

UNITED STATES DEPARTMENT OF THE INTERIOR
Ray Lyman Wilbur, Secretary
GEOLOGICAL SURVEY
George Otis Smith, Director

Bulletin 811

CONTRIBUTIONS TO ECONOMIC GEOLOGY

(SHORT PAPERS AND PRELIMINARY REPORTS)

1929

PART I.—METALS AND NONMETALS EXCEPT FUELS

G. F. LOUGHLIN, G. R. MANSFIELD, AND E. F. BURCHARD
GEOLOGISTS IN CHARGE

CANCELLED

OHIO STATE
UNIVERSITY

CANCELLED

UNITED STATES
GOVERNMENT PRINTING OFFICE
WASHINGTON : 1930

STATE OF OHIO
IN SENATE,
January 12, 1909.

CONTENTS

[The letters in parentheses preceding the titles are those used to designate the papers for advanced publication]

	Page
(A) The New World or Cooke City mining district, Park County, Mont., by T. S. Lovering.....	1
(B) Recent mining developments in the Creede district, Colo., by E. S. Larsen.....	89
(C) Indiana oolitic limestone; relation of its natural features to its com- mercial grading, by G. F. Loughlin.....	113
(D) The Rawlins, Shirley, and Seminoe iron-ore deposits, Carbon County, Wyo., by T. S. Lovering.....	203
(E) Tertiary volcanic tuffs and sandstones used as building stones in the upper Salmon River Valley, Idaho, by C. H. Behre, jr.....	237
Index.....	249

ILLUSTRATIONS

	Page
PLATE 1. Topographic and geologic map and sections of the New World mining district, Mont. Wyo.....	10
2. Cooke, Mont.....	10
3. View looking north from the top of Sheep Mountain, Mont.....	10
4. A, Corinnes Lake, a steep-walled tarn near Grasshopper Gla- cier, Mont.; B, Scotch Bonnet Mountain, Mont.....	10
5. A, Hayden Falls, Woody Creek, Mont.; B, Coarse-textured Archean basalt porphyry near Cooke, Mont.....	10
6. Correlation diagram of the New World mining district and surrounding region.....	18
7. A, Cross-bedded Flathead quartzite on Republic Creek, Mont.; B, Mottled limestone, the lower massive cliff-forming mem- ber of the Gallatin formation; C, Columnar weathering of limestone in the upper member of the Gallatin formation on Republic Mountain, Mont.....	18
8. A, White crackled limestone member of the Bighorn dolomite, Sheep Creek Basin, Mont.; B, Typical exposure of the dark massive cliff-forming lower part of the Bighorn dolomite, Silver Mountain, Mont.; C, Characteristic exposure of the massive buff rough-surfaced member of the Bighorn dolomite.....	18
9. A, Woody Mountain, Mont.; B, Unconformity between Madi- son limestone and Eocene early acidic breccia, west side of Woody Mountain.....	26
10. A, Poikilitic intergrowth of biotite and labradorite in biotite gabbro; B, Horizontal sheeting developed in the biotite gab- bro forming the top of Scotch Bonnet Mountain, Mont.....	26

	Page
PLATE 11. A, Henderson Mountain looking southwest from Sheep Mountain, Mont.; B, East front of Sheep Mountain.....	34
12. A, Differential metamorphism of Gros Ventre limestone on east side of Henderson Mountain, Mont.; B, View looking west down the valley of Goose Creek, Mont.....	34
13. Ice front of Grasshopper Glacier, Mont.....	42
14. Crown Butte, Mont.....	42
15. A, Silver Mountain from Republic Mountain, Mont.; B, Detail of fault zone shown on left in A.....	42
16. Map showing location of principal mines in New World district and relation of deposits to intrusive rocks.....	50
17. Photomicrographs of ore from Copper King mine, New World district.....	58
18. Mine map of Homestake property, New World district.....	58
19. A, Photomicrograph of pyritic copper ore from Glengarry mine, New World district; B, Concentric and radial textures in ore from Republic mine, New World district.....	66
20. Galena and quartz in sphalerite.....	66
21. Map of Irma mine, New World district.....	82
22. Nodular ore from Irma mine, New World district.....	82
23. A, Detail of sphalerite border shown in Plate 22; B, Relation of a 150-mesh screen to fine-grained lead-zinc ore from New World district.....	82
24. Sulphide nodules from Irma mine, New World district.....	82
25. Field relations of bog copper deposit in New World district....	82
26. Map of Creede district, Colorado, showing principal mines and prospects and mineralized faults and veins.....	102
27. A, Face of abandoned quarry showing cross lamination along a weathered fracture, also spalling due to frost action; B, Part of Perry, Matthews & Buskirk quarry of Indiana Quarries Co., Oolitic, Ind., showing an unevenly broken bed of hard limestone or marble above the channeled wall.....	122
28. Map showing the portion of east-central North America covered by a shallow sea during the part of the Mississippian epoch when the Indiana oolitic limestone and closely related formations were deposited.....	122
29. Map showing extent of the Indiana oolitic limestone in Indiana..	122
30. A, Photomicrograph of very fine-grained buff limestone of "statuary" or AA grade; B, Photomicrograph of medium-grained light-gray limestone from the Shea & Donnelly quarry, near Bedford, Ind.....	138
31. A, Photomicrograph of rather fine-grained dark-gray limestone from the Shea & Donnelly quarry, near Bedford, Ind.; B, Photomicrograph of limestone with oolitic coatings of grains usually well developed.....	138
32. A, Photomicrograph of a coarse, uneven-grained buff limestone; B, Photomicrograph of a medium-grained limestone more thoroughly cemented and therefore somewhat harder than the average.....	138
33. A, Photomicrograph of very hard limestone from top bed in quarry of Bedford Stone & Construction Co., northeast of Bedford, Ind.; B, Photomicrograph of a stylolite or "crow-foot" in stone from the Blue Hole quarry, on the east side of Bedford, Ind.....	138

	Page
PLATE 34. A, View of abandoned quarry at Stonington, Ind., showing undulating stylolites or "crowfeet"; B, Closer view in the abandoned quarry at Stonington, Ind., showing stylolites, cross fractures or "dry seams," and the variation in grain of the cross-bedded stone.....	138
35. A, Part of Perry, Matthews & Buskirk quarry of Indiana Limestone Quarries Co., Oolitic, Ind., showing typical mud seams developed along inclined fissures; B, Part of Dark Hollow quarry (1917) of Consolidated Stone Co., showing inclined mud seam connecting downward with a horizontal mud seam or small cave along bedding.....	138
36. West end of Doyle quarry, Dark Hollow, Ind. (1917), showing mud seams in the Mitchell and Indiana oolitic limestones...	138
37. A, Part of Shea & Donnelly quarry, near Bedford, Ind. (1917), showing mud seams of various dimensions; B, Eroded surface of Indiana oolitic limestone at Peerless quarry, 4 miles north of Bedford, Ind. (1917), exposed after removal of overlying residual soil by hydraulicking.....	139
38. Indiana oolitic limestone before and after treatment with carbonated water.....	154
39. Blocks cracked by frost action on swampy floor of abandoned quarry just north of Bedford, Ind.: A, Stone of inferior quality with comparatively few weak layers opened by frost action; B, Stone of inferior quality with a very "rifty" structure.....	170
40. A, View showing one step in the quarrying of Indiana oolitic limestone; B, Dark Hollow quarry of former Consolidated Stone Co., now Indiana Limestone Co.....	170
41. Texture of different grades of Indiana oolitic limestone.....	186
42. Crushing strength of different grades of Indiana oolitic limestone, arranged to conform with the texture diagram.....	186
43. Crushing strength of different grades of Indiana oolitic limestone, arranged in order of increasing strength of dry cubes crushed on bed.....	186
44. Transverse strength of different grades of Indiana oolitic limestone.....	186
45. Porosity, absorption, and specific gravity of different grades of Indiana oolitic limestone.....	186
46. Map showing the topography and geology of Bradley Peak area, Carbon County, Wyo.....	222
47. Panorama of Bradley Peak from the south.....	222
48. A, Deweese Creek from north spur of Bradley Peak, showing the effect of the northwest-southeast fault in determining the stream course; B, Test pit in hard ore one-third of a mile west of Iron Hill, Wyo.....	222
49. A, Hematite jasper showing dark-colored magnetite almost completely replaced by lighter-colored hematite; B, Magnetite-hematite jasper showing beginning of replacement of dark-colored magnetite by lighter-colored hematite; C, Magnetite band in specimen shown in Plate 50, A.....	222
50. Typical specimens of magnetite jasper and hematite jasper....	223
51. A, Episcopal Church, Salmon, Idaho, built of Tertiary sandstone; B, Old quarry in sandstone bluff 3 miles southwest of Salmon.....	244

	Page
PLATE 52. <i>A</i> , View northward toward Garden Creek, Idaho; <i>B</i> , View across Garden Creek at Challis from point 1 mile south of Challis...	244
53. <i>A</i> , Schoolhouse, Challis, Idaho; <i>B</i> , Corner of McGowan's store, Challis	244
FIGURE 1. Index map showing location of New World mining district, Mont.....	5
2. Columnar section of the New World mining district.....	18
3. Relations of fault systems in New World mining district.....	43
4. Ore from Copper King mine, New World district.....	60
5. Mine map of Glengarry property, New World district.....	66
6. Mine map of Tredennick property, New World district.....	68
7. Map of Republic mine, New World district.....	79
8. Plan of level 3 of the Bachelor and Commodore mines, Creede district, Colorado, showing branches of Amethyst vein and veins in hanging wall.....	95
9. Plan of parts of the Commodore and Bachelor mines, Creede district, Colorado, showing branches of Amethyst vein and veins in hanging wall.....	96
10. Map of the Resurrection tunnel, Creede district, Colorado.....	99
11. Map of the Equity mine, Creede district, Colorado.....	100
12. Stope of the Equity mine, Creede district, Colorado.....	101
13. Map of the Oxford tunnel, Creede district, Colorado.....	102
14. Geologic map of the Monon Hill area, Creede district, Colorado.....	104
15. Composite level map of the Monon, Manitoba, and adjoining mines, Creede district, Colorado.....	106
16. Cross section along the vein of the Monon mine, Creede district, Colorado.....	107
17. Oolites.....	117
18. Cross lamination.....	119
19. Local unconformity.....	120
20. East-west section through Smithville, Ind.....	123
21. An unusual quarry block from the Empire quarry, Sanders district, Indiana.....	130
22. Upper channeled walls in part of Peerless quarry (1917), 4 miles north of Bedford, Ind.....	130
23. Effects of oxidation on the color of the Mitchell limestone.....	139
24. Wall of Shea & Donnelly quarry, west of Bedford, Ind. (1917), showing relation of buff color to fissures.....	143
25. Apparatus used in tower experiment to determine the amount of corrosion on Indiana oolitic limestone by carbonated water.....	156
26. Crushing strength of Indiana oolitic limestone determined at different laboratories.....	176
27. Index map of Wyoming, showing the location of the Rawlins, Seminoe, and Shirley iron-ore deposits.....	204
28. Outline map of Custer and Lemhi Counties, Idaho.....	238
