Table 1.--Length of growing season (frost to frost) for 1963-77 from stations in the Green, Yampa, and White River Drainage Basins

[The mean growing-season length is the interval between the mean date of last spring frost and the mean date of first autumn frost computed from the entire 15-year period; the maximum is the longest frost-free interval recorded during the 15-year period and the minimum is the shortest frost-free interval. *, synthesized record.]

Station (Station Index No.)	Mean: Last spring	Mean: First fall	Mean: Interval (days)	Maximum: Year	Maximum: Last spring	Maximum: First fall	Maximum: Interval (days)	Minimum: Year	Minimum: Last spring	Minimum: First fall	Minimum: Interval (days)
