May 14, 1974

Memorandum

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: Royalty Inspection
OME-6141 (Mercury)
Pacific Minerals and Chemical Co., Inc.
Mother Lode, Cobar, and Lookout Mountain Group
Crook County, Oregon
Contract 2132

I visited the Mother Lode mine on Wednesday, May 8, 1974. It was necessary to walk the last 1½ miles as the road was in part snow-covered and impassable with my automobile. There was no evidence that any vehicles had traversed the road to the mine for at least several months. All the buildings and the mill at the mine appeared to be in good repair, although there was no evidence of any production since my last visit on August 17, 1969. The period during which the Government is entitled to a royalty on production from the Mother Lode mine extends until December 15, 1974. There are no royalties now due to the Government from past production.

Re: OME-6141 (Mercury)
Pacific Minerals & Chemical Co., Inc.
Mother Lode, Cobar, and Lookout
Mountain Group
Crook County, Oregon
Contract 2132

Dear Mr. Miller:

The subject contract was dated December 15, 1961, and work was to start by June 1, 1962. Work was to be completed within 14 months from the date of the contract. Royalty obligations extended for 10 years from the date of the contract. Subsequently, the contract was amended eight times at the request of the Operator, extending the time for completion of the work and also the time for royalty obligations. Amendment No. 8, dated September 10, 1964, established the period of royalty obligation at 13 years from the date of the contract, or December 15, 1974.

As shown in the enclosed copy of a letter to Mr. Fred Sepic, Acting President, Pacific Minerals and Chemical Co., Inc., dated January 25, 1966, the royalty obligation amounts to $6,289.52 plus interest at the rate of 6-1/4 percent per annum, and is secured by a lien upon the land and any production therefrom. The royalty rate is 5 percent of the gross proceeds.

I hope this information is adequate to answer your questions.

Sincerely yours,

Harold Kirkemo

P. S. On February 24, 1970, we sent you a copy of our letter of that date to Mr. Joe M. Price concerning the Government's lien upon the property to secure payment of royalty. Were you furnished the pertinent documents by Mr. Price?

I have no record of having received any documents or information from Mr. Price since our initial transaction several years ago. Inasmuch as the tunnel which we excavated into the mountain did not intersect any veins of ore in the area where they were indicated to be, we gave up and have been trying to sell the claims and equipment, but thus far without success.

Dear Mr. Price:

Thank you for your note, dated February 11, 1970, advising us that ownership of Pacific Minerals & Chemical Co., Inc., has been transferred to Mr. Edward P. Miller. We suggest that you obtain and transmit the pertinent documents to the new owner, advise him of the Government's rights to royalty on production from the property, and of the Government's lien upon the property to secure payment of royalty.

A copy of our letter, dated January 25, 1966, advising the Operator of its royalty obligations is being sent to Mr. Miller, together with a copy of this letter.

Our office in Spokane was moved recently to new quarters, so royalty payments should be mailed or delivered to the Field Officer, OME Region I, U. S. Geological Survey, U. S. Courthouse, Room 656, West 920 Riverside Avenue, Spokane, Washington 99201.

Dear Mr. Kirkemo:

There has been a change in ownership - - from Pacific Minerals to Mr. Edward P. Miller, 1102 Skyline Dr., Tacoma, Wash.

It will take a little time for me to have copies of the pertinent documents sent to you. The Pacific Minerals records are not in my possession. I resigned as Secretary of the defunct company 12/31/67. However, since Pacific Minerals has ceased to exist it would appear that either I secure and forward the information to you; or that you contact Mr. Miller.

Sincerely,

J. M. Price

Memorandum

To: Chief, Office of Minerals Exploration

From: Field Officer, Region I

Subject: Royalty Inspection
OME-6141 (Mercury)
Pacific Minerals & Chemical Co., Inc.
Mother Lode, Cobar, and Lookout
Mountain Group
Crook County, Oregon
Contract 2132

The subject property was visited June 21, 1966, to determine what, if any, activity had been going on since the last inspection was made June 13, 1965. The bunkhouse windows were open indicating that someone was or had recently been living there. A visit to a building housing two D-retorts and to another housing a Hereshoff furnace showed that both plants had been overhauled recently; near the Hereshoff ore bin, which was empty, an old open pit working had been leveled either for truck-turning or stockpiling use. Still no person could be found.

As I was about to leave the property, Bill Stewart, erstwhile mine foreman at the Oregon King mine and now working for the Operator of the subject property, drove up. Although Stewart had many rumors as to past financial problems of the company, about all the positive information he could give was that he and two other men have been told to put the furnaces in shape to start retorting and to open up a small area from which it was hoped mercury-bearing material may be retorted. National Minerals Corporation was on the property for a while last year, but Stewart is not sure just what work they may have done, nor is he sure whether they or Pacific Minerals & Chemical Co., Inc., is the present Operator. He is sure, however, that no mercury has been sold or retorted since the furnaces were put in operating condition. At present he is waiting instructions to start production.

Memorandum

To: Chief, Division of Exploration Operations

From: Acting Field Officer, Region I

Subject: Interim Inspection Report
OME-6141 (Mercury)
Pacific Minerals & Chemical Co., Inc.
Mother Lode, Cobar, and Lookout Mountain Groups
Crook County, Oregon
Contract 2132

Under the terms of Amendment No. 8 the subject project was recessed beginning October 15, 1963, and work was to have been resumed on or before June 1, 1965. This amendment was prepared at the telephoned request of Fred Sepic, Acting President at that time, in order to prepare a request for changes in the work provided in the contract and Amendment No. 5. No such request has been received nor has any of the trenching provided in Amendment No. 5 been started.

The property was visited June 13, 1965. Dick Tooley, Foreman, was present and said he had arrived that day shortly before the examiner. He confirmed that no contract* had been started. He had received instructions from Sepic to clean out the old trenches for inspection by principals he could not name but with whom he believed the company was hoping to come to some sort of an investment or operating agreement. Tooley had last visited the property in April 1965, at which time there was too much snow to permit any work.

By the date of the inspection, there was no evidence of snow in the working area and the ground was dry and hard. There was nothing to suggest that contract work could not have been started by June 1.

Tooley has received no instructions relative to resuming the contract work. It can only be concluded that the company is more interested in attracting capital or some other form of outside assistance than in resuming contract work. It is therefore recommended that the Operator be advised that the contract has been terminated and that the pseudo-certification included in Amendment No. 8 is in effect.

Memorandum

To: Chief, Division of Exploration Operations

From: Acting Field Officer, Region I

Subject: Interim Inspection Report
OME-6141 (Mercury)
Pacific Minerals & Chemical Co., Inc.
Mother Lode, Cobar, and Lookout Mountain Groups
Crook County, Oregon
Contract 2132

Although this project is in recess, I passed within 5 miles of the property en route from Grangeville, Idaho, to Prineville, Oregon, on August 5, 1964, and accompanied by Miguel de la Cruz visited the mine.

The bunkhouse was locked and no one was in evidence nor were there any sounds of nearby activity. There was a car with Missouri license plates parked and locked near the bunkhouse, but as Juan Munoz, geologist-supervisor for the company, lives in Portland, it was doubtful that the car was his. After calling several times and receiving no answer, we left the property.

Upon receipt of Mr. Murphy's memorandum of August 26, 1964, I talked to Fred Sepic, vice-president of the company, by telephone. Munoz has been doing considerable prospecting and geologic work on the property during the summer and believes he has located a very promising area heretofore not found and wishes to make a few changes in the proposed amendment now being processed. As it will be too late in the season to do much work by the time the new proposal can be presented and processed, Sepic requested that the recess be extended to June 1, 1965. This was discussed with Murphy August 31.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection report
OME-6141 (Mercury)
Pacific Minerals & Chemical Co., Inc.
Mother Lode, Cobar and Lookout
Mountain Groups
Crook County, Oregon
Contract 2132

The property was visited October 12, 1963, and about an hour was spent discussing the project with Juan Munoz, Engineer-Geologist-Supervisor. The last inspection was made August 18, 1963.

Since the last inspection DDH's No. 4, 5, and 6 have been completed; a copy of the logs is enclosed*. A Work Authorization dated September 24, 1963, advised the Operator that Hole 1 will now be approved, that Holes 4, 6, and 7 could be drilled, and that Holes 5 and 8 would not be approved unless a pending contract amendment providing for trenching is approved and the trenching justified them.

The driller was getting the last of his equipment together preparatory to leaving the property October 13. He has not been paid for the drilling he has done since July 1. Munoz also advised me that he has not been paid since August 15 and that the claim owners have not been paid for the last 5 months. He asked if OME could pay him and the driller directly their portion of any funds due the Operator. I told him that, as the driller was an independent contractor and the drilling was on an actual cost basis, it might be possible to pay him directly, but I was not sure whether the request had to come from the Operator or could come from the independent contractor. I suggested that if the driller would submit a request giving the circumstances and the amounts involved, I would forward it to your office for consideration. As for Munoz, I told him I did not think that he could be paid directly by OME.

As far as Munoz knows, the claim owners have not yet made any move toward lease cancellation, but the driller and possibly Munoz may start Labor Lien proceedings.

*Logs were to be furnished by Munoz but have not yet been received.

Since this information came from an "unhappy" employee, although I do not doubt its accuracy, I believe that for the present, with nothing more to go on, it is best not to mention the situation to Ellingsen. However, I have written him regarding the necessity of a recess, since the drilling has stopped and even though the pending amendment has been approved, it is late in the year to accomplish much trenching.

Approved by OME Executive Officer or Alternate:

Signature D R Yeoberen Title Acting Field Officer, Reg. I Date MAR 23 1964

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

13 of 10 samples listed in assay certificate, 290-310 ft. exceeds 15-foot sample limit outside ore zone and is disallowed. 315-317½ and 317½-320 each less than 5-foot specified for samples in ore but combined they represent 5 feet ∴ 1 assay only allowed for these 2 – 1 had accepted = 8 assays @ $3.00

14
Do not release $200.00 withheld from last voucher – work has not yet been resumed

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

OPERATOR'S NARRATIVE REPORT, JUNE 1963
OME CONTRACT No. 2132

MOTHER LODE PROPERTY
CROOK COUNTY, OREGON.

During the month of June the first part of the month was spent rehabilitating the camp after the winter shutdown and preparing for the summer work.

Manson Drilling Company arrived on the 12th of June, re-opening their camp and cleaning the hole in which they had been drilling (No. 3) to the previously reached depth of 110 feet. The drillers left on the 15th for additional supplies, returning the 17th to commence drilling.

Drilling continued in hole No. 3 from the 17th through the 21st of June and from the 24th through the 1st of July when hole No. 3 was completed to a depth of 330 feet.

The mineralized zone encountered in Hole No. 3 last year from a depth of 85 feet to 110 feet, continued to a depth of 130 feet. No further mineralization was encountered until a depth of 260 feet when the hanging wall of the Footwall Vein was pierced. Poor mineralization of cinnabar to purely pyritic mineralization continued to a depth of 313 feet where good cinnabar mineralization was encountered and persisted to a depth of 325 feet.

Excluding the last day of drilling on Hole No. 3 July 1st, Hole No. 3 had been advanced to a depth of 310 feet by the 30th of June. Having been resumed at a depth of 110 feet, an advance of 200 feet was made during a total of twelve drilling days. During that period the undersigned was engaged in supervision of this work and the 4 x 4 truck was used daily in this work.

A log of the drilling done on Hole No. 3 is enclosed as well as geologic notes on the property and the proposals for future work.

Sincerely,
Juan Munoz

Hole No. 3
Sheet No. 3
(Con't from Dec. 1962)

Footage	Description
110-160	Gray, even granular matrix of quartz and plagioclase feldspar with less than 10% feldspar phenocrysts, up to 1/8" long. About 10% green femg mineral, probably secondary epidote. Rock is altered to clay minerals throughout, at times with seams of clay or gouge. 2 foot seam of clayey gouge at 118 to 120 cut off ground water in hole after casing was advanced. 2% to 10% pyrite grains throughout, with cinnabar colors showing from 110 to 130 feet. Rock would probably be classed as Felsite.
160-165	Transitional from Felsite to a darker rock, classed as dolorite. Larger cuttings show both rock types together. 2% to 5% pyrite, no cinnabar.
165-330	Gray-green, fine but even granular rock with abundance of Felg minerals, minor quartz. Classed as dolorite as is more granular than basalt. 2% to 5% pyrite. Minor cinnabar colors from 260 to 265 Scarce cinnabar colors from 265 to 310. Very good cinnabar colors from 310 to 325. Nil cinnabar colors from 325 to 330. Sent for assays: 5 foot sections from 110 to 130 feet. 5 foot sections from 260 to 265 feet. 5 foot sections from 310 to 315 feet. 2 1/2 foot sections from 315 to 320 feet. 5 foot section from 320 to 325 feet.

OPERATOR'S NARRATIVE

Aug. 1963

During the month of August 1963, 200 Ft. of Churn Drilling was completed on Hole No. 5. This hole was stopped at a depth of 255 ft.

Drill site No. 6 was cut with the Company's D-9 bulldozer, including 75 Ft. of access road. Time required for this work totaled 12 hours.

Hole No. 6 was started and drilled to a depth of 105 Ft. 8" casing was advanced to this point when cinnabar mineralization was encountered.

Sincerely,

Juan Munoz

CHURN DRILL HOLE LOG

July 1963

Hole No. 5

0-15 Ft. Overburden

15-60 Ft. Light gray, fine grained highly altered and very soft andesite. Rare plagioclase phenocrysts. Considerable slickensiding and many gouge seams. Pyrite content is variable from 5% to 10% of rock. Pyrite impregnations are along seams, veinlets and fracture surfaces, in the numerous calcite seams and disseminated in the rock. 25 - 30 Ft. and 45 - 50 Ft. showed 3 or 4 cinnabar colors in the pan. Not sent for assay.

60-75 Ft. Similar to 15 - 60 Ft but darker gray with occasional seams of nearly white rock that could be feslite or a differential alteration of the andesite.

Aug. 1963

75-85 Ft. Dark green, fine grained, hard, very slightly altered basalt with many fractures and calcite seams.

85-110 Ft. Intermittent bands of badly sheared, hard, dark green basalt as in 75-85, clayey fault gouge with breccia fragments of basalt, and medium gray highly altered basalt or andesite similar to 60-75. ∓2% pyrite.

110-255 Ft. Medium gray, medium to fine grained basalt or andesite, highly altered to clayey minerals with 2 to 5% pyrite. Rock varied from soft to very soft, but could always be scratched with the fingernail. Occasional seams of felsite were encountered which were less altered and harder.

OPERATOR'S NARRATIVE

Sept. 1963

During the month of September 1963, only 100 Ft. of Churn Drilling was completed. This was largely due to a great deal of difficulty encountered in driving the 8" pipe through the mineralized zone: 165 Ft. to 195 Ft. There was also a breakdown of the drilling equipment, which lost 5 days of working time.

By September 30th, Hole No. 6 had been advanced to a depth of 205 Ft.

Sincerely,

Juan Munoz

CHURN DRILL HOLE LOG

HOLE No. 6

NB: Drill pad cut to bedrock of weathered, fractured andesite. Three fractures with minor cinnabar "paint" noted in bank approximately 10 Ft. NE of hole collar.

0-25 Ft. Yellow-brown, medium grained rock, probably andesite, highly altered and oxidized. Rare pyrite.

25-80 Ft. Light gray, medium grained andesite, occasional plagioclase phenocrysts, minor calcite and agatized quartz seams. 2-3% pyrite.

80-120 Similar to, but darker gray than 25-80 Ft. Fewer phenocrysts. Fair to good cinnabar colors noted from 105 Ft. to 110 Ft.

120-155 Ft. Similar to 80-120 Ft. but with bands of unaltered dark green, fine grained basalt, probably dikes.

155-240 Ft. Dark gray, fine grained andesite with much alteration to clayey minerals; typical "zone" material with ≈3% pyrite. Cinnabar colors in varying amounts from 165-195 Ft.

240-270 Ft. Varying light and dark gray, fine grained andesite with some alteration to clayey minerals, calcite and quartz seams, with nil to 3% pyrite. No Hg S.

270-330 Ft. Dark green, medium grained dolerite or basalt, apparent unaltered, pyrite content variable from nil to 2%. Rare magnetite. No cinnabar.

END OF HOLE.

ADMINISTRATIVE SUSPENSION STATEMENT March 27, 1964

Name and Address of Payee: Pacific Minerals & Chemicals Co., Inc.
1301 South Ray Street
Tacoma, Washington

Amount Claimed:	Differences (Explained Below)	Amount Approved
$6,406.45	$172.05	$6,234.40 (Gov't. Share $3,117.20)
Bu. Voucher No.	**Payee's Invoice No.**	**Period**
1287-1	OME Cont. #2132	June 1963 - 10/15/63

EXPLANATION

1. Amount claimed for bulldozing ..... $ 162.50
Not allowed as narrative states work done with D-9.
Whereas contract provides for either D-7 or D-8.

2. Sample sacks claimed $7.75
Sample sacks allowable 1.20
Amount disallowed 6.55

3. Of the 10 samples listed in assay certificates, (a) 290-310 Ft. exceeds 15 foot sample limit outside ore zone. (b) 315-317½ and 317½-320 each less than 5 foot specified for samples in ore but combined they represent 5 feet; One assay only allowed rather than two as claimed 3.00
Total disallowed ..... $ 172.05

Any reclaim for items deducted must be supported by the original of this statement and submitted to the ~~office shown above.~~

OPERATOR'S NARRATIVE
MOTHER LODE PROPERTY

July 1963

During the month of July, 20 days of actual drilling time were completed, with a total of three additional days spent moving the drill. This time was apportioned as follows:

July 1st: Last 20 feet of Hole No. 3.
July 2 & 3: Pulling pipe and moving from Hole 3 to Hole 4.
July 8, 9,10,11,12,15,16,17,18,19,22,23,24,25,26: Drilling Hole 4.
July 27: Moving from Hole 4 to Hole 5.
July 28,29,30 & 31: Drilling Hole No. 5 (To a depth of 75 Ft.)

The only samples sent for assay were from Hole No. 3, as mentioned in the June report.

The total drilling footage for the month, including the last 20 feet of Hole No. 3 as reported in June was:

Hole No. 3: 20 feet
Hole No. 4: 210 feet
Hole No. 5: 75 feet

For a total footage of 305 feet.

The Drill Logs for Hole 4 and the first 75 feet of Hole 5 are enclosed; the log of the last 20 feet of Hole No. 3 which was reported in June is not repeated.

Sincerely,

Juan Munoz

Mother Lode Property

Churn Drill Hole Log
Hole No. 4

0 to 20 feet	Highly weathered , altered and oxidized andesite.
20 to 63 feet	Dense, fine grained black rock comprised largely of hornblende and other femg minerals, grains too small to identify megascopically. Occasional hornblende phenocrysts with about 5% pyrite. Classed as a lamprophyre; probably a dike.
63 to 100 ft.	Medium gray, fine grained groundmass with distinctive hornblende phenocrysts, 1 to 3 mm x 1 mm in size, comprising 10 to 20% of the rock mass. Classed as hornblende basalt porphyry. Minor pyrite, minor alteration to clayey minerals, but with numerous clayey gouge seams.
100 to 125 ft.	Medium gray, fine grained groundmass, very similar to above (63-100 ft.) except hornblende phenocrysts were absent. Instead, rock carried about 20% plagioclase phenocrysts about 1 x 3 mm in size. Classed as basalt porphyry. Minor pyrite; clay alteration and gouge seams similar to 63 to 100 ft.
125 to 162 ft.	Dark green, fine grained serpentinized basalt. Soft and highly altered. Many slickensided surfaces with some calcite and gouge seams. About 2% pyrite.
162 to 165 ft.	Same as 125 to 162 ft but harder and less altered.
165 to 170 ft.	Medium gray, fine grained basalt or dolerite. Highly altered to clayey minerals; very soft. About 2% pyrite.
170 to 180 ft.	Black, hard, dense lamprophyre with about 5% pyrite.
180 to 190 ft.	Gray-green, fine grained non-porphyritic basalt. Some alteration to clayey minerals with about 5% pyrite.
190 to 210 ft.	Dark green, fine grained, hard, unaltered hornblende basalt porphyry. Many calcite seams and slickensides. About 5% pyrite.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Withhold $200 pending resumption of work on recons has been requested

INSTRUCTIONS FOR PREPARING OPERATOR'S PROGRESS REPORT, MME FORM 61

This report is the second of the three parts of the Operator's Monthly Report. Submit the original and four copies.

The cost for each operation should be the total of all claimed costs attributable to that type of work with two exceptions, namely—operating equipment purchased and analytical work which are stated separately. For example, drifting costs should be the total of all costs chargeable to drifting including supervision, technical services, timbering (if any), etc. Similarly, drilling costs should include the cost of cementing, reaming, core boxes, etc. This procedure of distribution holds whether the contract was written on an actual cost or a unit cost basis, or some combination of the two. Distribute the cost of such general items as supervision, equipment rented, etc. according to relative footages or on some other conventional basis. The item "Initial Rehabilitation and Repairs" covers all rehabilitation and/or repairs other than the rehabilitation of mine workings.

The item titled "Drilling, Non-core Percussion" includes all drilling performed with wagon, jack-hammer, stoper and mounted drills. The several items labelled "Other" are provided to take care of particular exploration operations not specified on this form.

129 feet of drilling @ $96.50 ..... $12,50

Amended Operator's Narrative Report, June thru December, 1962
Mother Lode Property, Oregon
OME Contract 2132(Mercury)

During the months of June and July, 1962, a grid pattern was laid out as a guide to the soil sampling, and soil samples of Phase I (35 samples) and Phase II (30 samples) were taken and analyzed, as well as some additional samples as shown on the attached map.

During the months of August and September, a few remaining soil samples were analyzed and the preperation of Churn Drill Sites Nos. 1, 2 & 3 were completed by the bulldozer. Churn Drilling commenced on September 27, 1963.

During the months of October, November and December, Hole No. 1 was completed to a depth of 305 feet, Hole No. 2 to a depth of 210 feet, and Hole No. 3 was begun and carried to a depth of 110 feet, before weather conditions forced a shutdown for the winter. During these months, a total of 625 feet of Churn Drilling was completed.

Sections of highly altered, pyritized andesite were encountered in all three holes, accompanied by sparce to fairly good cinnabar mineralization. The best mineralization encountered appeared to be in Hole No. 3 from 85 to 110 feet.

The above data represents a summary of the monthly Operator's Narratives compiled by W.G. Johnston for the month's of June thru December, 1962.

Memorandum

To: Chief, Division of Field Operations

From: Acting Field Officer, Region I

Subject: Interim inspection report
OME-6141 (Mercury)
Pacific Minerals & Chemical Co., Inc.
Mother Lode, Cobar and Lookout
Mountain Groups
Crook County, Oregon
Contract 2132

The morning of August 18, 1963, was spent in the motel at Prineville, Oregon, with C. M. Ellingsen, President, going over vouchers, discussing voucher and contract requirements, and clarifying the impression given by Juan Munoz, Technical Supervisor, that program changes requiring contract amendment might be forthcoming. The proposed changes will be submitted. The property was visited for about 1½ hours during the afternoon accompanied by C. M. Ellingsen, Juan Munoz, Mah Sup Kim and Se In Change, the two last named being Korean Trainees. The last inspection was made November 14, 1962, at which time Churn Drill Hole 1, although not yet authorized, had been drilled to a depth of 305 feet and Hole 2 to a depth of 10 feet. That evening and the following morning about 3 hours were spent with Ellingsen and Johnston discussing in considerable detail the necessity for and the nature of documentary support of vouchers.

Since the last inspection Churn Drill Hole 2 has been drilled to a depth of 210 feet and was stopped because the drill site was starting to slide as described in Munoz' letter of July 22, 1963, a copy of which has been forwarded. Access to the drill site was made by deepening to grade an old trench about 110 feet long. Apparently the material from this cut was pushed out on the hill side and leveled off for the drill site. The hole passed through a mineralized hanging-wall zone from which samples were taken. The mercury content was fairly persistent in the zone although the grade was low. The hole would have to be deepened to something over 400 feet to cross the footwall zone which has been cut and sampled in Hole 3. It is concluded that another hole farther south and collared closer to the hanging-wall zone will be of more value than redrilling Hole 2; deepening Hole 2 is not possible as spring rains have

so washed the drill site and caved the collar that it cannot be located with certainty.

Drill Hole 3 has been completed to a depth of 330 feet and has cut both the hanging-wall and footwall zones. Assays of samples from Holes 1, 2, and 3, a section through Holes 2 and 3, and a section through Holes 1 and 3, have been sent to E. D. Talbert. The sections as well as the enclosed map* were prepared by Juan Munoz. Had Holes 2 and 3 been completed and the data been available prior to the drilling of Hole 1, that hole would have been authorized. However, Munoz pointed out, and I concur, that the provisionally approved site of Hole 4 will be too far westerly of the footwall to cut both walls unless it is drilled considerably deeper than the authorized approximate depth of 300 feet.

Comparison of the assays from Hole 2 with those from Hole 1 suggest that the mineralization is weaker in the latter area. Munoz has mapped a N. 55° W. shear in the Wet Cut that shows some mercury and has proposed a new Hole 4 to be drilled to cut this shear and the strong hanging-wall shear near their intersection. There is also some topographic evidence of a N. 60° E. striking shear, which may be a continuation of the mineralized zone that passes through the Amity, Blue Ridge, and Westbrook properties. Munoz is currently collecting and mapping evidence to show this and will discuss it when he requests an amendment to change the work.

Memorandum

To : Chief, Division of Field Operations

From : Acting Field Officer, Region I

Subject: Interim inspection OME-6141 (Mercury)
Mother Lode, Cobar, and Lookout Mountain Groups
Crook County, Oregon
Contract 2132

Pacific Minerals

The property was visited July 18, 1962, accompanied by C. M. Ellingsen, President, and W. G. Johnston, Superintendent.

During May the Operator began opening the road into camp and taking in supplies. By the time of this inspection, base lines and sample locations for Phase 1 had been laid out and 37 soil samples had been taken. In addition, the Operator took 65 soil samples for his own account. Due to a delay in locating and getting delivery of one of the necessary reagents, none of the samples have been assayed. However, Johnston panned part of each sample and counted the cinnabar colors in the pan tail. The reagent was received July 17, and Johnston expects to have the results within a few days.

The method of analysis described by F. N. Ward and E. H. Bailey on page 343 in AIME Transactions (Mining), Vol. 217, 1960, is to be used. Because of the high color count in some of the pannings, Johnston is a bit concerned as to the feasibility of this method. If he cannot obtain satisfactory results, he will use an older and more tried but slower method.

As the assay determinations have not yet been made, no voucher will be submitted until the end of July, at which time the work done in June and July will be vouchered and a chemical anomaly map will be prepared.

I have a print of the color-count map but will not prepare a tracing and prints at this time unless you request it. Pan counts range from zero to 600, thirteen of them being 100 or more. Frankly, I cannot see anyone actually counting that many individual colors in a pan tail. Relative to other pannings, they indicate seven or more areas in which mercury is more concentrated in near surface soil and, other than that, their value or reliability as indicators is limited.

OPERATOR'S MONTHLY REPORT

The Operator, under an Office of Minerals Exploration contract, is required to report monthly to the Government. The report consists of three parts.

FIRST, the Operator's Monthly Voucher on MME Form 60 listing the project costs incurred and claimed by the Operator is the voucher basis for payment of the Government's share of the cost.

SECOND, the Operator's Progress Report on MME Form 61 is a statistical report of the units and cost of of work performed under the contract.

THIRD, the Operator's Narrative Report is a concise description of the work performed, results accomplished, and any unusual situations encountered, illustrated and supported by engineering-geological maps or sketches, drill hole logs, assay reports, etc., as pertinent.

The Operator submits the original and four copies of each of the three sections of this report to the OME regional Executive Officer at the end of each month during the life of the contract.

PREPARATION OF OPERATOR'S MONTHLY VOUCHER, MME FORM 60

After all applicable spaces are filled in, the Operator or his agent must sign the certification in the lower left corner. Categories (2) through (7) apply to "Actual Cost" contracts only.

Under "Fixed Unit Costs" and Category (1) report, (a) the total fixed unit costs of work performed under contract provisions for contribution by the Government on a basis of "fixed unit costs"; and (b) the claimed costs of work performed on a unit-price basis by independent contractors.

Under Category (2) include the claimed costs of all payrolled and invoiced supervisory, technical, and labor personnel, except the costs for services applicable to Categories (5) and (6).

Under Category (3) include the claimed costs of all project materials and supplies other than those used for work under Categories (5) and (6).

Under Category (4) report claimed rentals on equipment belonging to a third party, claimed payments or obligations for payments on the Operator's purchase of equipment, and claimed depreciation for the use of Operator-owned equipment.

Under Categories (5) and (6) include all claimed costs of labor, supervision, technical services, operating materials and supplies, and all other items used in (5) the initial rehabilitation and repairs of existing buildings, fixtures, installations (exclusive of mine workings), and operating equipment; and (6) the installation or construction of new buildings, fixtures, and fixed improvements (exclusive of mine workings). Do not report these costs under Categories (2), (3), (4), and (7).

Under Category (7) include all miscellaneous claimed costs such as repairs (other than initial) and maintenance of equipment, sampling and analysis, travel, communication, accounting, office expenses, and the Operator's share of payroll taxes and insurance.

Except for amounts claimed under "fixed unit costs" provisions of the contract, all costs claimed in this voucher must be supported by documentary evidence consisting of: (a) certified copies or transcripts of payrolls which list each employee, wage rate, period of employment, gross earnings, itemized deductions, and net earnings; (b) original or certified copies of invoices, statements of accounts, or purchase orders which indicate items of materials or services, quantities, unit prices, total charges, and payment terms; and (c) certified memoranda of the Operator for such items as depreciation of Operator-owned equipment, unemployment taxes, and employee's liability insurance. The certification may be stated thus, "Certified True Copy (or Transcript)", followed by the signature of the Operator or his agent. One copy of each document should accompany the original of this voucher.

The requirement for submitting documentary evidence of claimed costs may be waived by the OME regional Executive Officer if he determines that it is impracticable for an Operator to submit this material. In any case of waiver of this requirement an "on-site" audit by an OME auditor is mandatory prior to payment of the final Operator's Monthly Voucher.

Box 746,
Prineville,
Oregon,
September 7, 1962.

Mr. D.R. MacLaren
Office of Minerals Exploration,
No. 157 Howard Street,
Spokane 4,
Washington.

Dear Mr. MacLaren: Re: O.M.E. - 6141 (Mercury)
Pacific Minerals & Chemical Co., Inc.
Rother Lode, Cobar, and Lookout
Mountain Groups
Crook County, Oregon,
Contract 2132

With reference to your letter to Mr. Ellingsen of September 6, 1962. This is to certify that the following number of days in June and July were spent on contract work:

	June and July
W.G. Johnston, Geologist	33
Sampler Helper	20

This is to further certify that 4-wheel drive pick-up was used 13 days in June and 23 days in July, 1962, on contract work.

Yours very truly,

W.G. Johnston

OPERATOR'S NARRATIVE REPORT, JUNE AND JULY 1962
O[illegible]E, CONTRACT 2132 (MERCURY[illegible])

MOTHER LODE MINE, LOOKOUT MOUNTAIN,
CROOK COUNTY, OREGON

During June and July the following work was done:

	Contract Work	Company Work	Total
1. Grid surveyed and laid out	75 stations	100 stations	175 stations
2. Soil samples taken mainly with soil auger to maximum depth attainable	61 samples	68 samples	129 samples
3. Soil samples panned*	- - - - -	129	129
4. - - - - - - - - -	- - - - -	Former assay laboratory was rehabilitated for use: (a) Windows installed, as constructed it had no windows. (b) Bench installed and other alterations made to make it useable. (c) Temporary water line installed as original water line could not be repaired. (d) Equipment and reagents for determination of mercury in soils procured and set up.	

Respectfully submitted,

W. G. Johnston
