Introduction	Page.
(A) The Candelaria silver district, Nev., by Adolph Knopf (published Jan.	
20, 1922)	1
(B) Colemanite in Clark County, Nev., by L. F. Noble (published Feb. 23, 1922)	23
(C) Bonanza ores of the Comstock lode, Virginia City, Nev., by E. S. Bastin	
(published Mar. 29, 1922)	41
(D) Silver enrichment in the San Juan Mountains, Colo., by E. S. Bastin	
(published June 30, 1922)	65
(E) Primary native-silver ores near Wickenburg, Ariz., and their bearing on	
the genesis of the silver ores of Cobalt, Ontario, by E. S. Bastin (pub-	
lished Aug. 2, 1922)	131
(F) General features of the brown hematite ores of western North Carolina, by	
W. S. Bayley (published Oct. 17, 1922)	157
(G) General features of the magnetite ores of western North Carolina and east-	
ern Tennessee, by W. S. Bayley (published Dec. 8, 1922)	209
(H) Peridotite dikes in Scott County, Ark., by H. D. Miser and C. S. Ross	
(published Dec. 22, 1922)	271
(I) Diamond-bearing peridotite in Pike County, Ark., by H. D. Miser and	
C. S. Ross (published April 25, 1923)	279
(J) The Los Burros district, Monterey County, Calif., by J. M. Hill (pub-	
lished April 28, 1923)	323
Index	331

PLATE I. Typical exposures of limestone member of Horse Spring formation in	
Clark County, Nev.: A, Near Horse Spring; B, Near Bitter Spring.	28
II. Colemanite deposit near Callville Wash, Nev.: A, Looking east along	
outcrop of colemanite bed; B, Looking west along outcrop of cole-	
manite bed	29
III. "Goose egg" structure in limestone beds associated with colemanite	
deposit near Callville Wash, Nev	38
IV. Geologic map of Nottely-Valley River belt, N. C., showing location	
of principal ore deposits.	162
V. Views in brown-hematite mines in western North Carolina: A. View	
in Heaton & Russell mine, near Maltby; B, Hydraulic jet in Heaton	
& Russell mine; C, Hayes-Hoblitzell mine, near Marble; D, Mam-	
millary ore in Savage mine, near Murphy	164
VI, Views in brown-hematite mines in western North Carolina: A, Ore	
bed in mine of Southern Iron Mining Co., near Andrews; B, West	
end of bed shown in A , showing parallelism with surface; C , Gene-	
ral view of bed shown in A ; D , Ore vein in Heaton & Russell mine,	
near Maltby	165

PLATE VII. A, B, Photomicrographs of peridotite dike near Olio, Scott County, Ark.	276
VIII. Geologic map of parts of Pike, Howard, and Hempstead counties,	2.0
in southwestern Arkansas	280
 IX. Geologic map of the Prairie Creek area of peridotite in T. 8 S., R. 25 W., 2¹/₂ miles south-southeast of Murfreesboro, Pike County, 	000
ArkX. A, Exposures of the hypabyssal intrusive peridotite ("hardebank")	280
in the northern part of the Mauney mine, near Murfreesboro,	
Ark ; B, View looking north across the large open cut of the	00.0
Mauney mine, near Murfreesboro, Ark XI. A, Altered volcanic breccia ("blue ground") in cut of Ozark mine,	296
near Murfreesboro, Ark.; B, Ozark mine and washing plant, near	
Murfreesboro, Ark	296
XII. A, Photomicrograph of nearly fresh hypabyssal intrusive peridotite	
("hardebank"), Prairie Creek area of peridotite, near Murfrees- boro, Ark.; B, Photomicrograph of hypabyssal intrusive perido-	
tite ("hardebank") from summit of Middle Hill, in the area of	
peridotite near Prairie Creek, Murfreesboro, Ark	296
XIII. A, Photomicrograph of blue-gray tuff from drill hole No. 3 near	
Arkansas mine, near Murfreesboro, Ark.; B, Photograph of polished surface of volcanic breccia ("blue ground") from	
southern part of Mauney mine, near Murfreesboro, Ark	297
XIV. Maps showing the distribution of the peridotite at the American and	
Kimberlite mines and at Black Lick, Ark XV. A, Diamonds from the Arkansas mine, Pike County, Ark.; B,	304
Trenches on the Kimberlite mine, near Murfreesboro, Ark	320
FIGURE 1. Index map showing the location of the Candelaria district, Nev	2
2. Columnar section of the Tertiary rocks of the Candelaria district,	
Nev	9
4. Diagrammatic sketch showing mode of occurrence of colemanite	24 .
deposit near Callville Wash, Clark County, Nev	36
5. Argentite occupying a similar interstitial position to galena with	
respect to quartz and sphalerite, in bonanza ore from 1,650-foot level of C. & C. mine, Comstock lode, Nev	40
6. Primary argentite and gold (electrum?) in bonanza ore from 1,650-	48
foot level of C. & C. mine, Comstock lode	49
7. Bonanza ore from C. & C. mine, Comstock lode, East vein, between	
2,000 and 2,050 foot levels, carrying abundant primary argentite associated with galena, sphalerite, chalcopyrite, quartz, and gold	50
8. Polybasite, probably primary, intergrown with galena, sphalerite,	00
chalcopyrite, and quartz in ore from C. & C. mine, Comstock lode,	
East vein, 2,200-foot level	51
9. Primary (?) argentite in small quartz-lined vug peripherally re- placed by native silver in shallow ore from Belcher bonanza,	
Comstock lode	53
10. Detail, under higher magnification, of the exceedingly irregular	
replacement boundary between native silver and argentite in the	~ 4
specimen from which figure 9 was drawn 11. Polybasite peripherally replacing primary argentite in shallow ore	54
from the Belcher bonanza, Comstock lode	55
12. Composition diagrams of hot ascending waters from Comstock lode	
and Tonopah, Nev., and from Ouray, Colo	61

chalcopyrite, and galena, Bachelor mine, Ouray, Colo. 71 16. Primary intergrowth of proustite, galena, quartz, and sphalerite, in ore from Yankee Boy mine, between Ouray and Telluride, Colo. 77 17. Irregular intergrowth, apparently primary, of tennantite and proustite, Humboldt mine, between Ouray and Telluride, Colo. 80 18. Irregular intergrowth, apparently primary, of galena, quartz, and proustite, Humboldt mine, between Ouray and Telluride, Colo. 81 19. Primary veinlet of quartz and proustite traversing sphalerite, Humboldt mine, between Ouray and Telluride, Colo. 82 20. Primary intergrowth of quartz, sphalerite, galena, tennantite, proustite, pyrite, and gold, Smuggler-Union mine, Telluride, Colo. 85 21. Late primary veinlet of quartz and proustite traversing sphalerite, Smuggler-Union mine, Telluride, Colo. 86 22. Ore showing primary pearceite intergrown with tetrahedrite, chalcopyrite, and sphalerite, Waters vein, Liberty Bell mine, Telluride, Colo. 90 23. Replacement of galena by argentite, showing an apparently intermediate mineral, Waters vein, Liberty Bell mine, Telluride, Colo. 91 24. Replacement veinlets of stromeyerite in sphalerite, Yankee Girl mine, Red Mountain, Colo. 101 25. Probable replacement remnants of galena and tennantite (?) in secondary stromeyerite, Yankee Girl mine, Red Mountain, Colo. 102 27. Diagram showing what minerals have replaced others in the ores of the Yankee Girl mine, Red Mountain, Colo. 103	15		09
 Primary intergrowth of proustite, galena, quartz, and sphalerite, in ore from Yankee Boy mine, between Ouray and Telluride, Colo	10.		71
 in ore from Yankee Boy mine, between Ouray and Telluride, Colo	16		11
Colo. 77 17. Irregular intergrowth, apparently primary, of tennantite and proustite, Humboldt mine, between Ouray and Telluride, Colo. 80 18. Irregular intergrowth, apparently primary, of galena, quartz, and proustite, Humboldt mine, between Ouray and Telluride, Colo. 81 19. Primary veinlet of quartz and proustite traversing sphalerite, Humboldt mine, between Ouray and Telluride, Colo. 82 20. Primary intergrowth of quartz, sphalerite, galena, tennantite, proustite, pyrite, and gold, Smuggler-Union mine, Telluride, Colo. 85 21. Late primary veinlet of quartz and proustite traversing sphalerite, Smuggler-Union mine, Telluride, Colo. 86 22. Ore showing primary pearceite intergrown with tetrahedrite, chalcopyrite, and sphalerite, Waters vein, Liberty Bell mine, Telluride, Colo. 90 23. Replacement of galena by argentite, showing an apparently intermediate mineral. Waters vein, Liberty Bell mine, Telluride, Colo. 91 24. Replacement veinlets of stromeyerite in sphalerite, Yankee Girl mine, Red Mountain, Colo. 101 25. Probable replacement remnants of galena and tennantite (?) in secondary stromeyerite, Yankee Girl mine, Red Mountain, Colo. 102 27. Diagram showing what minerals have replaced others in the ores of the Yankee Girl mine, Red Mountain, Colo. 103 28. Replacement veins of covellite in enargite, Genessee mine, Red Mountain, Colo. 103 29. Composition diagrams of mine waters from Genesee mine, Red Mountai	10.		
 Irregular intergrowth, apparently primary, of tennantite and prousitie, Humboldt mine, between Ouray and Telluride, Colo. Irregular intergrowth, apparently primary, of galena, quartz, and prousitie, Humboldt mine, between Ouray and Telluride, Colo. Primary veinlet of quartz and proustite traversing sphalerite, Humboldt mine, between Ouray and Telluride, Colo. Primary intergrowth of quartz, sphalerite, galena, tennantite, proustite, pyrite, and gold, Smuggler-Union mine, Telluride, Colo. Itate primary veinlet of quartz and proustite traversing sphalerite, Smuggler-Union mine, Telluride, Colo. Ore showing primary pearceite intergrown with tetrahedrite, chalcopyrite, and sphalerite, Waters vein, Liberty Bell mine, Telluride, Colo. Replacement of galena by argentite, showing an apparently intermediate mineral, Waters vein, Liberty Bell mine, Telluride, Colo. Replacement veinlets of stromeyerite in sphalerite, Yankee Girl mine, Red Mountain, Colo. Probable replacement remnants of galena and tennantite (?) in secondary stromeyerite, Yankee Girl mine, Red Mountain, Colo. Stromeyerite as a pseudomorphic replacement of bournomite (?), Yankee Girl mine, Red Mountain, Colo. Diagram showing what minerals have replaced others in the ores of the Yankee Girl mine, Red Mountain, Colo. Composition diagrams of mine waters from Genesee mine, Red Mountain, Colo. Composition diagrams of waters of similar quality from Ducktown, Tenn., and Butte, Mont. Colo. Primary negatite in sphalerite, Smuggler-Almont mine, Dunton, Colo. Characteristic relations of niccolite, chloanthite, and calcite, Monte Cristo mine, near Wickenburg, Ariz. CONTRIBUTIONS TO ECONOMIC GEOLOGY, 1922.

PART L METALS AND NONMETALS EXCEPT FUELS.

F. L. RANSOME, G. R. MANSFIELD, and E. F. BURCHARD, Geologists in charge.

INTRODUCTION.

The Survey's "Contributions to economic geology" have been published annually since 1902. In 1906 the increase in the number of papers coming under this classification made it necessary to divide the contributions into two parts, one including papers on metals and nonmetals except fuels and the other including papers on mineral fuels. In 1915 the year included in the title was changed from the year in which the field work reported in these papers was done to the year of publication, and in consequence there was no volume entitled "Contributions to economic geology, 1914." The subjoined table gives a summary of these bulletins.

Date in title.	Date of publica- tion.ª	Bulletin No.	Date in title.	Date of publica- tion.ª	Bulletin No.
1902 1903 1904 1905 1906 1907 Part II 1910, Part I Part II Part II Part I Part II	1905 1906 1907 1907 1908 1909 1910 1910 1910 1911 1911 1912 1913 1913	213 225 260 285 315 316 340 341 380 430 431 470 471 531 540 541	1913, Part I. United States Geological Survey "Contributions to economic geology."

a The date given is that of the complete volume; beginning with Bulletin 285, the papers have been issued as advance chapters as soon as they were ready.

As the subtitle indicates, most of the papers in these volumes are of three classes—(1) short papers describing as thoroughly as conditions will permit areas or deposits on which no other report is likely to be prepared; (2) brief notes on mining districts or economic deposits whose examination has been merely incidental to other work; and (3) preliminary reports on economic investigations the results of which are to be published later in more detailed form.

Although these papers set forth mainly the practical results of economic investigations they include brief theoretical discussions and summary statements of conclusions if these appear to require prompt publication.
