Corporation (Sec. 10, T13N, R9W) McKinley County, New Mexico - Operator's Monthly Progress Report for the month of June, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended on the following basis, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

The cost of 1/2 hour stand-by time in hole 120 and 1/2 hour in hole 121 is allowed in addition to the 10 hours recommended in the Engineer's Report for holes 162, 163 and 172.

Disallowance, Non-Core drilling:

Amount reported by Operator, 6,782 feet at total cost of- - - - - - - - - - - - - - - -	-$5,725.15
The allowable cost as determined from driller's logs and drilling subcontract, 6,782 ft. at total cost of- - - - - - - - - - -	5,535.53
Amount to be disallowed	$ 189.62

Reconciliation with Amount Reported by the Operator on Form MF-104 for June, 1956

Total amount reported on Form MF-104 for June, 1956 - -	$ 12,290.36
Amount to be disallowed- - - - - - - - - - - - - - - - - - - -	189.62
Total accepted cost- -	$ 12,100.74
Government participation at 75 percent- - - - - - - - - -	$ 9,075.55

Note: Actual core drilling performed during the period was 1,634.5 feet. In accordance with the provisions of the drilling subcontract payment is made only for the footage of core actually recovered in those holes where core recovery is less than 80 percent. This results in a lower average cost per foot for the total core drilling performed. The Operator has correctly reported the core footage and cost on Forms MF-104 and MF-104A.

Remarks

Date of Report - - - - - - - - - - - - - - - - - July 9, 1956
Date Received in Field Office- - - - - - - - July 11, 1956
Date Received in Region Office- - - - - - August 28, 1956
Report held in field office pending receipt of logs and other data from Operator

W. M. TRAVER

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: W. D. McMillan

Subject: DMEA 4017 (Uranium) Contract Idm-3940, Colamar Corporation, Phillis, Fannie, Jean, and Beata Claim Groups, Sec. 10, T. 13 N., R. 9 W., NMPM, McKinley County, New Mexico -- Progress report for June, 1956

Progress was checked on July 10, 1956, accompanied by Jean Baly, geologist for Colamar Corporation.

The accompanying table gives data on the holes drilled during June, 1956 as shown by drilling contractor's logs.

6/30	175	-	458	458	127	67	85	585	1.0' - 0.09 "
		4157.5	2624.5	6782.0	1634.5		1286.5	8416.5	
		.70	.95				$3.50		
		$2910.25	$2493.28	$5403.53			$4292.75		

Note: Drilling contract was amended June 15, 1956 increasing cost of plug drilling from $0.70 to $0.95 a foot.

The drilling contractor's logs agree with total footage claimed by the operator in the narrative report; 6782 feet non-core drilling, 1634.5 feet core drilling; total drilling for June 1956, 8416.5 feet.

Operator reported 1634.5 feet of core drilling on Form MF-104, but only paid for 1286.5 feet at $3.50 a foot, or $4502.75 in accordance with his agreement with the drillers.

Operator performed 4157.5 feet of non-core drilling at $0.70, costing $2910.25 and 2624.5 feet at $0.95 a foot costing $2493.28 or a total of $5403.53. He charged $5785.15 for that item on Form MF-104.

Driller's logs show a total of 10 hours standby time used at holes 162, 163 and 172 for which $12.00 an hour is charged and this is allowed because Idm-2940 contract permitted a non-core drilling cost of $1.25 a foot.

Approved costs are as follows:

4157.5 feet of non-core drilling at $0.70 a foot	$2910.25
2624.5 feet of non-core drilling at $0.95 a foot	2493.28
1286.5 feet of core drilling at $3.50 a foot	4502.75
10 hours of standby time at $12.00/hr.	120.00
8416.5 feet at $0.27 for incidental costs	[illegible]
	$12,[illegible]

It is recommended that 75 percent of the approved total costs, amounting to $9066.56 be approved for payment.

A certified copy of Colmar's amended sub-contract with Mineral Engineering Company is on file in your office.

Radiometric logs and drilling contractor's logs in duplicate were submitted by the applicant.

One set of logs are attached with this report.

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature [illegible] Title Executive Officer Date AUG 29 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS:

(Instructions on reverse)

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man-days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

	6782	1634.5		1226.5	

This month drilling shows nine holes in which the core recovery has fallen below 80% as can be seen from the drillers logs. Practically all coring is being done in the sand units and most non core drilling in the shale units. The sands in this area are extremely soft and in many cases the core has simply been washed away. However, when this occurs we have the drillers recover the washed out core by means of water circulation and wet samples are recovered for this interval, so that we can still obtain information in this interval of drilling.

Included with this report are complete drillers logs of each hole. All radiometric logs are included with the exception of hole No. 164 which at this date has not been returned to us by the A.E.C. This will be forwarded immediately to your offices as soon as we can obtain a copy. Also included with this report are six copies of a recapitulation of the mineralization found in all holes drilled to date with the exception of hole No. 164.

Respectfully,

COLORADO CORPORATION

KENNETH BERTZ

Memorandum

To: T. A. Christensen

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 4017 (Uranium) Contract Idm-E940, Colamer Corporation (Phillis, Fannie, Jean and Deeta claim groups) McKinley County, New Mexico - Operator's Monthly Progress Report for the month of May, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Operator's Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended for 75 percent of the amount as reported on Form MF-104, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations, except for the following deductions.

Disallow 1) an amount of $280.00, the actual cost of 80 feet of core drilling in hole No. 104 at $3.50 per foot. The Operator has claimed the cost of 178 feet of core drilling in this hole, but driller's logs indicate that only 98 feet of core drilling was performed.

2) an amount of $21.60, the Incidental Allowance for 80 feet of drilling at $0.27 per foot.

Total amount disallowed - - - - - - - - - - - $301.60

Reconciliation with Amount Reported by the Operator on Form MF-104 for May, 1956

Amount reported on Form MF-104 - - - - - - - - - - - - -	$12,971.67
Amount disallowed- -	301.60
Total accepted costs- -	$12,670.07
Government Participation at 75 percent- - - - - - - - - -	$ 9,502.55

Driller's logs, radiometric logs and geologic logs are retained at the Denver Experiment Station.

Remarks

Date of Report- - - - - - - - - - - - - - - - - - -	July 7, 1956
Date Received in Field Office- - - - - - - - -	July 9, 1956
Date Received in Region Office- - - - - - - -	August 1, 1956

REGION III

Memorandum

Building 20
Denver Federal Center
Denver 2, Colorado
July 24, 1956

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

From: W. D. McMillan

Subject: DMEA Docket 4617, Contract Ldm-2940, Colamar Corporation, Phillis, Fannie, Jean, and Beeta Claim Groups, Sec. 10, T. 13 N., R. 9 W., NMPM, McKinley County, New Mexico
Progress Report for May, 1956

Progress was checked on June 4, 1956 accompanied by Jean Maly and Kelsey Bolts, geologists for Colamar Corporation.

Data on the holes drilled during May, 1956, from the drilling contractor's logs are given below:

Hole No.	Non-core	Core	Total	Core Recovery	Remarks
103	450	130	580	95	5 feet-0.03 to 0.08% U_3O_8
104	495	98	593	86	2 feet-0.02 to 0.09% "
105	497	100	597	84	Few inches 0.03% "
106	465	80	545	86	No radiometric anomalies
107	491	54	545	69	" " "
108	414	84	498	85	Few inches 0.03% U_3O_8
109	340	121	461	83	No radiometric anomalies
110	302	123	425	86	" " "
111	526	29	555	91	" " "
112	470	99	569	77	< 0.01% U_3O_8
113	358	206	564	76	W.W.C.-7 feet 0.03 to 0.12% U_3O_8
					P.C.-4 feet 0.025 to 0.06% "
114	488	62	550	100	5 feet 0.03% "
115	495	45	540	100	4 feet 0.035% "

117	414	111	525	89	P.C.-3.0 feet 0.030 "
					W.C.-6.5 feet 0.070 "
118	402	110	512	82	No Radiometric Anomalies
119	433	72	505	67	" " "
Totals	7522	1577	9099		

The operator claims 7334 feet plug bit drilling and 1657 feet paid core bit drilling.

The drill contractor's logs show 7522 feet of non-core drilling as compared with 7334 feet shown by the operator, and the drillers logs only show 1577 feet of core drilling as compared with 1657 claimed by the operator. Therefore the allowable footage of non-core drilling is reduced by 108 feet, and the allowable footage of core drilling reduced by 80 feet. The claimed unit costs are in accordance with the contract between Minerals Engineering Company and Colamer Corporation.

Approved costs for May are 7334 feet of non-core drilling at $0.70 per foot or $5,133.80, 1577 feet of core drilling at $3.29 per foot or $5,188.33, incidental allowance 8911 feet at $0.27 per foot or $2,405.97, a total of $12,728.10.

It is recommended that 75 percent of the approved total cost, amounting to $9,546.08, be approved for payment.

The operator submitted one copy each of driller's logs and radiometric logs which are retained in this office.

Copies in quintuplicate of the intervals and equivalent U_3O_8 and the formations are enclosed with this report.

W. D. McMillan
Mining Engineer

Signature W. M. Mary Title Executive Officer Date AUG 8 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

117	414	111	81	111	5-24-56
118	402	110	82	110	5-27-56
119	433	72	69	49.7	5-29-56
Total	7334	1657		1545.8	

Some difficulty has been experienced in drilling most of the holes. Hole 113 had to be cased before it could be probed. Therefore, the readings on the radiometric bahble log can be increased approximately 10%. The Empire log, however, reached a depth of 400 feed before casing was put into the hole.

To date the Fosion Canyon sandstone has been bleached in every hole. In holes 118 and 119, however, part of the Fosion Canyon was unbleached. The Westwater has been unbleached in holes 117, 118 and 119. However, as can be seen on the radiometric log of hole 117 at least one horizon was bleached and in this horizon the best mineralization, yet found in Section 10 in the Westwater, occurred. Drillers logs and radiometric logs were sent with the previous report.

Respectfully,

COLAMER CORPORATION

Kelsey Holtz

From: Executive Officer, DMEA Field Team, Region III

Subject: DMEA Docket 4017 (Uranium) Contract Idm-E940, Colamer Corporation (Phillis, Fannie, Jean and Deeta groups) McKinley County, New Mexico - Operator's Monthly Progress Report for the month of April, 1956

Enclosed are the original and four copies each of Forms MF-104 and MF-104A, Narrative Report, and Engineer's Report for the above period.

It is deemed that the Operator has complied with the intent of the contract, and the work for which payment is recommended is acceptable to the Government. Payment is recommended for 75 percent of the amount as reported on Form MF-104, contingent on your verification of the correctness of applicable rates and arithmetical accuracy of computations.

Memorandum

To: Executive Officer, DMEA Field Team, Region III

Through: John F. Shaw
Supervising Mining Engineer

RECEIVED
JUL 25 1956

From: W. D. McMillan

Subject: Docket DMEA 4017, Contract Idm-E940, (Uranium) Colamer Corporation, Phillis, Fannie, Jean, and Deeta claim groups, Sec. 10, T. 13 N., R. 9 W., NMPM, McKinley County, New Mexico -- Progress report for April 1956

Progress was checked on May 3, 1956 accompanied by Jean Baly, geologist for Colamer Corporation.

Data pertaining to holes completed during April are given below from the driller's logs.

Hole No.	Plug-bit	Core-bit	% Core Recovery	Total	Remarks
101	385	180	76	565	316-318 -0.02% U_3O_8
102	410	211	81	621	447-451 -0.023%
	795	391		1,186	

Core bit drilling was through the Westwater Canyon member and into the Recapture member, which is contrary to the terms of the contract and only the core-bit drilling through the Poison Canyon part of the Brushy Basin member is being claimed.

Considerable difficulty was experienced in Hole 101, which required 8 days to complete with NX core-bit from 385 feet to 572 feet, BX core-bit from 512 feet to 543 feet and NX core-bit from 543 to 565 feet.

The cores are stored in a galvanized iron shed. The bottom boxes were examined and were found to be in bleached Westwater Canyon sandstone with considerable amounts of pyrite. In Hole 102 there was broken core between 605.4 feet and 606.4 feet.

The operator claims 795 feet of plug-bit drilling at $0.70 a foot or $556.50, 208 feet of core-bit drilling at $3.50 a foot or $728.00, and incidental allowance of 1003 feet at $0.27 a foot, or $270.81, with a total of $1555.31.

It is recommended that 75 percent of the total claimed or $1166.48 be approved for payment.

The claimed unit costs for plug-bit, core-bit, and incidentals are in accordance or less than the contract unit costs. A certified copy of Colsmer Corporation's sub-contract with Minerals Engineering Company is on file in your office.

Holes numbers 101 and 102 are located on a north-south fence 200 feet east of the western boundary of Sec. 10, and 200 feet and 600 feet respectively south of the northern boundary of Sec. 10, with Hole No. 101 on the Karen No. 8 claims and Hole 102 on the Jean No. 29 claim. These have been placed on Sketch Map No. 2, a copy of which is attached to the original of this memorandum.

The operator submitted copies of the radiometric logs and the drilling contractor's logs, which are being retained in this office.

OPERATORS MONTHLY NARRATIVE REPORT DMEA DOCKET 4017
CONTRACT Idm-E940

Drilling under this contract was commenced April 24, 1956. Two holes were completed by April 30, 1956:

HOLE NO.	NON CORE	CORE	% RECOV.	CORE PAID	DATE COMPLETED
101	385	105	81	105	4-30-56
102	410	103	92	103	4 4-30-56
Totals	795	208		208	

Considerable difficulty was encountered in hole no. 101 in recovery of core. This was due to the highly fractured Poison Canyon Sandstone. Also, these were the 1st holes drilled by the contractors and recovery will undoubtly improve when they become more familiar with subsurface conditions.

Copies of drillers logs and radiometric logs were enclosed with previous report.

Respedtfully,

COLAMER CORPORATION

APPROVAL BY DMEA EXECUTIVE OFFICER OR ALTERNATE:

Signature W. M. Haney Title Executive Officer Date JUL 19 1956

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.
