OFFICE MEMORANDUM - UNITED STATES GOVERNMENT

TO : Mr. R. E. Adams, Administrative Officer, DMEA DATE: April 30, 1952

FROM : Iron and Ferro-Alloy Division, DMEA

SUBJECT: Removal of Applications from active files

Early in March letters were sent to several applicants advising that in order for their applications to be further processed, information which we had requested several times must be forthcoming by May 1, 1952, or we would remove the applications from our active file and thereby close the docket.

The applicants listed below failed to comply and their dockets are transmitted to you herewith.

Docket No. DMA 695X - Manganese
Higley Mining Company
Higley Mine
Juab County, Utah

Docket No. D A 1347X - Tungsten
Mohawk Corporation
Challenge Mine
Inyo County, California

Docket No. DMA 1369X - Cobalt
Coosa Mining & Smelting Company
Ben S. Chaney, Secretary
Talladega County, Alabama

Docket No. DMA 1370X - Manganese
Coosa Mining & Smelting Company
Talladega County, Alabama

Docket No. DMA 1372X - Tungsten
Arthur D. Carter, Attorney
Chalco in Rand Mining District
Kern and San Bernardino County, California

Docket No. DMA 1745X - Tungsten
Wilford McClellan
Tungsten Mine 50 miles west of Delta,
Utah

Docket No. DMA 1201X - Manganese
Reed L. Gallaher
Reed and Associates
Johnson County, Wyoming

Re: Docket No. DMA 1861X - Manganese
Mead Manganese Properties
Johnson County, Wyoming

Dear Mr. Schlieve:

A review of your application of July 19, 1951, for an exploration contract reveals that a letter dated January 25, 1952, by Mr. G. C. Selfridge, Chief, Iron and Ferro-Alloy Division of Defense Minerals Exploration Administration requests additional information necessary to process your application. We have not received an answer from you and we assume that you no longer desire to proceed with the application.

We wish to cooperate with you in the matter of allowing ample time, but if the needed data have not been received by May 1, 1952, we will then remove your application from the active file and consider the matter closed.

Sincerely yours,

E.L. 3/5/52

Approved in amount of $

Other action, specify:

Field Team

Through: Director, Supply Division
Operating Committee

Dear

Attached find DMA docket 422, an appraisal of the Wyoming Manganese Company to operate manganese properties located in Johnson County, Wyoming. Manganese deposits located in secs. 30 and 32, T. 47 N., Range 83 W. have been described by Thomas Gwynn, P.O. Box 4156, Washington, D. C. Neither the Geological Survey or the Bureau of Mines has sufficient information to determine the extent of the reserves which may be present in this area and the feasibility of the present proposal. For this reason it is recommended that the property be examined in the field by representatives of the Geological Survey and the Bureau of Mines to determine the following:

(1) Tonnage and grade of ore reserves
(2) Character of material in the ground and of washed nodules
(3) Feasibility and cost of strip mining operations of the character proposed.

The area is snow-covered until about May 1, but at that time the owner has indicated his willingness to undertake churn or auger drilling at his own expense whenever the ground is clear. It is suggested that the field team take advantage of this and time their visit so as to coordinate with this exploration. This should be arranged by communicating directly with Mr. Gwynn.

Sincerely yours,

Phil Bradley

This letter is Re 422 (Some Property as 1861)

No date

Mr. Thomas A. Gwynn
Box 4156
Washington, D. C.

Dear Mr. Gwynn:

Your proposal to produce and sell 300,000 tons of manganese ore from properties in Johnson County, Wyoming, has been considered by the Defense Minerals Administration. There is not sufficient information available here to verify your estimates of ore reserves, and to determine whether an acceptable product can be produced by simple washing of the nodular material. In view of the need for manganese, representatives of the Bureau of Mines and Geological Survey have been asked to visit the property later in the spring as soon as the snow is melted sufficiently to make it accessible. On the basis of your conversations with Mr. Crittenden in Washington, the field representatives have been asked to contact you directly, and to arrange their visit to coincide with exploratory drilling you indicated your willingness to undertake. This will greatly facilitate their sampling and appraisal of the property.

Your request for a loan of approximately $900,000 to equip and develop this property will be considered further when the results of this examination are complete.

Sincerely yours,

Gordon Boutwell

S. H. Williston, Director
Supply Division

Note 422 - withdrawn on Oct 9 - (Holden)

This letter is 422 some area or 186?

DMA 1861

Dear Mr. Schlieve:

In reviewing your application for an exploration loan we need additional information. The following questions must be answered before further action can be taken:

Question 4
" 6
" 7
" 8
" 9
" 12 You say, "contained in report", but we have no report from you.
Question 15
" 16
" 18
" 19
" 20
" 21
" 22
" 23
" 24

You say that you have leased the property but you have failed to attach a copy of your lease agreement. From the names of the mining claims and their locations, we might guess that they belong to Mr. Norman W. Mead, Francis Drake Hotel, Minneapolis, Minnesota. If this is the case, we still need additional information on question 18e. No estimation of tonnage has been given. Also question 21, asking a description of the proposed work and estimated time to complete it. We would also like to know what part Mr. Thomas Guyan is playing in your project.

Upon receipt of the requested information we will give your application careful consideration.

Very truly yours,

George B. Holderer

INSTRUCTIONS

Read Mineral Order 5, Regulations Governing Government Aid in Defense Projects, before completing this application. Submit four signed copies of the application to Defense Minerals Administration, Department of the Interior, Washington 25, D. C., or to the nearest field executive officer thereof, with your name and address on each sheet of the application and all accompanying papers. If any question is inapplicable, or if you cannot answer it, so state on the form. Where the space provided for answer is insufficient, answer on a separate sheet, annex it to the application form, and refer to it in space for answer. If the application is approved, you will be presented with an exploration project contract on Form MF-200, for your signature.

THE APPLICANT

*1. Is applicant an individual, partnership, or corporation? Individuals at the present time.

*2. If a partnership, state names and addresses of partners.

*3. If a corporation, state names and addresses of officers, directors, and five largest stockholders.

*4. Describe the mining and general business experience of (*a*) the applicant, and (*b*) the person or persons who will manage the project. Both factors will have experienced persons in charge.

*5. Are you the owner or the lessee of the property? Lessee.

6. If owner, state what claims, liens, or encumbrances, if any, are against the property.

7. If lessee, attach a copy of the lease and state if it is in good standing.

NOTE.—It will be necessary to procure and attach to the exploration project contract agreements of claimants, lienors, encumbrances and lessors subordinating their interests in the property to the interest of the Government under the contract.

8. Furnish current financial statement, showing assets and liabilities, and a profit and loss statement.

9. How much money is applicant prepared to invest in proposed project? Is it sufficient to pay your part of the cost of the project as detailed in question 23 of this application form, in accordance with the regulations on Government participation (Section 9 of Mineral Order 5)?

*If you have already answered these questions on MF-100, you are not required to answer the questions for this application.

16—64067-1

THE PROPERTY

10. (*a*) Give a description of the real property that will be in any way involved in the exploration project, including any existing mine or operating property. Township: 47 North, Range: 83 West, Sections: 29, 30, 31, 32

(*b*) Give the legal description of the exact parcel, plot, or area upon which the exploration is to be conducted.

NOTE.—If both areas are the same, so state. The only obligation to repay the Government is from the net earnings from any commercial discovery made in the area specified in (*b*) above in which the exploration is to be conducted, and the expenditure of funds which may be charged as costs of the project must be limited to that area or to work necessary to perform the exploration in that area.

*11. State the present and former names of the property, if any. Mead Manganese

*12. State, in detail, the location of the property with reference to towns, railroads, roads, shipping points, including distances and directions and kinds and conditions of roads. Contained in report.

*13. State source and quantity of water available for operations and its sufficiency at all seasons. State amount of power to be used, rate per hour or other cost, and source. A creek is availiable thru property.

*14. Describe any existing useable facilities, equipment, buildings, or structure now on the property that will be devoted to the exploration work. None

15. State in detail how the ore could be shipped and how and where milled. Contained in report.

*16. History: Contained in report.

(*a*) Give a statement, as complete as possible, of previous exploration, development, operation, and production of property, with reasons for any past suspensions of operations.

(*b*) State briefly the known history and production of adjoining and neighboring properties.

(*c*) Furnish any available (private) reports that may apply to this application, including results of mine examinations, recommended exploration and development, and metallurgical investigations.

*17. Production:

(*a*) If mine is in production, furnish the following information:

	Tons per day	*Grade or analysis*	*Cost per ton*	*Net value per ton*
(1) Mining				
(2) Milling				
(3) Shipped or sold				

*18. Ore or mineral reserves: (If property is or has been operating.) The following contained in report.

(*a*) Describe the ore or mineral deposits briefly.

(*b*) Submit available maps and assay data.

(*c*) Give estimated tonnage and grade of each class of ore reserves.

19. State any conditions or circumstances regarding the property not sufficiently brought out by the foregoing questions.

Tonage should run way over estimated tonage due to new exploration.

THE EXPLORATION

20. For what mineral or minerals and for what types of deposits and ores will the exploration be conducted? Manganese

21. Describe briefly, but concisely, the proposed work and the estimated time required to complete it. Time element is very short.

NOTE.—The Government will not participate in a project that will require more than 2 years to complete.

22. Furnish statement of the geological basis of the project with particular emphasis on factors leading the operator to expect the finding of commercial ore bodies. This statement should be accompanied by supporting maps such as geological maps, maps of the proposed openings and assay maps, sample lists, and other pertinent data.

Contained in report.

THE REQUIREMENTS AND COSTS

23. Tabulate in the form of an itemized statement with a sum for each item the estimated requirements and costs of the project so that the total will give the estimated cost of the project in which the Government will participate, as follows:

(*a*) Labor, by numbers and classes (miners, muckers, millmen, etc.), with wages of each.

(*b*) Supervisors, by numbers and positions, with salaries of each.

(*c*) Cost of necessary repairs to existing facilities, structures, and buildings.

(*d*) Cost of necessary installation or construction of additional facilities, structures, and buildings.

(*e*) Cost of items of equipment, not now owned by the applicant which must be purchased for operations at a cost of $50 or more each.

(*f*) Cost of rental for equipment which the operator proposes to rent.

(*g*) Rental value of items of equipment which the operator now owns and which will be devoted to the work.

(*h*) Cost of materials and supplies, including items of equipment costing less than $50 each.

(*i*) Cost of power, water, utilities, and any other items not provided for above.

24. Furnish a time schedule of the project, stated in terms of months after project is approved, showing progress expected to be accomplished and the money expected to be spent.

CERTIFICATION

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this form and accompanying papers is correct and complete to the best of their knowledge and belief.

INSTRUCTIONS

Read Mineral Order 5, Regulations Governing Government Aid in Defense Projects, before completing this application. Submit four signed copies of the application to Defense Minerals Administration, Department of the Interior, Washington 25, D. C., or to the nearest field executive officer thereof, with your name and address on each sheet of the application and all accompanying papers. If any question is inapplicable, or if you cannot answer it, so state on the form. Where the space provided for answer is insufficient, answer on a separate sheet, annex it to the application form, and refer to it in space for answer. If the application is approved, you will be presented with an exploration project contract on Form MF-200, for your signature.

THE APPLICANT

*1. Is applicant an individual, partnership, or corporation? Individuals at the present time

*2. If a partnership, state names and addresses of partners.

*3. If a corporation, state names and addresses of officers, directors, and five largest stockholders.

*4. Describe the mining and general business experience of (*a*) the applicant, and (*b*) the person or persons who will manage the project. Both factors will have experienced persons in charge.

*5. Are you ~~the owner or the lessee of the property~~? Lessee.

6. If owner, state what claims, liens, or encumbrances, if any, are against the property.

7. If lessee, attach a copy of the lease and state if it is in good standing.

NOTE.—It will be necessary to procure and attach to the exploration project contract agreements of claimants, lienors, encumbrances and lessors subordinating their interests in the property to the interest of the Government under the contract.

8. Furnish current financial statement, showing assets and liabilities, and a profit and loss statement.

9. How much money is applicant prepared to invest in proposed project? Is it sufficient to pay your part of the cost of the project as detailed in question 23 of this application form, in accordance with the regulations on Government participation (Section 9 of Mineral Order 5)?

*If you have already answered these questions on MF-100, you are not required to answer the questions for this application.

16—64067-1

THE PROPERTY

10. (*a*) Give a description of the real property that will be in any way involved in the exploration project, including any existing mine or operating property. Township: 47 North, Range: 83 West, Sections: 29, 30, 31, 32

(*b*) Give the legal description of the exact parcel, plot, or area upon which the exploration is to be conducted.

NOTE.—If both areas are the same, so state. The only obligation to repay the Government is from the net earnings from any commercial discovery made in the area specified in (*b*) above in which the exploration is to be conducted, and the expenditure of funds which may be charged as costs of the project must be limited to that area or to work necessary to perform the exploration in that area.

*11. State the present and former names of the property, if any. Mead Manganese

*12. State, in detail, the location of the property with reference to towns, railroads, roads, shipping points, including distances and directions and kinds and conditions of roads. Contained in report.

*13. State source and quantity of water available for operations and its sufficiency at all seasons. A creek is availiable thru property
State amount of power to be used, rate per hour or other cost, and source.

*14. Describe any existing useable facilities, equipment, buildings, or structure now on the property that will be devoted to the exploration work. None

15. State in detail how the ore could be shipped and how and where milled. Contained in report.

*16. History: Contained in report

(*a*) Give a statement, as complete as possible, of previous exploration, development, operation, and production of property, with reasons for any past suspensions of operations.

(*b*) State briefly the known history and production of adjoining and neighboring properties.

(*c*) Furnish any available (private) reports that may apply to this application, including results of mine examinations, recommended exploration and development, and metallurgical investigations.

*17. Production:

(*a*) If mine is in production, furnish the following information:

	Tons per day	*Grade or analysis*	*Cost per ton*	*Net value per ton*
(1) Mining				
(2) Milling				
(3) Shipped or sold				

*18. Ore or mineral reserves: (If property is or has been operating.) The following, contained in report.

(*a*) Describe the ore or mineral deposits briefly.

(*b*) Submit available maps and assay data.

(*c*) Give estimated tonnage and grade of each class of ore reserves.

19. State any conditions or circumstances regarding the property not sufficiently brought out by the foregoing questions.

Tonage should run way over estimated tonage due to new exploration.

THE EXPLORATION

20. For what mineral or minerals and for what types of deposits and ores will the exploration be conducted? Manganese

21. Describe briefly, but concisely, the proposed work and the estimated time required to complete it. Time element is very short.

NOTE.—The Government will not participate in a project that will require more than 2 years to complete.

22. Furnish statement of the geological basis of the project with particular emphasis on factors leading the operator to expect the finding of commercial ore bodies. This statement should be accompanied by supporting maps such as geological maps, maps of the proposed openings and assay maps, sample lists, and other pertinent data.

Contained in report.

THE REQUIREMENTS AND COSTS

23. Tabulate in the form of an itemized statement with a sum for each item the estimated requirements and costs of the project so that the total will give the estimated cost of the project in which the Government will participate, as follows:

(*a*) Labor, by numbers and classes (miners, muckers, millmen, etc.), with wages of each.

(*b*) Supervisors, by numbers and positions, with salaries of each.

(*c*) Cost of necessary repairs to existing facilities, structures, and buildings.

(*d*) Cost of necessary installation or construction of additional facilities, structures, and buildings.

(*e*) Cost of items of equipment, not now owned by the applicant which must be purchased for operations at a cost of $50 or more each.

(*f*) Cost of rental for equipment which the operator proposes to rent.

(*g*) Rental value of items of equipment which the operator now owns and which will be devoted to the work.

(*h*) Cost of materials and supplies, including items of equipment costing less than $50 each.

(*i*) Cost of power, water, utilities, and any other items not provided for above.

24. Furnish a time schedule of the project, stated in terms of months after project is approved, showing progress expected to be accomplished and the money expected to be spent.

CERTIFICATION

The undersigned company, and the official executing this certification on its behalf, hereby certify that the information contained in this form and accompanying papers is correct and complete to the best of their knowledge and belief.

16—64067-1 U. S. GOVERNMENT PRINTING OFFICE

1861

May 21, 1951

BRIEF REPORT

NAME OF PROPERTY:
Mead Manganese Properties

KIND OF ORE:
Manganese

Owned by: Norman W. Mead, et al
Francis Drake Hotel
Minneapolis, Minnesota

Location of Property: Big Horn Mountains

State: Wyoming
County: Johnson
Mining District: Not named

Township: 47 North
Range: 83 West
Sections: 29, 30, 31, 32

Railroad Shipping Points:
Buffalo, Wyoming on east side of mountains. If old Wyoming railroad is revived, or Clearmont, Wyoming on the Burlington railroad. Worland, Wyoming on the west side of the mountains.

Haulage road Distance, Mine to railroad shipping points:
Mine to Buffalo approximately 45 miles. Mine to Clearmont approximately 73 miles. Mine to Worland approximately 75 miles.

Type and Condition of Haulage Roads:
From the mine 10 miles of good dirt surface mountain road, then five miles of county improved road, to U.S.Highway #16 a black top main highway.

Brief History of Property:
Held as mining claims since 1942. No actual mining has been done; no shipments of ore except for experimental and analyses purposes.

Workings:
Work done on the property consisted of pitting, trenching and five short bulldozer cuts in one area, also some experimental diamond core drilling in another area.

Number of Claims:
Seven lode mining claims, also covered by seven placer mining claims - approximately 280 acres.

Brief Description of Deposits:
Geology and Topography: The origin of the manganese is not known. The manganese was apparently deposited in the deadwood formation at the time of its deposition or was deposited in it later by circulating waters or solutions, thereby filling interstices between the grains of sand, filling crevices between the strata, filling sills and/or just making a place for itself by force of bulk.

Name of Property: Mead Manganese Properties.

The Deadwood formation is of middle Cambrian age. It is said to vary in thickness from 900 feet to 1150 feet. It is composed of thin and thick layers or strata of sandstone, quartzite, shales, limestone and conglomerate, owing to its unconsolidated nature and the large amount of shale it contains. The formation is easily eroded and readily forms deep depressions or saddles. It is broken, faulted and deroded. Its dip and strike is at various angles throughout the property. The Deadwood formation, like the other formation of the area, has a high angle plunge to the east. Beyond its survace exposure, the Deadwood formation would continue in its natural stratagraphical position beneath the Bighorn limestone formation of Ordovician age down the front range of the mountains. The Deadwood formation is the lowest member of the sediamentary series of the Bighorn mountains. Therefore it overlies the Pre-Cambrian granites. Pendants or outcrops of these grainites are in evidence along the west side of the Deadwood surface exposures. The granites show a sharp dip to the east. A deep surficial mantle of the Tiertiary age consisting of sandy, limey clay, sparcely scattered, partially decayed boulders and some small gravel and broken fragments of crystalline rocks is in places upon or flanks the Deadwood formation. This mantle catches up the erosion of the Deadwood formation and is inter-mixed with it. In this inter-mixture of clay and Deadwood formation, the Manganese is liberated and has apparently formed Manganese nodule areas throughout the property. These Manganese nodules are in evidence scattered abundantly about the surface in numerous places. Manganese nodules are exposed in the pits, excavations, etc. These excavations have been shallow - 10 feet or less. A pit about ten feet deep on the north end of the property shows a very heavy deposit of nodules in clay. The nodules are packed as closely together as they can get with a coating of clay between them. There is only one foot of over-burden; then the nodule mass extends to the bottom of the pit. A trench was dug from this pit about 200 feet in length and exposed the nodules t throughout its length. The nodules in size are from a fraction of an inch to several inches in their longest dimensions. The ratio of nodules in this pit is probably 5 to 1, of clay.

The five shallow bulldozer cuts were made to the southwest of this pit in the same area; 3 cuts exposed the nodules; the two farther-erest up the hill apparently didn't get deep enough through the over-burden to strike the nodules. In this same area, some diamond core drilling was attempted. Considerable experimenting was done in an attempt to recover cores, but due to the force of the water necessary for functioning of the drill, the crushing of the Manganese by the bit, the size of the core barrel and the ready washing and dissolving of the clay surrounding the nodules, it was impossible to obtain satisfactory results. It was then determined to use the drilling merely for the purpose of indicating the presence of Manganese where it could not be seen on the surface. This proved quite successful and thereby the area containing Manganese and particularly the Manganese Nodules was proven to extend beyond the previously exposed Manganese Nodules. However, the area drilled was only a small part of the deposit. Drilling was done only on a small part of the "Lucky Strike" claim and on the "Hidden Fortune" claim.

BRIEF REPORT #3

Name of Property: Mead Manganese Properties

Drilling was done with a "Longyear Pioneer straight line Diamond Core Drill" with twin Hydraulic head, powered by a Waukesha gasoline engine and with E.X.drill rods and 2" fishtail and diamond bits - 10' and 5' core barrels taking about 7/8" cores. Separate pumping unit Nova A.V.-164 N gasoline powered delivering 16 G.P.M. at 125 H.S.I.

On the "Lucky Strike" claims the drilling data according to the drilling report was:

Date of drilling - Aug. 10 to Aug 22, 1949
Number of days of drilling - 10
Number of holes drilled - 21
Number of holes drilled per day - 2.1
Total number of feet drilled - 302
Number of feet drilled per day - 30.2
Greatest depth of any hole drilled - 31 feet
The shallowest drill hole - 3½ ft.
Average number of feet drilled per hole - 14.38
Average overburden per drill hole showing Manganese - 9.65 ft.
Number of drill holes not showing Manganese -8 or 38%
Average depth of drill holes not showing Manganese - 11.68 ft.
Number of holes showing Manganese - 13 or 62%
Average number of feet of Manganese per drill hole - 6.85

All the drilling was done in an irregular area approximately 500' S.W. - E - N.E. and 1000 feet S.E.-S. The holes were drilled approximately 6 feet to 193 feet 9 inches apart. The drill holes were all marked as drilled by a numbered stake driven into the hole. They probably will be there for you to observe.

On the "Hidden Fortune" claim the drilling data according to the drilling report was as follows:

Number of days drilling - 1
Number of holes drilled - 5
Total number of feet drilled - 39' 6"
Average depth of holes drilled - 8'
Number of drill holes showing Manganese - 4
Number of drill holes showing no Manganese - 1
About 6 feet overburden in each hole
Approximately 2 ft. of Manganese showing in each drill hole.

The quantity or ultimate depth of the Manganese was not attempted due to inability of the core drill and its water pressure to obtain a proper core or indicate exact depths due to dissolving and washing of the water. On striking Manganese the water immediately turns black. After that it is very difficult to determine if it comes from the bottom or sides of the hole.

We moved the drill back to another project to finish our work with it there.

BRIEF REPORT #4

Name of Property: Mead Manganese Properties

The "Van Clive Laboratories, Inc." of Minneapolis, made some analyses of samples taken from this deposit. Some of the results reported were as follows:

Manganese Dioxide	73.9%	46% Mn.	Manganese Dioxide	64.6%	40.5% Mn.
Silica	12.0%		Silica	18.2%	
Iron	.95%				
Manganese Dioxide	37.7%	23.6% Mn.	Manganese Dioxide	63.5%	39.8% Mn.
Iron	1.3%		Silica	20.1%	
Silica	23.4%				
Phosphorous	0.2%				
Manganese Dioxide	63.5%	39.8% Mn.			
Silica	19.7%				

These analyses were made on manganese ore samples as taken from the deposits and were without heat drying or benefication. It is believed a crushing and screening or simple gravity concentration is all that would be required if it were desired to further concentrate a large portion of this manganese.

A recent analyses report by a company to which 15 lbs. of samples were sent; as follows -

SiO_2	25.52 %	
CaO	nil	
Fe	1.5	
S	.013	
Mn	32.1	← Mn.
As	.014	
Zn	.01	

SUMMARY:

The large extent and numbers of surface exposures of manganese throughout the property, together with results obtained in exposing manganese, when excavation is done, seems to warrant an extensive program of development. At present no tonnages of possible production of manganese from this property can be fairly or accurately arrived at, due to the large area in which the manganese exposures are in evidence and the small amount of exploratory excavating. The lateral extent, the depth of the deposit and possible production tonnages can only be obtained by much more excavation on the property. There has been estimates made by various people according to the manganese exposed and in sight of from 50,000 tone to 300,000 tons and from 1-1/2 million to several million tons potential production.

Production can be had within 24 hours of manganese that is now available and has been declared acceptable to buyers of manganese to whom samples have been submitted.

PARMELEE TRANSFER OF HAND BAGGAGE

Passengers holding through tickets and requiring change of station in Chicago may do away with the problem of taking care of hand baggage between trains. All they need do is present baggage to Parmelee agent in the depot, pay 15c per bag, and Parmelee will arrange transfer to outgoing station, where baggage may be claimed at the parcel check room.

This arrangement applies only when there is at least a 3-hour interval between actual arrival of train in Chicago and scheduled departure time from outbound station.

Parmelee transfer coupon may be used to any hotel or destination in the downtown area.

REFERENCE NOTES

†—Daily, except Sunday.
‖—Meals.
⊙—Connection.
#—Stops to receive revenue passengers for Chicago when notified in advance.
●—Stops to let off revenue passengers from Chicago.
✚—Across Mississippi River from Quincy.
▲—Connecting bus from and to Fourth and Maine Sts.
■—Scenic Stage Line Buses between Davenport and Savanna, CB&Q RR tickets honored on these buses.
a—On Sunday leaves Peoria 3.00 p.m. by Burlington Bus.
b—Stops to receive revenue passengers for west of Minneapolis.
d—Stops to let off revenue passengers from Hannibal and beyond.
e—Stops to let off revenue passengers from north of La Grange or to receive for south of Hannibal.
f—Flag stop.
g—Coach passengers arrive Minneapolis 9.15 a.m.
h—On Sunday arrives Peoria 12.40 p.m. by Burlington Bus.
j—Coach passengers leave Minneapolis 10.05 p.m.
m—Checked baggage not handled on these trains.
n—Stops to let off revenue passengers or to receive for points north of Keokuk.
p—Stops to receive revenue passengers for St. Paul when notified at St. Louis.
s—Stops to let off passengers.
t—Stops to receive revenue passengers for Quincy and beyond.
A—Connecting bus leaves Fourth & Maine Sts. at 9.35 p.m.
—Train-Auto Service available at this point.

NOTE—Additional daily train leaves Quincy 10.15 a.m., arrives Hannibal 10.45 a.m; leaves Hannibal 6.30 p.m; arrives Quincy 7.07 p.m.

BLACK POINT No. 1 DISCOVERY
Scale: Diagrammatic

Sample No.	Location	Description	Manganese (%)
1	Lucky Strike Disc. Pit	Nodules	29.85
2	Black Point No. 2 Claim	Black sand--stone float	8.00
3	Black Point No. 1 Disc. Pit	8 ft of black sandstone	3.78

Explanation:

CAMBRIAN

- Mainly thin-bedded limestone, some shale.
- Mainly shale, some sandstone beds. Iron stained, brown, locally some oölitic hematite.
- Sandstone & quartzite (Deadwood Formation). Locally some manganese staining.

PRE-CAMBRIAN

- Granite with pegmatite dikes.

25° Strike and dip of strata.

Fault.

Manganese observed.

Suggested Drilling Sites:

- First Choice to test for nodular manganese.
- Second " " " " " " .
- Third " " " " " " .
- To test for manganese disseminated in Deadwood sandstone.
