# RESULTS OF SPIRIT LEVELING IN PENNSYLVANIA FOR THE YEARS 1899 TO 1905, INCLUSIVE.

By S. S. GANNETT and D. H. BALDWIN.

## INTRODUCTION.

The readjustment in 1903 of the precise-level net in the eastern portion of the United States by the United States Coast and Geodetic Survey necessitated a corresponding readjustment of all spirit-level heights of the United States Geological Survey dependent thereon. These results will be summarized by States or groups of States and published from time to time in bulletin form.

All results of leveling in Pennsylvania previously published in Appendixes to Reports of the Director of the United States Geological Survey and in Bulletin No. 185, as well as levels not previously published, have therefore been readjusted, rearranged by quadrangles, and collected herewith in one publication. Additional work done in 1902 on Sideling Hill quadrangle, Fulton County, will be reported on when the work in that quadrangle is completed. Descriptions and elevations of bench marks are given in forty-two counties, furnishing vertical control for one-fourth of the total area of the State.

The field work was done under the direction of Mr. H. M. Wilson, geographer, and under the immediate supervision of Messrs. Frank Sutton and R. D. Cummin, chiefs of section, United States Geological Survey, in cooperation with the State of Pennsylvania, by various topographers and levelmen of the United States Geological Survey, to whom due credit is given under the different headings listed in the following pages. The office work of adjustment was principally done by Mr. D. H. Baldwin, topographer, under the supervision of Mr. S. S. Gannett, geographer in charge of the triangulation and computing section.

The elevations are arranged according to the degree of accuracy of their determination, precise and primary. The former are determined by lines of levels run either in both forward and backward directions or by simultaneous double-rodged lines, a high-grade instrument being used and special precautions being taken in observations and reduction to correct errors and make the line continuously good throughout. The latter or primary levels are determined with the Y level, precautions being taken against only the principal errors and the levels being run mostly in circuits of single lines. The allowable limit of error observed on the precise work already done by the Geological Survey in this State is represented in feet by  $0.03\sqrt{D}$  and that for the primary work by  $0.05\sqrt{D}$ , in which D is the length of circuit in miles.

The bench marks described in the following list are of two general forms. First, a circular bronze or aluminum tablet  $3\frac{1}{2}$  inches in diameter and one-fourth inch thick, appropriately lettered, having a 3-inch stem cemented into a drill hole, generally in the vertical walls of public buildings, bridge abutments, or other substantial masonry structures. The second form, employed where masonry or rock is not accessible, consists of a hollow wrought-iron post 4 feet in length and  $3\frac{1}{2}$  inches in outer diameter, split at the bottom and expanded to 12 inches, so as to prevent both the easy subsidence of the post and its being maliciously pulled out of the ground. The iron is heavily coated with asphalt, and over the top of the post is riveted a bronze tablet similar to that described above.

The numbers stamped upon the bench marks as described in the following lists represent the elevations to the nearest foot above mean sea level, as determined by unadjusted levels in the field. They have been subjected to changes resulting from the adjustments necessary to close circuits and to those resulting from reduction to mean sea level through readjustment of the precise-level net of the United States. In some cases the finally accepted elevations as printed herein differ from those submitted as bench-mark numbers by 1 or 2 feet. This method of numbering bench marks has been adopted where many levelmen are working in the same area at the same time, as less liable to lead to confusion in identification of bench marks than any attempt at serial numbering, and because the bench-mark number at the same time gives an approximate statement of the elevation. It is assumed that engineers and others finding these bench marks so stamped in the field will communicate with the Director of the United States Geological Survey in order to obtain the accepted elevation to hundredths or thousandths of a foot:

Any person finding bench marks in the following lists mutilated or destroyed will confer a favor by notifying the Director, United States Geological Survey, Washington, D. C.

## PRECISE LEVELING.

### PIKE AND SUSQUEHANNA COUNTIES.

#### GREAT BEND, LACKAWAXEN, AND NARROWSBURG QUADRANGLES.

The elevations in the following list are the result of a line of precise levels run from Binghamton to Poughkeepsie. The two sections of this line, Binghamton to Hancock, and Hancock to Poughkeepsie, form two links in the net of precise leveling in the United States, 49 and 138 miles in length, respectively. The elevations here reported are the result of the 1903 adjustment, the effect of which upon the original results by this line has been to increase the elevation at Hancock with respect to Binghamton 0.042 foot and increase the elevation at Poughkeepsie with respect to Hancock 0.423 foot.

The New York portion of this line is published in the bulletin of spirit leveling for the State of New York (Bull. 281, U. S. Geol. Survey). The leveling was done during June, July, and August, 1900, by Mr. C. H. Semper, levelman. The standard bench marks are stamped "ALBANY" in addition to the figures of elevation.

Millrift, 0.3 mile east of, long bridge over Delaware River, top of west abutment, south side; bronze tablet stamped "491 ALBANY 1900".....	491.874

BRADFORD AND LYCOMING COUNTIES.

GILLETT, GROVER, RALSTON, TROUT RUN, AND WILLIAMSPORT QUADRANGLES.

The elevations in the following list are the Pennsylvania portion of the line of precise leveling run south from Elmira, N. Y., a point on the precise-level line of 1898, and connected at Williamsport, Pa., to a circuit of Pennsylvania Railroad levels from Harrisburg. The latter point is on the Coast and Geodetic Survey transcontinental precise line. This line, 75 miles in length, was involved as a factor in the 1903 adjustment of the precise-level net, the result of which was to lower the elevation by the original line only 0.004 foot at Williamsport with respect to Elmira.

The usual method of leveling and party outfit was used. The leveling was done in 1899 by Mr. C. H. Semper, levelman in charge. The standard bench marks on this line are stamped with the letters "HARRISBURG" in addition to figures of elevation and the year 1899. These elevations stamped are mostly 1 foot too low, due to an error of about 0.7 foot in the originally accepted elevation at Elmira, and thus do not strictly accord with the reference mark at Harrisburg, an aluminum tablet stamped "364 HARRISBURG 1899," in the State Library, the elevation of which is accepted as 363.988 feet above mean sea level.

GILLETT QUADRANGLE.

NEW YORK-PENNSYLVANIA BOUNDARY POST, ALONG NORTHERN CENTRAL RAILROAD TO TROY.

Williamsport, general superintendent's office building, north side of east entrance, on water table; chiseled shelf (Pennsylvania Railroad bench mark, elevation 528.25).....	528.50
Williamsport, northwest corner base of Soldiers' monument; chiseled square (Pennsylvania Railroad bench mark No. 46, elevation 525.04).....	525.19
Williamsport, city hall, in front face near main entrance; aluminum tablet stamped "528 HARRISBURG 1899".....	528.266

## WARREN COUNTY.

## KINZUA, WARREN, AND YOUNGVILLE QUADRANGLES.

The elevations in the following list are the Pennsylvania portion of the result of two independent lines of precise leveling run in opposite directions between Salamanca, N. Y., and Irvineton, Pa. A large probable error occasioned the second running, with a result, however, checking to 0.043 foot the original figures. The final mean results of this line were included as a factor in the 1903 adjustment of the precise-level net. The result of this was to increase the elevation at Irvineton, Pa., by this line 0.128 foot with respect to Salamanca; therefore, there has been distributed a correction of 0.128 foot in a total distance of 48.8 miles in amounts proportional to the mileage. Both lines were run by the same methods and similar party outfits as in previous work, each being a double-rodged, simultaneous, direct and reverse read line, employing special 10-foot double-faced targeted rods. The total divergence in the 1902 line was but 0.011 foot and the total correction 0.085 foot.

The leveling of 1899 was done by Mr. E. L. McNair, topographer, and that of 1902 by Mr. D. H. Baldwin, topographer. The standard bench marks are referred to the Dunkirk datum and stamped with the letters "DUNKIRK" in addition to the figures of elevation and year 1899.

FOREST, VENANGO, AND WARREN COUNTIES.

FRANKLIN, OIL CITY, TIBIOUTE, TIONESTA, AND YOUNGSVILLE QUADRANGLES.

The elevations in the following list are the result of a line of precise levels run from Irvineton to Franklin. The latest adjustment of the precise-level net in which this line was a factor has resulted in raising the original values of the line 0.083 foot at Franklin with respect to Irvineton, distributing this amount over the total distance of 57.9 miles.

The method of leveling and party outfit was similar to that previously used. The leveling was done in 1899 by E. L. McNair, topographer. The standard bench marks are referred to the Dunkirk, N. Y., datum and are stamped with the letters "DUNKIRK" in addition to figures of elevation which are mostly 1 foot low.

YOUNGSVILLE QUADRANGLE.

IRVINETON TO THOMPSON.

**ALLEGHENY, ARMSTRONG, CLARION, CRAWFORD, ERIE, MERCER,  
AND VENANGO COUNTIES.**

**CAMBRIDGE SPRINGS, ERIE, FOXBURG, FRANKLIN, FREEPORT, KITTANNING, McKEESPORT,  
MEADVILLE, RURAL VALLEY, SHARPSBURG, STONEBORO, AND UNION CITY QUADRANGLES.**

The elevations in the following list result from a line of precise levels extending from Erie to Pittsburg, Pa. The initial bench mark is an aluminum tablet stamped "635 ERIE" in the water table of the northwest corner of the hospital wing of the Soldiers' Home, Erie, the elevation of which was previously determined by primary levels to be 58.588 feet above a bench mark of the army engineers, described as a "chisel mark," at southwest corner of foundation of the light-house keeper's dwelling. The line extends south over the Pennsylvania Railroad to Leboeuf, thence over the Erie Railroad to Franklin and from Franklin to Pittsburg over the Allegheny Valley branch of the Pennsylvania Railroad. This line was included in the 1903 adjustment of the precise-level net, and as a result of that adjustment the elevations of the original line with respect to Erie have been lowered 0.204 foot at Leboeuf, 0.499 foot at Franklin, 0.862 foot at West Penn Junction (Lucesco post-office), and Pittsburg. The corresponding distances from Erie are, respectively, 22.4, 76.3, 169.7, and 198.7 miles. Between West Penn Junction and Pittsburg no error was distributed, because of a satisfactory check by Pennsylvania Railroad levels and to simplify the adjustment. The leveling was done in 1899 by Mr. C. H. Semper, levelman, except the portion Franklin to Emlenton, which was done by Mr. E. L. McNair, topographer. Standard bench marks are stamped "PITTSBURG" in addition to the figures of elevation and the year 1899.

## WASHINGTON AND WESTMORELAND COUNTIES.

## BROWNSVILLE, MASONTOWN, M'KEESPORT, MORGANTOWN, AND UNIONTOWN QUADRANGLES.

The elevations in the following list result from the Pennsylvania portion of a line of precise levels run between Pittsburg, Pa., and Grafton, W. Va. The line as run started from bench mark "M" at Grafton, W. Va., on the transcontinental precise-level line of the Coast and Geodetic Survey, a chisel mark on the coping stone at north end of central pier of railroad bridge over Tygart River, and followed the Baltimore and Ohio Railroad to Leith, near Uniontown, Pa., thence over the Pennsylvania Railroad to Pittsburg. This line was included in the 1903 adjustment of the precise-level net, and as a result of that adjustment the elevation by the original line at Braddock with respect to Grafton has been lowered 0.112 foot in a distance of 142.5 miles. Between Braddock and Pittsburg no error was distributed because of a satisfactory check by Pennsylvania Railroad levels and to simplify adjustment. The leveling was done in 1899 by Mr. E. L. McNair, topographer. Standard bench marks are stamped "PITTSBURG" in addition to the figures of elevation and of the year 1899.

ERIE AND WARREN COUNTIES.

CORRY, UNION CITY, AND YOUNGSRVILLE QUADRANGLES.

The elevations in the following list are the result of a line of precise levels run from Leboeuf to Irvineton. This line formed a factor in the 1903 adjustment of the precise-level net, the result of which was to lower the elevation by the unadjusted line 0.146 foot at Irvineton with respect to Leboeuf. This amount has therefore been distributed in this line proportional to the distance. The total divergence between the simultaneous, direct and reverse-lines is 0.021 foot in a total distance of 38.7 miles.

The method of leveling and party outfit was similar to that previously used. The leveling was done in 1902 by Mr. D. H. Baldwin, topographer in charge. The standard bench marks are referred to an aluminum tablet at Pittsburg at the entrance to the Seventh Avenue Hotel, stamped "738 PITTSBURG 1899," the elevation of which is accepted as 738.383 feet above mean sea level. They are stamped with the legend "PITTSBURG 1902" in addition to the figures of elevation.

## CRAWFORD AND ERIE COUNTIES.

## ERIE, FAIRVIEW, AND GIRARD QUADRANGLES.

The elevations in the following list are based on an aluminum tablet stamped "635 ERIE" placed in the Soldiers' Home, at Erie, Pa., the elevation of which is now accepted as 636.179 feet above mean sea level. This is the initial bench mark for the precise-level line run south to Pittsburg, and was set by primary leveling from an army engineer's bench mark, consisting of a chisel mark in the southwest corner of the foundation of the light-house keeper's dwelling at Erie, the elevation of which is now accepted as 577.591. This work was previously reported upon in the Appendix to the Twenty-first Annual Report of the United States Geological Survey and is here corrected. For additional elevations on Erie quadrangle refer to list under "Precise leveling."

The leveling was done in 1899 under the general direction of Mr. Frank Sutton, topographer, by William Crennel, levelman. The bench marks dependent on this datum are stamped "ERIE" in addition to figures of elevation mostly 1 foot low.

CENTER, CLEARFIELD, INDIANA, AND JEFFERSON COUNTIES.

CLEARFIELD, CURWENSVILLE, HOUTZDALE, MARION CENTER, PUNXSUTAWNEY, AND PHILIPSBURG QUADRANGLES.

The elevations in the following lists are based upon an aluminum tablet in the foundation of the Seventh Avenue Hotel, Pittsburg, Pa., marked "738 PITTSBURG 1899", the elevation of which is now accepted as 738.384 feet above mean sea level. The initial points upon which these levels depend are various bench marks along precise-level lines of the Pennsylvania Railroad, the heights accepted having been determined by the 1903 adjustment.

The double-rodged line from Tyrone through these quadrangles was run in 1902 under the direction of Mr. Frank Sutton, by Mr. Ira M. Flocker, levelman, and the remainder of the work on the Houtzdale and Curwensville quadrangles was done in 1902 under the direction of Mr. Sutton, by Mr. Charles Hartman, jr., levelman. The remainder of the work on the Punxsutawney quadrangle was done in 1902 by Mr. George Seidel, levelman. All standard bench marks dependent on this datum are stamped "PITTSBURG" in addition to the figures of elevation.

## KITTANNING AND RURAL VALLEY QUADRANGLES.

The elevations in the following list are based upon bench marks at Kittanning, Rimerton, and East Brady, on the precise-level line from Erie to Pittsburg, and are determined in accord with the latest adjustment of the precise-level net. For additional elevations on these quadrangles refer to said precise line.

The leveling on the Rural Valley quadrangle, republished from Bulletin No. 185, was done in 1900 under the direction of Mr. Frank Sutton, topographer, by Mr. J. H. Wetzel, levelman, and that on the Kittanning quadrangle was mostly done in the same year under the direction of Mr. W. L. Miller, topographer, by Mr. Ira M. Flocker, levelman. The elevations between Climax and Redbank on these quadrangles were determined in 1905 under the direction of Mr. W. T. Griswold, topographer, by Mr. B. J. Green, levelman. The standard bench marks are stamped with the letters "PITTSBURG" in addition to the figures of elevation, except those set in 1905, which are stamped "ADJ 1903" in addition to the figures of elevation.

## FAYETTE, GREENE, SOMERSET, WASHINGTON, AND WESTMORELAND COUNTIES.

## BROWNSVILLE, CONFLUENCE, CONNELLSVILLE, MASONTOWN, AND UNIONTOWN QUADRANGLES.

The elevations in the following list are based upon an aluminum tablet in the foundation of the Seventh Avenue Hotel, Pittsburg, the elevation of which is now accepted as 738.384 feet above mean sea level. The initial points upon which this work depends are various bench marks on the precise-level line, Grafton to Pittsburg, of the United States Geological Survey, and the Connellsville and Pittsburg division precise level-line of the Baltimore and Ohio Railroad. For additional elevations in these quadrangles refer to list under "Precise leveling." The leveling was previously reported upon partly in the Appendix to the Twenty-first Annual Report and partly in Bulletin No. 185, but has been corrected in this list to accord with the 1903 adjustment.

The leveling on the Uniontown quadrangle, on the west side of the Confluence quadrangle, and on line to Greensboro on the Masontown quadrangle, was done in 1899, under the direction of Mr. Frank Sutton, topographer, by Mr. William Crennell, levelman. The leveling on the Connellsville quadrangle, on line West Newton to Baird on the Brownsville quadrangle, was done the same year, under Mr. Sutton, by Mr. J. H. Wetzel, levelman, who com-

pleted leveling on the Masontown quadrangle in 1900. The line through Centerville on the Brownsville quadrangle was run in 1901, under the direction of Mr. A. H. Bumstead, topographer, by Mr. M. P. Page, levelman. The standard bench marks depending on this datum are stamped "PITTSBURG" in addition to the figures of elevation.

ALLEGHENY, ARMSTRONG, BEAVER, BUTLER, WASHINGTON, AND WESTMORELAND COUNTIES.

CARNEGIE, FREEPORT, GREENSBURG, McKEESPORT, SEWICKLEY, AND SHARPSBURG QUADRANGLES.

The elevations in the following list are based upon an aluminum tablet in the foundation of the Seventh Avenue Hotel, Pittsburg, the elevation of which is now accepted as 738.384 feet above mean sea level. Precise-level lines of the Corps of Engineers, U. S. Army, of the Baltimore and Ohio Railroad, of the Pennsylvania Railroad, and of the United States Geological Survey traverse this area. These, corrected in accordance with the latest adjustment, form the initial control for the primary levelings. For other elevations in this locality refer to list under "Precise leveling."

The leveling was done mostly in 1903 under the direction of Mr. Frank Sutton, topographer, by C. W. Marvin, levelman, on Greensburg and part of Freeport quadrangles, and the remainder by Mr. J. H. Wetzel, levelman. Five of the bench marks on Sewickley quadrangle were established in 1905 under Mr. A. C. Roberts, topographer, by Mr. B. J. Green, levelman. The standard bench marks are stamped with the letters "PITTS" in addition to the figures of elevation.

## ALLEGHENY, BEAVER, AND WASHINGTON COUNTIES.

### BURGETTSTOWN, CLAYSVILLE, AND STEUBENVILLE QUADRANGLES.

The elevations in the following list are based upon work in adjoining quadrangles of West Virginia and Pennsylvania, corrected in accordance with the 1903 adjustment of the precise level net.

The leveling was done mostly in 1904 under direction of Mr. W. T. Griswold, topographer, but a portion of the work on Claysville quadrangle was done in 1905 under Mr. M. J. Munn, assistant topographer, all by Mr. B. J. Green, levelman. Standard bench marks set in 1904 and 1905 in this area are stamped with the legend "ADJ 1903" and "ADJ" respectively, while those set previously on the Claysville and Steubenville quadrangles are stamped respectively "PITTS" or "STBNVL" in addition to figures of elevation.

GREENE AND WASHINGTON COUNTIES.

AMITY, BLACKSVILLE, ROGERSVILLE, AND WAYNESBURG QUADRANGLES.

The elevations in the following list are based upon an aluminum tablet in the foundation of the Seventh Avenue Hotel, Pittsburg, stamped "738 PITTSBURG 1899," the elevation of which is now accepted as 738.384 feet above mean sea level. They agree in datum with the latest adjustment of precise leveling.

The leveling was done as follows: On the Waynesburg quadrangle, in 1900, under the direction of Mr. Frank Sutton, topographer, by Mr. J. H. Wetzell, levelman; on the Blacksville quadrangle, in 1901, under Mr. A. H. Bumstead, topographer, by Mr. M. P. Page, levelman; on the Rogersville quadrangle, mostly in 1902, under Mr. R. D. Cummin, topographer, by Mr. Charles Hartman, jr., levelman; and on the Amity quadrangle, partly in 1901, under Mr. A. H. Bumstead, topographer, by Messrs. M. P. Page and H. Wood, levelmen; partly

in 1902, under Mr. R. D. Cummin, topographer, by Mr. Charles Hartman, jr., levelman; partly in 1903, under Mr. Sutton, by Mr. Wetzel, and partly in 1904, under Mr. W. T. Griswold, topographer, by Mr. J. B. Green, levelman. The final work on this and Rogersville quadrangle was that extended from Claysville quadrangle, in 1905, under Mr. M. J. Munn, assistant topographer, by Mr. Green. The standard bench marks, except that at Mount Morris, are stamped "PITTS" or "PITTSBURG" in addition to figures of elevation, which, being taken from unadjusted field values, are in many cases incorrect.
