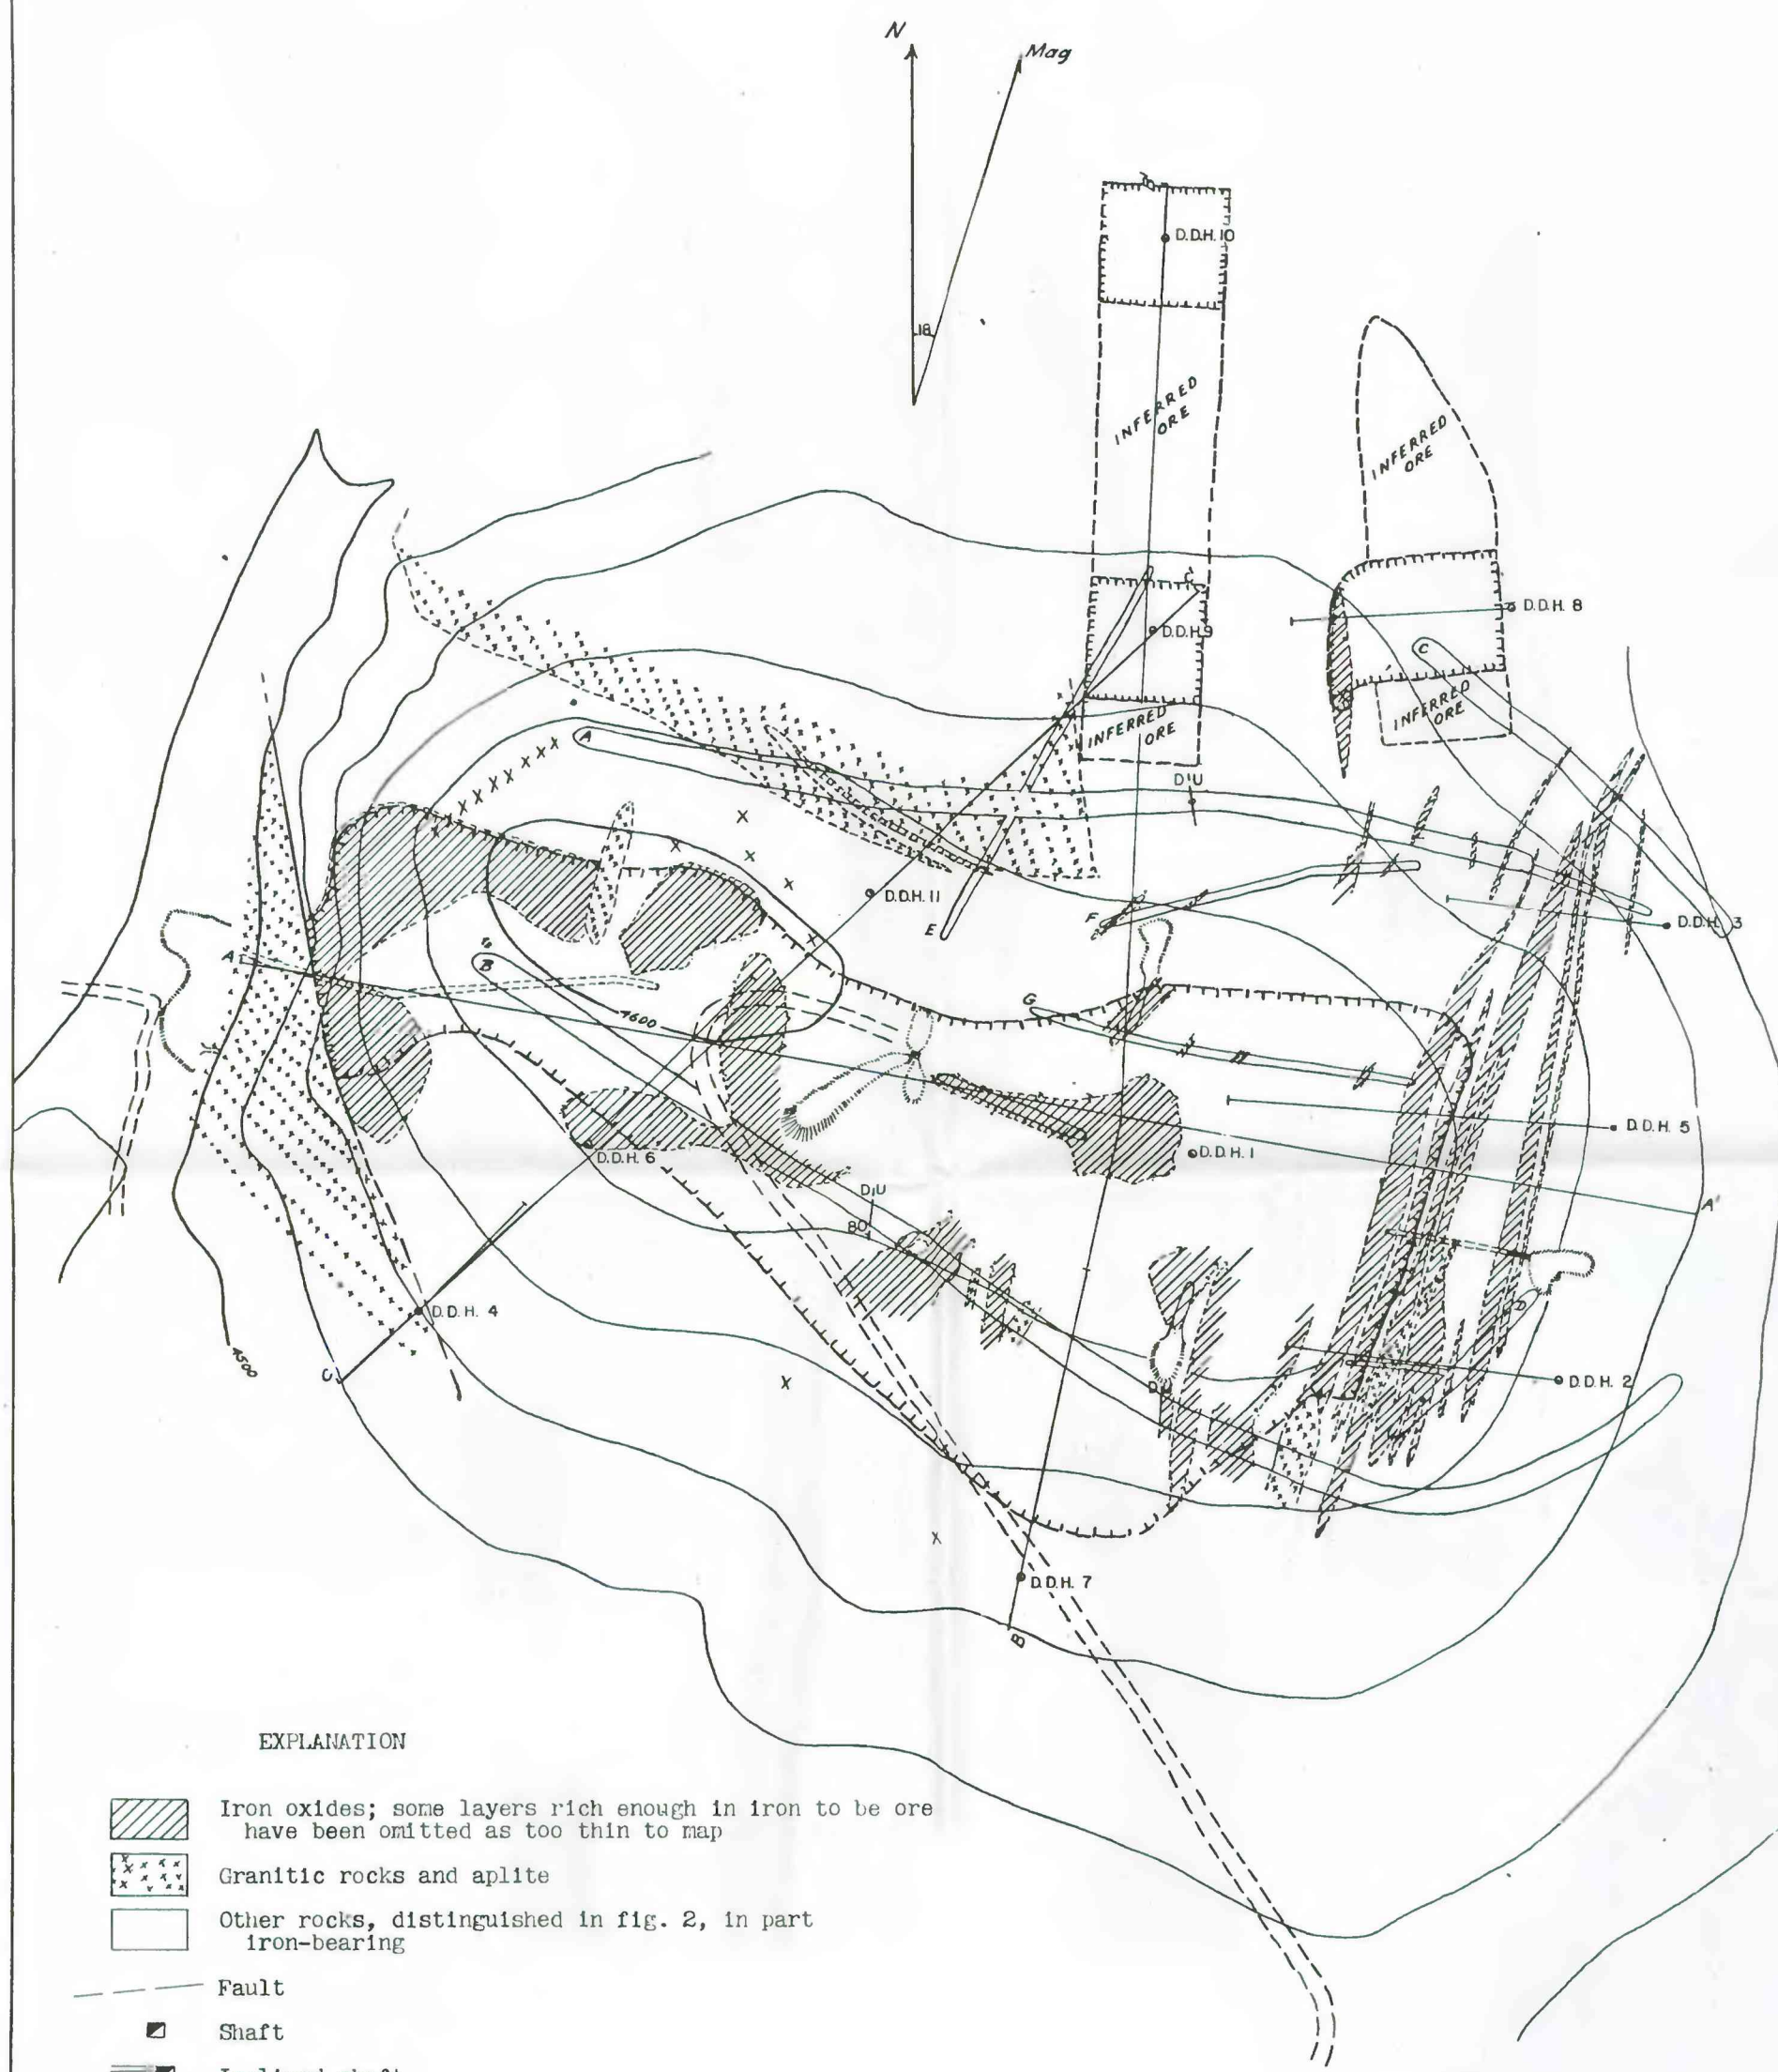
45-67

UNITED STATES DEPARTMENT OF THE INTERIOR
GEOLOGICAL SURVEY

STRATEGIC MINERALS INVESTIGATIONS
PRELIMINARY MAP



EXPLANATION

- Iron oxides; some layers rich enough in iron to be ore have been omitted as too thin to map
- Granitic rocks and aplite
- Other rocks, distinguished in fig. 2, in part iron-bearing
- Fault
- Shaft
- Inclined shaft
- Adit
- Pit
- Vertical drill hole
- Inclined drill hole; all holes inclined at 45°
- Estimated limit of indicated ore containing more than 40 percent of iron
- Road
- Trench
- Bulldozer cut
