

RELATIONSHIP OF WISCONSIN SUBLOBES OF THE DES MOINES AND JAMES GLACIAL LOBES TO SUBLOBES OF THE ILLINOIAN AND PRE-ILLINOIAN GLACIAL LOBES OF LAKE SUPERIOR PROVENANCE

Colors refer to lobes; numbers refer to sublobes; arrows indicate generalized direction of ice flow within lobes and sublobes; hachured lines indicate limits of glacial advances and stillstands, dashed where approximately located. Wisconsin: sublobes 6–10 of this quadrangle relate to James lobe, except sublobe 6 in northeast corner which relates to Des Moines lobe. Illinoian: sublobe 5 relates to source in Lake Superior region. Pre Illinoian: sublobes 1–4, undifferentiated, relate to source in Lake Superior region.
