

SELECTED LIST OF GEOLOGICAL SURVEY PUBLICATIONS ON ALASKA

REPORTS—Continued

SEPARATE MAPS

The Geological Survey for more than a third of a century has been investigating the mineral resources of Alaska, and in the course of this work has published hundreds of maps and reports covering different parts of the Territory. The Geological Survey publications that are available and that may be of most general use are given in the following lists, and the areas covered are indicated on the index map on the face of this sheet. The publications specifically noted are by no means all those on Alaska that have been issued by the Geological Survey. Many others that can no longer be obtained from any official source or that have been superseded by later issues have been omitted from this index circular but are included in the Survey's general list, "Publications of the United States Geological Survey (not including topographic maps)", and in other finding lists and catalogs. Files of Government publications are on deposit in many libraries and educational institutions throughout the United States and Alaska, where they can be consulted. Among the principal Alaska libraries are those at Juneau and Fairbanks.

The publications noted in this index are of two main groups—separate maps, which are for sale by the Geological Survey, Washington, D. C., and reports, which are for sale by the Superintendent of Documents, Government Printing Office, Washington, D. C. On the face of the index map information relating to maps sold separately is shown in red, whereas that relating to other publications is shown in purple. Reports and maps that cover large areas or that are on general subjects are not indicated on the face of the map but are grouped under the subheading "General" in the list of separate maps and the list of reports that follow.

REPORTS

The book publications listed below are sold at the prices indicated by the Superintendent of Documents, Government Printing Office, Washington, D. C., to whom remittances should be made by postal money order, express order, or check; postage stamps will not be accepted.

No discount is allowed on orders for reports, nor can an order for reports in combination with maps be counted in determining the allowable discount on the maps; the charge for maps will be the same as if they were ordered separately.

The three classes of reports of the Geological Survey on Alaska as listed are professional papers, bulletins, and water-supply papers and are grouped below under these series. On the face of the index map the number of a professional paper is preceded by the letter P. All other numbers printed in purple refer to the bulletin series, as the water-supply papers are not indicated on the map though listed below.

Reports covering general subjects or very large areas are listed only under the heading "General" and are not indicated on the index map.

Some of the reports listed were published as separate chapters, which later were assembled into volumes. Separates are designated by publication number and letter indicating the chapter, as 622-E. If the separate chapter is no longer available, but the complete volume in which it was printed can still be obtained, this fact is noted, and the price given is that for the complete volume, which contains several other articles.

Special notice should be taken of the dates of publication given in the following lists, because they are significant in indicating the recency of issue of the reports and maps.

In referring to maps contained in the reports listed below only the principal maps are noted, and the following designations are used: G, geologic map; T, topographic map; GT, geologic map on topographic base; plane, without indication of surface relief.

All separate maps issued by the Geological Survey are sold by the Director, U. S. Geological Survey, and not by the Superintendent of Documents. Maps published only as illustrations in reports and not sold separately are noted in the list of reports.

The prices stated are retail rates for single copies, but on all orders for separate maps amounting to \$5 or more at the retail rate a discount of 40 percent is allowed. Prepayment is required and preferably should be made by money order payable to the Director, U. S. Geological Survey, Washington, D. C.

The scales indicated are stated as the proportion which the distance between two points on the map bears to the distance between the same points on the earth's surface. The scales most commonly used for maps of areas in Alaska are 1:250,000 (1 inch=about 4 miles) and 1:62,500 (1 inch=about 1 mile).

If maps ordered are not in stock the right is reserved to substitute others rather than to return very small sums of money by mail, unless directions to the contrary are given in the order. The Survey cannot supply mounted maps.
