GEOLOGICAL SURVEY BENCH MARKS.

A, Tablet used in cooperating States. The State name is inserted at G.  
 B and D, Copper temporary bench mark, consisting of a nail and copper washer.  
 A, C, and E, Tablets for stone or concrete structures.  
 F, Iron post used where there is no rock.

# RESULTS OF SPIRIT LEVELING IN WYOMING, 1896 TO 1912, INCLUSIVE.

R. B. MARSHALL, Chief Geographer.

## INTRODUCTION.

*Scope of the work.*—All results of spirit leveling in Wyoming previously published by the United States Geological Survey and all the results of later work are included in this report, rearranged by quadrangles. All elevations are based on 1912 adjustment heights of bench marks along the precise-level lines of the Coast and Geodetic Survey.

*Personnel.*—The field work from 1896 to 1906, inclusive, was done under the general direction of E. M. Douglas, geographer; that for 1907 to 1909, inclusive, under E. C. Barnard, geographer; and the later work under Sledge Tatum, geographer, under the general direction of R. B. Marshall, chief geographer. The names of the respective levelmen are given in the introductions to the several lists. The office work of computation, adjustment, and preparation of lists was done mainly by S. S. Gannett, geographer, and D. H. Baldwin, topographer, and since 1907 under the general direction of E. M. Douglas, geographer.

*Classification.*—No precise leveling has been done by the United States Geological Survey in this State. For primary lines standard Y levels are used; lines are run in circuits or are closed on precise lines, with an allowable closing error in feet represented by  $0.05\sqrt{D}$ , in which D is the length of the circuit in miles, sufficient care being given the work to maintain this standard. For circuit closures careful office adjustments are made, the small outstanding errors being distributed over the lines.

*Bench marks.*—The standard bench marks are of two forms. The first form is a circular bronze or aluminum tablet (*C* and *E*, Pl. I), 3.5 inches in diameter and one-quarter inch thick, having a 3-inch stem, which is cemented in a drill hole in solid rock, in the wall of some public building, a bridge abutment, or other substantial masonry structure. The second form (*F*, Pl. I), used where masonry or rock is not available, consists of a hollow wrought-iron post 3.5 inches in outer diameter and 4 feet in length. The bottom is spread out to a

width of 10 inches, in order to give a firm bearing on the earth. A bronze or aluminum-bronze cap is riveted over the top of the post, which is set about 3 feet in the ground. A third style of bench mark with abbreviated lettering (*B* and *D*, Pl. I) is used for unimportant points. This consists of a special copper nail 1.5 inches in length driven through a copper washer  $\frac{3}{8}$  inch in diameter. The tablets, as well as the caps on the iron posts, are appropriately lettered, and State cooperation is indicated by the addition of the State name (*G*, Pl. I).

The numbers stamped on the bench marks described in the following pages represent the elevations to the nearest foot as determined by the levelman. These numbers are stamped with  $\frac{3}{16}$ -inch steel dies on the tablets or post caps, to the left of the word "FEET." The office adjustment of the notes and the reduction to mean sea-level datum may so change some of the figures that the original markings are 1 or 2 feet in error. It is assumed that engineers and others who have occasion to use the bench-mark elevations will apply to the Director of the United States Geological Survey, at Washington, D. C., for the adjusted values, and will use the markings as identification numbers only.

*Datum.*—All United States Geological Survey elevations are referred to mean sea level, which is the level that the sea would assume if the influence of winds and tides were eliminated. This level is not the elevation determined from the mean of the highest and the lowest tides, nor is it the half sum of the mean of all the high tides and the mean of all the low tides, which is called the half-tide level. *Mean sea level is the average height of the water, all stages of the tide being considered.* It is determined from observations made by means of tidal gages placed at stations where local conditions, such as long, narrow bays, rivers, and like features, will not affect the height of the water. To obtain even approximately correct results these observations must extend over at least one lunar month, and if accuracy is desired they must extend over several years. At ocean stations the half-tide level and the mean sea level usually differ but little. It is assumed that there is no difference between the mean sea level as determined from observations in the Atlantic Ocean, the Gulf of Mexico, or the Pacific Ocean.

The connection with tidal stations for bench marks in certain areas that lie at some distance from the seacoast is still uncertain, and this fact is indicated by the addition of a letter or word to the right of the word "DATUM" on tablets or posts. For such areas corrections for published results will be made from time to time as the precise-level lines of the United States Geological Survey or other Government organizations are extended.

*Topographic maps.*—Maps of the following quadrangles, wholly or partly in Wyoming, have been published by the United States Geological Survey up to November 1, 1913. They may be obtained, except as noted, for 10 cents each or \$3 for 50, on application to the Director of the Survey, at Washington, D. C.

### PRIMARY LEVELING.

Cheyenne, Chugwater, Egbert, Goshen Hole, Hartville, Patrick, and Sherman quadrangles.

#### ALBANY AND LARAMIE COUNTIES.

The elevations in the following list are based on 1912 adjustment heights of bench marks of Coast and Geodetic Survey precise-level lines crossing this area.

The leveling in Cheyenne quadrangle was done in 1896 by M. C. McFarland and in 1911 by H. C. Caldwell; in Egbert, Chugwater, Goshen Hole, Hartville, and Patrick quadrangles in 1896 and 1897, by McFarland; in Sherman quadrangle in 1902 by M. S. Bright and in 1903 by G. Stubblefield.

<sup>1</sup> Yellowstone National Park map includes Canyon, Gallatin, and parts of Lake and Shoshone sheets, together with a strip along the tops and the left sides of these combined sheets. A former edition having the same title was simply a combination of the four sheets mentioned.

## CHEYENNE QUADRANGLE.

[Latitude 41°-41° 30'; longitude 104° 30'-105°.]

From Cheyenne northeast along highway to sec. 3, T. 16 N., R. 64 W. (double rodged line).

	Feet.
Cheyenne, in front of Union Station; top of rail-----	6,062.0
Cheyenne, at south front of Capitol, in top step; bronze tablet stamped "6101." (Same as C. & G. S. b. m. E)-----	6,097.652
Cheyenne, north side of boulevard, 66 feet west of Odd Fellows Hall; iron post stamped "6118"-----	6,114.530
T. 14 N., R. 66 W., quarter corner on south side of sec. 8; iron post stamped "6134"-----	6,130.387
T. 15 N., R. 66 W., northeast corner of sec. 29; iron post stamped "6092"-----	6,087.950
Pole Creek, north side of, at road crossing; iron post stamped "6017"-----	6,013.515
T. 16 N., R. 65 W., northeast corner of sec. 29; iron post stamped "6031"-----	6,027.574
T. 16 N., R. 64 W., southwest corner of sec. 3; iron post stamped "5729"-----	5,724.845

From Cheyenne southwest along Fort Collins trail, Union Pacific Railroad, and Colorado & Southern Railway, thence east along township line between Tps. 12 and 13 N., thence north on line between Rs. 64 and 65, thence west on parallel between Tps. 16 and 17 N., thence south on line between Rs. 66 and 67 to Cheyenne.

Cheyenne, 36 feet north of center line of main track, in top of southwest corner of stone foundation under first pair of steel supports to viaduct across the Union Pacific R. R., inside of park; bottom of square cut, lettered "U. S. □ B. M." (C. & G. S. b. m. B)-----	6,060.300
Fort Russel Military Reserve, southeast corner of, corner being center of sec. 1, T. 13 N., R. 67 W., said stone being about 200 feet north of Union Pacific R. R. and about 150 feet west of Colorado & Southern Ry.; iron hub in concrete, marked "U. S. M. R."-----	6,095.24
Laramie County Home for the Poor, about 800 feet southwest of, on Fort Collins trail southwest from Cheyenne across Spring Creek, on top of concrete culvert at northwest corner; bottom of square cut, lettered "U. S. □ B. M."-----	6,096.44
Cheyenne, 3.5 miles from, 20 feet east of edge of road; top of rock, marked "6211"-----	6,210.79
Cheyenne, 3.5 miles from, on Fort Collins trail, at top of hill southwest of Laramie County Home for the Poor, in turn of road to southwest, about 1,000 feet south of northwest corner of sec. 13, T. 13 N., R. 67 W., 34 feet from telephone pole 4548 numbered from Denver; iron post stamped "6204"-----	6,203.980
Deep Ravine, 6 miles from Cheyenne; iron stake on west side of grade of Colorado & Southern Ry., at north end of grade across Deep Ravine, marked "6298"-----	6,298.22
T. 13 N., R. 67 W., southeast corner of sec. 33; iron post stamped "6371"-----	6,371.118

**Encampment Special, Grand Encampment, Laramie, and Medicine Bow quadrangles.**

**ALBANY AND CARBON COUNTIES.**

The elevations in the following list result from a line of levels run from Coast and Geodetic Survey bench mark N at Laramie, southwest to Pinkhampton, Colo., thence northwest to Encampment, Wyo. The initial bench mark is a cross cut in the top of a copper bolt in northwest corner of foundation of courthouse at Laramie, and its elevation is accepted as 7,166.547 feet. The line from Laramie to Encampment was run in duplicate in the forward direction by Goyne Drummond and E. W. Glafcke, in 1901, and the mean of the two values adopted. Starting from the bench mark thus established at Encampment, Donnell Miller completed the leveling for the Encampment Special quadrangle in 1901.

Additional leveling in Laramie quadrangle was done in 1903 by G. Stubblefield and in Grand Encampment and Medicine Bow quadrangles in 1904 by R. W. Wieland.

Alcova, Casper, Douglas, Ferris, Fort Steele, Glenrock, and Leo quadrangles.

#### CARBON, CONVERSE, AND NATRONA COUNTIES.

The elevations in the following list were determined by primary leveling extending along North Platte River from bench marks of the Coast and Geodetic Survey at Rawlins, Fort Steele, and Orin and accord with the 1912 adjustment of precise leveling. Leveling by the Reclamation Service between Orin and Casper was also utilized.

The leveling was done in Ferris quadrangle in 1903 by E. W. Glafcke, in Leo quadrangle in 1903 by E. W. Glafcke, and in 1904 by M. S. Bright, in Fort Steele quadrangle in 1904 by M. S. Bright and R. W. Wieland, and in Alcova, Casper, Douglas, and Glenrock quadrangles in 1904 by M. S. Bright.

Baggs, Rawlins, and Savery Creek 30' quadrangles.

#### CARBON COUNTY.

The elevations in the following list are based on a Coast and Geodetic Survey bench mark at Rawlins corrected to 1912 adjustment.

The leveling was done in 1907 by L. Reinecke. The line was run as a single unchecked primary line for 31 miles. From there on rod readings to hundredths only were made; the line must, therefore, be regarded as secondary, although permanent bench marks were set at intervals along its course.

The checked leveling in Rawlins quadrangle north of Rawlins was done in 1903 by E. W. Glafcke.

Aladdin, Devils Tower, Moorcroft, Newcastle, and Sundance quadrangles.

## CROOK AND WESTON COUNTIES.

The elevations in the following list were originally based on a bronze tablet in the city hall at Deadwood, S. Dak., set in 1897 and stamped 4543, based on railroad datum. They have since been reduced to mean sea-level datum by applying a correction of plus 2.2 feet, derived from connections with the precise line of the Coast and Geodetic Survey along the railroad passing through Edgemont, S. Dak., and Newcastle, Wyo.

The leveling was done in the Aladdin quadrangle in 1900 by C. E. Worthington, in Devils Tower and Moorcroft quadrangles in 1902 by Chester Irvine, and in Newcastle and Sundance quadrangles in 1899 by J. T. Stewart.

Bald Mountain, Cloud Peak, Dayton, Fort McKinney, No Wood, Rairden, and Sheridan quadrangles.

BIG HORN, JOHNSON, AND SHERIDAN COUNTIES.

The following elevations were determined by primary leveling forming part of an adjusted net across the State between the precise level lines of the Coast and Geodetic Survey along the Chicago, Burlington & Quincy and the Union Pacific railroads in agreement with the 1912 adjustment of precise leveling. The adjustment required corrections of 1.9 feet orthometric and 1.7 additional. The field work was mostly dependent on an assumed railroad datum at Sheridan and the majority of the bench marks are stamped "Sher." Most of the marked elevations are 10 feet too low. The descriptions of these are taken from the appendixes to the Nineteenth and Twenty-first Annual Reports. Most of the bench marks set later were stamped 3 feet too high, in accordance with preliminary corrections.

The leveling was done in Sheridan quadrangle in 1897 by W. L. Kemp, A. L. Coleman, and H. W. Huntington; in 1897-98-99 by E. W. Glafcke; and in 1909 by C. F. Fisher, H. G. Parry, and F. H. West; in Dayton quadrangle in 1897 by A. L. Coleman and H. W. Huntington, in 1898 by C. E. Worthington, and in 1897 and 1899 by E. W. Glafcke; in Bald Mountain quadrangle in 1897 by H. W. Huntington, in 1898 by C. E. Worthington, and in 1899 by E. W. Glafcke; in Fort McKinney quadrangle in 1897 by H. W. Huntington and in 1897-98-99 by E. W. Glafcke; in Cloud Peak and No Wood quadrangles in 1897 by E. W. Glafcke; and in Rairden quadrangle in 1897 by E. W. Glafcke, in 1904 by H. M. Huntington, and in 1905 by F. A. Nussle.

### Ilo Quadrangle.

#### BIG HORN COUNTY.

The elevations in the following list were determined by primary leveling and accord with the 1912 adjustment at Gwin's ranch and a point 8 miles northwest of Old Ilo. One line is a closed circuit joining these points, but the elevations on the two lines in the south half of the quadrangle are preliminary, the proposed circuits being uncompleted. Orthometric and rod corrections have been applied.

The work was done in 1912 by R. R. Monbeck.

<b>Almond, Badlands, Daniel, Francis, Granger, Green River (name not final), Lander, Leckie, Newfork, Rock Springs, South Pass, Table Mountain, and Viola quadrangles.</b>	

**FREMONT, SWEETWATER, AND LINCOLN COUNTIES.**

The elevations in the following list were determined by primary leveling forming part of an adjusted net across the State in agreement with the 1912 adjustment of precise leveling.

The leveling was done in Almond quadrangle in 1907 by C. S. Moyer; in Green River quadrangle in 1906 by H. M. Huntington, and in 1907 by Moyer; in Badlands, Daniel, Francis, Granger, Lander, South Pass, and Viola quadrangles in 1906 by Huntington; and in Leckie and Newfork quadrangles in 1905 by F. A. Nussle and in

1906 by Huntington; in Almond, Rock Springs, and Table Mountain quadrangle in 1908 by J. D. Weems.

 <b>Aspen Mountains, Mazon, South Bitter Creek, Bridger, Cokeville, Evanston, Montpelier, Randolph, Saleratus Pass, and Twin Buttes quadrangles.</b>	

SWEETWATER, LINCOLN, AND Uinta COUNTIES.

Most of the elevations in the following list are based upon a bronze tablet stamped "6752 Evan" in south side of courthouse yard at Evanston, the elevation of which is now accepted as 6,753.966 feet above mean sea level. The elevations in the Cokeville, Montpelier, Randolph, and Saleratus Pass quadrangles are part of the levels run in 1909 in Idaho, Utah, and Wyoming and are based on bench mark "J" of the Coast and Geodetic Survey near Onyx, Bannock County, Idaho. From Onyx the line was run over the Oregon Short Line R. R. to a point 3.5 miles south of Montpelier, thence south along road through Laketown and Randolph, Utah, to Evanston, Wyo., closing on the Coast and Geodetic Survey bench mark at that point.

The leveling was done in Cokeville, Montpelier, and Randolph quadrangles in 1909 by L. F. Biggs; in Bridger quadrangle in 1897-98 by E. W. Hills, and in 1905 by J. H. Kent; in Evanston quadrangle in 1897-98 by Hills, and in 1901-2 by E. W. Glafcke; in Aspen Mountains and Twin Buttes quadrangles in 1905 by J. H. Kent; and in Saleratus Pass quadrangle in 1898 by Hills, and in 1909 by Biggs.

For additional elevations in Randolph and Saleratus Pass quadrangles, Utah, and Montpelier quadrangle, Idaho, see Bulletins 566 and 567, respectively.

Leveling was also done in Aspen Mountains, Maxon, and South Bitter Creek quadrangles in 1908 by J. D. Weems, of the Fuel Section of the Geologic Branch.
