

Table 2.-Summary of inferred depositional environments, lithofacies, and their diagnostic characteristics, upper part of the Minturn Formation, Sangre de Cristo Range, Colorado

Table 3.--Metal concentrations in 83 samples of mineralized sandstone, siltstone, and silty limestone from the upper part of the Minturn Formation, northern Sangre de Cristo Range

Metal	Geometric mean (ppm)	Geometric deviation (X/mean)	Range (ppm)	Range of concentrations, average shale ¹ (ppm)	Median concentrations, average shale (ppm)
U	22.9	4.4	3-1,230	3-1,250	4
Co	104.7	5.0	5-4,130	70-150	50
Pb	39.1	3.5	5-7,480	20-70	20
Zn	94.8	1.6	44-439	<300-1,000	100
