Re: Docket No. DMA 2172X - Manganese
Black Bird Claim
Lander County, Nevada

Dear Mr. Stoker:

Your application for an exploration loan and other information referring to the above noted property available to us in Washington have been carefully reviewed.

The information indicates that, geologically, there is little probability of making a significant mineral discovery. We regret, therefore, to inform you that your application is denied.

We wish to thank you for your interest in the Defense Minerals Program, and for your activity in this instance.

Sincerely yours,

C. O. Mittenderf

Acting Administrator
Defense Minerals Exploration
Administration

In reply please refer to
DMA-2171 Tungsten

Gentlemen:

We have reviewed your application for a direct Government loan of $257,000 for a 200-ton mill, mine development and working capital.

The claims which you now hold under lease from the Rawhide Tungsten Company were examined by our field engineers. They report that the property contains no evidence of any appreciable tonnage of mineable tungsten ore. In order to justify the construction of a 200-ton mill, it is necessary to be reasonably certain that sufficient ore is present to merit the expenditure of money and strategic materials necessary.

We regret that we must deny your application.

Very truly yours,

Tom Lyon

DMA-2171 Tungsten, Direct Government Loan $257,000
Nevada Tungster Corporation
139 North Virginia Street
Reno, Nevada

Property: Rawhide, Mineral County, Nevada

The subject applicant has requested a loan of $257,000 to construct a 200-ton mill, develop their mine and provide working capital.

The Nevada Tungster Corporation has leased the claims of the Rawhide Tungsten Company, Fallon, Nevada; however, they state in their application that the leasors will not subordinate their interest to a Government loan.

The Rawhide Tungsten Company had submitted an application for a loan of $50,000 in January 1951 on the same property. A field examination of the property indicates that no ore bodies of appreciable size and mineable grade have been exposed.

The field report is well presented and is a good job of examination.

Recommendations:

The application is denied due to lack of ore reserves on the property and no evidence has been presented to indicate that sufficient custom ore can be obtained in the area to support a mill of 200 tons capacity.

George B. Holderer
