

OUTLINE MAP
OF
ALASKA
SHOWING KNOWN LOCALITIES OF
LATE TERTIARY-QUATERNARY
VOLCANIC ACTIVITY

Most of the localities noted are of volcanoes recently active. The alignment of volcanoes along a N E. and S W. axis, and along a N W. and S E. axis—the two meeting in the neighborhood of the Sushitna Basin—is shown. The volcanoes on most of the Aleutian Islands are outside the limits of the map.
