EXPLANATION
Depths to Carrizo sand in feet
0-300
300-600
600-900
900-1200
1200-1500
1500+
The depths shown are only approximate, because of irregularities in the land surface
Lines showing height above sea level to which water from the Carrizo sand would rise in 1930
Wells in which depth to water level or artesian heads were measured and the altitude of which was determined by instrumental leveling. For explanation of well symbols see plate 1
