
The sections were measured by the author, except as indicated in the captions. The names at the left of the columns are those in common use in the places where the sections were measured. The statements shown in brackets and also the correlation lines indicate the author's conception of the stratigraphic and age relations. The U. S. Geological Survey accepts Dakota group for the section at Bellvue, Colo., only, with the understanding that if rocks of Comanche age should be found to be present there, they are to be excluded from the Dakota group. The Lyons sandstone of Fenneman at Lyons includes the Lyons sandstone and Ingleside formation of this report.

GEOLOGIC SECTIONS BETWEEN COLORADO SPRINGS, COLO., AND THERMOPOLIS, WYO.

ENGRAVED AND PRINTED BY THE U. S. GEOLOGICAL SURVEY
