

Figure 2.4a. Photograph of the sea floor on the crest of Stellwagen Bank at a water depth of about 27 m (see Figure 2.2b for location). At this location, the sandy sediments are shaped into ripples.

Figure 2.4b. Photograph of the sea floor on the crest of Stellwagen Bank at a water depth of about 33 m (see Figure 2.2b for location). At this location, the sea floor is covered with clam shells.

Figure 2.4c. Photograph of the sea floor on the northern end of Stellwagen Bank at a water depth of about 31 m (see Figure 2.2b for location). At this location, the sea floor is covered with pebbles, coarse sand and shell hash.
