Re: DMEA-2309 (Lead-Zinc)
Comet Mines, Incorporated
Comet Mine
Lincoln County, Nevada
Amended Contract Idm-E295

Gentlemen:

By the terms of Article 8 and Amendments Nos. 1 and 2 of the subject Amended Exploration Project Contract, all minerals mined or produced from April 16, 1952, to April 16, 1966, were subject to the Government's royalty as set forth in said amended contract.

As the period during which production was subject to royalty has now expired, the Government according to its present records retains no claim or lien against the property subject to the contract or any future production therefrom. We, therefore, are closing our books and records on this amended contract. Your attention, however, is called to the provisions of the amended contract which require the Operator to keep and preserve certain records for the periods indicated.

Sincerely yours,

FRANK E. JOHNSON

Re: **DMEA-2309 (Lead-Zinc)**
Comet Mines, Inc.
Comet Mine
Lincoln County, Nevada
Amended Contract Idm-E295

Dear Mr. Burton:

After the completion of the approved exploration work under the contract identified above, we asked to be informed about changes in the status of the property and production from it during the period of royalty obligation.

To assist you to furnish this information and to assure the accuracy of our records, please answer the questions on the back of this letter and return two copies to this office with copies of any pertinent documents.

On May 28, 1965, we wrote you concerning a 440 ton stockpile which had been at the mine at one time but which apparently no longer was, as indicated by the MME Form 63 returned to us in May 1965. A copy of our letter is enclosed. Will you please definitely comment on the stockpile when returning this year's MME Form 63.

Sincerely yours,

(SIGNED) FRANK E. JOHNSON

REQUEST FOR INFORMATION ON CERTIFIED PROJECT
AND PROJECT UNDER ROYALTY AGREEMENT

From May 1965 to April 16, 1966

1. ~~Since~~ , has there been a change in ownership, lease, or sublease? If yes, please state details of the transaction below and provide a true or signed copy of the pertinent documents, unless they have been provided before. Yes [ ] No [X]

Has the assessment work on the unpatented claims been kept up to date? If not, please give details. **Yes/X/No/ /**

From May 1965 to April 16, 1966

2. ~~Since~~ , has there been any production from the land subject to the contract? Yes [ ] No [X]

A. If so and it was shipped, give quantity, value, and name and address of purchaser.

	Quantity	Value

B. If stockpiled awaiting sale, state quantity, grade, and location.

Type	Quantity		Estimated Grade	Location
Ore		Tons		
Concentrates		Tons		
Other		Tons		

Is the 440 ton stockpile still at the mine? Refer to audit report Nov. 21, 1961. **Yes/ /No/ /**

3. Since , has any production been transported through workings (see of contract)? Yes [ ] No [ ]

If so, state quantity, value, and disposition of material.

Disposition of Material	Quantity	Value
Concerning the 440 tons above, refer to R.G.Lee dated August 25, 1965 mailed to George C.Selfridge August 26,1965; two copies attached hereto.

Re: DMEA - 2309 (Lead-Zinc
Comet Mines, Inc
Comet Mine
Lincoln County, Nevada
Amended Contract Idm-E295

Dear Mr. Burton:

Reference is made to MME Form 63 sent to you on May 18, 1965, from the office of Minerals Exploration, Washington 25, D.C., relative to a 440 ton stockpile at the Comet Mine.

This stockpile is at the Comet Mine where it was placed in 1956.

Due to the low metal content of this material, a loss of about $10.00 per ton would be the net results, if shipped to smelter for recovery of the metal values at present metal prices.

In compliance with article 7(c) of the subject contract, the final report clearly states that no commercial ore was found. The rock stockpiled was the better grade of the material excavated under DMEA Project No. 2309.

Respectfully submitted,

Reginald G. Lee

Amended Contract Idm-E295

Dear Mr. Burton:

Thank you for returning the completed MME Form 63 sent you on May 18, 1965. In answer to the question relating to the 440 ton stockpile, the form is marked "No" and reference is made to our audit report of November 21, 1961, wherein the stockpile is mentioned. As the box is marked "No," we assume that the material is no longer at the mine. If this is so, will you please inform us what happened to it. Regardless of the metal value content, we must keep track of any material that was stockpiled.

Sincerely yours,

George C. Selfridge (gcs)

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Dear Mr. Ricker:

Attached are Supplementary Form MF-104-A and Supplementary Form MF-104 for the month of June 1957, showing drift advance of 13.67 feet in the North-East Drift on 465 Level.

The measurements by your Field Engineer, Mr. Gentry and our engineer, Mr. Schrader in July of this year shows total drifting on 465 level North East and South West to be 2,010.97 feet, whereas our drift footage reported on Form MF-104 for June of 1957 was 1,997.30 feet.

No work has been performed in the Comet Mine since June of this year.

Very truly yours

Reginald G. Lee

INTERIM REPORT

August 7, 1957

Docket No. DMEA-2309 (Lead-Zinc)
Comet Mines, Inc.
Comet Mine
Lincoln County, Nevada
Contract No. Idm-E 295 (Amended)

Accompanied by O. E. Schrader, representing the Operator, this project was visited on July 25, 1957.

Pursuant to Amendment No. 2, dated March 1, 1957, the Operator resumed work on the 465 level on April 24 by extending Raise No. 56.63B at approximate coordinates 5680N, 6303E.

After extending the raise 49.95 feet above the back of the level, operations were discontinued during the first week of June. Due to the present jlow prices for lead and zinc minerals, the date for the resumption of the work is indefinite. ?

The raise is vertical and has followed the quartz-filled fissure which varies in width from 1.8 ft. to 3.5 ft.

Five samples were taken from the places which could be reached from the ladderway:

	Width	Percent Pb.	Percent Zn.
BM 2298	1.8 ft.	<0.1	0.2
BM 2299	2.0 "	<0.1	0.1
BM 2300	2.0 "	2.20	<0.1
BM 2301	2.0 "	1.4	<0.1
BM 2302	2.0 "	4.9	<0.1

< = Less than.

The Operator expects to retain a watchman-hoistman (Joe Davenport) at the mine. Further inspections of the project may be arranged by contacting Mr. R. G. Lee, Mine Superintendent, Combined Metals Reduction Company, Caselton Plant, Pioche, Nevada.

Work completed:

		Feet
465 level:	drifting SW from shaft	373.85
	drifting NE from shaft	1,637.12
Total		2,010.97
Raising:		64.0

Financial:

Amount of contract	$190,000.00
Expended as of 6/30/57	123,661.90
Unexpended	$ 66,338.10

Contract period:

Completion of contract on	September 16, 1957.
Unexpended time	1.5 months.

The Operator is to advise this office, prior to the expiration date, relative to his plans for completion of the work.

John D Wayne

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

COMBINED METALS REDUCTION COMPANY

Progress Report - DMRA Project/2309 - Comet Mines, Inc. Month of June, 1957.

July 11, 1957

Paul Gemmill, General Manager

Reginald G. Lee

Dear Paul:

The D.M.R.A. Project No. 2309 at the Comet Mine was active during the first week of June.

Advance in the 56-63B Raise amounted to 9.0', from 48.5 feet to 57.5 feet above track level.

The fissure is 2 feet wide in the back of the raise, containing oxidized iron with minor amount of lead and zinc.

The raise is timbered having two compartments, manway, timber slide and pipe in one compartment, the other a rock section for ore or waste.

Due to the hardship from suppressed lead and zinc prices and the fact that in nearly 60 feet of raising no ore has been found in the 56-63B raise on 463 level, expenditures on this project must be deferred until lead-zinc prices are in line with cost of production.

Signature [illegible] Title Executive Officer Date 6/17/57

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

COMBINED METALS REDUCTION COMPANY

Progress Report - DMEA Project/2309 - Comet Mines, Inc. - May, 1957.

June 5, 1957

Mr. Paul Gemmill, General Manager

Reginald G. Lee

Dear Paul:

The DMEA Project/2309 at the Comet Mine was reactivated April 24, 1957.

A raise station was cut 1470 feet northeast of the Comet shaft on the 465 level. Chute and manway was installed and the raise advanced to 48.5' above the track level during the month.

The Comet Fissure is from 10" to 18" wide showing some lead carbonate mineralization. The fissure has a slight reverse dip or nearly vertical dip for about 40 feet above track level, above this point the dip changes to the regular attitude and the fissure shows some improvement in width and mineralization.

Comet Mines, Inc.
Comet mine
Lincoln County, Nevada
Contract Idm-E295

The field office of the Comet mine was visited on June 6, 1957 and the project was discussed with O. E. Schrader, representing the operator.

Work on the contract was resumed on April 24, 1957. A two-compartment raise that measures 5 feet by 8 feet in the clear of timber has been driven 48.5 feet above track level from the DMEA drift on the 465 level of the mine. This raise is known as the 56-63 B raise. A three-man crew, consisting of two miners and a hoistman, advanced the raise an average of three feet per day until May 20, 1957 when the crew quit. The project has been idle since that date but a new crew will resume work on June 10, 1957. Two month's time will be required to complete the raise to the target area at the Prospect Mountain Quartzite-Pioche shale contact, estimated to be about 150 feet above the 465 level.

The time allotted for completion of the contract will expire on September 16, 1957.

The raise follows the Comet vein in the Prospect Mountain Quartzite and is nearly vertical. At the 465 level the vein is about 4 feet thick and contains traces of lead and zinc sulfides in quartz. It dips about 85° south in the lower part of the raise, is vertical at about 45 feet above the level, and dips about 85° north at 48 feet. The reversal of dip at the top of the raise is considered, by the operators, to be a favorable change. Ore bodies that have been mined from the vein several hundred feet west of the raise have occurred just below the Pioche shale contact at a change or flattening of the dip.

INTERIM REPORT

Docket No. DMEA-2309 (Lead-zinc)
Comet Mines, Inc.
Comet Mine
Lincoln County, Nevada
Contract No. Idm-E295 (amended)

April 25, 1957

The field office of the Comet Mine was visited on April 16 and amendment No. 2 was discussed with Mr. R. G. Lee, representing the operator. The exploration work had not been resumed and there is no progress to report. However, on April 24, 1957, via telephone, Mr. Lee advised Mr. S. Ricker, Executive Officer, DMEA, Region II, that exploration work had been resumed as of that date.

This work will consist of extending a raise from the 465 east level in area No. 3 at approximately 150 feet west from the present face of the level. The purpose of the raise is to intersect the Pioche shale-quartzite contact in the hope of finding significant mineralization. Samples taken on the 465 level in area No. 3 by DMEA are as follows:

Sample No.	Width, feet	Percent Pb	Percent Zn	Percent Cu	Oz/T Au	Oz/T Ag
BM-1977	1.5	12.8	0.5	0.02	0.28	41.45

March 25, 1957

Docket No. DMEA-2309 (Lead-Zinc)
Comet Mines, Inc.
Comet Mine
Lincoln County, Nevada
Contract No. Idm-E 295 (Amended)

The field office of the Comet Mine was visited on March 8, 1957 and the project discussed with Mr. O. E. Schrader, representing the Operator. Exploration work has not been resumed in the mine and there is no progress to report.

Amendment No. 2 dated March 1, 1957, approving suspension of the work to May 1, 1957 and completion to September 16, 1957, has been signed by the Operator and he plans on resuming work prior to May 1, 1957.

The mine equipment and all workings are in good condition and should cause no delay in starting operations.

This exploration project was visited on September 15, 1956, accompanied by Mr. R. G. Lee, representing the Operator. No work has been conducted since June 20, 1956, when operations were temporarily suspended. Therefore, there is no progress to report. Mr. Lee expects to resume operations as soon as the company authorizes funds for their share of the costs. However, the date for the resumption of work appears indefinite.

When reactivated, Mr. Lee expects to raise above the 465 east level to intersect the shale quartzite contact. This raise will start at approximately 150 feet west of the present face of the level. Samples secured during the inspection on July 17, 1956, were analyzed as follows:

Sample No.	Width Ft.	Percent Pb.	Percent Zn.	Ozs/T Au.	Ozs/T Ag.
BM 2041	0.7	3.6	0.3	0.08	5.30
2042	2.5	0.3	0.2	0.05	3.65
2043	2.3	6.3	0.2	0.31	12.80
2044	2.2	3.5	0.3	0.24	4.45
2045	Shovel 150 T stockpile	1.5	0.3	0.08	3.40

As the present contract under Item 2 of Amendment No. 4 expires on October 16, 1956, an extension of time will be required to complete the project.

Glenn G. Gentry,
Mining Engineer.

BUREAU OF MINES
WASHINGTON, D.C.
AUG 22 8 45 AM '56

INTERIM REPORT

DMEA-2309 (lead-zinc)
Comet Mines, Inc.
Comet mine
Lincoln County, Nevada
Contract Idm-E295, amended

Operations at the subject property were discussed with Messrs. R. G. Lee and E. Schrader, company geologists, July 25, 1956. No attempt was made to examine the property inasmuch as the advance since the date of the last inspection, May 3, 1956, was inconsequential.

Operations were suspended about June 20, 1956 and have not yet been resumed. Lee reports that the Comet vein is still present in the face of the 465 level NE drift. According to Lee, the fissure is 12 - 14 inches wide and is composed principally of barren vein quartz with faint sporadic copper staining; a few isolated specks of galena noted near the south wall are of no economic importance. Iron staining and boxwork structure, which are common in the vein matter less than 100 feet back of the face, are totally lacking thus indicating that this section of the structure did not receive more than a very weak "shot" of the mineralizing solutions.

One small cross fault offset the Comet vein a few feet; however, except for branching of the individual vein strands, no

structures have been encountered which disturbed the over-all attitude of the vein or of the enclosing beds.

Bedding dips in the Prospect Mountain quartzite, over the last 800 feet of drift, ranged from 4 to 10 degrees east. Thus stratigraphic penetration is slight relative to footage advance.

The operators are in the process of requesting an amendment which will permit raising from the 465 level drift to the overlying Prospect Mountain - Pioche shale contact. Lee informed me that the expected position of the raise would be at coordinates 5680 N, 6300 E. There is already a small opening in the back of the drift at this point. Control for determining the position of the overlying shale is drawn mainly from the surface projection. Lee suggests that 50 feet of raising should be adequate, this figure might be regarded as conservative inasmuch as a slight variation in dip can, over a long horizontal projection, materially change the expected vertical position of the contact.

Lee has also stated that additional raising would be requested from an existing raise at coordinates 5360 N, 5580 E. The purpose of this work is exposure of the block of ground lying vertically below the large stoped area worked from the 160 level. A third request from the operator will involve 150 feet of sinking on the zone of stronger than usual copper mineralization encountered at coordinates 5472 N, 5870 E (see map attached to Interim Report dated January 4, 1956).

It is the opinion of the writer that of the various proposals being submitted by the operator, only that which involves raising to the overlying shale contact may be justifiably recommended. The most compelling argument in favor of the entire project has been the potentially favorable ore zone formed at the shale-quartzite contact where intersected by the Comet vein. The long northeasterly drifting operation, aimed at this objective, may no longer be logically continued because of the infinitesimal stratigraphic penetration. Raising a comparatively short distance to the target affords a happy solution to an unhappy problem. In the event that the target zone has received mineralization, it is unlikely that the 50 or so vertical feet will materially affect the amount of post-mineral leaching.

I do not believe DMEA would be defensible in recommending a raise from the 465 level to the stoped area mined from the 160 level. Quite obviously, this stope was bottomed in material either too low grade or too narrow to be of economic significance. There is, therefore, no reason to believe that the intervening block of ground will contain minable ore bodies.

The sinking operation proposed in the zone of high copper values should, I believe, be conducted at the operator's expense as a part of normal development work. DMEA has exposed the zone; the next step should be the responsibility of the operator.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report:—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

COMBINED METALS REDUCTION COMPANY

RECEIVED
AUG 2 2 1956

Progress Report - [illegible] Project/1339, Comet Mines, Inc. for Month of June, 1956.

July 10, 1956

Mr. Paul Cassill, General Manager

Reginald G. Lee

Dear Paul:

During the month of June, work under [illegible] Project/1339 consisted of advancing the 465 Level northeast drift and a small amount of raising, all on the Comet Fissure.

The northeast drift was advanced 40 feet in mineralized fissure material from 9" to 10" wide. The walls on both sides were hard Prospect Mountain Quartzite. No ore was produced from this advance.

Raise advance amounted to 8 feet for the month.

About 154.5 feet of drifting remains of stage 1 of the work.

Due to the flat dip of the beds in this section, the distance areas where Pioche Shale will be intersected by the 465 level northeast drift is probably much further than 154.5 feet.

Under these conditions, it may be advisable to sink on the west ore showings drifted through, where some fair silver, lead and copper assays were obtained.

Very truly yours,

Reginald G. Lee

INTERIM REPORT

Docket No. DMEA-2309 (Lead-zinc) July 26, 1956
Comet Mines, Inc.
Comet Mine
Lincoln County, Nevada
Contract No. Idm-E295 (amended)

The Comet Mine was inspected July 17 accompanied by Messrs. R. G. Lee and O. E. Schrader, representing the operator. On or about June 20, 1956 the operator temporarily discontinued operations due to the necessity of securing a new crew of miners and to prepare and submit for Government approval, a plan for raising and winzing as outlined under items 2 and 3 of Stage III.

The quartz vein in the face of the drift is only 8 inches in width and mineralization has decreased considerably. Five samples were secured during this inspection (Nos. BM-2041 - 2045 inclusive) and the analyses of these samples will be submitted in the next interim report.

Samples secured during the inspection May 24 were analyzed as follows:

No.	Width, ft.	%, Pb	%, Zn	%, Cu	Oz. Au/T	Oz. Ag/T
BM-1976	1.75	*0.1	0.4	0.05	0.01	1.80

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

RECEIVED
JUL 23 1956

Progress Report - DMEA Project/2309, Comet Mines, Inc. - May, 1956.

June 7, 1956

Mr. Paul Gemmill, General Manager

Reginald G. Lee

Dear Paul:

Work under DMEA Project/2309 consisted of advancing the 465 level east drift and raising on the Comet fissure.

During the month of May, 30.5 feet of drift advance was made. All of this advance was in waste, the fissure filling being mostly white quartz, the walls hard quartzite. However, the last five feet of advance showed considerable copper mineralization.

Two small lead carbonate ore shoots drifted through some time ago was raised on. Both of these ore shoots pinched down to a few inches in 20 feet of raising. However, one of these ore shoots should be followed up by further raising as recommended by DMEA Field Team.

JUN 8 7 54 AM '56

INTERIM REPORT

DMEA-2309 (Lead-zinc) June 4, 1956
Comet Mines, Inc.
Comet Mine
Lincoln County, Nevada
Contract No. Idm-E295 (amended)

The Comet Mine was inspected May 24 accompanied by O. E. Schrader, representing the operator. The operator was starting to drill a raise round at Station 424 +100 feet in a section of the brecciated quartz vein where the most favorable mineralization was encountered. In the face of the drift, the vein averaged 22 inches wide and consisted of leached, vuggy quartz showing some copper staining. Only a very small amount of sulphide mineralization was observed.

During the last 145 feet of advance, the operator accumulated two small stockpiles of ore:

No. 1, stockpiled adjacent to the hoist house, estimated to contain approximately 50 tons.

Car assays:	%, Pb	%, Zn	%, Cu	Oz. Au/T	Oz. Ag/T
	4.8	0.8	0.2	0.15	6.45

No. 2, stockpiled adjacent to No. 1, estimated to contain approximately 65 tons.

Esti. analyses	5.0	1.0	0.2	0.10	4.0

The operator expects to mill this ore at some future date.

Five samples were secured during this inspection (Nos. 1976 to 1980 inclusive), and the analyses will be submitted in the next interim report.

Samples secured during the inspection on April 2 were analyzed as follows:

Sample No.	Width, feet	%, Pb	%, Zn	%, Cu	Oz. Ag/T	Oz. Au/T
BM-1935	3.5	*0.10	0.1	0.03	0.70	Trace
1936	1.0	4.5	4.5	0.42	11.75	0.17
1937	1.8	4.2	0.1	0.12	3.85	0.05

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

COMBINED METALS REDUCTION COMPANY

Progress Report - DMEA Project/2309, Comet Mines, Inc. - April, 1956.

May 10, 1956

Mr. Paul Gemmill, General Manager

Reginald G. Lee

Dear Paul:

Work under DMEA Project/2309 on 465 level east drift was advanced 105.0 feet during the month of April.

The first 45 feet of advance showed considerable oxidized mineralization in the quartz fissure, two to three feet wide. The last 60 feet was mostly in barren quartz.

The highest assay from car samples representing 40 one-ton cars run 0.11 oz Au, 4.69 oz Ag, 3.5% Pb, 0.7% Zn and 0.1% Cu.

Very truly yours,

COPY

INTERIM REPORT

MAY 16 1956

DMEA-2309 (lead-zinc)
Comet Mines, Inc.
Comet mine
Lincoln County, Nevada
Contract No. Idm-E295-amended

The subject property was visited on May 3, 1956 by R. W. Osterstock, U. S. Geological Survey. Mr. E. Schrader, company geologist, was present as a representative of the operator during the inspection.

The face of the 465 drift NE has been advanced to the point shown on the accompanying sketch map, or about 310 feet since the last inspection January 18, 1956. The Comet vein structure has been followed faithfully except for the last few feet of drift which was unknowingly directed along a strong northerly branching fissure. This deviation is being remedied by turning the heading back to the main Comet structure. The Comet vein remains strong and persistent in strike and dip. Varying widths of the broken zone referred to as the "vein" are apparently due at least in part to the character of the adjacent wall rock. The average width of the Comet vein in the last 300 plus feet is perhaps 2-1/2 feet.

The vein matter is predominantly quartzite breccia recemented by cryptocrystalline to drusy quartz varying from gray to clear. In parts of the vein there are open spaces and boxwork-like structures termed "cornflakes" composed principally of iron oxides. It is presumed that these sections represent leached zones which once contained significant amounts of zinc sulfide. Traces of lead carbonate with occasional cores of galena remain in the vein zone. Copper staining, although easily discernible, does not constitute an assayable content of the mineralized zone except for the few sporadically placed disseminations of fine-grained chalcocite.

Continued northeasterly advance along the Comet structure appears to be in order. The attitude of the enclosing Prospect Mountain quartzite beds, although now dipping 10° instead of 5° as was noted in the last interim report, is such that stratigraphic penetration is agonizingly slow. Undoubtedly the final efforts of this project will include raising on the Comet structure to its intersection with the Prospect Mountain-Pioche Shale contact. It remains entirely possible that the relatively impervious shale beds may have protected the mineralized portions of the vein from oxidation and leaching and may even have effected a "bellying-out" of the mineralization into the quartzite beds immediately under the shale.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MAY 7 - 1956

Progress Report - Project/2309, Comet Mines Inc. - Month of March, 1956.

April 9, 1956

Mr. Paul Gemmill, General Manager

Reginald G. Lee

Dear Paul:

Work under DMEA Project/2309 on 465 level in the Comet mine made a progress of 100.0 feet of drift advance on the Comet Fissure.

The first 25 feet of this advance showed strong fissuring and some oxidized mineralization up to 30" wide. Average assays from about 100 tons (car samples) was 0.08 oz. Au, 4.8 oz. Ag, 3.3% Pb and 0.7% Zn.

The next 20 feet showed considerable improvement in mineralization, lead carbonate being the principal mineral from 10" to 16" wide. Average assays from 66 tons was 0.27 oz. Au, 10.52 oz. Ag, 7.6% Pb and 0.7% Zn.

The last 55 feet from survey station 424 to the face showed only 5" of fissuring and much less mineralization. Average assays of about 160 tons was 0.08 oz. Au, 2.70 oz. Ag, 2.6% Pb and 0.7% Zn.

A cut sample across 14" of the lead carbonate assayed 0.56 oz. Au, 32.54 oz. Ag, 33.8% Pb and 0.55 Zn.

No effort was made to mine up from the back of the drift in the lead carbonate as this would slow down the drift advance.

Very truly yours,

Reginald G. Lee

INTERIM REPORT

Docket No.: DMEA-2309 (Lead-zinc) April 9, 1956

Name and address of operator: Comet Mines, Inc.
Pioche, Nevada

Name and location of property: Comet Mine
Lincoln County, Nevada

Contract No.: Idm-E295 (amended)

Accompanied by Mr. Loyal Phillips, representing the operator, the Comet Mine was visited on April 2, 1956. Steady progress has been maintained in advancing the 465 foot level in a northeasterly direction from the shaft. During the inspection, six samples were secured (BM-1935 to BM-1940, incl.). The analyses of these samples will be included in the next interim report. Five samples secured during the inspection on February 6 analyzed as follows:

Sample No.	Percent		Ounces/Ton	
	Pb	Zn	Au	Ag
BM-1912	1.5	0.5	0.17	4.75
BM-1913	3.1	0.4	0.10	3.80
BM-1914	0.5	0.4	0.10	4.10
BM-1915	1.7	0.4	0.08	2.50
BM-1916	1.2	0.3	0.06	3.25

Analyses of samples taken by the operator from February 28, 1956 to March 26, 1956 and Nos. 114829 to 116352 are attached to this report. These are principally car samples and are from approximately 50 short, wet tons delivered to the Comet ore bin. A very marked increase in value is noted, and the operator is considering to do some stoping in this area. The quartz vein in the face of the drift had widened to 42 inches but the sulphide mineralization has decreased.

Work Completed:

	Feet
Previously reported	1,265.93
Advance 2/6-4/2/56	189.00
Total advance	1,454.93

The drift will be extended to the "D" shale contact estimated to be 300 feet further.

Financial:

Contract amount	$190,000.00
Expenditures as of 2/29/56	111,498.90
Unexpended	$ 78,501.10

Contract period: Amendment No. 4, dated April 8, 1955 extends the date of completion to October 16, 1956.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

COMBINED METALS REDUCTION COMPANY

Progress Report - Project/2309, Comet Mines, Inc. - Month of February, 1956.

RECEIVED
APR 11 1956

March 6, 1956

Mr. Paul Gemmill, Plant Manager

Reginald G. Lee

Dear Paul:

Work under DMEA Project/2309 was active during the month of February, 1956.

The northeast drift on 465 level was advanced 87.0 feet.

In the first 35 feet of advance the fissure was 14" wide containing very little mineralization, the next 52 feet the fissure opened up to 36" containing a silica filling of a sponge like pattern that is the direct result from leached out high grade sphalerite. Some lead carbonate is exposed in the face.

The shale and quartzite contact is about 200 feet above the drift face. For some distance immediately under the shale oxidation may have been much less active and the leached zones drifted through may contain lead-zinc sulphide ore near the contact.

Contract No. Idm-E295
INTERIM REPORT

The subject property was inspected on January 18, 1956 by R. W. Osterstock (USGS). Messrs. Schrader and Phillips were present as representatives of the operator.

The heading on the 465 drift NE had advanced approximately 125 feet since the previous inspection on December 14, 1955. The drift has continued to expose the Comet vein structure which has maintained an extremely consistent attitude throughout its exposed length, now well over 1,000 feet. In the portion of the vein exposed since December 14 this structure has ranged from 6 feet in width to less than 6 inches. The walls are generally well developed relatively clean breaking surfaces in the Prospect Mountain quartzite. The vein matter between the walls is composed predominantly of breccia fragments of quartzite recemented with clear and milky quartz.

Segments of the vein which were mineralized show unmistakeable evidence of leaching. Characteristic of this leached material is

the open boxwork structure locally termed "cornflakes". Remaining in the vein zone are small bunches of fine to coarsely crystalline galena (possibly argentiferous), chrysocolla, and chalcocite. The chalcocite in a few spots has attained a width of 4-6 inches over a distance of about 6 feet. Iron and manganese staining, while most abundant near the ore mineral zones, is present to some extent throughout the entire Comet vein structure.

The face is now making a small amount of water which may be a favorable indication of proximity to the unoxidized portions of the vein structure. Hope for intersection with the overlying Pioche shale with the remaining footage continues to lessen. Dips in the Prospect Mountain quartzite have flattened to 5 degrees, thus stratigraphic penetration is virtually nil. Exploration of the Comet vein at the Prospect Mountain-Pioche shale contact will probably of necessity be accomplished by raising on a favorable zone in the vein near the easternmost limit of the workings attained by this exploration venture.

BUREAU OF MINES
WASHINGTON, D. C.
FEB 20 9 19 AM '56

INTERIM REPORT

Docket No.: DMEA-2309 (Lead-zinc) February 15, 1956

Name and address of operator: Comet Mines, Inc.
Pioche, Nevada

Name and location of property: Comet Mine
Lincoln County, Nevada

Contract No.: Idm-E295 (amended)

Accompanied by E. Schrader, representing the operator, the Comet Mine was inspected on February 6, 1956. The operator has continued to employ four men on a one shift basis and has maintained steady progress in advancing the 465 level in a northeasterly direction. Four samples secured during the inspection on December 15, 1955 analyzed as follows:

Sample No.	Width, feet	Percent			Ounces/Ton	
		Pb	Zn	Cu	Au	Ag
BM-1848	4.0	0.2	0.6	0.26	0.05	6.65
BM-1849	3.5	0.2	0.4	0.16	0.22	3.60
BM-1850	5.0	0.2	0.4	0.32	0.05	7.05
BM-1851	shovel (stockpile)	0.3	0.5	0.58	0.05	6.55

Five samples, BM-1912 - BM-1916 incl., were secured on February 6, 1956 and the results will be included in the next interim report.

The width of the quartz vein has generally decreased and was measured at 2.8 feet in the face of the drift, which shows a small amount of copper stains and only slight and spotty occurrences of pyrite, lead and zinc sulfides.

Work completed:

During the period from December 15, 1955 to February 6, 1956, the Operators have advanced the drift a distance of 167.15 feet. The face of the drift is now 1,265.93 feet north of the shaft and will be continued to the "D" shale contact, estimated to be about 500 feet further.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

COMBINED METALS REDUCTION COMPANY

Progress Report on DMEA Project/2309 - Comet Mines, Inc. for month of January, 1956.

February 7, 1956

Mr. Paul Gemmill, Plant Manager

Reginald G. Lee

Dear Paul:

Work under DMEA Project/2309 was active during the entire month of January, 1956.

The northeast drift on 465 Level was advanced 90.0 feet (Stage II, under amended contract) during the month.

The first 40 feet of advance encountered very little mineralization, the last 50 feet contained from 3" to 8" of semi-sulphide lead-copper ore. Of the 309 tons hoisted during the month 188 tons were waste and 121 tons were protore stockpiled at the mine, assaying 0.03 Au, 3.20 Ag, 1.1% Pb, 0.70% Zn and 0.80% Cu.
