

CONTENTS

Abstract	1
Introduction	1
Changes in herbicide use	2
Nitrate in area affected by 1993 flood.	5
Plan of study.	6
Objectives and hypotheses.	6
Sampling sites	6
Sampling schedule	10
Sampling procedures	10
Analytical procedures.	10
Quality assurance	12
Data analysis methods and reports.	12
References	12

FIGURES

1. Boxplots showing the seasonal distribution in concentrations of selected herbicides detected during three sampling periods in 1991	3
2. Boxplots showing the distribution in concentrations of selected herbicides at approximately 50 sites sampled in both 1989 and 1990 during pre- and post-application sampling periods.	4
3. Map showing the location of drainage basins and sites to be sampled for herbicides and nitrate during March-June 1994	9

TABLES

1. Sites to be sampled during March-June 1994 to investigate the effects of changes in herbicide use on herbicide concentrations in streams	8
2. Physical properties and chemical compounds to be determined for samples collected during March-June 1994	11
