

HYPOTHETICAL STAGES OF RETREAT OF THE GLACIAL MARGIN IN WARE AND QUINSIGAMOND QUADRANGLES, MASSACHUSETTS

Numbered lines indicate approximate isochronal positions of temporary halt (or of halt after readvance) of the ice front interrupting the progress of general retreat of the glacial margin from south to north due to final melting of the last of the great ice sheets. The numbers apply to these two quadrangles only. To trace local detail place this sheet over the geologic map (Pl. VI)
