Memorandum

To: Administrative Management Division

Through: Director, Supply Division

From: Minor and Rare Metals Branch

Subject: Virgin Valley Uranium
Humboldt County, Nevada
DMA docket 1544x

Under date of May 25, 1951, Jack A. Crane, Elk House Ranches, Route 2, Box 555, Oswego, Oregon, submitted the subject application, DMA-1544x, requesting a project in the sum of $35,500, for government participation of $31,950, (90%).

Attached here find letter of even date addressed to applicant denying his application on the grounds of improbability of making any significant discovery by further exploration of the known, local uraniferous layers. This opinion is concurred in by field team, AEC, and U. S. G. S.

Complete docket is attached, comprised of the following:

(a) Three copies replies from MF-103 and submittal letter.
(b) Copy of referral to field team.
(c) Field team's recommendation and two copies field team's report.
(d) Reference slip bearing recommendation by J. O. Hosted and H. D. Keiser.

Re: Virgin Valley Uranium
Humboldt County, Nevada
DMA docket 1544x

Dear Mr. Crane:

Subsequent to receipt of report from the field team, the Minor and Rare Metals Branch has completed acoareful review of your application.

We regret to advise that your application must be denied at this time, as the possibilities of finding economically mineable material by additional exploration of known uranaiferous layers are not considered good. Should other ore bearing deposits of more promise be discovered on your ground, we would be glad to consider a new application from you.

Yours very truly,

Tom Lyon BJ 8-10

DMA Docket 1544x

Dear Mr. Crane:

Subsequent to receipt of reports from the field teams, the Minor and Rare Metals Branch has completed a careful review of your application.

We regret to advise that your application must be denied at this time, as the possibilities of finding economically winnable material by additional exploration of known uraniferous layers are not considered good. Should other or further deposits of ore grades be discovered on your ground, we would be glad to consider a new application from you.

Yours very truly,

Tom Lyon

Memorandum

To: Tom Lyon, Chairman, Coordinating Committee, Defense Minerals Administration, Washington, D. C.

From: Executive Officer, DMA Field Team, Region III

Subject: DMA-1544X - Virgin Valley, Humboldt County, Nevada (Uranium)

Reference is made to your undated subject "Review of Application for Exploration Assistance" received in this office on June 25. This property was examined by M. H. Staatz and H. L. Bauer, Jr., Geologists, U. S. Geological Survey, in November 1950, and reported on by them in Trace Elements Memorandum Report 227, dated May 1951. The re-examination made by George W. Walker and Robert F. Johnson, U. S. Geological Survey, in 1951 of the new pits dug since Staatz and Bauer's report, showed no Uranium minerals and they agree with Staatz and Bauer that "the possibilities of finding economically mineable material by additional exploration of known uraniferous layers are not considered good". It is recommended, therefore, that the application be denied.

Four copies of the report DMA-1544X, "Crane" Deposit, Virgin Valley, Humboldt County, Nevada (Uranium) by George W. Walker and Robert F. Johnson, Geologists, U.S. Geological Survey, dated July 20, 1951, are attached.

Attached also is the subject docket.

REPORT OF EXAMINATION BY FIELD TEAM
REGION III

DMA-1544x, "Crane" Deposit, Virgin Valley

Humboldt County, Nevada

(Uranium)

George W. Walker and Robert F. Johnson, Geologists
U. S. Geological Survey

July 20, 1951

DMA-1544x, "Crane" Deposit, Virgin Valley
Humboldt County, Nevada

(Uranium)

Introduction

DMA docket 1544x, "Crane" deposit, Virgin Valley, Humboldt County, Nevada, proposes to explore a section of nearly flat lying, uranium-bearing beds of tuff, ash, and opal of late Tertiary or Quaternary age. Locally, carnotite is present as a thin coating on many fracture surfaces in brittle and highly siliceous layers. It also is found as disseminated particles throughout some of the unfractured beds.

In response to a request from the Chairman of theCoordinating Committee of DMA to Mr. H. C. Miller, Executive Officer, Field Team, Region III, a field examination of the property was made by George W. Walker and Robert F. Johnson of the U. S. Geological Survey on July 5, 1951. The results of an investigation of the property in November 1950, by M. H. Staatz and H. L. Bauer, Jr., of the Federal Survey, are contained in Trace Elements Memorandum Report 227, dated May 1951. Their report covers in some detail the location of the property, the geology, description of the ore deposits, including 37 analyses for uranium, and an estimate of the ore reserves. Their evaluation of the deposit, as seen at the time of their examination, indicates that under present economic conditions the deposit cannot be profitably exploited. Therefore, this report is directed entirely toward a re-evaluation of the property, based on exploration and development that have been done by the owners since November 1950. Assuming that the economics of uranium recovery have not appreciably changed since the evaluation made in November, the property does not merit a Government exploration loan.

Recent Exploration and Development

Staatz and Bauer report that in November 1950 they examined a carnotite-bearing area consisting of 19 claims located and owned by Jack and Toni Crane of Oswego, Oregon. At that time development work consisted of a 315-foot bulldozer trench and 12 small pits on the east side of Virgin Valley, and 3 small pits on the west side of the valley. The report does not indicate whether this represents the total number of claims and total development at that time.

On July 5, 1951, when the writers examined the property, a total of 42 claims had been located by Jack and Toni Crane. Many of these cover a long, narrow belt of land lying north of the area examined by Staatz and Bauer. Development work includes the pits and trench described by Staatz and Bauer, and in addition, a larger number of shallow prospect pits and bulldozer trenches on claims lying to the north. These pits were checked with Geiger-Mueller counters, and reconnaissance counter traverses were made from one pit to another. No radioactive material was noted in the new pits or on the traverses between pits.

Evaluation of the Deposit

The evaluation of the Virgin Valley deposits as described in Trace Elements Memorandum Report 227, by M. H. Staatz and H. L. Bauer, Jr., is as follows:

> "The uranium content of the known deposits of uraniferous opal in the Virgin Valley opal district is insufficient to warrant economic development at present prices. The possibilities of finding economically mineable material by additional exploration of known uraniferous layers are not considered good.
>
> Only a small area was studied in detail for this report. Because opal deposits are widely distributed in the Virgin Valley area, however, further prospecting may discover additional deposits of radioactive opal. Prospecting should be directed toward the discovery of opal layers of greater thickness and regularity, and of higher uranium content than those described in this report."

The examination on July 5, 1951, uncovered no new or additional evidence that would warrant a change in the evaluation made by Staatz and Bauer. Nearly flat-lying tuff, ash, and opal beds containing carnotite are exposed along the sides of Virgin Valley, but the concentration of uranium is too low for profitable exploitation. The applicant proposes to explore by core drilling the extensions of these beds. No evidence indicating an increase in the uranium content on the extensions of the carnotite-bearing layers was found. Therefore, until such time as deposits of this grade can be worked economically the property does not merit an exploration loan.

DMA-1544x, "Crane" Deposit, Virgin Valley
Humboldt County, Nevada

(Uranium)

Introduction

DMA docket 1544x, "Crane" deposit, Virgin Valley, Humboldt County, Nevada, proposes to explore a section of nearly flat lying, uranium-bearing beds of tuff, ash, and opal of late Tertiary or Quaternary age. Locally, carnotite is present as a thin coating on many fracture surfaces in brittle and highly siliceous layers. It also is found as disseminated particles throughout some of the unfractured beds.

In response to a request from the Chairman of theCoordinating Committee of DMA to Mr. H. C. Miller, Executive Officer, Field Team, Region III, a field examination of the property was made by George W. Walker and Robert F. Johnson of the U. S. Geological Survey on July 5, 1951. The results of an investigation of the property in November 1950, by M. H. Staatz and H. L. Bauer, Jr., of the Federal Survey, are contained in Trace Elements Memorandum Report 227, dated May 1951. Their report covers in some detail the location of the property, the geology, description of the ore deposits, including 37 analyses for uranium, and an estimate of the ore reserves. Their evaluation of the deposit, as seen at the time of their examination, indicates that under present economic conditions the deposit cannot be profitably exploited. Therefore, this report is directed entirely toward a re-evaluation of the property, based on exploration and development that have been done by the owners since November 1950. Assuming that the economics of uranium recovery have not appreciably changed since the evaluation made in November, the property does not merit a Government exploration loan.

Recent Exploration and Development

Staatz and Bauer report that in November 1950 they examined a carnotite-bearing area consisting of 19 claims located and owned by Jack and Toni Crane of Oswego, Oregon. At that time development work consisted of a 315-foot bulldozer trench and 12 small pits on the east side of Virgin Valley, and 3 small pits on the west side of the valley. The report does not indicate whether this represents the total number of claims and total development at that time.

On July 5, 1951, when the writers examined the property, a total of 42 claims had been located by Jack and Toni Crane. Many of these cover a long, narrow belt of land lying north of the area examined by Staatz and Bauer. Development work includes the pits and trench described by Staatz and Bauer, and in addition, a larger number of shallow prospect pits and bulldozer trenches on claims lying to the north. These pits were checked with Geiger-Mueller counters, and reconnaissance counter traverses were made from one pit to another. No radioactive material was noted in the new pits or on the traverses between pits.

Evaluation of the Deposit

The evaluation of the Virgin Valley deposits as described in Trace Elements Memorandum Report 227, by M. H. Staatz and H. L. Bauer, Jr., is as follows:

> "The uranium content of the known deposits of uraniferous opal in the Virgin Valley opal district is insufficient to warrant economic development at present prices. The possibilities of finding economically mineable material by additional exploration of known uraniferous layers are not considered good.
>
> Only a small area was studied in detail for this report. Because opal deposits are widely distributed in the Virgin Valley area, however, further prospecting may discover additional deposits of radioactive opal. Prospecting should be directed toward the discovery of opal layers of greater thickness and regularity, and of higher uranium content than those described in this report."

The examination on July 5, 1951, uncovered no new or additional evidence that would warrant a change in the evaluation made by Staatz and Bauer. Nearly flat-lying tuff, ash, and opal beds containing carnotite are exposed along the sides of Virgin Valley, but the concentration of uranium is too low for profitable exploitation. The applicant proposes to explore by core drilling the extensions of these beds. No evidence indicating an increase in the uranium content on the extensions of the carnotite-bearing layers was found. Therefore, until such time as deposits of this grade can be worked economically the property does not merit an exploration loan.

Review of Application for Exploration Assistance

Docket No. DMA 1544 X

Commodity Uranium

Total Amount $35,000.00

Govt. Participation $31,950.00

1. Name and Address of Applicant Jack A. Crane, Cedarville, California

2. Location of Property Virgin Valley, Humboldt County, Nevada

3. Mineral or metal Uranium Is it listed in Section 9 of MO-5? Yes

If not, application will be rejected.

4. Geologic probability of discovery—based on data in application (question #16, 17, 18, 20 and 22)*

Mines or Survey reports, etc., do you rate chances:

a) Good

b) Poor

c) None

d) Don't know—needs field examination Report by field team is required.

e) Is there an alternative and favorable project? (If so, attach an explanation)

5. Is the applicant's right to the property clearly stated? (question 5, 6, 7)*

6. If applicant is a lessee, is a copy of the lease attached?

Does the lease have sufficient time to run to cover a future productive period?

*question numbers are those of MF-103

7. Are subordination agreements necessary?_____

a) MF-201?_____

b) MF-202_____

8. From the data presented, does the proposed project appear feasible from the point of view of:

a) Available manpower_____

b) Equipment and supplies_____
(Question 14 plus general knowledge of availability)*

c) Accessibility (question 12)*_____

d) Water (question 13)*_____

e) Power (question 13)*_____

Is a field check needed on any of these points?_____

9. Does the experience of the applicant appear to be adequate to assure that he can properly conduct the proposed project? (question 4)*_____

_____

Is a field check needed on this point?_____

10. Exhibit A. (questions 21 and 22)*

a) Is the project adequately described?_____

If not, are there sufficient data given so that you can describe the project?_____ If so, attach a draft.

b) Is there an adequate map or sketch of the proposed work?_____

_____

c) Is the proposed work "exploration" under the definition of Section 8, MO-5?_____

If not, what part of it is?_____

_____

_____

_____

Is this part a worthwhile exploration project?_____

d) Are the cost estimates detailed?_____

Can they be summarized, as on page 2 of Procedural Instruction 5-A, from the available data?_____ If so, attach a draft.

e) Are the cost estimates reasonable?_____

f) Should more information be requested from applicant?_____

g) Is a field examination necessary to complete Exhibit A?_____

11. Exhibit B (question 23-d)*

a) Is it applicable?_____

b) If so, are sufficient data furnished?_____ If so, attach a draft.

c) Is a field check needed?_____

12. Exhibit C (question 23-e, f and g)*

a) Is it applicable?_____

b) Sufficient data?_____ If so, attach a draft.

c) Are rents and charges reasonable?_____

d) Is a field check needed?_____ _____

13. Exhibit D (question 23-a, b)*

a) Are there sufficient data?_____

b) Is the schedule adequate for the work proposed?_____

c) Is the schedule excessive for the work proposed?_____

d) Are the proposed wages and salaries reasonable?_____

e) Is a field check needed?_____

14. Exhibit E (question 23-c)*

a) Is it applicable? _____

b) Sufficient data? _____

c) Reasonable? _____

d) Field check needed? _____

15. In your judgment, can the proposed work be done in the proposed time? _____

(All exploration must be completed within two years)

16. If field examination is not needed, attach your recommendation.

17. If field examination is needed, do you have any special instructions for the field team not indicated by your answers to the foregoing question? It is suggested that this application be reviewed with Lincoln R. Page, Geological Survey, and Charles C. Towle, Atomic Energy Commission. TEMR-227 indicates that the economic possibilities are probably poor.

Dear Mr. Crane:

Your application docket DMA-1544x for exploration project in the amount of $35,000.00 has been received by the Minor and Rare Metals Branch of the Supply Division.

Before a decision can be reached on your request we find it is necessary to obtain additional information on your property. Your application therefore is being referred to the office of the Executive Officer of DMA field team III, 1415 Appraisers Building, San Francisco, California, Mr. H. C. Miller, with the request that the needed information be supplied to us.

Yours very truly,

Re: Virgin Valley Uranium
Humboldt County, Nevada
DMA docket - 154x

Dear Mr. Crane:

Your application of May 25, 1951, DMA-154x, for an exploration project in the amount of $35,500 has been received by the Minor and Rare Metals Branch of the Supply Division. Before a decision can be reached on your request it will be necessary to obtain additional information on your property, before we can determine if a field examination is necessary.

I am attaching hereto contract form MF-200, which I suggest you review carefully at this time. In the event your project is given a preliminary clearance, the next step is to draw up a contract; unless the exhibits referred to (Exhibits A to E inclusive) are complete in all respects, including maps, some unnecessary delay may of course result. I would suggest therefore, that you prepare six copies each of this material and forward to my office. In line with the suggestion contained in paragraph 23 of your application, I would suggest also that you have your engineer prepare in detail the exploration program, cost requirements and so forth.

Please contact Mr. H. C. Miller, Executive Officer of the DMA Field Team 1415 Appraisers Building, San Francisco, California, if you are in doubt of any of the points covered in the contract.

Yours very truly,

Tom Lyon

Gentlemen:

Acting upon recommendations from the Bank in Winnemucca, Nevada, we have written our Senator here in regards to further exploration of our properties. We learned only today from another party who is making application that the deadline for filing is May 31st. We obtained one copy of your Form MP-103 (April 1951) and have made a facsimile report.

We sincerely hope you will accept this report as it is impossible for us to obtain your forms in time to file.

The properties mentioned in the report at this date already have five established mines. We sincerely believe from geological and previous engineering that these properties by proper exploration could become a very permanent phase in uranium production.

Our field address is:

Jack A. Crane,
General Delivery,
Cedarville, California.

Respectfully submitted,

Jack A. Crane

THE APPLICANT

1. Individual
2.
3.
4. a. Former electrical and construction superintendent for Kaiser Co. and Ingalls Steel Corporation.
   b. My intentions are to hire a competent mining superintendent.
5. All 42 claims are owned by myself and wife.
6. There are no liens, or encumbrances against any of the properties.
7. All claims have been surveyed properly, marked and all assessment and location work done. Contracts for percentage agreements for other personnel are by contract of individual nature and do not in any way encumber the property.
8. Personal financial statement: Assets $50,000.00 -Liabilities $2,175.00. This operation in process now of shipping, therefore no P&L statement.

9. a. Can finance $25,000.00 if necessary. Yes.
10. a. No real property involved in this operation at present.
    b. 42 claims in the Virgin Valley Opal Mining District, Humboldt Co., Nevada. These claims lie ten miles south of the old Sheldon CCC Camp on the Virgin Valley Road. Said properties being located on Federal grazing range of the Sheldon Game Refuge.
11. This is a new area and has not previously been claimed.
12. The property lies 110 miles due east from Cedarville, California and 145 miles from Winnemucca, Nevada due east with 85 miles paved road. All roads giving a year round shipping possibility.
13. Abundance of water directly on property from Thousand Creek reservoir. This being an all season stream. Power to be furnished by deisel generator as required.
14. Have erected at present dwelling together with full camp and commissary facilities on property.
15. We are now entering into an agreement with Vitro Chemical Co., Salt Lake City, Utah for milling and handling of entire output. Trucking contract has been made.
16. Have been engaged in exploratory work for the past four years. Personal equipment consists of special equipped trucks and laboratory equipment for radio active and other strategic ores. Explorations have covered most of southwest Oregon to the central portion of Nevada. Have at this writing been working in close cooperation with Dr. Nininger, U. S. AEC, Ansonia Station, N. Y. City, N.Y. on a number of large low grade deposits I have discovered. This enterprise, however, is strictly a personal adventure and in no way has been used for promotion or individual financing.
    a. Previous exploration of these properties has been done by cuts, Geiger counters, and Scintillometer readings. In 1950 the U. S. Geological Survey made a geological map of this operation upon the advice of Mr. Jesse C. Johnson, Mgr. of Raw Materials, Washington, D.C.
    b. To the best of my knowledge this occurence is floatation nature and there is no adjoining operations or will be within the vicinity of 50 miles.
    c. Reports: DeMent Laboratories, Portland, Ore. - Uranium contents 0.67% on the pitchblende equivalent: 3 tests from 3 respective cuts.
    Associated Laboratories, Portland, Oregon 0.67%.
    Vitro Chemical Co., Salt Lake City, Utah mill average 0.26%
    Engineers Syndicate, Ltd. Hollywood, Calif. 0.67%.
    Private enginseering and geology ore stratas as to tonnage almost unlimited. Metallurgical and production possibilities extremely favorable in all localities.
17. a. At present we have blocked out for delivery approximately 14 tons of high grade ore and are only awaiting field engineer and chemist from Vitro Chemical Co., Salt Lake City, Utah. Shipping program to start the middle of June 1951.
    1. Mining. For the next 12 months will be of strip characteristic with anticipated manpower a total of 100 tons per week at minimum mining expense. The grade by Scintillometer readings will average approximately 0.30%. Cost per ton of mining should be under present

conditions $12.00 . Net value per ton at Government quotation of 0.26% U_3O_8 approximately $4.75 per lb.

2. Milling. Refer Vitro Chemical Co., Salt Lake City, Utah.
3. Shipped or sold. None at present. In process now.

18. 14 tons stockpilled.
   a. The uranium ore is of uranifane characteristic forming in a very malleable rock. The ledges running from 10" to 2' in width. Vivid occurences of uranium oxide accompany a thick chalk belt lying above and below the main ore vein. The metallurgical analysis refer Vitro Chemical Co., Salt Lake City, Utah.
   b. We are instructing by mail to forward you the maps of this locality from the Fish and Wild Life Regional Office.
   c. Estimated tonnage and grade ore reserves is our primary motive in requesting this assistance as our intentions are to core drill along the top of the plateau.

19. This occurence we believe from various engineers and geologists could easily be of sufficient magnitude to warrant extensive operation. Due to the fact that there is three very definite and consistent ore stratas running one above the other where they are visible on the canyon wall sides. The length has been established by cuts and Scintillometer readings which show they are the identical veins extending over a mile in length and approximately 3/4 mile in width on one side of the valley. The other side being against a table land extending 25 miles to the Knott Creek Range.

20. Uranium. Vanadium. (Tin)

21. It is my intention to core drill the plateau and follow the ledge formation back to its extremity. The overall time element has been computed at 14 months.

22. Statements of geological certainty as to the formation is manifest in our arrangements for shipping and handling of the ore by the Vitro Chemical Co. together with the private engineering that has been done on the property. These reports will be submitted at your request.

23. To the best of my knowledge and due to the fact that exploration of this type should be of a highly flexible nature we would prefer having our engineer furnish you a detail of these requirements. However, it has been figured by us to spend $20,000.00 in this exploration. Practically all of the money going for equipment with very little in proportion being expended for secondary expenditure. Our main idea is to bring into operation additional ore deposits. At your request will furnish an engineering report on your item 23.

24. We have previously estimated a time schedule based entirely on findings of the first few cuts of core samples. Should the veins run in a southerly direction the ash formation will greatly facilitate exploration. However, should they follow an easterly pattern time would be increased due to hard rock formation. The over-all exploration not to exceed seven months. Due to the nature of the deposit with each opening a new operation can be started.

Location of mine Virgin Valley Humboldt Co., Nevada

Date of filing MF-100

DMA Docket Number, if available

THE APPLICANT

1. Individual
2.
3.
4. a. Former electrical and construction superintendent for Kaiser Co, and Ingalls Steel Corporation.
   b. My intentions are to hire a competent mining superintendent.
5. All 42 claims are owned by myself and wife.
6. There are no liens, or encumbrances against any of the properties.
7. All claims have been surveyed properly, marked and all assessment and location work done. Contracts for percentage agreements for other personnel are by contract of individual nature and do not in any way encumber the property.
8. Personal financial statement: Assets $50,000.00 -Liabilities $2,175.00. This operation in process now of shipping, therefore no P&L statement.

9. a. Can finance $25,000.00 if necessary. Yes.
10. a. No real property involved in this operation at present.
    b. 42 claims in the Virgin Valley Opal Mining District, Humboldt Co., Nevada. These claims lie ten miles south of the old Sheldon CCC Camp on the Virgin Valley Road. Said properties being located on Federal grazing range of the Sheldon Game Refuge.
11. This is a new area and has not previously been claimed.
12. The property lies 110 miles due east from Cedarville, California and 145 miles from Winnemucca, Nevada due east with 85 miles paved road. All roads giving a year round shipping possibility.
13. Abundance of water directly on property from Thousand Creek reservoir. This being an all season stream. Power to be furnished by deisel generator as required.
14. Have erected at present dwelling together with full camp and commissary facilities on property.
15. We are now entering into an agreement with Vitro Chemical Co., Salt Lake City, Utah for milling and handling of entire output. Trucking contract has been made.
16. Have been engaged in exploratory work for the past four years. Personal equipment consists of special equipped trucks and laboratory equipment for radio active and other strategic ores. Explorations have covered most of southwest Oregon to the central portion of Nevada. Have at this writing been working in close cooperation with Dr. Ninninger, U. S. AEC, Ansonia Station, N. Y. City, N.Y. on a number of large low grade deposits I have discovered. This enterprise, however, is strictly a personal adventure and in no way has been used for promotion or individual financing.
    a. Previous exploration of these properties has been done by cuts, Geiger counters, and Scintillometer readings. In 1950 the U. S. Geological Survey made a geological map of this operation upon the advice of Mr. Jesse C. Johnson, Mgr. of Raw Materials, Washington, D.C.
    b. To the best of my knowledge this occurence is floatation nature and there is no adjoining operations or will be within the vicinity of 50 miles.
    c. Reports: DeMent Laboratories, Portland. Ore. - Uranium contents 0.67% on the pitchblende equivalent: 3 tests from 3 respective cuts.
    Associated Laboratories, Portland, Oregon 0.67%.
    Vitro Chemical Co., Salt Lake City, Utah mill average 0.26%
    Engineers Syndicate, Ltd. Hollywood, Calif. 0.67%.
    Private engineering and geology ore stratas as to tonnage almost unlimited. Metallurgical and production possibilities extremely favorable in all localities.
17. a. At present we have blocked out for delivery approximately 14 tons of high grade ore and are only awaiting field engineer and chemist from Vitro Chemical Co., Salt Lake City, Utah. Shipping program to start the middle of June 1951.
    1. Mining. For the next 12 months will be of strip characteristic with anticipated manpower a total of 100 tons per week at minimum mining expense. The grade by Scintillometer readings will average approximately 0.30%. Cost per ton of mining should be under pre

conditions $12.00 . Net value per ton at Government quotation of 0.26% U_3O_8 approximately $4.75 per lb.

2. Milling. Refer Vitro Chemical Co., Salt Lake City, Utah.
3. Shipped or sold. None at present. In process now.

18. 14 tons stockpilled.
    a. The uranium ore is of uranifane characteristic forming in a very malleable rock. The ledges running from 10" to 2' in width. Vivid occurences of uranium oxide accompany a thick chalk belt lying ~~xxxxx~~ above and below the main ore vein. The metallurgical analysis refer Vitro Chemical Co., Salt Lake City, Utah.
    b. We are instructing by mail to forward you the maps of this localit from the Fish and Wild Life Regional Office.
    c. Estimated tonnage and grade ore reserves is our primary motive in requesting this assistance as our intentions are to core drill along the top of the plateau.

19. This occurence we believe from various engineers and geologists could easily be of sufficient magnitude to warrant extensive operation. Gentlemen:

Acting upon recommendations from the Bank in Winnemucca, Nevada we have written our Senator here in regards to further exploration of our properties. We learned only today from another party who is making application that the deadline for filing is May 31st. We obtained one copy of your Form MF-103 (April 1951) and have made a facimile report.

We sincerely hope you will accept this report as it is impossible for us to obtain your forms in time to file.

The properties mentioned in the report at this date already have five established mines. We sincerely believe from geological and previous engineering that these properties by proper exploration could become a very permanent phase in uranium production.

Our field address is:

Jack A. Crane,
General Delivery,
Cedarville, California.

Respectfully submitted,

Jack A. Crane
