MAP SHOWING THE DISTRIBUTION OF GRANITE AND RELATED ROCKS IN MAINE
AND LOCATIONS OF QUARRIES IN PEGMATITE DEPOSITS
1909

Areas occupied mainly by granite rocks (granite, pegmatite, diorite, igneous gneiss, etc.), with occasional small masses of slates or schists.

Areas occupied mainly by slates and schists, with various amounts of injection gneiss and pegmatite and small areas of granite and diorite.

Red dots show localities which have been worked for pegmatite minerals.

- M: Mica
- F: Feldspar
- Q: Quartz
- B: Beryl (except beryl)

(Pegmatites rich in lithium minerals occur mainly within the red broken lines.)
