LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR,

UNITED STATES GEOLOGICAL SURVEY,

Washington, D. C., June 18, 1901.

Sir: We have the honor to transmit herewith, in form for publication, the results of the spirit leveling executed by the United States Geological Survey during the fiscal year 1900–1901.

These results were arranged for publication by Mr. D. H. Baldwin, assistant topographer.

Very respectfully,

H. M. Wilson,
Geographer in charge of Atlantic Section.

J. H. Renshawe,
Geographer in charge of Central Section.

E. M. Douglas,
Geographer in charge of Rocky Mountain Section.

R. U. Goode,
Geographer in charge of Pacific Section.

Hon. Charles D. Walcott,
Director of United States Geological Survey.
RESULTS OF SPIRIT LEVELING, FISCAL YEAR 1900-01.

INTRODUCTION.

During the field season careful spirit leveling was continued in connection with the regular topographic work on the same general plan followed in the four preceding seasons, as described in the appendix to the Eighteenth Annual Report of the Director, Pt. I, 1896-97, pages 225-235.

The practice of stamping an initial datum letter or name on the bench marks has been continued, and in cases where the datum has been changed on account of better determination of the reference to sea level, such changes are noted in the list of elevations which follows.

In the following list only those elevations are published which have been adjusted and checked in closed circuits. Much work has been done in addition to the list here published, especially in mountainous regions, which it is thought inadvisable to publish at this time on account of the many lines which are left unchecked at the end of the field season, and also on account of errors of closure in a few circuits in excess of the limiting error "E," allowed by the formula

\[ E = 0.05 \sqrt{\text{distance in miles}}. \]

These lines in most cases will be rerun to bring them within the required limits.

The United States Coast and Geodetic Survey has made an elaborate general adjustment of a great net of precise leveling in the United States, by the method of "least squares," and the result and full description of this will be found in their Report for 1898-99, Appendix No. 8. This level net involves the results of leveling executed by the following organization, weighted as shown in the following extract from that appendix, and extends over the Atlantic and Central sections of topography in a belt of closed circuits from mean sea level in the Gulf of Mexico, near New Orleans, northward to the Great Lakes, and eastward to mean sea level in the Atlantic Ocean at Boston, Sandy Bull. 185-01—2
Hook, and Old Point Comfort. Mean Gulf level is considered to be the same elevation as mean sea level.

This adjusted precise-level net is considered to be the most reliable source of reference to mean sea level for the various local level lines which may touch upon it, until a sufficient number of additional precise level circuits are formed by future work to make necessary another general adjustment and a closer approximation to mean sea level.'

ATLANTIC SECTION OF TOPOGRAPHY.

In this section, under the direction of Mr. H. M. Wilson, geographer in charge, spirit leveling was continued for the control of the regular topographic work executed during the year in various localities as listed below. In addition, leveling was carried on in the following localities during the year 1900; but as the field work in these localities is not yet completed, or corrections are pending, the results will not be published until later:

Pennsylvania—Chester County.
West Virginia—Wayne County.
Ohio—Lawrence County.
Kentucky—Greenup, Boyd, Carter, Lawrence, and Elliott counties.
South Carolina—York, Chester, Fairfield, and Richmond counties.
Tennessee—Davidson and Franklin counties.
Georgia—Whitfield, Murray, Gilmer, Fannin, Union, Towns, Habersham, White, and Lumpkin counties.
The elevations published in the following list are based on an aluminum tablet placed in the post-office and custom-house building at Bangor, Me., the elevation of which is accepted as 23.725 feet above mean sea level. This elevation is derived from tidal observations on the Penobscot River at Bucksport, Me., during two lunar months, August and September, 1899, and one adjusted level circuit between Bucksport and Bangor, over which a closure error of 0.255 feet was distributed.

The leveling in the Bucksport quadrangle was executed in 1899 under the direction of Mr. E. B. Clark, topographer, by Messrs. Robert Coe and J. W. Edgerly, levelmen; in the Bangor quadrangle in 1900 under the direction of Mr. E. B. Clark, topographer, by J. W. Edgerly, levelman; and in the Orono quadrangle in 1900 under the direction of Mr. W. H. Lovell, topographer, by J. W. Edgerly, levelman.

All bench marks dependent on this datum are stamped with the letters "BANGOR" in addition to their figures of elevation.

ERRATA IN PREVIOUS REPORTS.

The following field and clerical errors occur in previous reports to this Bureau:

In the Appendix to the Twentieth Annual Report, page 354: Remsen, north end of retaining wall between lower milldam and Rome, Watertown and Ogdensburg Railroad; cross mark on bronze tablet set in end of coping near face corner, marked "1172." Published elevation to harmonize with adjacent elevations in the same list should read 1,171.045 feet.

In the Appendix to the Twenty-first Annual Report, page 392: Nehasane Lake, surface of water 1,714 feet, should read Lila Lake, surface of water 1,714 feet.

Appendix to same report, pages 404-405, line from Poughkeepsie to Newburg is in error 1 foot, and the elevations of these terminal points are corrected in this report. (See p. 40.) Also on pages 405-407, list of elevations Newburgh to Cornwall is found corrected in this report. (See p. 41.)

Page 401: Poughkeepsie; point in corner third step from top, south end, west abutment, cattle pass and bridge at Landis place, 1 mile west of Pleasant Valley. Published elevation to harmonize with adjacent elevations in the same list should read 232.18 feet.

Page 402: Hibernia; point on east side, south abutment, near end of truss bridge over creek. Published elevation to harmonize with adjacent elevations in same list should read 251.06 feet.

Page 402: South Millbrook, ¾ mile west of; point on rock north side of road, chisel mark "U. S." Published elevation to harmonize with adjacent elevations in same list should read 253.61 feet.

In addition to the above the following corrections, which are made necessary by the latest adjustment of the United States Coast and Geodetic Survey, are to be applied to figures given in the Appendix to the Twenty-first Annual Report:

FRANKLIN COUNTY.

PRECISE LEVELING.

The elevations published in the following list are based on a pri­
mary bench mark of the Deep Waterways Commission at Fort Cov­
ington, Franklin County, a 2-inch square cut on east abutment of the
Grand Trunk Railroad bridge over Salmon River, 1 foot from the
south edge and 1 foot from the east edge. The elevation of this is
accepted as 166.355 feet above mean sea level. This elevation
is derived by lowering that given by the Deep Waterways Commission
for this bench mark 1.115 feet, this being the amount by which the
elevation of a precise bench mark of that commission at Hogansburg,
Franklin County, has been lowered, as published by the United States
Coast and Geodetic Survey in its report for 1898–99, Appendix No. 8,
page 543. This bench mark at Hogansburg is the center of a punch
mark in a one-fourth-inch brass bolt cemented into the northeast face
of the east buttress of the main tower of St. Patrick’s Catholic Church,
near mark U.S.P., and its elevation is accepted at 178.198 feet above
mean sea level.

This precise line being based on Fort Covington and not adjusted
for closure error at Tupper Lake Junction gives a new value for the
bench mark at the latter place as here published 0.076 greater than
the published elevation of same in the Twenty-first Annual Report of
the Director of this Survey, page 393. This bench mark is an alumi­
num tablet set in foundation of water tank of the New York Central
Railroad, Adirondack Division, stamped “1555 ALBANY.”

The leveling was executed by Mr. C. H. Semper, levelman in charge,
under the immediate supervision of Mr. H. M. Wilson, geographer.

All bench marks are referred to the gristmill bench mark at Albany,
the elevation of which is accepted as 13.577 feet above mean sea level,
and are stamped with the letters “ALBANY” in addition to their
figures of elevation and year.

SPIRIT LEVELING.

WASHINGTON AND SARATOGA COUNTIES.

SCHUYLERVILLE QUADRANGLE.

The elevations published in the following list are based on an aluminum tablet, set in stone of pilaster at left side of the front entrance of the high school building at Fort Edward, N. Y., and marked "145 A." This bench mark was touched upon by the Deep Waterways Commission—wye and water leveling between the grist-mill bench mark near Albany and permanent bench mark; "P" of their precise line at St. Patrick's Catholic Church, Hogansburg, via Lake Champlain; and the elevation is derived by the adjustment of this line to the corrected elevations of these bench marks as determined by the latest adjustment of the United States Coast and Geodetic Survey, in 1900, and published in report of that bureau for 1898–99, Appendix No. 8, and is accepted as 144.386 feet above mean sea level. The leveling was originally based upon bench marks established by the Hudson River and Lake Champlain Canal, and as a result the markings are generally 1 foot too high.

The leveling was executed under the general direction of Mr. W. H. Lovell, topographer, by Mr. Clark Brown, levelman, in 1898.

All bench marks are referred to the Gristmill bench mark near Albany and are stamped by the letter "A" in addition to their figures of elevation.

SCHOHARIE, ALBANY, AND SCHENECTADY COUNTIES.

Berne Quadrangle.

The elevations published in the following list are based on a bronze tablet set on the north end of east abutment of bridge at Duanesburg, marked "681 ALBANY 1898." The elevation of this bench mark is derived by precise leveling of the United States Geological Survey and, as corrected by the latest adjustment of the United States Coast and Geodetic Survey, is accepted as 680.246 feet above mean sea level. (See United States Coast Survey Report for 1898-99, Appendix 8, p. 543.)
The leveling was executed in the field season of 1899 under the direction of Mr. A. W. Walker, topographer, by Mr. Seth Van Loan, levelman, and in 1900 under the direction of Mr. Glenn S. Smith, topographer, by Mr. J. W. Hodges, levelman.

All bench marks are referred to the Gristmill bench mark at Albany, N. Y., the elevation of which is accepted as 13.577 feet above mean sea level, and are marked with the letters "ALBANY" in addition to their figures of elevation.

SCHOHARIE, DELAWARE, GREENE, AND ULSTER COUNTIES.

The elevations published in the following lists are based on and adjusted between two bench marks. One is an aluminum tablet set in the front face of the city hall in Poughkeepsie, N. Y., stamped "173 ALBANY 1899," the elevation of which is accepted as 172.613 feet above mean sea level, and the other a bronze tablet at the northwest corner of the stone foundation of Union schoolhouse at Cobleskill, N. Y., stamped "930 A," the elevation of which is accepted as 926.865 feet above mean sea level. The elevation of the Poughkeepsie bench mark depends directly upon that of a precise bench mark of the United States Coast and Geodetic Survey at the west abutment of the Poughkeepsie bridge, and the elevation of the Cobleskill bench mark, a precise bench mark of this survey, is taken as corrected by the United States Coast and Geodetic Survey. (See Report for 1898–99, Appendix No. 8, p. 543).

ULSTER AND ORANGE COUNTIES.

Newburg Quadrangle.

The elevations published in the following list are based on an aluminum tablet set in the front face of the city hall, in Poughkeepsie, and marked "173 ALBANY 1899." The height of this is derived from a bench mark established in Poughkeepsie by the United States Coast and Geodetic Survey, the elevation of which, as corrected in accordance with their adjustment of 1900, is accepted as 42.956 feet above mean sea level. Dependent on this, the datum tablet of this survey in Poughkeepsie is accepted as being 172.613 feet above mean sea level.

The leveling was executed under the direction of Mr. C. C. Bassett, topographer. A portion is republished of levels of Mr. Seth Van Loan, levelman, run in 1899, and published in the Appendix to the Twenty-first Annual Report of the Director of this Bureau, on pages 405, 406, and 407. They are republished here because of an error of 0.97 foot, by which the figures previously published exceed the corrected elevations given herewith. These figures include a gross error of 1 foot in leveling from Poughkeepsie, via Highlands, along West Shore Railroad to Newburg (pages 404 to 405 of that report), less a correction
of 0.030 foot, by which the present accepted elevations of the Poughkeepsie bench marks exceed their previously accepted values. The bench marks are therefore marked about 1 foot higher than their present accepted elevations. The remainder of the elevations listed below are the result of leveling of Mr. George Baily, levelman, during the season of 1900.

All bench marks dependent on this datum are referred to the Gristmill bench mark at Albany, the elevation of which is accepted as 13.577 feet above mean sea level, and are marked with the letters “ALBANY” in addition to the figures of elevation.

DUTCHESS AND COLUMBIA COUNTIES.

POUGHKEEPSIE, RHINEBECK, MILLBROOK, DOVER, COPAKE, AND KINDERHOOK QUADRANGLES.

The elevations published in the following list are derived by connection with two lines of precise leveling carried to Greenbush, N.Y., near Albany, from mean sea level at New York and Boston and adjusted to the corrected mean elevation of the Greenbush "Gristmill" bench mark as determined by the latest adjustment of the United States Coast and Geodetic Survey. Part of this list consists of levels adjusted between Poughkeepsie and Chatham, and the bench marks listed between Poughkeepsie and Millerton, via Clinton Corners and Dover Plains, are republished, from the Appendix to the Twenty-first Annual Report of the Director of this Bureau, following the title on page 401, with corrected elevations resulting from this adjustment. The remainder of the list consists of levels adjusted between Niverville and Hudson. The descriptions and elevations of the connecting points are given in the body of the list.

The leveling was executed under the general direction of Mr. C. C. Bassett, topographer, in 1899 and 1900, the portion which is here republished from the last report being the result of leveling by Mr. Seth Van Loan, levelman, in 1899, the remainder being the work of Mr. George Baily, levelman, in 1900.

All bench marks are referred to the Gristmill bench mark near Albany, the elevation of which is accepted as 13.577 feet above mean sea level, and are marked by the letters "ALBANY" in addition to their figures of elevation.

The elevations published in the following list are based upon permanent bench marks established in the course of precise leveling by the Deep Waterways Commission at Clayton, Fishers Landing, Alexandria Bay, and Chippewey village, in the vicinity of Cape Vincent, N. Y. The accepted elevations of these are derived by the latest adjustment of the United States Coast and Geodetic Survey, made in 1900 (see Appendix No. 8, report for 1898-99 of that Bureau). The leveling was executed under the general direction of Mr. W. H. Lovell, topographer, by Mr. William Kelley, levelman, in 1900.

All bench marks are referred to the Deep Waterways Commission's bench marks at Cape Vincent, which are published in the Coast Survey report, the elevations there given being accepted, and they are stamped with the letters "CAPE VINCENT" in addition to their figures of elevation. The latter are generally 1 foot lower than the values stamped upon the bench marks, because of a subsequent adjustment, as explained under precise leveling (p. 27).

ERRATA IN PREVIOUS REPORTS.

A field error occurred in the levels published in the Appendix to the Twenty-first Annual Report, page 442, between West Brownsville Junction and Jacob Ferry. The elevations of these terminal points are corrected in this report.

In addition to above the following corrections are to be applied, which are derived from the latest adjustment of the United States Coast and Geodetic Survey:

ARMSTRONG AND INDIANA COUNTIES.

RURAL VALLEY QUADRANGLE.

The elevations published in the following list are based on and adjusted, between two bench marks established in the course of precise leveling by the United States Geological Survey. One is a bronze tablet set in front face of northwest corner of public school, corner of McKain and Vine streets, Kittanning, marked "803 PITTSBURG 1899," and the other is a bronze tablet set in the north abutment, west side of iron bridge, 2 miles south of Rimerton, marked "820 PITTSBURG 1899." The elevations of these, as derived by the latest adjustment of the United States Coast and Geodetic Survey, in 1900, are accepted as 803.870 feet above mean sea level for Kittanning and 821.148 feet for Rimerton.

The leveling was executed under the direction of Mr. Frank Sutton, topographer, and by Mr. J. H. Wetzel, levelman, in 1900.

All bench marks are referred to an aluminum tablet set in foundation of Seventh Avenue Hotel at Pittsburg, marked "738 PITTSBURG 1899," the elevation of which is accepted as 738.718 feet above

INDIANA AND WESTMORELAND COUNTIES.

INDIANA, ELDERS RIDGE, AND LATROBE QUADRANGLES.

The elevations published in the following list are based upon vari­
ous bench marks of the Pennsylvania Railroad on lines from West
Penn Junction, via Blairsville intersection, to Braddock, the eleva­
tions of which are derived by applying various corrections to those
listed in their publication of May 1, 1899, in conformity with the
latest adjustment of the United States Coast and Geodetic Survey,
in 1900, which makes the elevation as accepted for Blairsville inter­
section, bench mark Pennsylvania Railroad No. 47, a square cut on
stone monument, 25 feet south of tool house, 1,120.113 feet above mean
sea level.

The leveling was executed under the direction of Mr. Frank Sutton,
topographer, by Mr. J. H. Wetzel, levelman, in 1900.

All bench marks are referred to an aluminum tablet set in founda­
tion of Seventh Avenue Hotel at Pittsburg, marked "738 PITTS­
BURG 1899," the elevation of which is accepted as 738.718 feet above
mean sea level, and are stamped with the letters "PITTSBURG" in
addition to the figures of elevation.

WASHINGTON, WESTMORELAND, GREENE, AND FAYETTE COUNTIES.

BROWNSVILLE, CONNELLSVILLE, WAYNESBURG, MASONTOWN, UNIONTOWN, AND MORGANTOWN QUADRANGLES.

The elevations published in the following list are based on and adjusted between bench marks established in the course of precise leveling by this Bureau at Point Marion, Uniontown, West Browns­ville Junction, and Baird flag station, Pennsylvania. The elevations of these are accepted as corrected by the latest adjustment of the United States Coast and Geodetic Survey. (See Report for 1898–99 of that Bureau, Appendix No. 8.)

Elevations published in the Twenty-first Annual Report of this Bureau, on pages 440–443, are corrected as follows: To those listed in circuit from Uniontown via Farmington and Lamont to Uniontown, add 0.181 foot; to those between Point Marion and Greensboro, add 0.166 foot; in list Brownsville to Jacobs Ferry, add 0.192 foot to the elevation there given for the tablet at West Brownsville Junction, but the elevation at Jacobs Ferry is corrected by leveling of the United States Engineer Corps from West Brownsville Junction, raising it 0.445 foot, and intermediate elevations are discarded.

The leveling was executed under the direction of Mr. Frank Sutton, topographer, and by Messrs. William Crennell and J. H. Wetzel, levelmen, in 1899, and by the latter alone in 1900.

All bench marks are referred to an aluminum tablet in the foundation of the Seventh Avenue Hotel at Pittsburg, marked "738 PITTSBURG 1899," the elevation of which is accepted as 738.718 feet above mean sea level, and are stamped with the letters "PITTSBURG" in addition to their figures of elevation.

FRANKLIN COUNTY.
CARLISLE QUADRANGLE.

The elevations published in the following list are based directly upon a bench mark of the United States Coast and Geodetic Survey at Carlisle, Pa. This is marked by the letter "M" cut on the base of the column at the west side of the jail entrance. (See p. 560, Appendix No. 8, on hypsometry, of their report for 1898–99, published in 1900.) The elevation of this bench mark is accepted as 473.234 feet above mean sea level.

The datum to which this leveling is referred is an aluminum tablet of the United States Geological Survey placed in the State library at Harrisburg, marked "364 HARRISBURG, 1899," the elevation of which is accepted as 363.961 feet above mean sea level, as corrected by the United States Coast and Geodetic Survey in 1900. This elevation is 0.148 feet higher than the elevation accepted for this bench mark in the Appendix to the Twenty-first Annual Report of the Director of this Survey, page 431.

The leveling was executed under the general direction of Mr. Robert D. Cummin, topographer, by Mr. F. M. Taylor, levelman:

The bench marks being referred to Harrisburg as datum are stamped with the letters "HARRISBURG" in addition to their figures of elevation.

WILSON ET AL. | PENNSYLVANIA.

LEHIGH, LEBANON, BERKS, AND LANCASTER COUNTIES.

WERNERSVILLE AND SLATINGTON QUADRANGLES.

The following elevations are based on an aluminum tablet placed in front face of State library at Harrisburg, Pa. The height of this is determined from mean sea level by precise levels of the United States Coast and Geodetic Survey, the Pennsylvania Railroad, and the United States Geological Survey, the connection having been made by the latter organization. The elevation of this datum is accepted as 363.961 feet above mean sea level. The immediate elevations on which the leveling reported upon herewith is based are bench marks of the United States Coast and Geodetic Survey transcontinental line as published in their latest adjustment, Report of 1898–99, Appendix 8.

The leveling was done under the direction of Mr. Hersey Munroe, topographer, by Messrs. B. E. White and Hargraves Wood, levelmen.

All bench marks dependent upon this datum are marked with the letters “HARRISBURG” in addition to the figures of elevation.

MACUNGIE, VIA FOGELSVILLE, CLAUSSVILLE, AND NEW TRIPOLI, TO SLATINGTON.

The elevations published in the following list are based on a copper bolt in the doorsill of the Pennsylvania Railroad passenger station at Altoona, Pa. The elevation of this, as corrected by the United States Coast and Geodetic Survey in their latest adjustment, is accepted as 1,181.373 feet above mean sea level. This is 0.173 foot greater than the elevation of this bench mark as given in the Pennsylvania Railroad list of elevations, published May 1, 1900. The immediate elevations on which the leveling reported upon herewith is based are of various bench marks of the latter publication between Altoona and State line, which are given the same correction.

A connection is made between Stateline and a precise bench mark of the United States Coast and Geodetic Survey at Cumberland, Md., by primary levels of this list between Mount Savage, Md., and Stateline, and elevations listed in the Nineteenth Annual Report of the Director of this Survey, page 363, between Mount Savage and Cumberland. The circuits therein listed and based on the Cumberland bench mark are to be lowered 0.006 foot. This includes the correction made by the United States Coast and Geodetic Survey to the elevation of that bench mark of 0.005 and a correction of 0.001 made in the Twentieth Annual Report to the elevation of a bronze tablet at that place.

The leveling was executed in 1900 under the direction of Mr. A. M. Walker, topographer, by Mr. B. C. Shepherd, levelman.

All bench marks set in the course of this work are referred to the tablet set by this Bureau at Harrisburg, Pa., and are stamped with the letters "HARRISBURG" in addition to their figures of elevation.

ERRATA IN PREVIOUS REPORTS.

Elevations in the vicinity of Baltimore published in preceding reports are corrected by various amounts by a readjustment with work of the past two seasons. (Full description, with corrected list of elevations, will be found in this report.)

The following corrections to the Twenty-first Annual Report are made necessary by the latest adjustment of the United States Coast and Geodetic Survey:

HARFORD AND BALTIMORE COUNTIES.

BELAIR, HAVRE DE GRACE, AND PARKTON QUADRANGLES.

The elevations published in the following list are the result of the field work of the seasons of 1899-1900, and are based on an aluminum tablet in the city hall, Baltimore, Md., the height of which is accepted as 20.630 feet above mean sea level, as derived from the United States Coast and Geodetic Survey tide gauge in the city of Baltimore.

The leveling was done under the direction of Mr. W. Carvel Hall, topographer, by Messrs. C. H. Smith, John W. Hodges, and Hargraves Wood, levelmen.

All bench marks dependent on this datum are marked with the letters "BALTO.,” referring them to the Baltimore bench mark.

MARYLAND-DELAWARE-VIRGINIA.

As result of the field work of the season of 1900, connections have been made between the entire group of levels from Baltimore south-eastward to the lower end of the Eastern Shore with six widely distributed tide gauges of the Coast Survey. The result is a mass of data which has permitted the making of final adjustments of the leveling of past and preceding years throughout this area.

Corrections to all bench marks published in previous annuals for leveling in this region should be made as follows:

To bench marks depending on datum tablet at Middletown, Del., published in the Appendix to Eighteenth Annual (p. 279), and which lie to the north and west of the Philadelphia, Wilmington and Baltimore Railroad, a constant correction of +0.640 feet must be made. To all of the above-named bench marks lying to the south and east of
the same railroad new values are to be given in accordance with the result tabulated below:

Corrections for intermediate elevations between points above tabulated should be made by interpolation. Similar corrections to the above are to be made to all elevations published in the Appendix to the Twenty-first Annual (p. 443), and depending on central datum tablet at Baltimore.

KENT, QUEEN ANNE, TALBOT, CAROLINE, DORCHESTER, WICOMICO, WORCESTER, AND SOMERSET COUNTIES, MD.; KENT AND SUSSEX COUNTIES, DEL.; AND ACCOMAC COUNTY, VA.

BETTERTON, CHESTERTOWN, ST. MICHAELS, PRESTON, OXFORD, CRAPO, NANTICOKE, SALISBURY, BARCLAY, SEAFORD, DENTON, HARRINGTON, PRINCESS ANNE, DEAL ISLAND, CRISFIELD, SNOWHILL, PITTSVILLE, AND OCEAN CITY QUADRANGLES.

The elevations in the following list are the result of field work of the seasons of 1899 and 1900, and are based on an aluminum tablet in the city hall, Baltimore, Md., the height of which is accepted as 20.63 feet above mean sea level, as derived from United States Coast and Geodetic Survey tide gage in the city of Baltimore.

The leveling was done under the direction of Mr. W. Carvel Hall, topographer, by Messrs. C. H. Smith, T. D. Leonard, George Baily, John W. Hodges, and C. H. Semper, levelers.

All bench marks dependent on this datum are marked with the letters "BALTO.,” referring them to the Baltimore bench mark.

ERRATA IN PREVIOUS REPORTS.

The following correction in the Appendix to the Twenty-first Annual Report, pages 456-461, is derived from the latest adjustment of the United States Coast and Geodetic Survey: List of elevations from Chillicothe to Columbus and in vicinity of Columbus, correction, −0.518 foot.

CENTRAL SECTION OF TOPOGRAPHY.

In this section, under the direction of Mr. John H. Renshawe, geographer in charge, spirit leveling was continued for the control of the regular topographic work executed during the year in the various localities listed below. In addition, leveling was carried on in the following localities during the year 1900, but as the field work in those localities is not yet completed, or corrections are pending, the results will not be published until later:

Alabama—Talladega, Coosa, and Elmore counties.
Arkansas—Carroll, Madison, Clark, Dallas, Ouachita, and Calhoun counties.
Wisconsin—Lincoln and Marathon counties.

OHIO.

ERRATA IN PREVIOUS REPORTS.

To the elevations published in the Appendix to the Twenty-first Annual Report apply the following correction, which is derived by the latest adjustment of the Coast and Geodetic Survey, pp. 465 to 467: List of elevations based on a Coast and Geodetic Survey bench mark at Toledo, correction, +0.389 foot.

Bull. 185—01—7
SPIRIT LEVELING.

INDIANA-KENTUCKY.

DAVIESS, GIBSON, PIKE, DUBOIS, WARRICK, AND SPENCER COUNTIES, IND.; DAVIESS AND HANCOCK COUNTIES, KY.

BOONVILLE, PETERSBURG, ROCKPORT, TELL CITY, VELPEN, HUNTINGSBURG, DEGONIA, AND ST. MEINRAD QUADRANGLES.

The elevations in the following list are based on Bench Mark Z of the Coast and Geodetic Survey at Washington, near Vincennes, Ind., a □ cut on the sill of a basement window at southeast corner of courthouse. The elevation of this, as corrected by the latest adjustment of that Bureau, is accepted as 508.599 feet above mean sea level.

The leveling on the Boonville and Petersburg quadrangles was done under the direction of Mr. R. C. McKinney, topographer, by Mr. L. E. Granke, levelman, in 1899.

The leveling on the Rockport and Tell City quadrangles was done under the direction of Mr. Charles E. Cooke, topographer, by Mr. Dean Halford, levelman, in 1900.

The leveling on the Velpen, Huntsburg, Degonia, and St. Meinrad quadrangles was done under the direction of Mr. Charles W. Goodlove, topographer, by Mr. C. E. Hewitt, levelman, in 1900.

All bench marks are referred to the Coast and Geodetic Survey bench mark at Vincennes, and are stamped with the letters "VIN" in addition to the figures of elevation:

ERRATA IN PREVIOUS REPORTS.

To the elevations published in the Appendix to the Twenty-first Annual Report apply the following correction, which is derived by the latest adjustment of the Coast and Geodetic Survey, pages 471 and 472: List of elevations based on St. Paul, correction, +1.040 foot.

WISCONSIN.

ERRATA IN PREVIOUS REPORTS.

The following clerical error appears in the Appendix to the Nineteenth Annual Report, page 259:

T. 6 N., R. 1 W., sec. 10; near center of road crossing, three-fourths mile east of Preston; iron post, marked "DBQ 1,118;" to be consistent with adjacent elevations in the same list should be marked "DBQ 1,138," and published elevation corrected by leveling of 1900 should read 1,138.252; but as further corrected by the latest adjustment of the Coast and Geodetic Survey this and all other elevations in same list (pp. 257-259) are to be raised 1.084 foot, the correction to the Mississippi River Commission bench mark at Dubuque, Iowa.

The following clerical errors occur in the Appendix to the Twenty-first Annual Report:

Page 469: Under title "Columbia and Marquette counties" for the
words "iron post," in the second line of the introductory paragraph, substitute the words "copper bolt." Change the description on page 470, seventh bench mark from top, to conform with introduction, omitting marked "PRTG 791."

Page 470: Baraboo, at northeast corner of court-house; iron post, marked "PRTG 890," should read: Baraboo, at northeast corner of court-house; bronze tablet, marked "B 890," 896.760 feet.

NOTE.—The latter is identical with bench mark described in introduction to list on page 468; therefore, to raise the elevations in the list on page 468 to the Portage datum add 7.079 feet.

COLUMBIA, MARQUETTE, ADAMS, AND SAUK COUNTIES.

BRIGGSVILLE QUADRANGLE.

The elevations in the following list are in continuation of those published in the Appendix to the Twenty-first Annual Report, page 470, and are based upon a bench mark of the United States Lake Survey, being a copper bolt 4 feet below ground and 25 feet from wall of lock of canal connecting Wisconsin and Fox rivers at Portage, Wis., and 84.6 feet above recess of upper gate of new lock. The elevation of this is accepted as 791.243 feet above mean sea level.

The leveling was done under the direction of Mr. Robert Muldrow, topographer, by Mr. Robert Wipfler, levelman.

All bench marks are referred to Portage and are stamped with the letters "PRTG" in addition to the figures of elevation.

IOWA, GRANT, AND LAFAYETTE COUNTIES.

MINERAL POINT QUADRANGLE.

The elevations published in the following list are based on a bench mark of the Mississippi River Commission at Dubuque, Iowa, in the
northeast corner of the custom-house, being a copper bolt marked U.S.P.B.M., the elevation of which is accepted as 644.565 feet above mean sea level, as corrected by the latest adjustment of the Coast and Geodetic Survey. They are in continuation of leveling reported upon in the Appendix to the Nineteenth Annual Report, on pages 258 and 259, after raising them 1.084 feet, the correction to the elevation there given for the Dubuque bench mark (see errata in previous reports).

The leveling was done under the direction of Mr. R. C. McKinney, topographer, by Mr. G. Stubblefield, levelman.

All bench marks are referred to Dubuque, and are marked with the letters “DUBQ,” in addition to the figures of elevation. They are stamped 1 foot low, since the above correction was applied subsequent to the field work.

ERRATA IN PREVIOUS REPORTS.

To the elevations published in the Appendix to the Twenty-first Annual Report apply the following correction, which is derived by the latest adjustment of the Coast and Geodetic Survey, pages 472-473: List of elevations based on Dubuque, correction, +1.084 feet.
ALLAMAKEE AND CLAYTON COUNTIES, IOWA; VERNON, CRAWFORD, AND GRANT COUNTIES, WISCONSIN.

WAUKON QUADRANGLE.

The elevations published in the following list are based on the corrected elevations of several bench marks of the Mississippi River Commission between North McGregor, Iowa, and Victory, Wis. The corrections which were applied are the result of adjustment of precise leveling in the United States by the Coast and Geodetic Survey, in 1900. See Report for 1888–99, Appendix No. 8, page 513.

The leveling was under the direction of Mr. M. Hackett, topographer, by Mr. T. Burns, levelman.

All bench marks set in the course of this work are referred to a bench mark at Dubuque, Iowa, and are marked with the letters, “DUBQ” in addition to the figures of elevation. The elevations assumed for the base bench marks in the field were approximately 1 foot lower than as corrected by the Coast and Geodetic Survey adjustment. Therefore, the bench marks of this list are stamped in most cases 1 foot low.

ERRATA IN PREVIOUS REPORTS.

To the elevations published in the Appendix to the Twenty-first Annual Report apply the following correction, which is derived by the latest adjustment of the Coast and Geodetic Survey, pages 474-475: List of elevations based on St. Louis City Directrix, correction +1.098 feet.

CLARK, SCOTLAND, SCHUYLER, ADAIR, MACON, KNOX, AND LEWIS COUNTIES.

KAHOKA AND EDINA QUADRANGLES.

The elevations published in the following list are based on a bench mark of the United States Engineer Corps (Mississippi River Commission) at Alexandria, Mo., in T. 64 N., R. 5 W., sec. 8, being an eyebolt in top of mooring stone at boat landing. The elevation of this, as corrected by the latest adjustment of the Coast and Geodetic Survey, is accepted as 493.369 feet above mean sea level.

The leveling was done under the direction of Mr. Paul Holman, topographer, by Mr. H. V. Rees, levelman.

All bench marks dependent on this datum are marked with the letter “A” in addition to the figures of elevation. They are stamped in general 1 foot too low, as the Coast and Geodetic Survey correction of 1.079 feet was applied subsequent to the field work.

The elevations published in the following list are based on bench mark "C 111" of the Coast and Geodetic Survey at Carthage, Mo., at the southwest corner of Main and Limestone streets, being a cross cut on rounded top of 6 by 6 inch limestone post buried in the ground
SPIRIT LEVELING.

2.3 feet west of intersection, of inside lines of sidewalk. The elevation of this bench mark, as corrected by the latest adjustment of that survey, is accepted as 942.037 feet above mean sea level.

The leveling was done under the direction of Mr. W. H. Griffin, topographer, by Mr. D. C. Wray, levelman.

All bench marks dependent upon this datum are stamped with the letters "CRTHG" in addition to the figures of elevation.

MISSOURI-ARKANSAS.

BERRY COUNTY, MO.; CARROLL, MADISON, AND WASHINGTON COUNTIES, ARK.

Eureka Springs Quadrangle.

The elevations in the following list are based upon and adjusted between two bench marks of the Coast and Geodetic Survey, namely, bench mark No. "CXIII," the center of a cross on the end of copper bolt leaded in the west side wall of the brick building at the corner of Main and Seventh streets, Seligman, Mo., owned and occupied by A. J. Dean, M. D., the elevation of which is accepted as 1,542.761 feet above mean sea level; and bench mark No. "CXXI," the center of a cross cut on the south side of main entrance to the Arkansas State University building at Fayetteville, Ark., the elevation of which is accepted as 1,454.079 feet above mean sea level. The connection with the latter is made through leveling reported upon in the Appendix to the Twenty-first Annual Report, page 476, corrected in accordance with note under "errata in previous reports."

Bull. 185—01—8
SPIRIT LEVELING.

The leveling was done under the direction of Mr. H. B. Blair, topographer, by Messrs. J. E. Smith, C. C. Curry, G. E. Diehl, and Jerry Boyd, levelmen.

All bench marks are referred to Fayetteville and are stamped with the letters “FTVL,” in addition to the figures of elevation. They are stamped 1 and 2 feet too low, since the Coast and Geodetic Survey correction was applied subsequent to the field work.

ROCKY MOUNTAIN SECTION OF TOPOGRAPHY.

In this section, under the direction of Mr. E. M. Douglas, geographer in charge, spirit leveling was continued for the control of the regular topographic work executed during the year in the various localities as listed below. In addition, leveling was carried on in the following localities during the year 1900, but as the field work in these localities is not yet completed the results will not be published until later:

Texas—Grayson, Fannin, and Lamar counties.
Utah—Salt Lake, Summit, and Wasatch counties.
Montana—Teton, Silverbow, Deer Lodge, Powell, Lewis and Clarke, and Jefferson counties.
Wyoming—Uinta County.

ERRATA IN PREVIOUS REPORTS.

To the elevations listed in the Appendix to the Twenty-first Annual Report, pages 483-486, derived from a bench mark of the United States Coast and Geodetic Survey at Fort Smith, Ark., add 1.660 feet to raise them to the corrected elevation of that bench mark as derived by the latest adjustment of that survey.

MONTANA.

MISSOULA AND RAVALLI COUNTIES.

Bonner Quadrangle.

The elevations in the following list are based on a tablet set on the right side of entrance to the First National Bank building, Missoula, Mont., and marked "3201 T."
The elevation of this datum was determined by Mr. H. S. Crowe, levelman, and was found to be 3,201.400 feet above mean sea level at Tacoma, Wash. (See Appendix to the Twentieth Annual Report of the United States Geological Survey, p. 530.)

The leveling was done in 1898 by Mr. J. B. Whitlock, and in 1900 by Mr. John T. Stewart, under the general direction of Mr. E. M. Douglas, geographer.

All bench marks depending on this datum are marked "MSLA" in addition to the figures of elevation.

EDGEMONT AND HAY CREEK QUADRANGLES.

The elevations in the following list are based on a bronze tablet set in the city hall building at Deadwood in 1897 and marked "4543."
The elevation at this point, as determined from the Fremont, Elkhorn and Missouri Valley Railroad Company's bench mark, is 4,543.472 feet. See Appendixes to the Nineteenth and Twenty-first Annual Reports of the United States Geological Survey for additional elevations in this vicinity.

The leveling in the north half of the Edgemont quadrangle was done in 1899 by Mr. John T. Stewart, levelman. The leveling on the south half of the Edgemont quadrangle and on all of the Hay Creek quadrangle was done in 1900 by Mr. C. E. Worthington, levelman, under the general direction of Mr. E. M. Douglas, geographer. All bench marks depending on this datum are stamped "DW" in addition to the figures of elevation.

COLORADO.

WELD, ARAPAHOE, AND BOULDER COUNTIES.

GREELEY, LONGMONT, AND DENVER QUADRANGLES.

The elevations in the following list are based on the elevation of the top of lower pedestal, southeast corner of steps of Colorado State capitol building, at Denver, Colo. The point is marked by the letters U.S.B.M. cut on top of granite block. The elevation is obtained from the Coast and Geodetic Survey transcontinental line of levels and is accepted as 5,279.840 feet, as furnished by letter of July 13, 1901, from that Bureau, correcting these elevations on line Roswell to Denver, which were published in the report of the United States Coast and Geodetic Survey for 1898–99, Appendix No. 8.

The leveling was done in 1897 by Thomas Winsor, levelman in charge, and in 1899, under the general direction of Mr. W. M. Beaman, topographer, by E. W. Glafcke and A. E. Franklin, levelmen.

All bench marks are stamped "DENVER," in addition to figures of elevation.

DENVER.

The first five of these elevations result directly from precise leveling of the Coast and Geodetic Survey, not as published in their report for 1898–99, Appendix, but as corrected by letter of July 13, 1901. The tablets were set by the United States Geological Survey.

SAN JUAN AND LA PLATA COUNTIES.

FLORIDA, WEMINUCHE, SAN CRISTOVAL, AND SILVERTON QUADRANGLES.

The elevations in the following list are based on a bronze tablet, marked "6517," set in the foundation of the Smelter City State Bank building, at Durango. The elevation of this datum, as derived from the corrected Denver and Rio Grande Railroad levels, is 6,517.003 feet.

For additional elevations in this vicinity see Appendices to the Eighteenth, Nineteenth, and Twentieth Annual Reports of the United States Geological Survey.

The leveling was done in 1899 by Mr. Thomas Winsor and in 1900 by Mr. John P. Darling, under the general direction of Mr. W. M. Beaman, topographer.

All bench marks depending on this datum are stamped with the letters "DUR" in addition to the figures of elevation.

ARIZONA.

MARICOPA, PINAL, GILA, AND GRAHAM COUNTIES.

The elevations in the following list are based on an aluminum tablet marked "1090," set in the north front of the Maricopa County courthouse at Phoenix, Ariz. The elevation of this datum, as determined from the Maricopa, Phoenix and Salt River Valley Railroad, is 1,098.910 feet.

The leveling was done in 1899 and 1900 by Mr. Thomas Winsor, and in 1901 by Mr. John T. Stewart, under the general direction of Mr. E. M. Douglas, geographer.
All bench marks depending on this datum are marked "PHNX" in addition to the figures of elevation.

YAVAPAI AND MARICOPA COUNTIES.

BRADSHAW MOUNTAINS QUADRANGLE.

The elevations in the following list are based on an iron post set in the court-house at Prescott and marked "5346 PRSCT." The elevation of this bench mark was determined from the corrected elevation of the Santa Fe, Prescott and Phoenix Railroad.

The leveling was done in 1900 and 1901 by Mr. John P. Darling and Mr. John T. Stewart, under the general direction of Mr. E. M. Douglas, geographer.

All bench marks depending on this datum are stamped PRSCT, in addition to the figures of elevation.

PACIFIC SECTION OF TOPOGRAPHY.

In this section, under the direction of Mr. Richard U. Goode, geographer in charge, spirit leveling was continued for the control of the regular topographic work executed during the year in the various localities, as follows:

IDAHO-MONTANA.

SHOSHONE AND MISSOULA COUNTIES.

Coeur d'Alene Mining Region.

The elevations in the following list are in continuation of leveling reported upon in the Appendix to the Twenty-first Annual, and are based on an aluminum tablet in the top of the latitude pier in the grounds of the county court-house at Spokane, Wash., accepted as 1,890.954 feet above mean sea level. These elevations depend directly upon that of a bench mark at Lane, Idaho, as published on page 522 of that Appendix.

The leveling was done, under the direction of Mr. Van H. Manning, topographer, by Mr. F. E. Washburn, levelman.

All bench marks depending on this datum are stamped with the letter "S" in addition to the figures of elevation.

SAN BERNARDINO AND KERN COUNTIES.

RANDBURG QUADRANGLE.

The elevations in the following list are based on the levels of the Randsburg Railway, the height of the top of the rail in front of the depot at Johannesburg being accepted as 3,545 feet above mean sea level.

The leveling was done under the direction of Mr. L. C. Fletcher, topographer, by Mr. C. C. Ward, levelman.

All bench marks depending on this datum are stamped with the letter “J” in addition to the figures of elevation.

## SPIRIT LEVELING.

**LOS ANGELES, VENTURA, AND KERN COUNTIES.**

**TEJON, CAMULOS, SANTA SUSANA, AND CALABASAS QUADRANGLES.**

The elevations in the following list are based on a bronze tablet in north stone buttress of main entrance to post-office building at Los Angeles, the elevation of which was determined by leveling of 1897 from a bench mark of the Coast and Geodetic Survey at San Pedro and is accepted as 270.119 feet above mean sea level, as published in the Appendix to the Nineteenth Annual Report, page 382.

The leveling was done by Mr. H. S. Crowe, levelman, in charge.

All bench marks are stamped with the letters "L.A." in addition to the figures of elevation.

SHASTA COUNTY.

REDDING QUADRANGLE.

The elevations in the following list are based on an aluminum tablet set in first angle of wall on north side of east entrance to courthouse in Redding, about 3 feet above ground. The height of this
bench mark was accepted as 591.994 feet, being based on the elevation, taken from the Southern Pacific profiles, of 555 feet for the top of the east rail of the western track opposite approach to depot hotel at Redding.

The leveling was done by Mr. L. A. Whereat, levelman, under the direction of Messrs. R. H. McKee and A. B. Searle, topographers.

All bench marks depending on this datum are stamped with the letter "R" in addition to the figures of elevation.

REDDING, VIA FURNACEVILLE, TO WARD'S RANCH ON REED'S TOLL ROAD.

OREGON.

BAKER, UNION, AND GRANT COUNTIES.

SUMPTER AND BAKER CITY QUADRANGLES.

The elevations in the following list are a continuation of those published in the Appendix to the Twenty-first Annual Report, page 564, being based on a bronze tablet in the astronomical pier in front yard of the public school in Baker City, stamped "3433 A," the elevation of which was accepted as 3,432.700 feet above sea level, as derived by double-rodded line from Astoria.

The leveling was done partly in 1899 by Mr. W. R. Manning, under the direction of Mr. R. H. McKee, topographer, and partly in 1900, by Mr. C. L. Nelson, under the direction of Mr. L. C. Fletcher, topographer.

All bench marks depending on this datum which are stamped with the letters "B. C.," in addition to figures of elevation, are referred to the old railway elevation accepted in 1898 for the Baker City bench mark and are stamped about 14 feet too high, but those stamped with the letter "A," in addition to the figures of elevation, are referred to Astoria and are generally stamped correctly.

WASHINGTON.

KITTITAS AND YAKIMA COUNTIES.

Mount Aix Quadrangle.

The elevations in the following list are based primarily on an aluminum tablet on the southeast corner of the city hall in Tacoma, the elevation of which was accepted as 109.968 feet above mean sea level. From this bench mark a line of levels was carried along the Northern Pacific Railway and from this latter line a bench mark was established
at Mehaffey's ranch, the elevation of which was determined to be 2,138.754 feet. The elevations are based directly upon this bench mark.

The leveling was done under the general direction of Mr. A. H. Sylvester, topographer, by Mr. C. J. Hutchinson, levelman.

All bench marks are referred to Tacoma and are stamped with the letter "T" in addition to the figures of elevation.

SKAGIT AND WHATCOM COUNTIES.

The elevations in the following list are based on a bench mark established in 1898 at Marblemount, which in turn was based on a
SPIRIT LEVELING.

It was planned to continue these levels so as to form a connection with levels previously run from the east to Slate Creek Pass, but on account of deep snows a gap of about 8 miles was left uncompleted.

The leveling was done by Mr. E. M. Fry, levelman in charge. All bench marks dependent on this datum are stamped with the letters “TUL” in addition to the figures of elevation.

MARblemOUNT, VIA SKAGIT RIVER TRAIL, TO MOUTH OF SLATE CREEK.
