SUMMARY

Paul Gille, operator of Contract Idm-E-755, DMEA Docket 3510, drilled 78 holes on the Dawson and Lindsay leases in sec. 20, T. 2 N., R. 1 E., Lafayette County, Wis. exploring for zinc and lead ore. These holes totaled 13,013 feet and cost $23,842.45. DMEA loaned one-half of the cost or $11,921.22. The contract authorized a total cost of $24,846.00 and 13,000 feet.

Three small ore bodies totalling about 10,000 tons were discovered on the Lindsay lease. No ore was discovered on the Dawson leases. The largest of the discovered ore bodies is estimated to contain 5,200 tons of 5.4 percent lead ore; the next largest contains about 3,350 tons of 5.0 percent zinc ore; and the smallest contains about 1,450 tons of 3.3 percent zinc ore.

The three ore deposits are too small and too deep to be of current economic value. However, it is recommended that DMEA certify a discovery on the Lindsay lease as the ore deposits do represent ore found by DMEA drilling.

INTRODUCTION

Contract

Paul Gille, of Cuba City, Wis. applied to DMEA (DMEA 3510, zinc-lead) for assistance in exploring for lead and zinc ore on the Dawson and Lindsay leases on August 22, 1954. A field examination of the property was made by Mr. C. J. Stehlik of the U. S. Bureau of Mines and Mr. W. A. Broughton of the U. S. Geological Survey. A joint memorandum submitted by Messrs. Stehlik and Broughton on September 20, 1954 recommended that DMEA grant assistance for exploring the Dawson and Lindsay leases.

On January 6, 1955 DMEA prepared Contract No. Idm-E-755 whereby DMEA would pay one-half the cost of drilling and associated assaying and technical services.

The cost allowed was:

For drilling 13,000 ft at $1.65 per foot	$21,450.00
For assaying 1,056 determinations	1,056.00
For technical services	2,340.00
Total	$24,846.00
Government participation at 50 percent	12,423.00

The maximum allowable price per foot under this contract was $1.91.

Gille started drilling in February, 1955 and completed drilling in June, 1956. During this time he drilled 13,013 feet in 78 holes. Actual expenses incurred by Gille during the drilling were:

13,013 feet drilled at $1.65 per foot	$21,471.45
208 chemical determinations	191.00
Technical services	2,180.00
Total	$23,842.45
Government participation	11,921.42

The actual cost per foot drilled was 1.832. The lower actual cost is due to only 208 assay determinations made where 1,056 were allowed under the contract.

Location

The Dawson and Lindsay leases are in sec. 20, T. 2 N., R. 1 E., Lafayette County, Wis. (fig. 1 and 2). The Dawson lease comprises about 200 acres in the SW¼ sec. 20 and S½ of the SE¼ sec. 20; the Lindsay lease comprises about 240 acres in the NW¼ sec. 20 and the N½SE¼ sec. 20.

Cuba City, Wis., about 2 miles southwest of sec. 20, is the nearest town to the Dawson and Lindsay leases.

GEOLOGY

Stratigraphy

Rocks penetrated by the drill on the Dawson and Lindsay leases include soil, and in descending order, the Middle Ordovician Galena, Decorah, and Platteville formations. A generalized stratigraphic section is shown by figure 3, and a brief description of the rocks is given below. One detailed description of cuttings from a drill hole and skeleton logs of all the holes are included in the appendix.

Platteville formation

The Platteville formation consists of four members, which in ascending order are the Glenwood shale, the Pecatonica dolomite, the McGregor limestone, and the Quimbys Mill limestone. Of the members in the Platteville, only the Quimbys Mill is considered potentially ore-bearing. So, the common practice in this district is to drill all prospect holes through the Quimbys Mill and bottom the hole in the upper part of the McGregor limestone (known locally as the "Trenton"). In some of the holes on the Dawson and Lindsay leases, however, lead, zinc, or iron minerals were encountered at the top of the McGregor member. In these cases, the hole continued until barren rock was encountered.

Quimbys Mill member.--The Quimbys Mill member is a dark brown dense limestone about 12 feet thick. The limestone is sub-lithographic and breaks with a conchoidal fracture. Because of the conchoidal fracture the Quimbys Mill is locally known as the "Glassrock." Near the lead and zinc deposits the limestone is altered to a dolomite limestone; and where strong mineralizing solutions have entered the limestone, most of the carbonate is dissolved leaving a dark brown shale residuum. The leaching of the carbonate thins the Quimbys Mill member and where strongly mineralized the thickness is usually 8 or 9 feet.

Decorah formation

Spechts Ferry member.--The Spechts Ferry member consists of green clay and white fossiliferous limestone. This member, known locally as the "Claybed," is about 3 feet thick at the Dawson and Lindsay leases. It is not considered an ore-bearing member.

Guttenberg member.--The Guttenberg member (known locally as "Oilrock") consists of about 12 feet of tan to light brown fossiliferous limestone and thin interbeds of dark brown carbonaceous shale. The basal bed of limestone generally contains abundant phosphatic nodules, and all the limestone contains silt-sized flecks of an unidentified red mineral. Near lead and zinc deposits the Guttenberg is altered to a dolomitic limestone, or the limestone is completely dissolved leaving a dark brown shale. The dissolving of the carbonate causes the Guttenberg to thin, and in mineralized holes on the Dawson and Lindsay leases the Guttenberg ranges from 8 to 10 feet in thickness.

Ion member.--The Ion member consists of about 20 feet of very fine grained dark gray and gray dolomite and dolomitic limestone with minor amounts of green clay along bedding planes and disseminated through the dolomite. The lower one-half of the Ion contains mainly dark gray dolomite and, in comparison with the upper part, more green clay. This division is recognized by prospectors in this district and they term the lower unit "blue" and the upper unit "gray." The Ion member is the chief ore-bearing zone in many mines in this district.

Galena formation

The Galena is a medium-grained light tan dolomite which forms the bedrock at the Dawson and Lindsay leases. This formation is generally divided into two units in southwest Wisconsin: A lower unit about 105 feet thick which contains bands of light gray chert nodules, and an upper unit 115 to 120 feet thick which does not contain chert nodules. Some prospectors in this district recognize the divisions of the Galena, and they term the cherty unit "drab" and the noncherty unit "buff." The areal contact between the cherty and noncherty units crosses near the boundary between the Dawson and Lindsay properties. Thus some of the holes drilled started in the noncherty units and the others in the cherty unit.

The lower 10 to 30 feet of the cherty unit is an important ore zone in this district.

The Dawson and Lindsay leases are on the northwest side of the Meekers Grove anticline. The main structure shown by DMEA drilling at the leases is a northwest N 10° W to N 30° W dip which drops the rocks about 90 feet from the south side to about the middle of the leases (fig. 1). A slight syncline which marks the north side of the Meekers Grove anticline trends roughly east through the middle of the leases. Gille drilled only a few holes north of this small syncline, but Vinegar Hill Zinc Company and New Jersey Zinc Company prospect holes north of the trough indicate less than 10 feet of rise on the beds within the Lindsay lease.

Mineral Deposits

Known ore deposits near the Dawson and Lindsay leases include the Gritty Six-Raisbeck and Trego deposit in S½ sec. 21; the Cuba City deposit in SW¼ sec. 20 (on the Dawson lease); and the Henrietta deposit in NW¼ sec. 20. These deposits vary greatly in size and grade of lead and zinc. The Gritty Six-Raisbeck deposit, the largest and richest near the Dawson-Lindsay area, was over 2,000 feet long, ranged from 50 to 170 feet wide, and locally had stopes as much as 60 feet high. In spite of the impressive dimensions of the Gritty Six-Raisbeck deposit, the highest estimates of ore produced from this deposit are in the 50,000 ton range. The small total production may reflect selective mining as the deposit produced ore that was higher grade than other nearby deposits. The "higher" being 8 to 10 percent zinc as compared to 5 percent zinc in nearby deposits. The zinc to lead ratio in these deposits was about 10:1.

Inclined fractures called "pitches" are associated with these ore bodies, but whether the ore body is controlled by the pitches or whether solution of rocks by mineralizing solution caused the pitches to develop is not known (fig. 4). Ideally, two sets of pitches which apex over the ore body develop, but in many ore bodies only one set is present. The pitches may be uninterupted fractures, but most commonly they are offset along bedding planes or more shaly layers.

In ore deposits the pitches are filled with sphalerite, pyrite, marcasite, calcite, and galena. At stratigraphically favorable places and where the pitches are offset horizontally, the same minerals occur and these places are known as "flats" (fig. 4).

In addition to filling pitches and flats, sphalerite, pyrite, marcasite, calcite, and galena are disseminated in the country rock. Typically these disseminated minerals cease at a geologic wall at the outside pitch and grade out to an assay wall inside the inner pitch. The disseminated-mineral ground inside the inner pitch is known as "core ground" (fig. 4).

A second type of mineral deposit also occurs with the pitch and flat deposits. In this type of deposit galena, calcite, iron sulfides, and sphalerite fill vertical fractures, which are locally called "crevices." Horizontal shoots of these minerals develop along the crevice where it cuts favorable stratigraphic zones. These favorable stratigraphic zones are called "openings." The crevice deposits may contain 10 to 40 ton pods of galena, but in general the crevice deposits are considered uneconomic as the pods of galena are difficult to find.

The description given above is greatly idealized. In many deposits, especially in deposits that are weakly mineralized and in deposits in the Quimbys Mill member, well defined pitches are absent.

Stratigraphically, the pitches generally apex in the basal part of the Galena dolomite and toe out in the Guttenberg member of the Decorah formation. Flats are best developed at the Guttenberg-Ion contact, in the basal beds of the Ion, the Ion-Galena dolomite contact, and locally at the base of the lowest chert bands in the Galena dolomite. Flats, not directly connected with pitches also develop in the Quimbys Mill member and at the Quimbys Mill-McGregor contact. The crevice deposits are in the upper 200 feet of the Galena dolomite.

Results of Drilling

Drilling indicated zinc and lead minerals are widespread on the Dawson and Lindsay leases. Fifty-four of the 78 holes drilled cut zinc and/or lead minerals, but only 8 of these mineralized holes encountered concentrations above the lowest cut-off point used in the district (at least 7 and one-half feet of mineralized ground that averages at least 3.0 zinc or lead). These 8 holes indicate three small ore deposits, all on the Lindsay lease (fig. 1). One hole on the Dawson lease, D-18, contained 10 feet that averaged 3.75 percent lead but adjacent holes did not contain ore; so no ore block is shown for D-18.

Ore block No. 1, indicated by holes L-4 and L-5, is about 100 feet long, 50 feet wide, and contains about 3,350 tons of 5.0 percent zinc ore. Barren to sub-ore grade holes surround this ore deposit and further drilling is not warranted around this ore deposit.

Ore block No. 2, indicated by holes L-25 and L-26, is assumed to be 50 feet by 50 feet and to contain about 1,450 tons of 3.3 percent zinc and 0.75 percent lead ore. This ore body is open east and west. Geologic habits of ore deposits near the Dawson and Lindsay leases indicate a good chance that the ore body would extend east under some old lead prospects. And there is a good geologic chance that the ore body would extend about 200 feet west. Thus, the ore body indicated by holes L-25 and L-26 is likely to contain about 15,000 tons of ore on the Lindsay lease.

Ore Block No. 3, indicated by holes L-17, 18, and 20 is assumed to be 250 feet long and 25 feet wide and to contain about 5,200 tons of 5.4 percent lead ore. This ore body, although indicated by three holes, is possibly more "inferred" rather than "indicated." Apparently the three holes encountered the toe of a pitch and mineralization near the toe of a pitch is erratic.

None of the three ore bodies described above is of current economic value as the deposits are too small and too deeply burried (160 to 180 feet). On the other hand, mining companies in this district mine isolated ore deposits such as these if they have nearby drifts. It is probable that ore blocks 2 and 3 would be mined if a large ore body were discovered just east of the Lindsay property.

Ore Calculations

Block 1, Holes L-4 and L-5

Hole	Thickness	Average assay	Assay feet
*L-4	7.5 feet (135 - 142½)	5.2 percent Zn	39.0
L-5	10.0 feet (150 - 160)	4.85 percent Zn	48.5

Average thickness 8.7 feet

Average grade 5.0 percent Zn

Area 50 x 100 = 5,000 sq. ft.

Volume 5,000 x 8.7 = 43,500 cu. ft.

Tons (13 cubic feet/ton) = 3,346

Block 2, Holes L-25 and L-26

Hole	Thickness	Average assay	Assay feet
L-25	7.5 feet (165 - 172.5)	3.12	23.4
L-26	7.5 feet (165 - 172.5)	3.53	25.5

Average thickness 7.5 feet

Average grade 3.32 percent Zn

Area 50 x 50 = 2,500 sq. ft.

Volume 2,500 x 7.5 = 18,750 cu. ft.

Tons = 1,442

Block 3, Holes L-17, L-18, and L-20

Hole	Thickness	Average assay	Assay feet
L-17	12.5 feet (170 - 182.5)	4.88 percent Pb	61.0
L-18	12.5 feet (177.5 - 190)	5.79 percent Pb	72.3
*L-20	7.5 feet (185 - 192.5)	5.95	42.2

Average thickness 10.8 feet

Average grade 5.4 percent Pb

Area 25 x 250 = 6,250 sq. ft.

Volume 6,250 x 10.8 = 67,500 cu. ft.

Tons 5,192

*Holes L-4 and L-20 actually contain only 5 feet of mineralized ground, but a mining company would generally drift to this type of hole.

RECOMMENDATIONS

It is recommended that the small ore bodies on the Lindsay lease be certified as ore discovered under a DMEA contract. These ore bodies are of no current importance, but the east end of the mineralized trend shown by holes L-15 to L-21 may be prospected on property adjacent to the Lindsay lease. And, if a commerical mineral deposit is discovered along this trend the ore bodies on the Lindsay lease would be mined.

It is recommended that no certification of discovery be made for the Dawson lease as DMEA drilling did not discover ore or favorable trends on the Dawson lease.

Appendix

A log of Hole D-23 is given below to illustrate the general lithology of nonmineralized holes drilled on the Dawson and Lindsay leases. The thickness and lithology as shown in the log could be used for any nonmineralized hole drilled. However, where ore minerals or pyrite are present in appreciable amounts, the Ion and Guttenberg members of the Decorah formation and the Quimbys Mill member of the Platteville formation are altered. This alteration consists of thinning, dolomitization, softening, and shalification of limestone.

Hole D-23

Collar elevation: 993.6
Depth to water: 70.0 feet
Completed: July 9, 1955
Logged by: T. E. Mullens

Depth (feet)	Description of cutting
0 - 15	Soil; no cuttings saved.
15 - 20	Dolomite, light brown, medium-grained, 60 percent; chert, yellowish brown, 40 percent; trace of calcite, and about 1 percent of the cut is composed of fine- to coarse-grained specks of limonite.
20 - 25	Dolomite, as above, 90 percent; chert, as above, 10 percent.
25 - 30	Dolomite, as above, 95 percent; chert, as above 5 percent.
30 - 35	Dolomite, as above, 85 percent, chert, yellowish brown and gray 15 percent; trace of calcite.
35 - 40	Dolomite, as above, 85 percent; chert, as above, 15 percent.
40 - 45	Dolomite, as above, 95 percent; chert, as above 5 percent; calcite, ½ percent.
45 - 50	Dolomite, as above, 99 percent; chert, as above 1 percent.
50 - 55	Dolomite, as above; trace of calcite.
55 - 60	Dolomite, as above; trace of light gray chert, trace of calcite, trace of limonite.

60 - 65	Dolomite, as above, 80 percent; chert, yellowish brown and light gray, 20 percent; trace of calcite.
65 - 70	Dolomite, as above, 95 percent; chert, as above, 5 percent, trace of calcite.
70 - 75	Dolomite, as above; trace of calcite; trace of limonite.
75 - 80	Dolomite, as above, 20 percent; dolomite, light gray with fine green clay specks, very fine grained, 80 percent; trace of green shale, trace of pyrite; trace of calcite.
	Contact between Galena dolomite and Ion member of the Decorah formation at 76 feet.
80 - 85	Dolomite, light gray, very fine-grained; calcite, 1 percent; pyrite, 1 percent, pyrite disseminated in silt-sized particles in dolomite.
85 - 90	Dolomite, as above, 60 percent; dolomite, dark to blue-gray, very fine-grained, 35 percent; shale, green, 5 percent; trace of calcite; trace of pyrite.
	Contact between informal "gray" and "blue" divisions of Ion member at 88 feet.
90 - 100	Dolomite, dark to blue gray, very fine-grained; shale, green, 2 percent; trace of pyrite (two 5 foot cuts studied).
100 - 102.5	Dolomite and green shale, as above, 95 percent; dolomite, tan, fine-grained, 5 percent; abundant silt-sized clear quartz grains; trace of pyrite.
	Contact between Ion and Guttenberg members of the Decorah formation at 102 feet.
102.5- 105	Dolomite, tan, fine-grained, 20 percent; dolomite and dolomitic limestone, light tan to light brown, very fine-grained, 80 percent; trace of yellowish white bentonite.
105 - 107.5	Limestone and dolomitic limestone, tan, very fine-grained; trace pyrite, trace calcite.
107.5- 112.5	Limestone, tan, lithographic except for rare very fine dolomite grains, trace calcite (two 2.5 foot cuts).
112.5- 115.0	Limestone, as above, 50 percent; limestone, very light gray, with dark brown to black phosphate nodules, 45 percent; shale, green, 5 percent; trace of calcite; trace of pyrite.
	Contact between Guttenberg and Spechts Ferry members of the Decorah formation at 114 feet.
115 - 117.5	Limestone, very light gray, very fine-grained, 70 percent; shale, green, 10 percent; limestone, brown, dense, 10 percent; shale, brown, light gray fossil fragments, 10 percent; trace of calcite.
	Contact between Spechts Ferry member of the Decorah formation and Quimbys Mill member of the Platteville formation at 117 feet.

117.5- 127.5	Limestone, brown to dark tan, dense, lithographic except for scattered very fine dolomite grains; trace pyrite; trace calcite; trace brown shale (four 2.5 foot cuts).
127.5- 130	As above, 20 percent; shale, dark brown, fissle, 2 percent; dolomitic limestone, gray, very fine-grained, 60 percent; fossil fragments, 18 percent.

Figure 2. Index map showing location of DMEA 3510, Paul Gille, Operator, Dawson and Lindsay leases, Lafayette County, Wisconsin.

Series	Formation	Member	Rock Type	Local Name	Description	Thickness (feet)
Recent				Surface	Soil, loess, and residual pebbles	10-20
Middle Ordovician	Galena	Noncherty unit		Buff	Dolomite, light tan, medium- to coarse-grained, granular, argillaceous	0-25
		Cherty unit		Drab	abundant bands of light gray chert nodules	105
					sparse bands of chert nodules	
					Dolomite, light tan, medium- to coarse-grained, granular, argillaceous	
					sparse bands of chert nodules	
					abundant bands of chert nodules	
					no chert in lower 10 feet	
	Decorah	Ion		Gray / Blue	Limestone and dolomitic limestone, light gray in upper part, blue-gray in lower part, some green clay, scattered quartz grains near base	20
		Guttenberg		Oil rock	Limestone and dolomite, dark brown, interbedded dark brown clay	12-14
		Spechts Ferry		Clay bed	Clay, green, and light gray limestone, phosphatic nodules	1-3
	Platteville	Quimbys Mill		Glass rock	Limestone and dolomite, dense, brown, dark brown shale at base	10-12
		McGregor		Trenton	Limestone, gray, fine-grained. Most holes bottomed about 3 feet below top of McGregor member

Figure 4. Diagram showing idealized cross section of a zinc-lead mineral deposit in southwest Wisconsin.

Final Report
DMEA 3510
Contract E-755

Location: Lindsey Lease: NE¼ and the N½ of the SE¼, sec. 20, T2N, R1E, 4th P.M., Lafayette County, Wisconsin.

Dawson Lease: SW¼ of the SW¼ and the E½ of the SW¼, and the S½ of the SE¼, sec. 20, T2N, R1E, 4th P.M., Lafayette County, Wisconsin.

Original Amount of Contract: $24,846.00

Date Drilling Started: 2/9/55

Total Footage: 13,013

Number & Cost of Assays: 208 assays - $191.00

Technical Service Cost: $2180.00

Total Cost of Contract: $23,842.45

Total Cost per foot: $1.83

Report on General Stratigraphy

Soil: Thickness averaged 20'. Chert was present. No mineralization.

Buff & Drab: Combined thickness 60-90'. Lead & iron mineralization occurred along with crevasse clay and limonite.

Gray: Thickness 10-20'. Some oxidation occurred. Very light zinc and iron mineralization.

Blue: Thickness 7-10'. Very light zinc mineralization. Light to heavy iron mineralization.

Oilrock: Thickness 7-14'. Fair zinc mineralization with heavy barite in some holes. Medium to heavy iron mineralization. Zinc occurred when the thickness of oilrock was approximately 8'. Light lead mineralization.

Claybed: Thickness 2½-5'. Light zinc, Light to heavy iron. The best lead zone was in this formation.

Glassrock: Thickness 6½-12½'. The glassrock was the best zinc zone. Heavy iron concentration in some holes. Fair lead.

Trenton: Holes were drilled with at least one cut in this formation. Light iron and zinc mineralization.

Ore Discovered

Location: Holes L-4, L-5, L-17, L-18, L-20, L-25 and L-26.

ORE CALCULATIONS

Block 1: L4 & L5

Area ---- 50 X 100 5000 sq. ft.

Ave. length of ore: $\frac{7\frac{1}{2} \quad 12\frac{1}{2}}{2}$ 10'

Vol. of Ore 5000 X 10 50,000 cu. ft.

Tons of Ore $\frac{50,000}{12}$ 4160 tons Zn Ore

Grade of Ore $\frac{49.5 \quad 52.5}{20}$ 5.1% Zn

Block 2: L17, L18 & L20

Area 250 X 25 6250 sq. ft.

Ave. length of ore: $\frac{12\frac{1}{2} \quad 12\frac{1}{2} \quad 5}{3}$ 10'

Vol. of ore: 6250 X 10 62,500 cu. ft.

Tons of ore: $\frac{62,500}{12}$ 5210 tons Pb Ore

Grade of ore: $\frac{61 \quad 72.38 \quad 44.6}{30}$ 5.93% Pb

---

Block 3: L25 & L26

Area 50 X 50

Ave. length of ore $\frac{7\frac{1}{2} \quad 10}{2}$ 8.75'

Vol. of ore 2500 X 8.75 21,875 cu ft

Tons of ore $\frac{21,875}{12}$ 1810 tons Zn ore

Grade of ore $\frac{23.4 \quad 29.7}{17.5}$ 3.04% Zn

PAUL GILLE

UNITED STATES
DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS EXPLORATION ADMINISTRATION
WASHINGTON 25, D. C.
ROOM 15 POST OFFICE BLDG.
KNOXVILLE 2, TENN.

October 29, 1956

Memorandum

To: Operating Committee, DMEA, Washington, D. C.

From: Field Team, DMEA, Region V, Knoxville, Tennessee

Subject: Final Report, DMEA-3510, Idm-R755 (Zinc-lead)
Paul Gille, Cuba City, Wisconsin
Bungum and Lindsay Leases, Lafayette County, Wisconsin

Enclosed are the original and three copies of the final report by T. E. Mullens, geologist, on the subject exploration contract. The Operator's final report was mailed to you last week.

The Operator and Mr. Mullens are in essential agreement concerning their estimates of indicated reserves, which may be summarized thus:

	Operator	Mullens
Block 1	4,166 tons, 5.18% Zn	3,350 tons, 5.0% Zn
Block 2	5,309 tons, 6.10% Pb	5,300 tons, 5.6% Pb
Block 3	1,823 tons, 8.04% Zn	1,650 tons, 3.3% Zn
	11,198 tons	10,000 tons

*These are Operator's numbers, and differ from Mr. Mullens' block numbers.

Mr. Mullens points out that the differences in these estimates resulted from:

1. Operator figures 12 cubic feet per ton; Mullens used 13.

2. Operator and Mullens did not use identical intercepts of ore in drill holes in figuring outlines of ore blocks.

DMA-3510 - Paul Mills

The Operator's reports and map are quite sketchy, but they appear to convey the essential factual information, and taken together with Mr. Mullens' complete report, fulfill the need of a final engineering and geologic report.

Although the amount of ore discovered, by either estimate is small, and is not likely to be mined, it is nevertheless ore discovered by the DMA contract and, should ore eventually be discovered on neighboring properties, the Lindsay ore might be mined eventually. Therefore, we agree with Mr. Mullens's conclusion, and we recommend a certification of discovery. It should be noted that all three ore bodies are on the Lindsay lease.

Final Report
DMEA 3510
Contract E-755

Location: Lindsey Lease: NE¼ and the N½ of the SE¼, sec. 20, T2N, R1E, 4th P.M., Lafayette County, Wisconsin.

Dawson Lease: SW¼ of the SW¼ and the E½ of the SW¼, and the S½ of the SE¼, sec. 20, T2N, R1E, 4th P.M., Lafayette County, Wisconsin.

Original Amount of Contract: $24,846.00

Date Drilling Started: 2/9/55

Total Footage: 13,013

Number & Cost of Assays: 208 assays - $191.00

Technical Service Cost: $2180.00

Total Cost of Contract: $23,842.45

Total Cost per foot: $1.83

Report on General Stratigraphy

Soil: Thickness averaged 20'. Chert was present. No mineralization.

Buff & Drab: Combined thickness 60-90'. Lead & iron mineralization occurred along with crevassé clay and limonite.

Gray: Thickness 10-20'. Some oxidation occurred. Very light zinc and iron mineralization.

Blue: Thickness 7-10'. Very light zinc mineralization. Light to heavy iron mineralization.

Oilrock: Thickness 7-14'. Fair zinc mineralization with heavy barite in some holes. Medium to heavy iron mineralization. Zinc occurred when the thickness of oilrock was approximately 8'. Light lead mineralization.

Claybed: Thickness 2½-5'. Light zinc, Light to heavy iron. The best lead zone was in this formation.

Glassrock: Thickness 6½-12½'. The glassrock was the best zinc zone. Heavy iron concentration in some holes. Fair lead.

Trenton: Holes were drilled with at least one cut in this formation. Light iron and zinc mineralization.

Ore Discovered

Location: Holes L-4, L-5, L-17, L-18, L-20, L-25 and L-26.

ORE CALCULATIONS

Block 1: L4 & L5

Area ---- 50 X 100 5000 sq. ft.

Ave. length of ore: $\frac{7\frac{1}{2} \quad 12\frac{1}{2}}{2}$ 10'

Vol. of Ore 5000 X 10 50,000 cu. ft.

Tons of Ore $\frac{50,000}{12}$ 4160 tons Zn Ore

Grade of Ore $\frac{49.5 \quad 52.5}{20}$ 5.1% Zn

Block 2: L17, L18 & L20

Area 250 X 25 6250 sq. ft.

Ave. length of ore: $\frac{12\frac{1}{2} \quad 12\frac{1}{2} \quad 5}{3}$ 10'

Vol. of ore: 6250 X 10 62,500 cu. ft.

Tons of ore: $\frac{62,500}{12}$ 5210 tons Pb Ore

Grade of ore: $\frac{61 \quad 72.38 \quad 44.6}{30}$ 5.93% Pb

---

Block 3: L25 & L26

Area 50 X 50

Ave. length of ore $\frac{7\frac{1}{2} \quad 10}{2}$ 8.75'

Vol. of ore 2500 X 8.75 21,875 cu ft

Tons of ore $\frac{21,875}{12}$ 1810 tons Zn ore

Grade of ore $\frac{23.4 \quad 29.7}{17.5}$ 3.04% Zn

Memorandum

To: Operating Committee, DMEA - Washington

From: DMEA Field Team, Region V - Knoxville, Tenn.

Subject: DMEA-3510, Idm-E755(zinc-lead) Paul Gille, Cuba City, Wis.
Dawson & Lindsay Leases, Lafayette County, Wisconsin

Enclosed is one copy of a request for an amendment to the subject contract, received from the Operator today. Mr. Gille sent only two copies, and we are keeping the other copy for our use.

We have written to Mr. Mullens, Geologist at Platteville, Wis., asking for comments and recommendations on this proposal.

Robert A. Laurence
Executive Officer, DMEA
Region V

V. J. Lynch, Member
Bureau of Mines

Mr. A. B. Needham
U. S. Bureau of Mines
2908 Colfax Avenue, South
Minneapolis 8, Minnesota

Dear Mr. Needham:

The Gille contract, DMEA 3510, will be completed this month, and I have some more mineralized samples I would like to send to you.

If you could send me about 200 of the small plastic sample boxes I will send all samples containing more than "shines" of lead or zinc minerals to you. These boxes could be brought to Platteville by the engineer who makes the semi-annual DMEA inspection.

Sincerely yours,

T. E. Mullens

Re: DMEA-3510, Idm-E755 (Zinc-Lead)
Paul Gille, Cuba City, Wisc.
Dawson & Lindsay leases,
Lafayette County, Wisconsin

Dear Tom:

As I interpret the Gille contract, it would be possible to amend it so that an additional 500 feet could be drilled, using money which was not spent for assays to pay for the additional drilling.

But both Mr. Lynch and I doubt that it is advisable to do so, unless Mr. Gille is willing to drill the three holes at the sites you recommend now instead of waiting until after the fall harvest to avoid payment for crop damages.

To date, nearly 13,000 feet of drilling has apparently located three small ore bodies totalling less than 10,000 tons of about 4% grade. The three additional holes, even if successful, are not likely to make much difference in the overall picture, and it hardly seems worth a delay of four or five months in completing the project. We agree with your conclusion that the holes should not be drilled on the Dawson lease, west of D-18 as suggested by Mr. Gille.

If Mr. Gille wants to drill the three holes at your locations, immediately after completion of L-37 and L-38, let me know and I will prepare the amendment. It will also be necessary to amend the contract if work (including technical services) is not completed or costs of same incurred by July 6, 1956, regardless of whether or not the additional drilling is approved. Therefore, please give me an estimate of the amount of time required to complete the job, with or without the additional drilling. Preparation of a time extension amendment is more or less routine and presents no difficulties, except that we can't extend it beyond January 6, 1957.

As it is again nearly time for the semi-annual inspection of certified projects, you will soon be visited by a Bureau of Mines engineer, probably Wes Grosh. It is not expected that you will have to spend much time on that chore or to accompany the engineer on his inspections, but any assistance you can give him without interference to your regular project work will be appreciated.

Sincerely,

Bob

Robert A. Laurence

Re: Docket No. DMEA-3510 (Lead-zinc)
Paul Gille
Dawson and Lindsay Leases
Lafayette County, Wisconsin

Dear Tom:

I have forwarded the interim reports on the Gille contract to Washington. They serve the purpose adequately -- which is to provide the Washington office with a field man's appraisal of the progress of a contract. We can get prints made of tracings if you send them with the next report. It isn't necessary to write a report on a contract of this type after each visit; once every couple of months would be adequate.

As far as I'm concerned, the work of cutting and preparing DMEA samples is definitely DMEA work, and I'd suggest you have Ralph Chartraw do the work as you have suggested and charge it to DMEA.

Sincerely,

Bob.

JUN 14 1956

Mr. Thomas E. Mullens
Box 165
Platteville, Wisc.

Dear Mr. Mullens:

The Geological Survey Incentive Awards Committee has the following to report after considering your suggestion, No. GS-56-111, regarding a change in the "Permit and Agreement" form.

We know you will be disappointed to learn that, although the form has been modified as you proposed, the Committee cannot recommend an award as the suggestion is thought to fall within the normal duties of your job. However, you are to be commended for your alertness in recognizing this problem, and I know you are pleased that beneficial action resulted from your idea.

I appreciate your interest in the Incentive Awards program and hope that you will continue to send in ideas that you think are worthwhile and will improve operations in the Survey.

Very truly yours,

Willard F. McCornack

Memorandum

To: Robert A. Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas E. Mullens, Geologist, Platteville, Wisconsin

Subject: Recommendation that the requested amendment to Contract Idm-8755, DMEA-3510 (zinc-lead), Paul Gills, Operator Duncan and Lindsay leases, Lafayette County, Wisconsin be denied.

Paul Gills, operator of Contract Idm-8755, DMEA-3510, has requested an amendment to allow an additional 10,000 feet of drilling. The additional 10,000 feet would be used to drill 55 more holes on the Duncan and Lindsay leases, and the cost of the additional drilling would be $19,000.00. DMEA is requested to loan one-half of the cost.

The original terms of Contract Idm-8755 allowed 13,000 feet to be drilled on the Duncan and Lindsay leases at a cost not to exceed $24,846.00. To date, Gills has drilled about 13,000 feet at a total cost of about $24,300.00.

I recommend that DMEA deny the request for an amendment because I do not believe the additional drilling would find any significant ore deposits.

To the present time Gills has drilled about 13,000 feet in 78 holes, and has discovered three small ore deposits. The total tonnage in the three deposits is less than 10,000. Ore block No. 1, indicated by holes L-4 and 5 (figure 1), contains about 2600 tons of ore that will average about 5.0 percent zinc; ore block No. 2, indicated by holes L-25 and 26, contains about 1,400 tons of ore averaging about 3.80 percent zinc and about 0.75 percent lead; and ore block No. 3, indicated by holes L-17, 18 and 20, contains about 4,400 tons of ore averaging about 6.0 percent lead.

Ore block No. 1 is fairly well blocked out and more drilling in this area is not warranted. Ore block No. 2 is open both east and west and more drilling would probably indicate 5,000 to 10,000 tons of ore for this block. Ore block No. 3 is based on 3 holes in nearly a straight line, and the ore in this block is more "inferred" than "indicated." The erratic nature of lead ore deposits in this district makes it unwise to drill more holes to further delineate ore in this block.

None of the three blocks is of current economic value as the deposits are too deep (about 180 feet) and too small. On the other hand, it should be noted that mining companies in this district mine deposits this size if they have nearby drifts; and ore block No. 3 would be mined if it were less than 50 feet from the surface.

The above indicates what has been found by drilling under Contract Idm-8755; below I will indicate why I think the additional drilling requested by Gille is not warranted.

The lead-zinc deposits adjacent to the Dawson and Lindsay leases are linear and narrow. The Gritty Six-Raisbeck deposit just southeast of hole D-4 was over 2,000 feet long and ranged from 25 to 170 feet wide. Total production from this mine is not known, but it was the largest deposit in the vicinity of the Dawson and Lindsay leases and I estimate less than 50,000 tons of ore was removed. Hayl (unpublished report) reports the ore was of higher grade than adjacent deposits, and I interpret Hayl's remarks to mean that the ore averaged 8 to 10 percent zinc.

The deposits in the Dawson-Lindsay area do not show a close relationship with the local structure; however, a good method of prospecting is to explore areas where the rocks dip instead of areas where the rocks are flat-lying.

Halos of iron, zinc, and lead minerals and altered rock occur with many of the ore deposits in this district. However, such halos are of little use on the Dawson and Lindsay leases as sub ore grade concentrations of lead and zinc minerals are common. (See figure 1)

Structurally and trend-wise the line of holes from D-4 to L-3 tested the best area. The rocks dip slightly from D-4 to L-3 and this line of holes should have cut any westward extension of the Gritty Six-Raisbeck ore body. The line of holes indicates the Gritty Six-Raisbeck deposit spread and the ore minerals are not concentrated enough to make an ore deposit.

The best area discovered by Gille trends slightly south of west from L-15 to L-21. Gille proposes to drill three more holes to test this area. I believe the holes proposed by Gille would show that ore block No. 3 is really a 5,000 to 10,000 ton deposit. This zinc deposit, however, is of no economic value at the present time. I limit the size of the deposit because I believe the favorable trend does not extend west to the line of holes drilled by Vinegar Hill Zinc Company.

Gille proposes to drill four north-south lines of holes in the south-west part of the Lindsay lease. Some of these holes fill in spaces in the line L-37 to 38. These holes are not needed as the first line of holes indicated this area is not favorable for ore deposits. The other holes in the Lindsay lease must be considered prospect holes as no known ore trend or favorable structure extends into this part of the Lindsay lease. In fact, a north-south line of holes 300 feet east of the west line of the Lindsay lease indicates the structure is not favorable for ore deposits. This line of holes was drilled by Vinegar Hill Zinc Company and the collar elevations given by Vinegar Hill are not accurate, but I believe the holes do show the general structure. No mention of iron, zinc, or lead minerals is made in the logs of these holes.

The line of proposed holes about 600 feet west of D-18 is planned to intercept the west trending favorable zone indicated by D-18 and nearby holes. However, the trend of structure contours controlled by holes D-4, L-3, L-38, D-18, and D-31 indicates the area west of D-18 is not favorable for zinc ore deposits.

The line of proposed holes west of the road on the Dawson lease is planned to intercept a favorable zone trending east through the Cuba City mine. Little is known about the Cuba City mine, but Hayl (unpublished report) indicates it was small and produced low grade ore. The three Rasque Mining Company holes for which I have logs show the Cuba City deposit did not extend far eastward. The projection of structure contours into this area indicate the area is unfavorable for zinc deposits.

In summary:

I would say none of the north-south lines of holes proposed by Gille are warranted. I believe holes drilled on the Lindsay lease (Gille, Vinegar Hill, and New Jersey Zinc) give enough information to indicate no ore body of economic importance will be found in the area Gille proposes to test. The two lines of holes on the Dawson lease will apparently test an area with unfavorable structure. The three holes proposed to test the area west of L-25 and 25 are needed, but Gille could not drill them until fall because of crop damage. And the largest ore body he could find in this area would be of no economic value at the present time and probably not within ten years.

Memorandum

To: Operating Committee - DMEA - Washington, D. C.

From: Field Team - DMEA - Region V - Knoxville, Tennessee

Subject: DMEA-3510, Idm-E755 (Zinc-Lead)
Paul Gille, Cuba City, Wisconsin
Dennon and Lindsay Leases, Lafayette County, Wisconsin

Enclosed are four copies of a memorandum from Thomas E. Mullens, USGS, recommending denial of the proposed amendment to the subject contract. We will forward the opinion of the Bureau of Mines representative, when received.

Mr. Mullens reports that the current contract price for drilling in the Wisconsin district is about $1.45 per foot. If 10% for assaying, technical services, etc. is added, this would give $1.60 per foot instead of the $1.90 requested by the Applicant.

Dear Bob:

The mailing address of Thomas B. and Nancy W. Dawson is Benton, Wis.; and for Everett W. and Lucille Lindsay it is Cuba City, Wis.

I have not seen the proposed amendment for the Gille contract. However, yesterday Mr. Grosh and I talked with Mr. Gille about the amendment. Our recommendation will be not to allow the additional drilling.

We will submit a report on the amendment late next week or early the following week. The delay is due to me. I will be on a field trip until next Monday.

I will try to write the Gille final report next week. I will send the report to Mr. Grosh before I submit it to you. This will give him a chance to add any engineering data.

The recommendation will be to certify the Lindsay lease, but not the Dawson lease.

Sincerely yours,

T. E. Mullens

P.S. Would you send me the Platteville DMEA Project Number so I can charge this time to DMEA

Re: DMEA-3510, Idm-E755 (Zinc-Lead)
Paul Gille, Cuba City, Wisconsin
Lindsay and Dawson leases
Lafayette County, Wisconsin

Dear Tom:

This morning I received a letter, and two copies of a map, from Paul Gille, requesting an amendment to his exploration contract to provide for 55 additional holes, total footage 10,000, at $1.91 per foot. Total amount requested for the amendment is $19,000.00 (although 10,000 ft @ $1.91 would be $19,100). Forty-one holes are spotted on the map; seventeen of these are on the Dawson lease and twenty-four are on the Lindsay lease. Six of these are on the line between the NW$\frac{1}{4}$ SW$\frac{1}{4}$ and NE$\frac{1}{4}$ SW$\frac{1}{4}$, Sec. 20, at locations halfway between holes L34 to L39 which were drilled under the original contract.

I presume that Mr. Gille has submitted a copy of this map to you; if not I suggest that you get one from him. Please let me have your comments and recommendation for or against approval of the requested amendment. As Mr. Grosh will be with you next week, you could submit a joint memorandum with him.

Berton

Can you send me the mailing addresses of Thos. B. and Mary W. Dawson and Everett W. and Lucille Lindsay, owners of the Dawson and Lindsay leases? — Cuba City

Sincerely,

Robert A. Laurence
Executive Officer
DMEA Field Team, Region V

June 1, 1956

Mr. Robert A. Laurence
Executive Officer
DMEA Field Team - Region V
Room 13 - Post Office Building
Knoxville 2, Tennessee

Dear Bob:

Mr. Paul Gille, operator of contract E-755, DMEA Docket, asked me a question I could not answer.

Mr. Gille will complete the contract allowable footage of 13,000 feet in about two weeks. However, the unit cost of the contract has been about $1.83 instead of the authorized $1.91; therefore, some money, about $1,040.00, of the authorized total cost of the contract ($24,846.00) will not be spent.

Mr. Gille would like to know if the $1,040.00 could be used in drilling more holes. The $1,040.00 would pay for about 500 more feet and still leave money for the technical services charge for a final report.

Would you tell me if this can be done.

I enclose a map to show you what could be gained by spending the $1,040.00. I would recommend that holes be drilled where I made orange crosses. Everywhere else leaves me cold.

Sincerely yours,

T. E. Mullens

MEMORANDUM

To: Robert A. Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas E. Mullens

Subject: Interim Report on Contract Idm E-755,
DMEA Docket 3510, Paul Gille, Operator

Enclosed are four copies of the subject report.

Thomas E. Mullens

Enclosure

Interim Report
Contract Idm E-755 - DMEA Docket 3510
Lead-Zinc
Paul Gille, Operator
Dawson and Lindsey Leases
Lafayette County, Wisconsin

by

Thomas E. Mullens
U. S. Geological Survey

DMEA Contract Idm E-755, a part of DMEA Docket 3510, authorizes Paul Gille of Cuba City, Wis. to drill 13,000 feet on the Dawson and Lindsey leases, section 20, T. 2 N., R. 1 E., Lafayette County, Wis. The purpose of the drilling is to explore for lead and zinc ore.

As of March 16, 1956 exploration under Contract Idm E-755 was 80 percent completed. The operator had drilled 39 holes on the Dawson lease and 25 holes on the Lindsey lease for a total of 10,405 feet. Through February 29, 1956 total expenses under the contract were $18,032.45 out of the authorized $24,846.00.

The operator has been diligent in collecting samples and in having samples thought to contain ore-grade material assayed. The operator, aided by the technical services of D. C. Dixon, also logs the samples and maintains an up-to-date map showing hole locations, collar elevations, and elevations of a key horizon for structure contours. The map is of value as the ore is probably structurally controlled.

Most of the holes drilled by the operator have cut lead or zinc minerals. Some of these holes cut "ore grade" lead or zinc, but in only two areas has the "ore grade" material been thick enough to be classed as an "ore-hole." One area, holes L-4 and L-5, has been drilled enough to indicate no currently minable lead or zinc ore extends away from the area. Minable ore indicated by L-4 and L-5 is less than 1,000 tons of 4 percent zinc ore. It is doubtful that this small deposit will be mined within the next ten years.

The second area where "ore grade" is associated with "ore thickness" is near holes L-17, L-18, and L-20. This area has not been completely

explored, and assays have not been made; however, about 4,000 tons of lead and zinc ore can be inferred to underlie this area. Possibly more drilling in this area will indicate a larger deposit.

Currently the operator is drilling north-south cross-cuts on a large iron sulfide body indicated by the east-west line of holes L-15 to L-22. These cross-cuts will roughly outline the iron sulphide body, but the main purpose of the cross-cuts is to penetrate lead or zinc deposits associated with the iron sulphide. This plan is geologically valid as many of the lead and zinc deposits in this district are associated with iron sulfide deposits.

It is recommended that the operator continue exploration with DMEA assistance until the limits set by Contract Idn E-755 are reached.

From: T. E. Mullens

Subject: Interim Report on Contract Idm E-755, DMEA Docket 3510,
Paul Gille

Enclosed are four copies of the subject report.

I have not included any maps or cross-sections with the report as I have no means of reproducing copies in Platteville. For the next report -- maybe 2 or 3 months from now -- I will prepare tracings to include with the report.

Enclosures

Interim Report

Contract Idm E-755

DMEA Docket 3510

Dawson and Lindsey leases

by

Thomas E. Mullens

U. S. Geological Survey

As of December 16, 1955 exploration for lead and zinc under Contract Idm E-755, DMEA Docket 3510, was about one-half completed. The total approved cost of the contract is $24,846.00 and about $12,400 have been spent in drilling 46 holes totalling nearly 7,000 feet.

Most of the holes drilled have cut lead and zinc minerals. Some of these holes penetrated "ore grade" lead or zinc; however, none of these holes penetrated a sufficient thickness of lead or zinc minerals to be classed as an "ore hole."

The Dawson and Lindsey leases are on the north flank of a northeast trending anticline. This flank at the anticline has produced lead and zinc ore on and adjacent to the leases, and the plan of the operator was to drill four north-south lines of holes along the flank of the anticline in order to determine the trend of the favorable ground. This first stage of work was completed near the end of October 1955. Since then the operator has been drilling around the most promising holes in the north-south lines in an attempt to discover an ore body.

At all times the operator has been diligent in collecting samples and in having assays made of samples thought to contain ore grade material. The operator also maintains an up-to-date map showing collar elevations and elevations of a key horizon for structure contours. This map is of value in spotting new holes as the ore is structurally controlled.

Although the drilling during the first one-half of the contract did not outline any ore, this drilling did outline some places that are apparently favorable for ore. It is recommended, therefore, that the operator be allowed to continue exploration with DMEA assistance in these more favorable places.

Re: DMEA-3510, Idm-E755
Paul Gille (lead-zinc)
Dawson & Lindsay leases
Lafayette County, Wis.

Dear Bob:

Your letter of April 4 mentioned that justification is indicated for drill hole spacing closer than 100 feet on the above contract.

Because a full application report by the examining USGS geologist (Broughton) and USBM engineer (Stehlik) was not included with the contractor's application report in this case, the complete picture of the target may not have been obvious.

The geologic picture is that of a relatively steeply dipping (for this district) north slope of a generally east-trending anticline across the contract area. In the next half-mile to the east a small syncline on this larger anticline has localized an ore body half a mile long, which was mined by the Gritty Six (west) and Raisbeck (east) mines. This ore body became too lean to mine at its west end, which is about 600 feet east and 100 feet south of the NE corner SE¼SE¼ sec. 21 of the contract area; at the west end the ore body is said to have been only 60 feet wide, although farther east it was mined as much as 100 feet wide.

A north-south line of four 20-year old drill holes just east of this section line, spaced 25 feet apart, caught the syncline and mineralized effects of the ore trace.

A north-south line of three 10-year old drill holes 100 feet west of this section line (on the Dawson land in the contract area), 50 feet apart, are supposed to have been mineralized, but locations, grade of mineralization, and structure are vague.

A north-south line of five 50-year old drill holes, 50 feet farther west, reportedly intersected lead minerals in the center hole, but the structural information is anomalous.

Adding all this together, when the contract work began in February it seemed to me as if the best procedure would be to drill a north-south line of closely spaced holes, 5 or more if needed, to determine accurately the mineral, stratigraphic, and structural

picture of the westward extension of the Gritty Six-Raisbeck ore trend. Mr. Stehlik and Mr. Gille agreed, and a north-south line of holes was drilled on 25-foot spacing, 250 feet west of the section line (100 feet west of the westernmost line of old holes). We were not sure that we had the complete picture until hole 7 was completed in mid-March.

The Spring thaw has interrupted drilling until this week, when Mr. Gille hopes to begin a second north-south cross section, 550 feet west of the first one. The spacing will be 100-foot, with 50-foot fill-ins if needed. This cross section will extend to the south from a previously drilled 2000-foot line of holes drilled north from the north line of the SE¼SE¼ sec. 21, on the Lindsay land.

Sincerely,

Allen

Re: DMEA-3510, Idm-E755 (lead-zinc)
Paul Gille
Dawson & Lindsay Leases
LaFayette County, Wis.

Dear Mr. Stehlik:

Please have Mr. Gille submit with his next monthly voucher a sub-voucher or receipt for any technical services and analytical work which is included, and also a similar sub-voucher for the $98.46 for technical services on his February voucher. These items are on the contract under the actual cost classification and therefore they must be supported by the proper documents. We approved payment of the $98.46 because it was within the allotted figure and because it obviously was based on a per-foot cost for actual inspection of the drilling. However, we will have to suspend payment of that amount, plus any charges to these items on the March voucher, if not supported by proper documents.

Also, please instruct Mr. Gille not to fill in the columns marked "For Government Use Only." These are to be completed here, when the voucher is finally approved and forwarded to the Finance Office for payment.

I am tentatively planning to visit the Wisconsin and Michigan projects in May, and hope to be able at that time to discuss with you and Mr. Needham the handling of DMEA contracts in your area after the Platteville office is closed.

Very truly yours,

Robert A. Laurence

Paul Gille

Dear Mr. Stehlik:

The monthly report and voucher for the subject contract have been received and forwarded to the Finance Office for payment. Your copy is returned herewith. It is not necessary to send us the fifth copy of the drill logs, narrative and map, so on future reports, I suggest you send 5 copies of only the MF-104 and MF-104A.

Under separate cover, I am sending you 50 copies each of forms MF-104 and 104A. We do not have the "Work Progress Report" forms here, as we have not been using that form. I wonder if these were produced at the Minneapolis office? Probably you can get a supply there.

It appears that the Operator filled out the three columns at the right-hand side of the voucher, marked "for Government use only." Please instruct him to leave these blank. Entries in these columns should be made only by your office or this office, preferably at this office when final approval is given to the voucher.

Very truly yours,

Re: DMEA-3510 (lead-zinc)
Paul Gille - Cuba City, Wis.

Dear Mr. Stehlik:

I enclose herewith seven copies of the subject exploration contract. We have reviewed it here and it seems to be in order; however, I suggest that you check it over and if there are any items which do not have your approval, please notify me. If it does meet with your approval, please present six copies to Mr. Gille for his signature, and then return to me all except the Operator's copy, and the one marked "Field Engineer" which is for your use.

I assume that you have copies of the map which accompanies the contract. If not, I suggest you have one of them copies for your use before returning the contract to me.

As 27 days have already elapsed since January 6, I suggest that you and Mr. Gille agree on a reasonable amount of time for starting, subsitute that number of days for "60" in Article 3, have Mr. Gille initial it on each copy and I will initial it when returned here (unless, of course, Mr. Gille thinks he can begin work by March 7).

If you have a supply of forms MF-104 and MF-104A, please give Mr. Gille some. If you don't have them, notify me and we will send some. Please advise Mr. Gille that the contract, when executed, is a firm committment to complete the work described at the unit cost set forth in the contract. Mr. Gille should be advised to send his monthly voucher and reports to you for approval after which you can forward them here for my signature.

Mr. W. A. Broughton will be the Geological Survey field representative in the administration of this contract.

Re: Docket No. DMEA-3510 (lead-zinc)
Paul Gille
Dawson and Lindsay Leases
Lafayette County, Wis.

Dear Mr. Laurence:

In previous correspondence with Mr. A.B. Needham, we have dealty with the cited application. We are now enclosing the original and five copies of the contract which has been rewritten in accordance with Mr. Needham's letter of January 18.

If you are inaccord with the contract provisions, will you please see that it is presented to the Applicant for signature and distribute the copies in the usual manner. Otherwise, all copies should be returned to us with your recommendations.

Essentially, the contract provides that churn drilling is allotted a fixed unit price of $1.65 per foot, whereas the items under actual cost classification (technical services and analytical work) are acceptable only upon presentation of proper vouchers covering such expenditures. Since the cost of technical services obviously may very widely from one month to another, footnote 1 at the bottom of Exhibit "A" of the contract permits of such costs being averaged. In case the footnote wording "provided it not exceed" may cause confusion, the intent is to permit of such averaging.

Sincerely yours,

s/ George C. Selfridge
Chairman, Operating Committee

MF-200
(Revised June 1954)

Docket No. DMEA 3510

Commodity Lead-Zinc

Contract No. Idm-E 755

UNITED STATES OF AMERICA
DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS EXPLORATION ADMINISTRATION

EXPLORATION PROJECT CONTRACT[1]

It is agreed this 6th day of January, 1955, between the United States of America, acting through the Department of the Interior, Defense Minerals Exploration Administration, hereinafter called the "Government," and [2] Paul Gille, whose mailing address is Cuba City, Wisconsin, hereinafter called the "Operator," as follows:

ARTICLE 1. *This contract* is entered into under the authority of the Defense Production Act of 1950, as amended. It consists of this form (MF-200), the attached Exhibit "A," Annex I, and .....

The Operator shall not transfer or assign this contract or any right thereunder without the written consent of the Government.

ARTICLE 2. *Operator's property rights.*—(a) The land which is the subject of this contract (hereinafter called "the land") is in the State of Wisconsin, County of Lafayette, and is described in Annex I.[3]

(b) The Operator represents and undertakes that:

(1) The Operator is the [4] lessee of [5] the minerals rights in the land, in possession and entitled to possession for all of the purposes of this contract, under and by virtue of a [6] See Annex I, [7] ..... recorded in Book ....., page ....., official records of said County; and

(2) The Operator's right, title, or interest (whether as owner, lessee, or otherwise) is subject only to the following claims, liens, or encumbrances: none

(c) The Subordination Agreement of the holder of any claim, lien, or encumbrance listed above, and (if the Operator does not hold the legal title) the Consent to Lien of any holder of the legal title

[1] If sufficient space is not provided in any blank, use an extra sheet of paper and refer to it in the blank.
[2] Insert name, and if an organization, its nature (corporation and place of incorporation, partnership with names of partners, etc.).
[3] State on a separate sheet marked "Annex I" the legal description or enough to identify the property, particularly excluding any areas from which the production is not to be subject to the Government's percentage royalty.
[4] Insert "owner," "lessee," "contract purchaser," "locator," etc.
[5] Insert "the entire interest," "the mineral rights," "an undivided one-third," etc.
[6] Insert "deed," "lease," "contract," "location notice," "patent," etc.
[7] If not recorded, so indicate by inserting "un."

of the land (lessor, seller, optionor, etc.), are attached, as follows: Owner's Consent to Lien

(d) The Operator shall preserve and maintain his right, title, and interest in the land and his right to the possession thereof for the purposes of this contract, and shall devote the land and all existing improvements, facilities, buildings, installations, and appurtenances to the purposes of this contract. Until the lapse of the time within which the Government may make a certification of discovery or development without any such certification having been made, and after any such certification has been made, the Operator shall neither transfer, convey, nor surrender the land nor any right, title, or interest therein, nor permit nor suffer any claim, lien, or encumbrance thereon, without expressly referring to and providing in the instrument of conveyance, lien, or encumbrance for the preservation of the Government's right to a percentage royalty on production and lien for the payment thereof. If the Government makes no certification of discovery or development within the time limited in Article 8, it shall thereafter have no claim against the land or any production therefrom except for any production referred to in Article 8(b)(1).

ARTICLE 3. *The exploration project.*—The project is a search for indicated or undeveloped deposits of lead and zinc 90 P.L.G. The work to be performed is described in Exhibit "A." The Operator on or before ~~60~~ days from date* shall commence the work, and on or before 18 Mos. from date* (unless the Operator's obligation to prosecute the work is terminated—see Article 10) shall either have completed the work or shall have incurred allowable costs (see Article 6) in a sum not less than the estimated total allowable cost set forth in Exhibit "A." *"Date" means date of the contract.

ARTICLE 4. *Performance of the work.*—(a) *Operator's responsibility.*—The work shall be performed with reasonable diligence, efficiently, expertly, in a workmanlike manner, in accordance with good mining standards and State regulations for health and safety and for liability insurance covering employment; and with suitable and adequate equipment, facilities, materials, supplies, and labor, to bring it to completion within the time fixed.

(b) *Independent contracts.*—To the extent that the allowable costs are estimated in Exhibit "A" with express reference to performance by independent contractors on a unit-price basis (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations), the work may be so performed; but if the reference in Exhibit "A" to any such independent contract requires the Government's approval thereof, payments under such contract will not be allowable costs unless the Government gives its written approval of the contract. Any such independent contract shall refer to some specific and identifiable part of the work, and shall be subject to all of the pertinent terms and conditions of this exploration contract; but the Government shall not be considered a party thereto, and its rights under this contract, including the right to terminate its contributions, shall not be affected thereby. Regardless of the provisions of any such independent contract and regardless of the Government's approval thereof, the Government will participate in payments to the independent contractor only on account of work performed in accordance with the provisions of this exploration project contract, and only to the extent that the Government deems the unit prices for the work under the independent contract to be reasonable.

(c) *Government may inspect.*—The Operator shall consult with and inform the Government on all phases of the work as it progresses. The Government may enter at all reasonable times to inspect the work under the contract, and also after a certification of discovery or development to inspect production operations and underground workings. The operator shall provide the Government with all reasonable means of access for such inspections.

ARTICLE 5. *Contribution by the Government.*—The estimated total allowable cost of the project, set forth in Exhibit "A," is the sum of $24,846.00 The Government shall contribute 50 percent of the allowable costs as they are incurred in a total sum not in excess of $12,423.00: *Provided,* That until the Operator has rendered to the Government his final report, and any final auditing required by the Government has been made, and a final settlement of the contract has been made, the Government may withhold from the last

voucher or vouchers such sums as it sees fit not in excess of 10 percent of the estimated total cost of the work or not in excess of the amount of the Government's contribution to the cost of property which is or may become subject to disposal as provided in Article 9(c), whichever is greater. The Government will make its contribution on the basis of the monthly vouchers referred to in Article 7(b), but all payments by the Government are provisional only, subject to audit, until the account between the Operator and the Government is finally audited and settled. "Costs incurred" mean costs that have been paid or have become due and payable, or that in the opinion of the Government have become an obligation. The Government may make payments directly to independent contractors and suppliers for the account of the Operator rather than to the Operator. See Article 13.

ARTICLE 6. *Estimated costs.*—(a) *Categories of costs.*—The allowable costs of the work to which the Government shall contribute are limited to those that are direct, reasonable, necessary, and that are estimated in Exhibit "A" by categories as specified in this article. If any category or subcategory is omitted from the estimate of costs, or if the word "none" is annexed to the listing thereof, costs under such category or subcategory are not allowable. Any excess over any estimate which is indicated as the maximum of any category, subcategory, or item, either as to requirement or related cost, and any excess over the estimated total allowable cost of the work, shall not be allowable. Any excess over the estimate of any category, subcategory, or item, either as to requirement or related cost, not indicated as a maximum shall be allowable within the limit of the estimated total allowable cost of the work. To the extent that excesses over maximums other than the estimated total allowable cost of the work may be necessary for the performance of the work, the Operator shall incur such excesses for his own account without contribution by the Government; but except for any such necessary excesses in categories, subcategories, or items thereunder the Operator is not obligated to incur more than his agreed percentage of the estimated, total allowable cost of the work.

To the extent specified in this article or in Exhibit "A" the following categories, subcategories, and elements thereof are maximums; but if not so specified either here or in Exhibit "A" they are not maximums, and may be exceeded within the limit of the estimated total allowable cost of the work:

CATEGORY (1)—INDEPENDENT CONTRACTS.—Work to be performed under independent contracts (see Article 4(b)). The estimated total amount of this category and the estimated cost of each unit of work for performance under an independent contract are maximums.

CATEGORY (2)—PERSONAL SERVICES.

Subcategory (a)—Supervision.—All elements of this subcategory (number of supervisors, periods of employment, rates of pay, and total) are maximums.

Subcategory (b)—Technical services.—All elements of this subcategory (number of technicians, periods of employment, rates of pay, and total) are maximums.

Subcategory (c)—Labor.

CATEGORY (3)—OPERATING MATERIALS AND SUPPLIES.—Includes such items as drill bits and steel, explosives, fuel, pipe, power, small tools costing less than $50 each, timber, track.

CATEGORY (4)—OPERATING EQUIPMENT.

Subcategory (a)—Rental.—The number of each object to be rented [6 mine cars, 1 truck], the rate of rental [$100 per month, $5 per hour], and the total of this subcategory are maximums.

Subcategory (b)—Purchases.—The estimated total of this subcategory is a maximum.

Subcategory (c)—Depreciation.—All elements of this subcategory (time periods, rate of depreciation, and subcategory total) are maximums.

CATEGORY (5)—INITIAL REHABILITATION AND REPAIRS.—Estimates under this category include all requirements and related costs, such as labor, materials and supplies, and supervision at a rate not higher than provided for in Category (2), and shall not be duplicated under any other category. The estimated total of this category is a maximum.

Subcategory (a)—Initial rehabilitation and repairs of existing buildings, fixtures, and installations (exclusive of mine workings).—The estimated total of this subcategory is a maximum.

Subcategory (b)—Initial rehabilitation and repairs of operating equipment.—The estimated total of this subcategory is a maximum.

CATEGORY (6)—NEW BUILDINGS, FIXTURES, AND INSTALLATIONS (EXCLUSIVE OF MINE WORKINGS).—Estimates under this category include all requirements and related costs, such as labor, materials and supplies, and supervision at a rate not higher than provided for in Category (2), and shall not be duplicated under any other category. The estimated total of this category is a maximum.

CATEGORY (7)—MISCELLANEOUS.—Repairs and maintenance (other than initial) of operating equipment, analytical work, prints and other reproductions, accounting, Operator's share of payroll taxes, liability insurance covering employment, travel, communications, and any other items of requirement or cost that do not fall within any of the first 6 categories. See Article 13

THE ESTIMATED TOTAL ALLOWABLE COST of the work is a maximum.

(b) *Nonallowable costs.*—The following costs are not allowable for contribution by the Government:

(1) *Costs of the land,* such as rental, depreciation, depletion, or other cost of acquiring, owning, or holding possession;

(2) *Indirect costs,* such as general overhead, corporate management, interest, taxes (other than payroll and sales taxes), insurance (other than liability insurance covering employment), damages to persons, damages to property (other than necessary repairs or replacements of equipment or other property used in the work);

(3) *Previous work* performed or costs incurred before the date of this contract; and

(4) *Deferred payments.*—Any costs incurred by the Operator under any rental-purchase agreement, installment-purchase agreement, or any agreement for the purchase of goods under the provisions of which payment of the full purchase price is deferred more than 90 days from the delivery of the goods; unless the purchase agreement is approved by the Government in writing.

(c) *Reductions in costs.*—The Operator shall account for and give the Government credit for any incidental benefits, credits, or money received in the ordinary course of business in prosecuting the work (as by salvage or sale of materials or equipment, furnishing of room or board, furnishing of power or services to third persons, rebates or discounts on purchases, etc.), in the same ratio in which the Government contributes to costs; and such amounts shall be treated as a reduction in costs incurred so that they are available for use within the limit of the original estimated total cost. This provision does not apply to receipts from production which are subject to the Government's percentage royalty under the provisions of Article 9.

ARTICLE 7. *Reports, accounts, audits.*—(a) *Operator's records.*—The Operator shall keep suitable records and accounts of the work performed and of any production in which the Government may have an interest; and shall preserve those with respect to work performed for at least three years after final payment by the Government, and those with respect to production for at least three years after any obligation to pay royalties to the Government has terminated. The Government may inspect and audit said records and accounts at any time, either by itself or by a certified public accountant. If the Government elects to audit said records and accounts relating to the exploration work by certified public accountant, it may do so as a cost of the work to which the Operator shall contribute. The Comptroller General of the United States or his representative, until the expiration of said three-year periods, shall have access to and the right to examine any pertinent books, documents, papers, and records of the Operator. All of the Operator's vouchers and records and accounts relating thereto and the Government's payments thereof remain subject to adjustment until final audit by the Government. If work under this contract is carried on in conjunction with any other operations, or if labor, supervision, services, materials, supplies, equipment, facilities, or other requirements for carrying on the work are also used in connection with other operations, the costs shall be segregated and accounted for on a basis and by methods and accounts that are satisfactory to and approved by the Government.

(b) *Progress reports and vouchers.*—The Operator shall provide the Government with five copies of monthly progress reports in three sections as follows: (1) Operator's Monthly Report and Voucher showing detailed costs incurred during the reporting period; (2) Operator's Unit Cost and Progress Report showing the various types of work performed during the reporting period and costs incurred for each type of work; and (3) a Narrative Report of the work performed during the reporting period including adequate engineering-geological maps or sketches, drill hole logs and locations, and assay reports on samples taken concurrently with advance in mineralized ground. (Forms for reporting under (1) and (2) above will be provided by the Government.)

percent for each additional full fifty cents ($0.50) by which such amounts exceed eight dollars ($8.00) per ton, but not in excess of five (5) percent of such amounts.

(For instance: the royalty on an amount of five dollars ($5.00) per ton would be one and one-half (1½) percent; on an amount of ten dollars ($10.00) per ton, three and one-half (3½) percent.)

(f) *Time for computation and payment.*—The Government's royalty shall be computed and paid currently upon each lot sold, held, or used in integrated operations, as the case may be, as above provided in this article.

(g) *Lien for payment.*—To secure the payment of its percentage royalty, there is hereby granted to the Government a lien upon the land or the Operator's interest in the land and upon any production of minerals therefrom, until the royalty claim is extinguished by lapse of time or is fully paid.

(h) *Notice to purchasers.*—The Operator shall give notice of the Government's claim for royalty to any purchaser of the production, and shall authorize and direct such purchaser to pay the royalty directly to the Government and to furnish the Government with copies of the settlement sheets. If the records of any production and sales or other disposition of production, whether the production is by the Operator or by others, are not made available to the Government, the amount of the royalty may be estimated by the Administrator, Defense Minerals Exploration Administration, or his successor, and his estimate thereof shall be final and binding upon the Operator.

(i) *No obligation to produce.*—Nothing in this contract is to be construed as imposing any obligation on the Operator or the Operator's successor in interest to engage in any production operations.

(j) *Government not obligated to buy.*—Nothing in this contract shall be construed as imposing any obligation on the Government to purchase any minerals mined or produced from the land.

ARTICLE 9. *Interests in purchased property.*—(a) *Title and ownership.*—All costs under this contract shall be incurred by the Operator in the Operator's own name and for the Operator's own account; but any property acquired to the cost of which the Government contributes shall belong to the Operator and the Government jointly in proportion to their respective contributions, although title thereto shall be taken in the name of the Operator.

(b) *Preservation of property.*—Until the final disposal of any property in which the Government has an interest the Operator shall preserve and protect same for the best interest of the Government, any reasonable and necessary costs thereof to be treated as an allowable cost of the project. After the completion of the work or termination of the Government's obligation to contribute, or when such property is not in use for or needed for the work, the Operator shall neither use it without the written consent of the Government nor without paying a reasonable rental to be fixed by the Government for its interest.

(c) *Disposal of property.*—Upon the completion of the work or termination of the Government's obligation to contribute to costs, or when the property is no longer needed for the work, the Operator shall promptly dispose of salable or salvageable property in which the Government has an interest for the joint account of the Government and the Operator, either by return to the vendor, by sale to others, or purchase by the Operator or the Government at a price at least as high as could be obtained from others, unless the Government in writing waives its interest in any such property. Without advance approval of the sales price by the Government the Operator shall not sell at any price any item of property the cost of which was more than $500, and shall not sell at less than 25 percent of the purchase price any item of property which cost $500 or less. The Government, in lieu of approving the sales price for any such item, may itself purchase the item at the best price which the Operator is able to obtain or himself cares to give. Property remaining upon any termination of the work shall be considered in groups or categories (such as drill steel, or explosives, or pipe, or rails), and if the original cost of the remaining unexpended portion of any such group or category is less than $50, the Government waives its interest therein. If necessary to accomplish the disposal of any item the Operator shall dismantle and sever it from the land, the cost thereof to be treated as a cost of the project.

(d) *Default of the Operator re disposal.*—If within 90 days after the completion of the work or termination of the Government's obligation to contribute to costs, or after the property is no longer needed for the work, or after such further time as the Government may in writing allow, the Operator has failed to sell or otherwise liquidate or dispose of any property in which the Government has an interest, the Government, at any time prior to final settlement under the contract, may pursue one of the following two courses: (1) the Government, by written notice to the Operator, may place upon such property what in its opinion is a fair valuation thereof, not in excess of the cost less 1.66 percent per month from the

(c) *Final report.*—Upon completion of the work or termination of the Government's obligation to contribute to costs, the Operator shall furnish the Government with five copies of a final report (in addition to the final progress report and voucher). This final report shall include a geological and engineering evaluation of the results of the work performed under the contract with an estimate of the ore reserves resulting from such work, complete assay data, adequate geological and engineering maps or sketches, and a summary of the work performed and related costs incurred.

(d) *Report of sales.*—The Operator shall provide the Government with suitable accounting and documentary evidence covering all production to which the Government's percentage royalty relates, such as copies of smelter or concentrator settlement sheets, and certified accounts of production and sale or other disposition of production.

(e) *Compliance with requirements.*—If in the opinion of the Government any of the Operator's reports, records, or accounts are insufficient or incomplete, or if the Operator fails to make them, the Government may procure the making or completion of such with suitable attachments as an expense of the work to which the Operator shall contribute. The Government may withhold approval and payment of any vouchers relating to insufficient or incomplete reports, records, or accounts.

ARTICLE 8. *Repayment by Operator.*—(a) *Certification.*—If the Government considers that a discovery or development from which production may be made has resulted from the work, the Government, at any time not later than six months after a sufficient final report and final account (see Article 7) has been rendered, may so certify in writing to the Operator. Such certification shall describe broadly or indicate the nature of the discovery or development.

(b) *Royalty on production.*—The Operator, as principal if the Operator is the producer, or as surety if the Operator is not the producer, shall pay to the Government a royalty on all minerals mined or produced from the land, as follows: (1) regardless of any certification of discovery or development, from the date of the contract until the lapse of the time within which the Government may make such certification, or until the total net amount contributed by the Government without interest is fully repaid, whichever occurs first; or (2) if the Government makes a certification of discovery or development, within a period of ten years from the date of the contract, or until the total net amount contributed by the Government without interest is fully repaid, whichever occurs first.

(c) *Basis for computation.*—The Government's royalty shall be a percentage of the gross proceeds (including any bonuses, premiums, allowances, or other benefits) from the production sold, in the form sold (ore, concentrates, metal, or equivalent), at the point of delivery (the f. o. b. point); *except,* that charges of *the buyer* arising in the regular course of business, and shown as deductions on the buyer's settlement sheets, on account of the cost of treatment processes performed by *the buyer,* sampling and assaying to determine the value of the production sold, and freight paid by *the buyer* to a carrier (not the Operator), shall be allowed as deductions in arriving at the "gross proceeds" as that term is used herein. Any costs of treatment processes, sampling or assaying, or transportation, performed or paid by the Operator or by anyone other than the buyer, are not deductible in arriving at the "gross proceeds" as that term is here used. The term "treatment processes," as here used, means those processes (such as milling, concentrating, smelting, refining, or equivalent) applied to the crude ore or other production after it is extracted from the ground, to put it into a commercially marketable form; excluding fabricating or manufacturing.

(d) *Unsold production.*—If any production (ore, concentrates, metal, or equivalent), after the lapse of six months from the date the ore was extracted from the ground, remains neither sold nor used by the Operator in integrated manufacturing or fabricating operations (for instance, if it is stockpiled), the Government, at its option, as long as it so remains, may require the computation and payment of its royalty on the value of such production in the form (ore, concentrates, metal, or equivalent) it is in when the Government elects to require computation and payment. If any production is used by the Operator in integrated manufacturing or fabricating operations before the Government makes its election, the Government's royalty on such production shall be computed on the value therof in the form in which and at the time when it is so used. "Value" as here used means what is or would be gross income from mining operations for percentage depletion purposes in Federal income tax determination, or the market value, whichever is greater.

(e) *Percentages of royalty.*—The percentages of the Government's royalty shall be as follows:

One and one-half (1½) percent of amounts ("gross proceeds" or "value") not in excess of eight dollars ($8.00) per ton of production in the form in which sold, held, or used, plus one-half (½)

date such property was purchased under this contract to the termination of said 90-day period; and such property shall thereupon be considered and accounted for as having been purchased by the Operator at the valuation so fixed by the Government; or (2) the Government may enter and take possession of such property wherever it may be found, and remove and dispose of it for the joint account of the parties.

ARTICLE 10. *Termination of the Government's obligations.*—(a) If in the opinion of the Government operations at any time have failed to achieve anticipated results that indicate the probability of making a worthwhile discovery, and in the opinion of the Government further operations are not justified, the Government may give the Operator written notice thereof, and thereupon: (1) the Government shall be free of all obligation to contribute to costs not then incurred other than such as may be allowable under the provisions of the contract as necessary and incidental to winding up, reporting, and accounting; and (2) the Operator shall be free of all obligation to prosecute the work other than such as may be necessary and incidental to winding up, reporting, and accounting.

(b) If in the opinion of the Government the Operator is in any manner in default under the terms of the contract, the Government may give the Operator written notice of such default with a specification of reasonable time within which the default must be cured; and if the Operator fails to cure such default as required, thereupon: (1) the Government shall be relieved of all obligation to contribute to costs not incurred when the notice was given, other than such as may be allowable by the provisions of the contract as necessary and incidental to winding up, reporting, and accounting; and (2) the Operator shall be free of all obligation to prosecute the work other than such as may be necessary and incidental to winding up, reporting, and accounting. The remedy provided for the Government in this paragraph "(b)" is in addition to any other remedy provided in this contract, and in addition to any other remedy the law may provide for breach of contract.

(c) The giving of any notice by the Government under the provisions of this Article 10 shall not affect the Government's rights as provided for in the contract with respect to a percentage royalty, and such rights shall be fully preserved.

ARTICLE 11. *Notices to be given by the Government* may be delivered to the Operator, or may be sent by registered mail addressed to the Operator at his mailing address stated in this contract. If mailed, notices are deemed to have been delivered five days after the date of mailing.

ARTICLE 12. *Officials not to benefit.*—No member of or delegate to Congress or resident commissioner shall be admitted to any share or part of this contract or to any benefit that may arise therefrom; but this provision shall not be construed to extend to this contract if made with a corporation for its general benefit.

ARTICLE 13. *Changes and added provisions.*—
To the extent that costs zre set forth in Exhibit "A" as "Fixed Unit Costs," they are in lieu of the actual costs that would otherwise be allowable costs of the project as provided in Article 6(a) of the contract form.

EXPLORATION PROJECT CONTRACT
PAUL GILLE
DOCKET NO. DMEA-3510

ANNEX I

The land referred to in Article 2 consists of two parcels of land, as follows:

Dawson Lease - East three quarter (E 3/4) (also described as the E½ of the ~~W½ of the~~ SW¼ and the E½ of the W½ of the SW¼) of the southwest quarter (SW¼) and the south half (S½) of the southeast quarter (SE¼) of Section 20, Township 2 North, Range 1 East of the 4th P.M., containing 200 acres, more or less.

This land is held by the Operator under an agreement dated June 4, 1954, which he entered into with Thomas B. Dawson and his wife Mary.

Lindsay Lease - Northeast quarter (NE¼) of Section 20, and the North one-half (N½) of the Southeast Quarter (SE¼) of Section 20; all in Township 2 North, Range 1 East of the 4th P.M., containing 240 acres, more or less.

This land is held by the Operator under an agreement dated June 4, 1954, which he entered into with Everett W. Lindsay and his wife Lucille.

The land is shown on a map entitled "Lindsay and Dawson Leases," attached hereto and made a part hereof.

EXPLORATION PROJECT CONTRACT
PAUL GILLE
DOCKET NO. DMEA-3510

EXHIBIT "A"

Description of the Work

The purpose of the project is to explore for lead-zinc ores, by means of churn drilling a maximum of 13,000 feet.

The location and depth of all drill holes shall be subject to prior approval of the Government.

Estimated Costs of the Project

FIXED UNIT COSTS

13,000 feet of churn drilling @ $1.65/ft.	$21,450.00

The Government will contribute to the costs of churn drilling on the basis of the fixed unit cost set forth above, as work is performed, in lieu of actual costs. The fixed unit cost includes all costs of the work except the costs of technical services and assaying, estimates of which appear below and to which the Government will contribute on the basis of actual costs. The churn drilling may be performed by independent contractor without regard to the provisions of Article 4 (b) and Article 6 (a) (1) of the contract form.

Actual Costs

Category (2) Personal Services	
Technical services - $130.00/mo. 1/ for 18 months	2,340.00 1/
Category (7) Miscellaneous	
Analyrical work - 1,056 determinations*	1,056.00*
Estimated Total Cost of Project	$24,846.00
Government's Participation @ 50%	$12,423.00

* Indicates maximum in addition to the maxima set forth in contract form.

1/ Monthly maximum may be exceeded in a given month, provided it not exceed when averaged over total period for which payments are made.

January 18, 1955

Memorandum

To: Operating Committee, Defense Minerals Exploration Administration, Washington, D. C.

From: Superintendent, North Central Experiment Station

Subject: Docket 3510, Paul Mills, Dawson and Lindsay Leases, Lafayette County, Wisconsin

Reference is made to your letter of January 6, enclosing a memorandum from Mr. Hofflund regarding clarification of the phraseology of the land in question pertinent to the contract. The original and five copies of the contract were submitted to our Field Team for correction of this phraseology before submitting to the operator for his signature.

The Dawson land was found to be described as it is on the contract and the Owner's Consent to Lien, but no evidence could be found to indicate that it meant "the E1/2 and the SW1/4 of the SW1/4", as indicated in the footnote of Annex I. Therefore, our Field Team visited Mr. Dawson and, according to him, and also a sketch of the property which he had, the interpretation of that phraseology as indicated on the application map and in the September 20 memorandum was in error. As a matter of fact, the description, E3/4 of the S1/4 is actually correct, and may be more closely defined as the E1/2 of the SW1/4 and the E1/2 of the W1/2 of the SW1/4, totaling 120 acres more or less. Our Field Team questioned Messrs. Mills and Dixon before submitting the September 20 memorandum and they were assured that the description was identical to the abstract, and that their interpretation was correct. However, it was not correct. Therefore, it is necessary now to strike out the footnote on Annex I and to correct the application description and map. If the application and map corrections cannot be made by you in Washington, please have them returned and it will be done in the field.

One other provision of the contract, we believe, needs clarification, and that is the reference to Article 6, Category (2)--Personal Services. In Article 6, Category (2)--Personal Services, Subcategory (a) it states that all elements of this subcategory (and reference to technical services) are maximum. Can this mean then that the $130 per month provided for in Exhibit A is the total amount that can be claimed on the monthly operator's unit cost and progress report each month, or can the

charge be variable, sometimes exceeding $130 per month, but providing that the maximum of $2340 is not exceeded. We assume also that Mr. Dixson could claim technical services for work done on the final report following completion of drilling if such amount still remains in the contract. Please clarify this when you return the contract for signature.

You will also note that the operator is to start work on the contract within 60 days. If much time is to be consumed in redrafting the contract, provision will have to be made to either change the starting date or provide for an extension by way of an amendment.

January 17, 1955

Memorandum

To: A. B. Needham, Chief, Mining Division, Region V

From: Charles J. Stehlik, Mining Engineer

Subject: Contract Idn E-755 (Lead-Zinc), Paul Gille

Returned herewith are the 6 unsigned copies of the subject contract.

In reference to the description E-3/4 of the SW-1/4 (Dawson lease of the subject contract), the Lafayette County Register of Deeds office was visited to clarify the phraseology for that property. The Dawson land was found to be described as it is on the contract and the Owner's Consent to Lien but no evidence could be found to indicate that it meant "the East 1/2 and the SW 1/4 of the SW 1/4". The Dawson property was therefore visited and a sketch, by Mr. Dawson, indicated that the interpretation of that phraseology, as indicated on the application map and in the September 20, 1954 memorandum, was in error. East 3/4 of the SW-1/4 is correct and may be more clearly defined as - the E-1/2 of the SW-1/4, and the E-1/2 of the W-1/2 of the SW-1/4, totalling 120 acres more or less. Mr. Gille and Mr. Dixon were questioned about this matter before submission of the September 20, 1954 memorandum and the field team representatives were assured that the description was identical to the abstract and that their interpretation was correct. The interpretation was not, however, and it is now necessary to strike out the foot note on Annex I and to correct the application description and map. If the application and map corrections cannot be made in Washington, please have them returned as quickly as possible.

The contract was reviewed by Mr. Gille and his consultant, Mr. Dixon, and all provisions were found to be satisfactory except that in Exhibit "A", category (2) Personal Services, some clarification is needed. Article 6, category (2) states that "All elements", in reference to technical services, "are maximums". Are we to assume then that $130.00 per month is the maximum that can be claimed on the monthly Operator's Unit Cost and Progress Report or can the charge be variable in accord with the amount of drilling done, sometimes exceeding $130.00, providing that the maximum of $2,340.00 is not exceeded? If the former is true, could Mr. Dixon

claim $130.00 for work done on a final report following completion of drilling if such amount remains in the contract; or, is $130.00 the amount to be claimed regardless of amount drilled with allowable drilling completed in less than 18 months? Please clarify this problem when the contract is returned for signing.

Also, if much time is consumed in the corrections, it may be necessary to redate the contract to allow sufficient time to start drilling.

It was noted that no copy of the contract was designated for this office. Since we do not have the new contract form, it would be difficult to make a copy for our files. Please have an additional copy made if we are not to have one of these copies.

To: C. J. Stehlik, Mining Engineer, Region V, Platteville, Wisc.

From: Executive Officer, Field Team, Region V

Subject: Docket DMEA 3510, Contract Idm E-755, Paul Gille - Wisconsin

Here are the original and five copies of the partially executed contract for Paul Gille, Lafayette County, Wisconsin, together with copy of the transmittal and a memorandum from the Acting Assistant Solicitor, in regard to phraseology of the land description pertinent to the contract. Please clarify the phraseology before submitting the contract to the operator for his signature.

When the land description is clarified, determine whether or not the operator is in accord with all terms of the contract. If so, please have him execute all copies, retain the one marked for him and forward the original and other copies to this office for further distribution.

Re: Docket No. DMEA-3510 (Lead-Zinc)
Paul Gille
Dawson and Lindsay Leases
Lafayette County, Wisconsin

Dear Mr. Needham:

Enclosed are the original and five copies of a contract covering the cited project. We are also enclosing two copies of a memorandum from the Acting Assistant Solicitor, dated December 28, in which he stipulates that we require verification that the phraseology "East 3/4 of the SW 1/4" actually covers the areas it is purported to cover on the map.

When this is cleared up you may present the contract to the Applicant for signature and make distribution of the copies in the usual manner. However, in case you are not in accord with any of the contract terms, all copies should be returned to this office with your recommendations.

Sincerely yours,

George C. Selfridge
Chairman, Operating Committee

December 28, 1954

Memorandum

To: The Administrator, DMEA
Attention: Mr. W. R. Griswold

From: Acting Assistant Solicitor, Defense Minerals

Subject: Docket No. DMEA-3510, Paul Gille, Lead-Zinc

As requested in a memorandum dated December 13 from Mr. Griswold, we have prepared the draft of contract attached for the subject project.

The application states that one of the leases covers, in part, the "SW1/4 of the SW1/4, E1/2 of the SW1/4," of a specified section, etc., and a map submitted with the application delineates this area. However, the lease recites that it covers, in part, the "East three quarter (E 3/4) of the southwest quarter (SW1/4)" and the Owner's Consent to Lien describes this part of the land in the same language as the lease.

A memorandum dated September 20, 1954, from Stehlik and Broughton to Needham states that: "The leases are sound and typical of mining and prospecting leases in use in this district." Annex I has been drawn in the language of the lease with an explanatory note, based upon the memorandum cited, for the purpose of drafting the contract. However, as the land in question originally was regularly subdivided public land and as there is no satisfactory explanation for the deviation in description, we require a verification of the land description in question under the Dawson lease prior to execution of the contract.

Memorandum

To: Operating Committee, Defense Minerals Exploration Administration, Washington, D. C.

From: Executive Officer, Field Team, Region V

Subject: Docket 3510, Paul Gille

Here are six copies each of Lessor's Consent to lien for the Lindsay and Lawson leases required by the subject application, and which we indicated in previous correspondence would be obtained and forwarded to you.

Property descriptions were checked and they are the same as contained in the leases.

OWNER'S CONSENT TO LIEN

WHEREAS, the undersigned, as owner, co-owner, lessor, or seller has an interest in certain property in the State of Wisconsin, County of Lafayette, described as follows:1/

NE ¼ Section 20 and the N ½ of the SE ¼ Section 20, T 2 N, R 1 E, 4th P.M.

which is the subject of a proposed exploration project contract, hereinafter called the "contract", between the United States of America, hereinafter called the "Government", and

2/ Paul Gille

hereinafter called the "Operator"; and

WHEREAS, under the provisions of said contract the Government is entitled to a percentage royalty on production and to other rights and equities which do or may conflict with or be adverse to the rights of the undersigned:

NOW THEREFORE, the undersigned, in consideration of said contract and as an inducement to the Government to enter into same, undertakes and agrees as follows:

1. The Government's equity in and right to dismantle, sever, take possession of, and remove and dispose of facilities, buildings, fixtures, equipment, or other items as provided in the contract or any amendment thereof shall prevail over and be prior and superior to any conflicting or adverse rights of the undersigned, and the Government is authorized to enter upon the land for such purposes.

2. To secure the payment to the Government of the percentage royalty on production3/ provided for under the terms of said exploration project contract or any amendment thereof there is hereby granted to the Government a lien upon the land above referred to and upon any production of minerals therefrom until said royalty is fully paid or ten years have elapsed from the date of the contract, whichever occurs first.

1/ Either (a) insert the legal description of the land, or (b) strike out the words "as follows" and insert "in a lease [or contract, deed, or other document] dated _____, and recorded in book _____ page _____ official records of said county." If (b) is used, the book and page of recordation cannot be dispensed with. If the space provided is insufficient, use an Annex, and refer to the Annex in the space.

2/ Insert the name of the Operator as it will appear in the exploration project contract.

3/ Mining or production from the land is not required, and in the absence of production there is no obligation to repay the Government.

(OVER)

3. The undersigned shall commit no act nor assert any claim that may contravene or conflict with the lien, claim, or rights of the Government under the provisions of said contract. This agreement shall be binding upon the heirs, executors, administrators, successors, and assigns of the undersigned.

Subject: Docket 3501 - Paul Gille, Lafayette County, Wisconsin

Your letter of October 28, 1954 requested comments and data to support our approval of the subject proposal. We, therefore, submit the following information:

In order to keep the entire proposal on a unit price-short form contract, the total cost of assaying was calculated and then transposed to a cost-per-foot item. Cost of assaying at the Vinegar Hill laboratory where Mr. Gille plans to have the work done is $1.00 per determination. Here is our breakdown:

> Assuming a single-pitch type ore body 60 feet high and 110 feet wide, a cross section of the ore body may require: (with 2½-foot intervals) one hole with 24 samples (60 feet), one hole with 16 samples (40 feet), and one with 8 samples (20 feet), or an average of 16 samples per ore hole. Assuming 60% of 100 holes in ore, 960 samples would be required. If each has a zinc assay and each tenth a lead assay in addition to the zinc, 1056 determinations are required at a cost of $1056 or $.081 per foot.

If, as Mr. Selfridge suggested, sampling costs are reimbursed by actual cost, the contract wording should be on cost per <u>determination</u> rather than sample because not all samples require lead assays.

Truly, the logs presented in the application are not by themselves a strong argument for DMEA exploration assistance. Summarizing the situation, however, we find that out of three prospecting parties, one could not drill the property, one had insufficient knowledge of proper prospecting methods, and one had interest only in a regional view. Mr. Gille knew of these deficiencies and has now proposed a reasonable and proper plan of attack which has very good possibilities. The following explanation is to clarify the above statements:

The Vinegar Hill Zinc Company recognised the possibility of an extension of the Gritty Six mine but because of differences with the land owner, they could not obtain the lease. Their drilling, therefore, was around but not on the Dawson lease.

Their drilling on the Dowling property is reported by Mr. Gille (drilling was by his father's rig) to be in good mineralization. Why the logs do not indicate this is subject to conjecture. Disinterest and indifference on the part of a logger has caused many a log to be misleading. Zinc estimates in symbols such as "considerable", "little", "shine", and "trace" are often commensurate to a quality required at the time of the logging rather than a fixed value. Or assays were not considered because of marginal ore grade. New Jersey Zinc Company hole No. E-15 (possibly an edge hole) demonstrates the existence of encouraging mineralization which conceivably may be disregarded by another operator.

It is very unfortunate that the Rasque drilling (the best located) was by an organization which hoped to "remember" location, content, and quality, etc. of holes. The three holes R1, R2, and R3, have only brief logs assembled from bits of information gleaned by Mr. Gille from the driller. Mr. Gille states that zinc mineralization was discovered in both cross sections.

The New Jersey Zinc Company drilling is part of an initial stage in their very extensive program covering thousands of acres. It is part of a 660' grid for structure purposes. No attempt was made to spot holes for ore; their chief aim was a favorable structure pattern covering more than three townships. Disregard of mineralization in holes E-13 and E-15 is probably due to their close proximity to old workings and hence (for them) no real discovery.

As it stands then, the picture is one of a very possible trend of mineralization with much drilling unsuitably located or poorly managed. The prospective operator must, therefore, prospect as though no drilling was done using what little information he has to direct him. Surely, some reported mineralization is a better start than none at all. It is in a sense check drilling and also the beginning of a good plan of attack. In this district, where mineralized trends may run for several miles with weakening and strengthening in mineralization, it is wise to not be discouraged by a poor showing in one section. Another section some distance along the trend is often advisable until, of course, the possibility of an economic sized ore body has been disproven.

The known facts have been presented by the applicant and by the field team's field representatives' letter of transmittal of September 20, 1954 and in the above paragraphs. A formal field report on the subject will not change the data nor increase the possibility of finding ore. The exploration proposals set forth within the application are in accord with common exploration practice as followed in this southwestern Wisconsin zinc-lead district.

Our files do not contain the revised Owner's Consent To Lien forms as noted in the Minutes of the Operating Committee, June 25, 1954, No. 384. Mr. Gille has obtained the MF-203 (Revised July 1, 1953) form with which he will explain the provisions to the land owners but would like to have the new forms for the official documents. Please send a supply of them as early as possible.

W. A. Broughton, U. S. Geological Survey, Platteville, Wisc.

From: Executive Officer, Field Team, Region V

Subject: Docket DMEA 3501 - Paul Gille, Lafayette County, Wisconsin

Here is correspondence from the Chairman, Operating Committee, indicating that a contract for Paul Gille seems to be in the making. They are, however, advising that instead of allocating a certain amount per foot of drilling for the necessary analysis of samples, they propose to pay for this item at so much per sample. They request information about the prevailing assay rates in the Platteville area. Although we have in this office a schedule of analysis rates from a number of laboratories, and particularly from the Bruce Williams Laboratory, Joplin, Missouri, which specializes on lead-zinc analyses, we would appreciate your advising us what the prevailing rate is for all samples sent in from your district. Bruce Williams Laboratory schedule for lead is $1.25, and for zinc it is $1.00.

You will also note that owner's consent to lien for the properties in question should be obtained. When you do so, obtain six copies.

You will also note that there is a P. S. on the Operating Committee letter, which requests a comment on the memorandums from Messrs. Bishop and Newcomb to the correspondence which is attached. You will note that while Bishop of the Bureau approved the application of our contract, Newcomb of the Survey believes the application should be referred to the field for a report to further justify the recommendation rather than accept the short ones submitted with the application.

We will not answer the Operating Committee letter until we get your comments, owner's consent to lien and prevailing assay rates.

RE: Docket No. DMEA-3510 (Lead-Zinc)
Paul Gille
Dawson and Lindsay Leases
Lafayette County, Wisconsin

Dear Mr. Needham:

We have your letter of September 28 with the cited application and the memorandum of Messrs. Charles J. Stehlik and W. A. Brought. We are in accord with these gentlemen in their statement "... in most cases adequate assaying is not done."

However, instead of allocating a certain amount per foot of drilling to provide for assaying, we prefer to allow for it in a separate item, as, for example:

650 samples at $1.60 $1,040.00

In this manner the Operator is only reimbursed for samples actually sent for assay. Since we do not know the prevailing assay rates in the district in question, please advise us as to the number and cost of assays required.

Also, since no Owner's Consent to Liens were forwarded us, they should be obtained.

Sincerely yours,

/s/ George C. Selfridge

Chairman, Operating Committee

APPROVED:

/s/ J. H. Hedges
Member, Bureau of Mines

/s/ Thor H. Kiilsgaard
Member, Geological Survey

P.S. Will you kindly comment upon the enclosed memorandums by Mr. O. M. Bishop, USBM, dated October 8 and by Mr. E. L. Newcomb, USGS, dated October 11.

RE: DMEA-3510
Paul Gille
(Lindsay & Dawson Leases)
Lafayette County, Wis.
$24,830 - Lead-Zinc

Memorandum

To: W. R. Griswold, Defense Minerals Exploration Administration

From: E. L. Newcomb, U. S. Geological Survey

Subject: Review of application

The applicant proposes to drill 13,000 feet of churn drill holes on several sections west of the Gritty Six mine.

The Field Team memorandum of September 20, 1954, recommends the applicant's program be approved. However, they do not adequately support their recommendation in their memorandum. I do not believe their brief comments are acceptable in lieu of a field examination report.

The logs presented in the application do not represent by themselves a very strong argument for DMEA exploration assistance. Most of the initial drilling is in the form of check drilling, which would seem to indicate the reported mineralization in a number of the VH, R and E holes may not be regarded as reliable by the operator. Although Holes R-1 thru R-6 are reported to have had good or abundant mineralization, Holes VH 28 thru 30 contained very limited mineralization. These VH holes should be indicative of the postulated westward extension of the Gritty Six-Raisbeck mines. However, they do not have a grade of mineralization which suggests a strong zone of mineralization between R4-6 and R1-3. Several holes have already been drilled along the northern edge of the westward trend of the Gritty Six mine without significant results. If the Cuba City and Henrietta mines are related structurally with the Gritty Six and Reisbeck mines, then a few broadly spaced holes may be justified between R2 and R5 as a preliminary stage to establish continuity of mineralization. If these holes give favorable results, then a second stage of more closely spaced holes could be planned.

I recommend the application be referred to the Field Team for a report which justifies their recommendation.

C O P Y

October 8, 1954

Memorandum

To: W. R. Griswold, DMEA

From: O. M. Bishop, USBM

Subject: Docket No. DMEA-3510 - Application for $24,830 exploration project by Paul Gille on Lindsey and Dawson Leases, Lafayette County, Wisconsin

I have reviewed the subject application and the field team report by Messrs. Stehlik (Mines) and Broughton (Survey), and note they recommend the application be approved.

In summary the applicant proposes to churn drill a row of 4 holes on the Dawson lease about 500 feet west of the old Gritty Six mine in the vicinity of Vinegar Hill Zinc Company drill holes 28, 29, 30, seeking a westward projection of the ore formerly mined in the Raisbeck and Gritty Six mines. If he finds no ore he proposes a second series of holes 200 feet west. If ore is found it will be cross sectioned at intervals, but if none is found in the second series of holes the applicant proposes to drill 5 holes in a north-south line about 500 feet east of the old Cuba City mine. If ore is discovered, it will be followed to discover extent but, if not, 2 holes will be drilled on the Dawson lease near hole E 13 which contained two 5-foot runs of better than 2 percent zinc ore. As before if ore is discovered it will be blocked out, but if not, a series of holes will be drilled near holes H 20, 21, and 22 on the Lindsey lease. These 3 holes were logged as containing "shines and traces" of zinc.

In reviewing the evidence favoring mineralization on the Dawson lease I conclude that the more than 1,000,000 tons of ore mined in the Raisbeck and Gritty Six mines may well have an extension westward onto the Dawson property, which can best be checked by a series of drill holes. It was hoped the sub-surface contours at the base of the "oil rock" would be of help, but as usual the structural deformation, as portrayed by the contours, fades away just beyond the ore faces with no indication of whether the fadeout is actual or merely because lack of data did not permit its portrayal on the maps. I consider all of the proposed drilling on the Dawson lease well founded, but would recommend that all hole locations be subject to relocation as knowledge of mineralization and structure cut in preceding holes gives a new basis for judgement.

The projected holes on the Lindsay lease in the vicinity of the "trace and shine" mineralization reported in the Vinegar Hill holes is somewhat less well founded, but still sound exploration practice in this district where a drill hole costs but about $250, and relatively small orebodies normally can be profitably mined.

The costs of $1.91 per foot for drilling, supervision and assays seems a fair estimate and is divided as follows: Drilling $1.65; supervision and engineering $0.18; and assaying $0.08. Mr. Gille is thoroughly competent to supervise and carry out the drilling, but engineering and assaying will be a purchased service covered by invoices and vouchers.

I believe the project essentially sound and recommend it for approval.

September 28, 1954

Memorandum

To: Operating Committee, Defense Minerals Exploration Administration, Washington, D. C.

From: Executive Officer, Field Team, Region V

Subject: DMEA Application - Paul Bille, Cuba City, Wisconsin

Here are the original and two copies of an application for an exploratory project from Mr. Paul Bille of Cuba City, Wisconsin, who proposes to explore for lead and zinc in the Upper Mississippi lead-zinc district of Wisconsin, together with the mining leases and maps, as well as a memorandum from the Field Team representatives at Platteville, Wisconsin, recommending the application for a project.

It is felt that the memorandum from the Field Team representatives is sufficient rather than submitting a lengthy report, because Mr. Bille consulted with both Messrs. Broughton and Stehlik in filling out the application, determining the type of exploratory procedure and in estimating the costs, so that the entire application had their approval from the very beginning. The memorandum merely corroborates their recommendation. We have retained one copy of the application.

September 20, 1954

Memorandum

To: A. B. Needham, Chief, Mining Division, Region V

From: Charles J. Stehlik, Mining Engineer, Bureau of Mines, and
W. A. Broughton, Geologist, U.S. Geological Survey

Subject: DMEA Application, Paul Gille

Transmitted herewith is Mr. Paul Gille's application for DMEA assistance in lead-zinc prospecting in Sec. 20, T2N, R1E, Lafayette County, Wisconsin. Included are four copies of Form MF-103 and related papers, four copies of the application map, and a copy of each of the two leases.

During the formulation of this application, Mr. Gille and his consultant, Mr. Dale Dixon, visited the Bureau office often for advice and guidance. Requirements and general conduct as experienced by contracts previously administered through this office were noted to them and it is believed that many of the difficulties experienced in the past have been avoided by the conferences.

Examination of the application has been made and the following comments are offered for the field team appraisal:

(1) Leases and lease descriptions: The leases are sound and typical of mining and prospecting leases in use in this district. Description on the Lindsay lease, on the official document, is as it is recorded in the abstract office. The true meaning of E3/4 of SW1/4 is listed as the SW1/4 of the SW1/4, and the E1/2 of the SW1/4 on the application.

(2) Physical description: Information of physical features contained in the application and on the map has been obtained from the most reliable sources in the district and to our knowledge was faithfully reproduced. Permission to reproduce data from other parties was obtained.

(3) Geologically Mr. Gille's plan of exploration is feasible. There is a very good possibility that the east-west structure of the Raisbeck and Gritty Six mines continues westward and is related to the structures of the Cuba City and Henrietta mines (see applicant's map). If this east-west structure does continue through the SE¼SW¼ and the S½SE¼ Sec. 20, there is a possibility that it contains zinc and lead ore along its strike. Mr. Gille intends to test this possibility by his three (and possibly four) proposed cross sections. The proposed positions of these cross sections are controlled mainly by the reported occurrence of abundant zinc and lead minerals in the previous holes R1 to R6 and E13. The four proposed drill holes in the Lindsay lease in the vicinity of holes VH20 to VH22 are intended to further explore the slight zinc occurrence (see logs accompanying application) in the SE¼NE¼ Sec. 20.

(4) Estimates of Cost:

(a) Supervision and Engineering cost, listed as $.18 per foot, is in accord with practice in this district.

(b) Drilling cost, totalling $1.65, is the amount most usually quoted for such work. The $.40 per foot for the driller and a portion of $.65 use allowance is, of course, a profit to the driller. It is, however, a necessary expense to the operator, and since Mr. Gille is both, a perplexing problem may arise from this item.

(c) Assaying costs, listed as $.08 per foot, is slightly high for the district but in most cases adequate assaying is not done. This item, therefore, is not excessive if proper assaying is done.

Based on the above listed evaluations, it is recommended that this request for DMEA assistance be granted.

Charles J. Stehlik, Mining Engineer
U.S. Bureau of Mines

W. A. Broughton, Geologist
U.S. Geological Survey

Day File

3(d)

Paul Gille
Cuba City, Wis.

THIS AGREEMENT, made and entered into this 4th day of June, 1954, by and between Everett W. Lindsay and Lucille Lindsay, his wife - of Benton Township, LaFayette County, State of Wisconsin, of the first part, hereinafter referred to as Lessor, and Paul Gille of Cuba City, Grant County, Wisconsin, of the second part, hereinafter referred to as Lessee.

W I T N E S S E T H :

That Lessor, for and in consideration of the rents, covenants and conditions herein agreed to be paid, kept and performed by Lessee, has leased and let and does hereby lease and let unto Lessee for prospecting and mining purposes only, the following described premises owned by Lessor and situated in Bent on Township, LaFayette County, Wisconsin, to-wit:

> The Northeast quarter (NE 1/4) of Section twenty (20) and the North one-half (N 1/2) of the Southeast Quarter (SE 1/4) of Section twenty (20); all in Town Two (2) North, Range One (1) East of the 4th. P.M., containing 240 acres, more or less.

3(d)

Paul Gille
Cuba City, Wis.

THIS AGREEMENT, made and entered into this 4th day of June, 1954, by and between Thomas B. Dawson and Mary Dawson, his wife ----- of Benton, LaFayette County, State of Wisconsin, of the first part, hereinafter referred to as Lessor, and Paul Gille of Cuba City, Grant County, Wisconsin, of the second part, hereinafter referred to as Lessee.

W IT N E S S E T H :

That Lessor, for and in consideration of the rents, covenants and conditions herein agreed to be paid, kept and performed by Lessee, has leased and let and does hereby lease and let unto Lessee for prospecting and mining purposes only, the following described premises owned by Lessor and situated in Benton Township, LaFayette County, Wisconsin, to-wit:

> The east three quarter (E3/4) of the southwest quarter (SW 1/4) and the south half (S 1/2) of the southeast quarter (SE 1/4) of section twenty (20) in township two (2) north range One (1) east of the 4th P.M., containing 200 acres, more or less.

---

1. This agreement is intended to and does lease, let and demise to Lessee all and every prospecting and mining right and privilege in and upon said lands absolutely, together with the privilege of erecting and installing any and all machinery and equipment necessary or convenient in mining, processing and marketing the ore.

2. The parties mutually agree that Lessee, except as herein otherwise provided, each year during the life of this agreement beginning June 4, 1954, (hereinafter referred to as "work year") shall:

A. Perform a minimum of six hundred (600) man shifts of mining work on the premises, or

B. Drill 5 holes each 300 feet in depth (unless the ore horizon is sooner encountered), or

C. Pay the sum of $300.00 on or before the expiration of any work year during which Lessee has not performed either A or B, such payment to be considered advance royalty applicable against subsequent royalties provided for in Paragraph 6 of this lease; provided, however, that if Lessee terminates this lease prior to the expiration of any work year and has performed neither A nor B theretofore during such work year, Lessee shall pay Lessor $25.00 for each month during such work year that this lease was in force and effect.

It is understood and agreed, however, that alternatives B and C above shall only be applicable during the first four work years of this lease, i.e. up to June 4, 1958.

3. It is further agreed that Lessee will make available for Lessor's inspection, at all reasonable times during the term of this lease, information as to the location and footage of each hole drilled on said land. At the termination of this lease, Lessee will furnish to Lessor a factual record of any holes drilled on the land together with a map showing the location of such holes.

4. This lease conveys such surface land rights as are necessary for prospecting for, developing and operating any mine or mines in said land, or operating mills on said land. Lessee shall have the right of way to and from any place where prospecting, mining or milling operations are carried on and the public highway. Lessee, however, shall use one roadway to and from any one mine or mill on said land, and shall fence off the area of its mining or milling operations and the roadway from such area to the public highway. Lessee shall cover or case all prospect holes. Lessee shall do no more damage to crops on said land than may be necessary and shall pay all damage to growing crops while prospecting. In case the parties hereto shall not be able to agree upon the amount or extent of such damage, the same shall be determined by arbitration, the Lessor to select one arbitrator, the Lessee to select one arbitrator, and the two arbitrators so selected to select a third arbitrator. The award made by said arbitrators shall be binding and conclusive on the parties hereto.

5. Should any well or surface stream now regularly used for water supply on the leased premises be drained by mining operations conducted thereon by Lessee, Lessee agrees to furnish a water supply equivalent to that being used by Lessor at time said well or stream should be interrupted.

6. Ores mined from the leased premises may be milled and prepared for market thereon or on other lands, separately or in connection with other ores, as Lessee may elect, provided, however, that before milling such ores they shall be weighed and assayed and the net recoverable lead sulphide concentrates and zinc sulphide concentrates calculated on the basis of an 85% recovery in the case of zinc and a 75% recovery in the case of lead, and in accordance with weighing and sampling methods recognized in the Illinois, Wisconsin and Iowa district as practical and efficient at the time of receipt at the mill. Lessee agrees to pay the Lessor, as rent or royalty, the following:

Seven and one-half ($7\frac{1}{2}$) percent of the market value of such recoverable lead and zinc concentrates, from ores mined from the leased premises. "Concentrates" for the purposes hereof means the salable zinc and lead sulphide minerals recoverable, as determined above, at the mill or concentrating plant where treated. "Market value" for the purposes hereof when used with respect to lead and zinc concentrates means the price established f.o.b. cars at the mill by responsible buyers of concentrates of a similar grade and kind produced from ores mined and milled in said district and prevailing at the time the ores are delivered to the mill for treatment.

In the event that Lessee elects to recover pyrite concentrates the ore shall, before milling, be weighed and assayed and the net recoverable pyrite concentrates calculated in accordance with weighing, sampling and concentrating methods recognized in the aforesaid district as practical and efficient at the time of receipt at the mill. In such event Lessee shall pay to Lessor a royalty of seven and one-half ($7\frac{1}{2}$) per cent of the market value of such pyrite concentrates from ores from the demises premises. "Market value" for the purposes of this paragraph, inasmuch as there is no established market for such concentrates in said district, means the amount for which Lessee is able to sell such concentrates, f.o.b. cars at the mill.

7. Lessor shall have no interest in any subsidy, bonus, premium, or similar payment made by the United States Government or any agency thereof with respect to ores and minerals mined from the premises and no royalty shall be paid on any such payment received by Lessee.

8. Royalty payments shall be made by the Lessee on or before the last day of each calendar month for all ores delivered at the mill during the preceding calendar month. Royalty or other payments under this agreement

shall be deposited by Lessee in Cuba City State Bank of Cuba City, Wisconsin, or such other bank as Lessor may in writing designate (such bank being hereby constituted as agent of Lessor to receive such payments, and deposits in such Bank shall be deemed to be payment to Lessor).

9. Lessee agrees to keep an accurate record of all ores mined from the leased premises and of all calculations relative to royalty payments thereunder. The said records may be inspected by Lessor at all reasonable times.

10. Lessee shall have the right to erect and install all necessary buildings, tramways, machinery and equipment on said land for the purposes of mining, milling, cleaning or otherwise preparing for market all ores mined therefrom, and Lessee shall have the right to remove the same at the expiration of this lease, or within six (6) months thereafter, Lessee agrees not to sink a shaft or erect a plant on the demised premises within three hundred (300') feet of the present main buildings on the demised premises. Lessee agrees to support all shafts and drifts when in its sole judgment it appears necessary and not to remove such supports without the written permission of Lessor. Lessee shall not be liable for damages in event of caving of said leased premises or any portion thereof by reason of failure of supports or pillars left to support the same.

It is understood and agreed that Lessee shall conduct no open pit mining the leased premises without the written consent of the Lessor. If in connection with Lessee's mining operations an incline opening on the surface of the leased premises is to be driven, Lessee shall obtain written consent of Lessor as to the location on the demised premises for the deposit of rock or waste materials to be removed through the surface opening of such incline, provided, however, that such designated location shall be ample for such purpose and shall not be further than six hundred (600') feet from the opening of such incline; and Lessee shall have the right of access to such designated area.

If such designation is not made within thirty (30) days after receipt of request therefor, Lessee may pile such rock and waste material at such location on the leased premises as it chooses. Upon termination of all of Lessee's rightsand privileges hereunder, Lessee shall securely seal any shaft or incline on the surface of the leased premises.

11. Lessee shall have the privilege of raising ores from said land through shafts or inclines on other lands in the area, and the privilege of milling, cleaning or otherwise treating such ores in plants or mills located upon such lands. Lessee shall also have the privilege of raising ores mined from other lands through shafts or inclines which Lessee has sunk or driven on the leased premises for the purpose of working same, and of milling, cleaning or otherwise treating such ores in mills or plants located upon the leased premises. The privileges referred to in the last preceding sentence shall survive the termination, by expiration or otherwise, of this lease. For any period after such termination during which Lessee is (a) raising, through a shaft driven on the demised premises or through an incline opening on the surface of the demised premises, ores, exclusively from other lands in which Lessor has no interest, or (b) milling, cleaning or otherwise treating on the demised premises, ores exclusively from such other lands, or (c) doing both (a) and (b), Lessee shall pay Lessor at the rate of $600.00 per year. The right to use underground inclines or exploration openings existing in the leased premises at the termination of this lease shall also survive such termination for so long as the use of any of the same may be necessary or convenient for any mining purpose connected with this or any other property. For the exercise of such right subsequent to such termination, Lessee shall pay Lessor at the rate of One hundred ($100.00) Dollars per year, provided, however, that no such payment shall be required to be made by Lessee for any period for which Lessee makes payment to Lessor at the rate of Six hundred ($600.00) Dollars per year as heretofore in this paragraph provided.

Anything hereinbefore to the contrary notwithstanding, Lessee shall have the right to remove any of its property used in connection with the exercise of the rights and privileges referred to in the last five preceding sentences of this paragraph, within six (6) months after tendering a release of the same.

Nothing herein shall be construed so as to permit Lessee to construct and operate a central concentrating plant on lands herein described without the express written consent of Lessor.

12. Lessee shall have the right to sell any rock, tailings, or other waste material (hereinafter in this paragraph 12 referred to as "waste material") resulting from mining or milling ore from the leased premises. Lessee shall also have the right to use, without charge, so much of such waste material as it may desire for its own purposes.

In case of sale by Lessee of such waste material, the Lessee shall pay to Lessor, at the end of each calendar month, fifty (50) per cent of the balance of the proceeds of sale of such waste material during the preceding calendar month, after deducting the costs (i.e., costs subsequent to milling the ore) of handling, stocking, preparing for market, selling, transporting, and delivering such waste material, and any taxes of any nature assessable on such waste material or measured by the proceeds of the sale of such waste material. However, if such waste material has been commingled in stockpiles at a milling plant with waste material resulting from ores from other lands, Lessee shall, in the event of a sale from such stockpiles, pay to Lessor that proportion of fifty (50) per cent of the balance of the proceeds of sale, after the deductions hereinabove referred to, as the amount of waste material resulting from ores from the leased premises in such stockpiles at the time of such sale is to the entire amount of waste material in such stockpiles at such time. When making payments as aforesaid, Lessee shall furnish Lessor with a statement setting forth the proceeds of sale and the costs deducted.

In case Lessor desires to remove, before termination of milling, waste material stockpiled at a mill site of Lessee, it may do so upon request to Lessee, subject to the following: Lessee may impose such regulations upon such removal as it may deem necessary, i.e., such regulations as to time, place and method of removal, matter of weighing, records to be kept, and removal not to interfere with Lessee's operations. Lessee will notify Lessor as to the amount of waste material resulting from ores from the leased premises and unsold which Lessee calculates is stockpiled at the time of such request, and Lessor may remove up to fifty (50) per cent of such amount. All handling, accounting or other costs of Lessee with respect to waste material which may be so removed shall be paid to Lessee by Lessor before removal.

Upon termination of Milling at a mill site at which waste material is stockpiled, Lessee shall notify Lessor of such termination and of the quantity of waste material to which Lessor is entitled.. Such quantity shall be fifty (50) per cent of the amount of waste material resulting from ores from the leased premises and unsold which Lessee calculates is so stockpiled at the time of such termination. Lessor shall have a period of two (2) years after the date of such notice in which to remove such quantity and at the expiration of such period any portion of such waste material not so removed shall be the absolute property of the owner of the premises upon which the same is stored, without further conveyance, free and clean of all obligations of this instrument.

Lessee's judgment and decisions as to handling, stockpiling, apportioning, commingling, allocation, sale and cost account with respect to waste material shall be final and binding. The provisions of the Paragraph 12 apply to waste material from ores milled in a mill owned or operated by Lessee,

Lessor to have no rights in or to waste material resulting from ores milled elsewhere.

13. It is further agreed that after the first four work years of this lease referred to in Paragraph 2 hereof, the Lessee may pay to the Lessor fifteen ($15.00) dollars an acre in lieu of required mining work (referred to in Paragraph 2A hereof) during any work year, payable at the end thereof, Said payment shall be considered advance royalty applicable against subsequent royalties provided for in Paragraph 6 of this lease.

14. It is further agreed that in the event that the East St. Louis spelter market shall at any time during the life of this lease drop below twelve (12c) cents per pound, Lessee may discontinue work of any kind or payments in lieu thereof under this lease until the said price equals or exceeds twelve (12c) cents per pound, but such cessation of work shall not exceed a period of four (4) years at any one time.

15. Lessor hereby warrants and agrees to defend the title to the lands leased herein up to the time that this lease or proper notice thereof is put on record, but no later than June 4, 1955, and Lessee shall at all times during the life of this lease have the right, but is not obliged, to pay taxes, mortgages or other liens which may be due and payable in the event of default of payment by Lessor, in which event Lessee shall be subrogated to all the rights of the holder thereof and Lessor also agrees, at Lessee's option, (a) to reimburse Lessee upon demand for such payments made or (b) to permit Lessee to deduct the same from any advance or earned royalties due Lessor under any of the provisions of this lease.

16. The lease hereby granted shall subsist and run so long as Lessee shall continue to prospect, operate or mine upon said leased premises,

leased premises, including such periods as the operating requirements of this lease are suspended or advance royalties are paid under any of the provisions hereof, unless surrendered or terminated as hereafter provided.

17. In case of failure of Lessee to keep and perform the terms and obligations of this lease, Lessor may give thirty (30) days written notice of the breach, violation or default complained of, in which case Lessor shall specify the details of the same in order that Lessee may be fully informed with respect thereto, and if the same is not remedied or corrected within thirty (30) days after the receipt of said notice, this lease shall thereupon terminated at the option of Lessor, which shall be evidenced by notice in writing to Lessee, and which remedy shall be exclusive. No forfeiture, however, shall be asserted or based on a breach, violation or default hereunder or on a failure to remedy or correct the same, when occasioned by fire, riot or civil commotion, striked or other labor controversies, inability to obtain labor or materials or equipment on the open market, delay of carriers, breakage of machinery or equipment, government regulation or interference, war, whether declared or not, acts of nature, or any other cause beyond the control of Lessee, whether or not of a like nature of the foregoing and whether or not the same could have been foreseen or prevented.

18. Lessee may at any time surrender this lease by executing and tendering to Lessor and if requested by Lessor, recording at Lessee's expense a written release thereof, and from and after such tender Lessee shall be released and relieved from all further obligations and liabilities hereunder, with respect to or in any way connected with the above described premises or the exercise of Lessee's rights hereunder, except to account for and make payments accrued during the life hereof and except to permit Lessor

to remove tailings in accordance with the provisions of Paragraph 12 hereof. Lessee may at any time, after the surrender or termination of this lease, surrender the rights and privileges referred to in Paragraph 11 hereof which survive this lease and by executing and tendering to Lessor and if requested by Lessor, recording at Lessee's expense a written release thereof, and from and after such tender Lessee shall be released and relieved from all obligations and liabilities with respect to or in any way connected with the above described premises or such rights or privileges or the exercise of such rights or privileges, except to account for and make any payments accrued during the life of such rights and privileges for the exercise thereof. Tender of the aforesaid releases may be made by mailing same to Lessor at the address hereinafter set forth in Paragraph 19 hereof or by depositing the same with the bank, if any, at such time acting as agent for Lessor to receive payments hereunder.

19. All notices herein provided to be given in writing shall, unless otherwise provided, be mailed by registered mail to the addresses following, until some other address is designated in a notice so given:

UNITED STATES DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS EXPLORATION ADMINISTRATION

Form Approved.
Budget Bureau No. 42-R1035.2.

APPLICATION FOR AID IN AN EXPLORATION PROJECT, PURSUANT TO DMEA ORDER 1, UNDER THE DEFENSE PRODUCTION ACT OF 1950, AS AMENDED

Not to be filled in by applicant

Docket No. .....
Metal or Mineral .....
Date Received .....
Estimated Cost .....
Participation (Government %) .....

INSTRUCTIONS

1. *Name of applicant.*—(*a*) State here your full legal name, in the form in which you will wish to contract, and your mailing address: Paul Gille
Cuba City, Wis.

(*b*) If other than an individual, add to your name above whether a corporation, partnership, etc., and the name of the State in which incorporated or otherwise organized.

(*c*) If a corporation, add to above statement, titles, names and addresses of officers.

(*d*) If a partnership, add to the above statement the names and addresses of all partners.

2. *General.*—Read DMEA Order 1, "Government Aid in Defense Exploration Projects," before completing this application. Submit this application and all accompanying papers in quadruplicate (four copies), with your name and address on each sheet of the application and on all accompanying papers. Where sufficient space is not provided on the form for all required information, state it on an accompanying paper, with a reference in each case to the instruction to which it refers by number. Comply with all applicable instructions; or, if not applicable, so state. File the application with Defense Minerals Exploration Administration, Department of the Interior, Washington 25, D. C., or with the nearest field executive officer thereof.

3. *Applicant's property rights.*—(*a*) State the legal description of the land upon which you wish to explore, including all land which you possess or control that may be benefited by the exploration, and excluding any land or interest in land which is not to be included in the exploration project contract Lindsey Lease: NE¼ Sec. 20 and the N½ of the SE¼ Sec. 20, T2N, R1E, 4th P.M. Dawson Lease: SW¼ of the SW¼, E½ of the SW¼ and the S½ of the SE¼ Sec. 20, T2N, R1E, 4th P.M.

(*b*) State any mine name by which the property is known. None

(*c*) State your interest in the land, whether owner, lessee, purchaser under contract, or otherwise lessee

(*d*) If you are not the owner, submit with this application a copy of the lease, contract, or other document under which you control the property. See accompanying papers

(*e*) If you own the land, describe any liens or encumbrances on it --

(*f*) If the land consists of unpatented claims, add to the description above, the book and page numbers for each recorded location notice. ----

4. *Physical description.*—(*a*) Describe in detail any mining or exploration operations which have been or now are being conducted upon the land, including existing mine workings and production facilities. State your interest, if any, in such operations. Also describe accessibility of mine workings for examination purposes. See accompanying papers

(*b*) State past and current production, and ore reserves, if any, giving quantities and grades. See accompanying papers

(*c*) Describe the geologic features of the property, including mineralization, type of deposit (vein, bedded, etc.), and your reasons for wishing to explore. Illustrate with maps or sketches. Send with your application (but not necessarily as a part of it) any geologic or engineering report, assay maps, or other technologic information you may have, indicating on each whether you require its return to you. See accompanying papers

(*d*) State the facts with respect to the accessibility of the project: Access roads, distances to shipping, supply and residence points. See accompanying papers

(*e*) State the availability of manpower, materials, supplies, equipment, water, and power.
See accompanying papers

16—66551-1

5. *The exploration project.*—(*a*) [illegible]e the mineral or minerals for which you wi[illegible] explore Lead & Zinc

(*b*) Describe fully the proposed work, including a map or sketch of the property showing a plan (and cross sections if needed) of any present mine workings, and the location of the proposed exploration work as related to such features as contacts, veins, ore-bearing beds, etc. See accompanying papers

(*c*) The work will start within 30 days and be completed within 18 months from the date of an exploration project contract.

(*d*) State the operating experience and background of the applicant with relation to the ability to carry out such exploration project, and also that of the person or persons who will supervise the operations. See accompanying papers

6. *Estimate of costs.*—Furnish a detailed estimate of the costs of the proposed work (you will have to use a separate sheet), under the following headings. Add the totals under all headings to give the estimated total cost of the project:

(*a*) *Independent contracts.*—(Note.—If the applicant does not intend to let any of the work to contractors, write "none" after this item. To the extent that the work is to be contracted, do not repeat the cost of the contract-work in subsequent items.) State the cost of any proposed independent contracts for the performance of all or any part of the work, expressed in terms of units of work (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, per cubic yard of material moved, etc.).

(*b*) *Labor, supervision, consultants.*—Include an itemized schedule of numbers, classes and rates of wages, salaries or fees for necessary labor, supervision and engineering and geological consultants.

(*c*) *Operating materials and supplies.*—Furnish an itemized list, including items of equipment costing less than $50 each, and power, water and fuel.

(*d*) *Operating equipment.*—Furnish an itemized list of any operating equipment to be rented, purchased, or which is owned and will be furnished by the Operator, with the estimated rental, purchase price, or suggested use-allowance based on present value, as the case may be.

(*e*) *Rehabilitation and repairs.*—Furnish a detailed list showing the cost of any necessary initial rehabilitation or repairs of existing buildings, installations, fixtures, and movable operating equipment, now owned by the Operator and which will be devoted to the exploration project.

(*f*) *New buildings, improvements, installations.*—Furnish a detailed list showing the cost of any necessary buildings, fixed improvements, or installations to be purchased, installed or constructed for the benefit of the exploration project.

(*g*) *Miscellaneous.*—Furnish a detailed list showing the cost of repairs to and maintenance of operating equipment (not including initial rehabilitation or repairs of the Operator's equipment), analytical work, accounting, workmen's compensation and employers' liability insurance, and payroll taxes.

(*h*) *Contingencies.*—Give an estimate of any necessary allowances for contingencies not included in the costs stated above.

NOTE.—No items of general overhead, corporate management, interest, taxes (other than payroll and sales taxes), or any other indirect costs, or work performed or costs incurred before the date of the contract, should be included in the estimate of costs.

7. (*a*) Are you prepared to furnish your share of the cost of the proposed project in accordance with the regulations on Government participation (Sec. 7, DMEA No. 1)? Yes

(*b*) How do you propose to furnish your share of the costs?

[x] Money [x] Use of equipment owned by you [ ] Other

Explain in detail on acompanying paper.

CERTIFICATION

The undersigned, whether as an individual, corporate officer, partner, or otherwise, both in his own behalf and acting for the applicant, certifies that the information set forth in this form and accompanying papers is correct and complete, to the best of his knowledge and belief.

Dated Sept. 8, 1954

/s/ Paul Gille
(Applicant)

By

Title 18, U. S. Code (Crimes), Section 1001, makes it a criminal offense to make a willfully false statement or representation to any department or agency of the United States as to any matter within its jurisdiction.

U. S. GOVERNMENT PRINTING OFFICE 16—66551-1

Paul [illegible]le
Cuba City, Wis.

4(a) The Vinegar Hill Zinc Co. of Platteville, Wis. drilled 24 holes on the Lindsey Lease and 3 holes on the Dowling Property in 1946. The locations of these holes are shown on the accompanying map, and are numbered VH 1 thru 24 and VH 28 thru 30. The logs are included under 4(c)

The New Jersey Zinc Co. drilled 7 holes on the Lindsey Lease and 7 holes on the Dawson Lease in 1952. The locations of these holes are shown on the accompanying map and are numbered as follows: Lindsey Lease - B7, B11 thru B14 and E14 and 15. Dawson Lease: E12 and 13, C7 thru C11. The logs are included under 4(c). This exploration project was a wide spread grid drilling program.

Mr. Ernest Rasque drilled 6 holes on the Dawson Lease that contained lead and zinc. The locations of these holes are shown on the accompanying map and are numbered R1 thru R6. The logs of R1 thru R3 are included under 4(c). The logs of R4 thru R6 are not available but have been reported as having good lead and zinc mineralization.

There was one small mine located on the Dawson property. It was called the Cuba City Mine. This mine was worked many years ago. It is not in production now.
To the east of the Dawson property is located the Gritty Six Mine, the Raisbeck Mine and the Trego Mine. They are all interconnected and located in the S½ of Section 21 as shown on the map. These mines are not in production now and are not accessible for examination.

4(b) Past Production:

Gritty Six: Figures not available
Raisbeck Mine: 1912-1913- 6500 tons of ore yielding a 17.5% zinc concentrate. No other figures available.
Trego Mine: Figures not available.

4(c) Geologic Report:

Raisbeck Mine: This mine was discovered in 1846 by shallow shafts for galena. It was worked continuously until 1903. It was drilled in 1911 by the Vinegar Hill Zinc Co. and reopened by them in 1912. The mine was again reopened in 1929 and 1930 and galena and barite were mined from the south part. The ore body has been mined for a length of 2000 ft. and width of 50 to 170 ft; the stopes were 60 ft. high. It is typical east trending ore body controlled by outward dipping east trending pitches, and was noted for its richness. Flats of ore up to 4 ft. in thickness are reported. Along the toe of the south pitch in the "oil rock" there is a 3-5 ft. thickness of barite. The zinc ore occurred from the cherty drab down into the glass rock and main zinc occurred in veins along the pitches and flats in the "blue" and "gray" beds.

Gritty Six Mine: It is a west extension of the Raisbeck ore body. Exploration started in 1890 and continued to 1897. The ore body was discovered Oct. 22, 1897 by shaft sinking to a depth of 110 ft. The mine was mined profitably until 1907.

I wish to explore these leases for the following reasons:

(1) The Possibility of finding an extension of the Gritty Six Mine.
(2) To check the area where some mineralization occurred on previous drilling, such as around E-13 (Dawson), R-1, 2 and 3 (Dawson) and VH 19, 20, 21 (Lindsey).

4(d) Access roads border the leases and drill locations are within 1/4 mile of these roads. Shipping distance is within 3 miles. Supply and residence is 3 miles.

4(e) Manpower, materials and supplies are plentiful. Power is within 1/2 mile of the leases. Water is very plentiful.

5(b) The purpose of the project is to explore for lead and zinc by means of churn drilling. Maximum depth of holes will be about 180'. Average depth of holes will be about 130'. All holes will be drilled with one cut into the Trenton limestone. The location of the initial drill holes are shown on the map. The drilling of these holes will be conducted as follows:

1. Cross section No. 1 consisting of 4 holes on the Dawson lease located west of the Gritty Six will be drilled. If ore is discovered in any of these holes this cross section will be extended in the North South direction until a dead hole occurs. Then the drilling will be extended in the west direction in order to follow the ore. In the event that no ore is discovered in the first 4 holes of cross section No. 1 a similar cross section will be drilled 200' west of cross section No. 1 If no ore is discovered in this cross section then cross section No. 3 consisting of 5 holes west of R 1, 2 and 3 will be drilled. If ore is doscovered in any of these holes the ore will be followed out by the same procedure as on cross section #1. In event that no ore is discovered in cross section #3 cross section #2 will be drilled which is located around hole E 13 of the Dawson Lease. If ore is discovered the same drilling procedure will be conducted as on cross sections 1 and 3. If no ore is discovered 4 holes located around VH 19, 20, 21 (Lindsey Lease) will be drilled. This is the only mineralized area indicated by previous drilling.

   In event no ore is discovered in the above described drilling, the Operator will have the option to terminate the program. The total number of holes in event of a continuous program shall not exceed 100 holes or 13,000 ft. of drilling.

5(d) The applicant has had 30 years of experience as a drilling contractor for the Vinegar Hill Zinc Co., Eagle Picher Mining Co. and private contracts. In addition the applicant will employ D. C. Dixon, consultant, for supervision and technical work. Mr. Dixon is a graduate mining engineer and has had considerable experience working on other DMEA drilling projects in the Southwestern Wisconsin District.

ul Gille
Cuba City, Wis.

6(a)	None	
6(b)	Supervision & Engineering (13000' drilling @.18/ft.)	$2340.00
	Driller (13000' drilling @ .40/ft.)	$5200.00
	Drillers Helper (13000' drilling @ .30/ft.)	$3900.00
6(c)	Oil, grease, and gasoline (13000' drilling @ .30/ft.)	$3900.00

6(d) The following equipment is owned by the Operator and is on a use allowance basis:

1 Drill Machine (22W Bucyrus Erie)
1 Truck (Mounted with extra transmission)
1 Winch truck (4 wheel drive)
1 Pickup truck
2 Sets Drill Tools (6" complete)
2 Sets Drill Tools (6½" complete)
Fishing tools, Jars, Sockets, Side Spuds
1 Drill House (on wheels)
Drill wrenches, Hand tools
500' Casing
800' Cable (3/4")
800' Cable (7/16")
4 Sizes Bailers
1 extra Drill Bit (8")
1 extra Drill Bit (10")

Use allowance (13000' drilling @ .65/ft.) $8450.00

6(e)	None	
6(f)	None	
6(g)	Assaying (13000' drilling @ .08/ft.)	$1040.00
6(h)	None	

TOTAL (13000' drilling @ $1.91) $24,830.00

Paul Gille
Cuba City, Wis.

7(b) I will furnish my share of the costs as follows with cash:

Supervision & Engineering	.09 /ft.	
Drillers Helper	.15 /ft.	
Oil, grease, gasoline	.15 /ft.	
Assaying	.04 /ft.	
Total		.43 /ft.

Being the driller on my own rig I will furnish my share of the following by use of the equipment and labor performed as driller:

Driller	.20 /ft.	
Use allowance (Drill rig & equipment	.32½/ft.	
Total		.52½/ft.

Total .95½/ft.

Memorandum

To: A. B. Needham, Chief, Mining Division, Region V

From: Charles J. Stehlik, Mining Engineer

Subject: DMEA Application by Paul Gille Drilling Company

The enclosed letter from Paul Gille was brought to this office today for transmission. In the conversation with him and Mr. Dale Dixon, his consultant, it was understood that Mr. Gille intends to consider his labor and equipment usage as roughly equal to 50% of the costs and that the government reimbursement would furnish the necessary cash for supplies, engineering, assay, and miscellaneous costs.

A cost breakdown suggested to Mr. Gille on a previous visit was generally agreeable and was as follows:

Item	Cost per foot
(1) Use allowance on drill rig	$ .65
(2) Supplies for rig	.30
(3) Drill helper wages	.30
(4) Driller wages	.40
(5) Supervision, engineering, mapping	.15
(6) Assay & Miscellaneous	.07
	$ 1.87

Of the above costs, items 2, 3, 5 and 6 would total $.820 per foot. The government participation would be $.935 per foot and would meet his liabilities, leaving $.115 per foot toward equipment use allowance and his own wages. His assets then, are his equipment and labor.

The problem, as he sees it, is how he could show payment to himself for the balance of items 1 and 4 in case of an audit.

Please advise the procedure followed in such cases.

Charles J. Stehlik

UNITED STATES DEPARTMENT OF THE INTERIOR
DEFENSE MINERALS EXPLORATION ADMINISTRATION

Form Approved.
Budget Bureau No. 42-R1035.2.

APPLICATION FOR AID IN AN EXPLORATION PROJECT, PURSUANT TO DMEA ORDER 1, UNDER THE DEFENSE PRODUCTION ACT OF 1950, AS AMENDED

Not to be filled in by applicant

Docket No. .....
Metal or Mineral .....
Date Received .....
Estimated Cost .....
Participation (Government %) .....

INSTRUCTIONS

1. *Name of applicant.*—(*a*) State here your full legal name, in the form in which you will wish to contract, and your mailing address:

Paul Gille
Cuba City, Wisconsin

(*b*) If other than an individual, add to your name above whether a corporation, partnership, etc., and the name of the State in which incorporated or otherwise organized.

(*c*) If a corporation, add to above statement, titles, names and addresses of officers.

(*d*) If a partnership, add to the above statement the names and addresses of all partners.

2. *General.*—Read DMEA Order 1, "Government Aid in Defense Exploration Projects," before completing this application. Submit this application and all accompanying papers in quadruplicate (four copies), with your name and address on each sheet of the application and on all accompanying papers. Where sufficient space is not provided on the form for all required information, state it on an accompanying paper, with a reference in each case to the instruction to which it refers by number. Comply with all applicable instructions; or, if not applicable, so state. File the application with Defense Minerals Exploration Administration, Department of the Interior, Washington 25, D. C., or with the nearest field executive officer thereof.

3. *Applicant's property rights.*—(*a*) State the legal description of the land upon which you wish to explore, including all land which you possess or control that may be benefited by the exploration, and excluding any land or interest in land which is not to be included in the exploration project contract LINDSAY PROPERTY: NE $\frac{1}{4}$ Section 20 and the N$\frac{1}{2}$ of the SE $\frac{1}{4}$ of Section 20, T2N, R1E of the 4th P.M., containing 240 acres more or less. DAWSON PROPERTY: E 3/4 of the SW$\frac{1}{4}$ and the S$\frac{1}{2}$ of the SE$\frac{1}{4}$ Section 20, T2N, R1E of the 4th P.M. containing 200 acres more or less

(*b*) State any mine name by which the property is known.

(*c*) State your interest in the land, whether owner, lessee, purchaser under contract, or otherwise lessee

(*d*) If you are not the owner, submit with this application a copy of the lease, contract, or other document under which you control the property. See accompanying papers

(*e*) If you own the land, describe any liens or encumbrances on it ------

(*f*) If the land consists of unpatented claims, add to the description above, the book and page numbers for each recorded location notice. ------

4. *Physical description.*—(*a*) Describe in detail any mining or exploration operations which have been or now are being conducted upon the land, including existing mine workings and production facilities. State your interest, if any, in such operations. Also describe accessibility of mine workings for examination purposes. See accompanying papers

(*b*) State past and current production, and ore reserves, if any, giving quantities and grades. See accompanying papers

(*c*) Describe the geologic features of the property, including mineralization, type of deposit (vein, bedded, etc.), and your reasons for wishing to explore. Illustrate with maps or sketches. Send with your application (but not necessarily as a part of it) any geologic or engineering report, assay maps, or other technologic information you may have, indicating on each whether you require its return to you. See accompanying papers

(*d*) State the facts with respect to the accessibility of the project: Access roads, distances to shipping, supply and residence points. See accompanying papers

(*e*) State the availability of manpower, materials, supplies, equipment, water, and power.

See accompanying papers

16—66551-1

5. *The exploration project.*—(*a*) State the mineral or minerals for which you will explore Lead & Zinc

(*b*) Describe fully the proposed work, including a map or sketch of the property showing a plan (and cross sections if needed) of any present mine workings, and the location of the proposed exploration work as related to such features as contacts, veins, ore-bearing beds, etc. See accompanying papers

(*c*) The work will start within 30 days and be completed within 18 months from the date of an exploration project contract.

(*d*) State the operating experience and background of the applicant with relation to the ability to carry out such exploration project, and also that of the person or persons who will supervise the operations. See accompanying papers

6. *Estimate of costs.*—Furnish a detailed estimate of the costs of the proposed work (you will have to use a separate sheet), under the following headings. Add the totals under all headings to give the estimated total cost of the project:

(*a*) *Independent contracts.*—(Note.—If the applicant does not intend to let any of the work to contractors, write "none" after this item. To the extent that the work is to be contracted, do not repeat the cost of the contract-work in subsequent items.) State the cost of any proposed independent contracts for the performance of all or any part of the work, expressed in terms of units of work (such as per foot of drilling, per foot of drifting, per hour of bulldozer operations, per cubic yard of material moved, etc.).

(*b*) *Labor, supervision, consultants.*—Include an itemized schedule of numbers, classes and rates of wages, salaries or fees for necessary labor, supervision and engineering and geological consultants.

(*c*) *Operating materials and supplies.*—Furnish an itemized list, including items of equipment costing less than $50 each, and power, water and fuel.

(*d*) *Operating equipment.*—Furnish an itemized list of any operating equipment to be rented, purchased, or which is owned and will be furnished by the Operator, with the estimated rental, purchase price, or suggested use-allowance based on present value, as the case may be.

(*e*) *Rehabilitation and repairs.*—Furnish a detailed list showing the cost of any necessary initial rehabilitation or repairs of existing buildings, installations, fixtures, and movable operating equipment, now owned by the Operator and which will be devoted to the exploration project.

(*f*) *New buildings, improvements, installations.*—Furnish a detailed list showing the cost of any necessary buildings, fixed improvements, or installations to be purchased, installed or constructed for the benefit of the exploration project.

(*g*) *Miscellaneous.*—Furnish a detailed list showing the cost of repairs to and maintenance of operating equipment (not including initial rehabilitation or repairs of the Operator's equipment), analytical work, accounting, workmen's compensation and employers' liability insurance, and payroll taxes.

(*h*) *Contingencies.*—Give an estimate of any necessary allowances for contingencies not included in the costs stated above.

NOTE.—No items of general overhead, corporate management, interest, taxes (other than payroll and sales taxes), or any other indirect costs, or work performed or costs incurred before the date of the contract, should be included in the estimate of costs.

7. (*a*) Are you prepared to furnish your share of the cost of the proposed project in accordance with the regulations on Government participation (Sec. 7, DMEA No. 1)? Yes

(*b*) How do you propose to furnish your share of the costs?

[x] Money [x] Use of equipment owned by you [ ] Other

Explain in detail on acompanying paper.

CERTIFICATION

The undersigned, whether as an individual, corporate officer, partner, or otherwise, both in his own behalf and acting for the applicant, certifies that the information set forth in this form and accompanying papers is correct and complete, to the best of his knowledge and belief.

Dated Aug. 22, 1954

/s/ Paul Gille

Pa[illegible] Gille
Cuba [illegible]ty, Wis.

4(a) The Vinegar Hill Zinc Co. of Platteville, Wis. drilled twenty four (24) holes on the Lindsay property in 1946. The location of these holes are shown on the accompanying map and the logs are included under 4(c).

The New Jersey Zinc Co. drilled seven (7) holes on the Lindsay property and seven (7) holes on the Dawson property in 1952. The location of these holes are shown on the accompanying map and the logs are included under 4(c). This exploration project was a wide spread grid drilling program.

Mr. Ernest Rasque drilled 3 holes on the Dawson property that contained lead and zinc minerals. These holes are shown on the accompanying map and the logs are included under 4(c).

There was one small mine located on the Dawson property. It was called the Cuba City Mine. This mine was worked many years ago. It is not in production now.

To the east of the Dawson property is located the Gritty Six Mine, the Raisbeck Mine and the Trego Mine. They are all interconnected and located in the S½ of Section 21 as shown on the map. These mines are not in production now and are not accessible for examination.

4(b) Past Production:

Gritty Six: Figures not available
Raisbeck Mine: 1912-1913- 6500 tons of ore yielding a 17.5% zinc concentrate. No other figures available.
Trego Mine: Figures not available

4(c) Geologic Report:

Raisbeck Mine: This mine was discovered in 1846 by shallow shafts for galena. It was worked continuously until 1903. It was drilled in 1911 by the Vinegar HillZinc Co. and reopened by them in 1912. The mine was again reopened in 1929 and 1930 and galena and barite were mined from the south part. The ore body has been mined for a length of 2000 ft. and width of 50 to 170 ft; the stopes were 60 ft. high.. It is typical east trending ore body controlled by outward dipping east trending pitches, and was noted for its richness. Flats of ore up to 4 ft. in thickness are reported. Along the toe of the south pitch in the "oil rock" there is a 3-5 ft. thickness of barite. The zinc ore occurred from the cherty drab down into the glass rock and main zinc occurred in veins along the pitches and flats in the "blue" and "gray" beds.

Gritty Six Mine: It is a west extension of the Raisbeck ore body. Exploration started in 1890 and continued to 1897. The ore body was discovered Oct. 22, 1897 by shaft sinking to a depth of 110 ft. The mine was mined profitably until 1907.

I wish to explore these leases for the following reasons:

(1) The possibilit y of finding an extension of the Gritty Six Mine.
(2) To check the area where some mineralization occurred on previous drilling, such as around hole E-13 (Dawson), VH-19, 20,21 (Lindsay) and R-1,2 and 3 (Dawson)

Paul Gille
Cuba City, Wis.

4(d) Access roads are located within ½ mile of the leases. Shipping distance is 3 miles. Supply and residence is 3 miles.

4(e) There is plenty of manpower, materials and supplies. Power is within ½ mile of the leases. Water is very plentiful.

5(b) The purpose of the project is to explore for lead and zinc by churn drilling. Maximum depth of holes will be about 180'. Average depth of holes will be about 130'. All holes will be drilled with one cut into the Trenton limestone.

Locations of ten (10) initial drill holes which will be STAGE I of this project are shown on the map.

There will be two more cross sections equally spaced in the East-West direction between the Gritty Six Mine and the Cuba City Mine. The North-South locations of these cross sections will depend upon the results of cross section #1 (STAGE I) whose location is determined by VH 28, 29 and 30 of the Dowling Property. Locations of remaining holes will depend upon the results obtained in the initial holes and the cross sections. The cross sections #2 and #3 and the remaining holes will be STAGE II of this project.

The total number of holes including both stages will not exceed 100 holes or 13,000 ' of drilling.

5(d) The applicant has had 30 years of experience as a drilling contractor for the Vinegar Hill Zinc Co., Eagle Picher Mining Co.and private contracts. In addition the applicant will employ D. C. Dixon, consultant, for supervision and technical work. Mr. Dixon is a graduate mining engineer and has had considerable experience working on other DMEA drilling projects in the Southwestern Wisconsin District.

MEMORANDUM

To: Robert A. Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas R. Mullens, Geologist

Subject: June Monthly Report, Contract Idm-E 755, DMEA 3510 (zinc-lead), Paul Gille, Operator

Enclosed are four copies of the subject report.

Drilling was completed for this contract, and the June monthly report includes all expenses incurred. Total footage drilled under the contract was 13,013 feet, and the total cost of the project was $23,842.45. This compares well with the authorized 13,000 feet and total cost of $24,846.00. The 13 feet over the authorized total was needed to bottom the last hole below the ore-bearing zone.

MONTHLY REPORT
DMA 3510
June, 1956

Drilling continued of the Lindsey Lease in the NE¼, SE¼, Sec.20, T2N, R1E, 4th P.M. Lafayette County, Ala. Holes 29 and 30 were completed. Both holes had chunks or traces of iron. All holes were drilled with at least one out into the Trenton Lime. This completes the contract on DMA 3510.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

REMARKS: Project completed

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MEMORANDUM

June 26, 1956

To: Robert A. Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas E. Mullens, Geologist

Subject: May Monthly Report, DMEA Contract E-755, Docket 3510, Paul Gille, Operator

Enclosed are four copies of the subject report.

Please note that two bills for assaying are included with the report. One bill, for $24.00, is for assaying done by Eagle-Picher; the other bill, for $6.00, is for assaying done by George H. Kettler.

Assay reports show L-20 is a lead ore hole, and L-25 and L-26 are zinc ore holes.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

MONTHLY REPORT
DNRA 3510
May, 1956

Drilling continued on the Lindsey Lease in the NW. NW. Sec. 22, T2N, R1E, 4th P.M. Lafayette County, Wis. Holes L-33,34,35,36 and 37 were completed. Hole L-33 had a small amount of mineralization and heavy iron sulfide. Holes L-34,35,36 and 37 were drilled to extend the cross-section north from hole D-13 and intersect the east-west mineralized area on the Lindsey Lease. These holes showed only shines of iron and no zinc mineralization. All Holes were drilled with at least one out into the Trenton Line.

MEMORANDUM

To: Robert Al Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas E. Mullens, Geologist

Subject: April Monthly Report, DMEA Contract E-755, Docket 3510, Paul Gille, Operator

Enclosed are four copies of the subject report.

Thomas E. Mullens

MONTHLY REPORT
APRIL 1936
DMMA 3510

Drilling continued on the Lindsey Lease in the NE. SW. Sec. 29, T2N. R1E, 4th P.M. Lafayette County, Mo. Holes L-29,30,31,32 were finished. Holes L-29 had only shiners of zinc. This completes this cross-section. Holes L-30, 31, and 32 had light zinc and lead mineralization. All holes were drilled with at least one out in the Trenton Lime.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: Robert A. Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas E. Mullens, Geologist

Subject: March Monthly Report, DMEA Contract E-755, Docket 3510, Paul Gille Operator

Enclosed are four copies of the subject report.

Note that two separate cost sheets for assays are included with the report; however, the original invoices for assays are included only with the original copy of the report.

Note also that assay reports on L-17, L-18, and L-20 did not confirm the original estimate of "near ore grade and thickness" of zinc in these holes (see operators March report). I made estimates only slightly lower than those of the operator for these holes. Neither the operator or I can explain the large difference between estimates and assay results.

From: Thomas E. Mullens, Geologist

Subject: February Monthly Report, DMEA Contract E-755, Docket 3510, Paul Gille, Operator

Enclosed are four copies of the subject report.

Note that the technical services charge for February exceeds the contract allowable charge of $130.00, but that the over-all average of $130.00 is the exact contract limit.

The map with the February report is 1:2400 scale and shows all the Dawson lease and part of the Lindsey lease. Previous maps with the monthly report were 1:1200 scale.

Assays of samples containing abundant iron sulfide show that no zinc is masked by the iron sulfide.

Drilling continued on the Lindsey Lease, NW¼, SE¼, Sec. 20, T2N, R1E, 4th P.M. Lafayette County, Wis. Holes L-17, 18, 19, 20, 21 and 22 were completed. Holes L-17, 18 and 20 had fair zinc, heavy iron and fair lead mineralization. Hole L-21 had light zinc, medium iron mineralization. Holes L-19 and 22 had shines of zinc, medium iron mineralization. A north-south cross-section will be drilled at L-13 and L-20. All cuts were taken with at least one cut into the Trenton line.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(For Government use only)

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

GPO 872894

Box 165
Platteville, Wis.

MEMORANDUM February 21, 1956

To: Robert A. Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas E. Mullens, Geologist

Subject: January Monthly Report, DMEA Contract E-755, Docket 3510, Paul Gille, Operator

Enclosed are four copies of the subject report.

Note that the technical services charge exceeds the contract allowable charge of $130.00, but that the over all average of $129.93 is within the contract limit.

The map with the January report shows only the Lindsey lease. No holes were drilled on the Dawson lease during January.

The assay reports for L-4 and L-5 show zinc of ore grade and thickness in two adjacent holes. Also more assays of cuttings of L-6 are planned, and these assays may show that ore extends to L-6.

The property can be certified on holes L-4 and L-5. However, it is recommended that no certification be made until the contract is completed as the operator has no plans for mining at the present time.

Megascopic examination of samples from holes drilled during January did not reveal zinc of ore grade and thickness. Possibly, however, zinc assays of the high iron cuttings will reveal zinc of ore grade as in this district abundant iron sulfide commonly masks any contained zinc sulfide.

Thomas E. Mullens

PROGRESS REPORT
JAN. 1956
DMRA 3510

Drilling continued on the Lindsey Lease in the NE¼, SE¼, Sec. 20, T2N, R1E, 4th P.M. Lafayette County Wis. Holes L-12,13,14,15, and 16 were completed. All holes were drilled with at least one cut into the Trenton lime. All holes showed heavy iron mineralization and fair zinc mineralization. Light lead mineralization secured. It appears to be a very good zone for prospect drilling due to the high mineralization. The trend is basically east and west. Additional holes in the area is recommended.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

TEM:rbg

PROGRESS REPORT
DNRA 3818
Dec. 1955

Drilling continued of the Lindsey Lease in the NE¼, SE¼, Sec. 20 T2N, R1E, 4th P.M. Lafayette County, Wis. and on the Dessen Lease in the SE¼, SE¼, Sec. 20, T2N, R1E, 4th P.M. Holes L-8,9,10,and 11 were completed on the Lindsey Lease. Holes D-36,37,38 and 39 were completed on the Dessen Lease. L-8 and L-9 were drilled to extend the mineralization found in L-4 and L-5. L-10 and L-11 were drilled to extend cross-section 1 to the north. L-8 had light Zn mineralization. L-9 had fair Fe mineralization. L-10 showed the Galena formation elevation still going down. L-11 had very heavy Fe mineralization and fair Zn mineralization. D-36 and D-37 were drilled as a cross-section to see if the mineralization in L-4 and L-5 had turned southward. Light Zn mineralization occurred in both holes. D-38 and D-39 were check holes on previously drilled holes R4, R5, R12 and R13. A highly oxidized zone occurs as evidenced by the cuttings. Openings occurred which contained mud and clay. These holes were very difficult to get down. All holes were drilled with at least one cut into the Trenton Lime.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

December 16, 1955

MEMORANDUM

To: Robert A. Laurence, Executive Officer
DMEA Field Team, Region V

From: Thomas E. Mullens, Geologist

Subject: November 1955 Monthly Report, DMEA Contract Idm E-755, Docket 3510, Paul Gille, Operator

Enclosed are four copies of the subject monthly report.

Note that the technical services charge exceeds the contract allowable charge of $130.00, but that the overall average of $116.37 per month is within the contract limit.

During November the operator continued drilling on the Lindsey property. The six holes drilled during November penetrated well oxidized soft rock which is generally considered a guide to ore and five of the six holes cut zinc minerals. However, my preliminary study of these holes indicate none of the six can be considered as an "ore hole."

Thomas E. Mullens

PROGRESS REPORT
DMEA 3510
Nov. 1955

Drilling continued on the Lindsey Lease in the NE$\frac{1}{4}$, SE$\frac{1}{4}$, Sec. 20, T2N, R1E, 4th P.M. Lafayette, County, Wis. Holes L-2,3,4,5,6,7 were completed. L-2 and 3 were drilled 50 and 100 ft. north of L-1 respectively on cross-section 1. L-2 contained shines of Zn. L-3 was blank. The Oilrock elevations continue to lower in these two holes. Holes L-4,5 and 6 were drilled 50', 100' and 150' west of L-1 respectively. All three of these holes had fair Zn mineralization in the Oilrock and Glassrock. Assays results have not been received. L-7 was drilled 50' north of L-6. Only a shine of Pb and Zn appeared. All holes were drilled with at least one cut into the Trenton Lime.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Memorandum

To : Robert A. Laurence, Executive Officer
DMEA Field Team, Region V
From : Thomas E. Mullens, Geologist

Subject: DMEA Contract Idm E-755, Docket 3510, Paul Gille

Enclosed are four copies of the monthly report for the subject contract during October 1955.

Hole D-35 completed exploration around a New Jersey Zinc Company hole (E-13 on the map). About five of the eight holes drilled by Gille around E-13 cut lead and zinc minerals, but none of the holes could be considered "ore holes." No more exploration is warranted in this area.

Hole L-1, drilled during October, was the first hole on Lindsey property. This hole contained fair zinc sulphide, and my personal opinion is that drilling in the L-1 area will be more productive than any place Gille has drilled to date.

Thomas E. Mullens

Enclosures

PROGRESS REPORT
DIAM 3510

Drilling continued on the Pawnee Lease and the Lindsey Lease. Hole D-35 located in the SE¼, SW¼, Sec. 20, T27, R15 and E-1 located in the NW¼, SE¼, Sec. 20, T27, R15, 4th P.M. Montgomery County, Kan. were completed. Hole D-35 contained a little iron mineralization. This completes the drilling in the area of cross-section B. E-1 was drilled 25 ft. north of D-7 on cross-section 1. A 2½ ft. out showed fair also in the Cherokee. All holes were drilled with one bit into the Fronton lime.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF–104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF–104A has been designed to tie in with Form MF–104 for both monthly and cumulative costs. The "Total Costs" on Form MF–104A for each month should equal the monthly "Total Costs" as reported on Form MF–104. This is also true of the "Total Costs To Date".

In preparing Form MF–104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

PROGRESS REPORT
DMEA 3510
Sept. 1955

Drilling continued of the Dawson Lease located in the SE¼, SW¼, Sec. 20, T2N, R1E, 4th P.M. Lafayette, County, Wis. Holes 31,32,33 and 34 were completed. Holes 31, 32, and 33 were drilled south and north of E-13 a New Jersey Zinc Co. hole. Hole 34 was drilled west of E-13. Hole 31 contained light lead and zinc mineralization. Hole 32 had heavier zinc mineralization. Hole 33 had light mineralization and hole 34 had only top lead mineralization. One more hole will complete this area.

Signature ..... Title ..... Date .....

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Drilling continued on the Ranson Lease located in [illegible], [illegible] No. 10, [illegible] Oil Pool, Lafayette County, Mo. Holes 66 thru 67 were completed. Holes 32 and 33 were on cross-section [illegible]. These holes complete this cross-section. Holes 68 thru 77 were drilled East of D-10 which had shown some mineralization. Eight lost and also mineralization encountered. Several holes will be drilled around D-10 which is a new county line No. hole. Also the well on the Kinney property was reported to have shown some mineralization. This would warrant checking. 11 holes were drilled with one out into the Fronton line.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

PROJECT REPORT

DATA 2910

Drilling continued on the Dawson Lease located in the [illegible] of the [illegible], Sec. 20, T 2 N, R 1 E, 4th P.M. Lafayette County, Wis. Holes no. 16, 17, 18, 19, 20 and 21 were completed on cross-section C3 as shown on the accompanying map. Holes 17, 19 and 21 were blank holes. Holes 16, 18 and 20 had local mineralization. Hole 18 was the best hole showing 5 ft. of 4% and 3 ft. of 3.5% Zn by assay. The Galena elevations are increasing as the holes progress toward the south. The increase in elevation of the Galena is approximately 3 ft. per 100 ft. move. Two more holes will be drilled on this cross-section than completing cross-section C3. All holes were drilled with one cut into the Dresbach Limestone.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

GPO 83-38476

Drilling continued on the Benson house located in the SE¼ of the SE¼, Sec. 20, T2N, R1W, 4th P.M. Lafayette County, Wis. Holes D-11 and D-12 were completed on Cross-section C. Hole D-11 had some lead mineralization and heavy barite. Hole D-10 was spotted half way between D-8 and D-9 which showed some zinc mineralization. D-12 was a blank hole. The drill was then moved to Cross-section D which is located 990' west of Cross-section B in the E½ of the SW¼, Sec. 20, T2N, R1E. Holes D-13, D-14 and D-15 were completed. D-13 had some lead mineralization. D-14 and D-15 showed slight zinc, lead and iron mineralization. The block elevation raised 9' in 200. The structure now shows the block elevations decreasing in dip as drilling proceeded westward. All holes were drilled with one cut in the Trenton limestone.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

Progress Report
Section 5310

Drilling continued at the Dawson Lease located in the SW of the SW of the SW, Sec. 20, T 2 N, R 1 E, 4th P.M. Lafayette County, Wis. The drill was moved to cross-section #2 which is 950' West of cross-section #1. Holes D-8, D-9 and D-10 were completed. All holes were drilled with at least one cut into the Trenton limestone. Slight lead and zinc mineralization occurred in D-8. Hole D-9 had fair mineralization in the Glenwood. Hole D-10 was a blank hole. The Glenwood elevation of D-8 was 819.9' while in D-10 it was 843.0'. The structure raised 20' in a distance of 600'. The dip is dipping toward the west from cross-section #1 to cross-section #2.

WORK PROGRESS REPORT

Docket 3510

~~Mining Engineer or~~ Geologist

PROGRESS REPORT
DATA 3310

Drilling continued on cross-section C1 on the Dawson Lease located in the SE¼ of the SE¼, Sec. 20, T 2 N, R 1 E, 4th P.M. Lafayette County, Wisconsin. Hole number D-3, D-6 and D-7 were completed. These are located at 25' intervals north of D-1. All holes were drilled with at least one cut into the Trenton limestone. The diamond elevation dropped 10' in a distance of 75' from D-1 to D-7 which shows a definite structure. The diamondiferous zone ended with the Blue and continued through the Cincinnati with presence of a large amount of galena and barite. This cross-section warrants more drilling to the north into the Hindley Lease which will be conducted later.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(*a*) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(*b*) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(*c*) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

INSTRUCTIONS

Preparation of Form MF-104A—Operator's Unit Cost and Progress Report.—Applicable places on Form 104A should be filled in by the Operator. The purpose of this form is twofold as follows: (1) to furnish the supervising engineers and other administrators with statistical information necessary to better determine the progress of the project; and (2) to furnish more permanent information on mining costs for future use. The more important phases of operation on which permanent information is desired have been outlined in the form. There are blank lines, however, for those unusual phases which may need to be reported for a particular project. It will be necessary for the Operator to distribute his costs among the applicable phases reported with the exception of three items the costs of which are not to be distributed by the Operator. These three items are: "Operating Equipment Purchased", "Initial Rehabilitation and Repairs", and "New Buildings, Improvements, etc." The reason for not distributing these items on a monthly basis is doubtless clear to the Operator, since such distribution might well overstate the cost for any one month or period short of the entire contract period.

Form MF-104A has been designed to tie in with Form MF-104 for both monthly and cumulative costs. The "Total Costs" on Form MF-104A for each month should equal the monthly "Total Costs" as reported on Form MF-104. This is also true of the "Total Costs To Date".

In preparing Form MF-104A, it will be necessary frequently to distribute certain costs over a number of items. For instance, supervisory and engineering costs may have to be distributed over several phases, such as, drifting, crosscutting, raising, etc., provided that these items were reported active for the month. Such distributions should be made on the basis of time spent on the various phases, on man days of labor charged to such phases, or on some other equitable basis. "Operating Equipment", "Initial Rehabilitation and Repairs", and "New Buildings Improvements, etc.", will be distributed to the several phases of the project by the Washington Office of DMEA at the close of the project if determined necessary. The last two columns headed "Authorized by Contract" will be filled in by the Operator if such information is found in the contract. This information is usually a part of Exhibit "A" of the contract. A space for remarks has been provided for the use of the Operator to call attention to any unusual circumstances causing excessive or disproportionate unit costs.

Memorandum

To: Robert A. Laurence, Executive Officer, DMEA Field Team, Region V

From: Charles J. Stehlik, Mining Engineer

Subject: DMEA Contract Idm E-755, Docket 3510, (Lead-Zinc), Paul Gille, operator

Enclosed are 5 copies each of the Operator's Monthly Report and Voucher (Form MF-104), Operator's Unit Cost and Progress Report (Form MF-104A), Operator's Narrative, log of drill holes, map, and the Work Progress Report. It is requested that upon completion of the Forms MF-104 and -104A a copy of each be returned to this office for the files. A copy has been marked for that purpose. Please advise if it is necessary to forward the fifth copy each of the drill hole logs, narrative, and map.

All of the cuttings from these four holes have been examined by the U.S.G.S. and assays have been requested for the following holes:

Hole	D-1	132½' - 135'	Zn, Pb, Fe
"	D-2	130' - 132½'	Zn, Pb
"	D-3	107 - 110	Zn, Pb, Ba

Please forward 50 copies each of the Forms MF-104, MF-104A, and the Work Progress Report.

MONTHLY REPORT OF OPERATOR

The Operator (Contractor) of an exploration project is required to make a monthly report to the Government through the Regional Executive Officer. This report consists of three parts as follows:

(a) *Form MF-104—Operator's Monthly Report and Voucher.*—This form details expenditures and constitutes a voucher for reimbursing the Operator for the Government's share of costs;

(b) *Form MF-104A—Operator's Unit Cost and Progress Report.*—This is a statistical report of expenditures which shows costs for the various types of operation; and

(c) *Narrative.*—A concise narrative description of progress made, results accomplished, and any unusual difficulties encountered must be furnished as an attachment to this Report and Voucher. Wherever possible, the narrative is to be illustrated with maps or sketches showing formations penetrated and location and assays of samples taken as well as advances in workings. In the case of diamond drilling or churn drilling, the location and inclination of holes is to be shown on a map; logs and assays also are to be submitted.

The Monthly Report of Operator should be prepared in an original and four copies all of which must be sent to the Executive Officer of the Region not later than the 15th of the month following.

Preparation of Form MF-104—Operator's Monthly Report and Voucher.—All the applicable spaces in Form MF-104 should be filled in by the Operator, and the Operator or his agent should sign the certification in the lower left corner of the form.

The items of costs are arranged in the order they appear in Article 6 (a) of Form MF-200 (Revised February 1952), however, this form is readily adaptable for use in reporting activities under other contract forms.

Under Item (1) delete words "Short Form" if the contract is a sub-contract under Form MF-200; and delete word "Independent" if the contract reported is on Form MF-200 (A). Also, report work paid for on a unit basis under contract Form MF-200 as though it were performed under an independent contract.

Under Item (2) include labor, supervision and technical services incurred for the exploratory operations. Do not include labor, supervision and technical services used for work performed under items (5) and (6).

Under Item (3) include the costs of material and supplies used in the project other than that used under items (5) and (6).

Under Item (4) appear the three types of operating equipment expenditures, that is, rental, purchase and depreciation. The expenditures made for renting equipment belonging to a third party will be reported under "Rental". The amount paid or duly obligated for payment for the purchase of equipment will be reported under "Purchase". The amount of expenditures due the Operator to reimburse him for depreciation of equipment owned will be reported under "Depreciation".

Item (5) comprises costs of labor, supervision, technical services, materials, etc., which are used in the initial rehabilitation and repair of existing buildings, installations, fixtures, and equipment. These costs, therefore, should not be reported under items (2) and (3).

Item (6) includes the labor, supervision, technical services, materials, etc., used in the installation or construction of new buildings, fixed improvements, etc., necessary for the project. These costs, therefore, should not be reported under items (2) and (3).

Item (7) covers miscellaneous types of expenditure such as payroll taxes, liability insurance, workmen's compensation insurance, repairs to equipment and sampling and analysis. Only that part of payroll taxes, liability insurance and workmen's compensation which are paid by the operator should be reported under item (7). The share paid by the employee as a payroll deduction is to be included under item (2) as labor costs.

Item (8) includes any unforeseen costs not included in the other seven categories.

The original of Form MF-104 when submitted for reimbursable expenses incurred under contract Form MF-200 must be supported by original documentation or by certified copies of purchase orders, payrolls or transcripts of payrolls, unless such documentation has been waived by the Regional Executive Officer. This certification may be stated thus, "Certified True Copy (or Transcript)", followed by appropriate signature. If the Executive Officer of the Region determines that a contract under Form MF-200 should have an "on-site" audit, that is, a Government auditor should make an audit of the Operator's books and records of account, the Operator need not support his monthly voucher with original or certified documents except in cases of equipment purchases whose individual costs exceed $50.00. In these cases the original or a certified copy of the purchase order or invoice should be attached to the Monthly Voucher. N. B.—Only the *original* of Form MF-104 is required to be documented. The four copies of Form MF-104 are not to be thus supported.

Form MF-104 submitted for reimbursement under fixed price contracts on Form MF-200 (A), however, are not required to be supported by documentation of any kind. The Operator will submit his claim under item (1) of Form MF-104 by deleting as stated above the word "Independent" and by showing the number of feet or other units immediately after the appropriate descriptive word, such as, drilling, bulldozing, crosscutting, drifting, etc., and giving the "Monthly Total" amount due. "Totals Previously Reported", and "Totals to Date" columns should also be filled in.

DRILLING - The following holes were completed this period:

Lease	Hole	Date started	Date completed	Depth
Thomas B. Dawson	D-1	2/ 9/55	2/15/55	148
" " "	D-2	2/15/55	2/19/55	138
" " "	D-3	2/21/55	2/23/55	133
" " "	D-4	2/24/55	2/28/55	128

The following holes were in progress this period, but not completed:

Lease	Hole	Date started	Footage reported	Remarks
		None		

TOTAL (completed)(~~accrued~~) footage this period 547 To date 547
scratch one

DRIFTING AND CROSSCUTTING - Headings were advanced as follows:

Name and location	Average cross-section	Advance From-	Advance To-	Advance for period	Total advance to date	Remarks

TRENCHING AND TEST PITTING - The following excavations were in progress this period:

Name and location	Cubic yards this period	Cubic yards to date	Linear feet this period	Linear feet to date	Remarks

OTHER MAJOR WORK -

All work was performed in a satisfactory manner and the attached Form MF-104, Monthly Report, constituting certified invoice, rendered by the contractor under date of March 5, 19 55, totalling $ 1,001.01, has been carefully checked and approved by me.

Progress Report
Diamond Drill 3510

On Feb. 8, 1955 drilling started on the Duncan Lease located in the SE of the SE, Sec. 20, T2N, R1E, 4th P.M. Lafayette County, Wis. Holes number D-1, D-2, D-3, D-4 of cross-section #1 were completed. All holes were drilled with at least one cut into the Trenton Limestone.

Hole D-1 showed a trace of sphalerite in the Blue line and a shine of galena in the Glassrock. The Trenton line contained an abundance of calcite. Hole D-2 contained lead and also mineralization in the Glassrock and heavy calcite in the Trenton. Holes D-3 and D-4 also contained lead and zinc mineralization. Not any of the holes could be classified as ore holes. The elevation of the top of the Galena raised 11 feet from Hole D-1 to D-4. All holes were spaced at 50 ft. intervals.

Hole No: Sunoco #1 (D-1)
Location: 30' N and 100' E of the SE corner of the NE quarter of Sec. 20 T2N, R1W, [illegible]
Started: 2/9/55
Finished: 2/13/55
Water: 40' (dropped to 30' @ 136)
Depth: 149'
Collar Elev: 930.4

	Sample			Assay		
	Zn	Pb	Fe	Zn	Pb	Fe
0-17 Soil, clay, chert						
17-90 Yellow sand and sandy lime						
90-100 Gray lm.

Looks like 150-155 spls, except for 10% of or med gran dol.]

TD

Poss 151-158 and 152½-155 were switched. At any rate, the Trenton was not drilled - perhaps touched, tho.

Examination of #18 shows same stuff below base of GR; tho it looks like GR, it isn't. Thus these spls are appar OK.

Figure 1. Map showing holes drilled and proposed holes on the Dawson and Lindsay leases, sec. 20, T. 2 N., R. 1 E., Lafayette County, Wisconsin.

o Hole drilled under Contract Idm-E755, DMEA 3510.

◎ Hole proposed by requested amendment to Contract Idm-E755

● Ore hole, zinc minerals (assay values)

● Ore hole, lead minerals (assay values)

σ Mineralized hole, lead or zinc minerals (estimated 0.5 percent or more of lead or zinc minerals)

X Hole drilled by Vinegar Hill or New Jersy Zinc Companies.

✓ Hole, no information

✓ Drill hole, Basque Mining Company, scanty information
