EXPLANATION

- UNCONSOLIDATED ROCKS
 - Moraine, alluvium, and talus
- STRATIFIED ROCKS
 - Graywacke
(Largely graywacke metamorphosed to quartz-biotite schist)
 - Amphibole-epidote schist
(Includes minor quartz-biotite schist and amphibole schist)
 - Amphibole schist
(Includes hornfels and amphibolite formed from amphibole schist, amphibole-epidote schist, and quartz-biotite schist)

- INTRUSIVE ROCKS
 - Quartz diorite
 - Diorite
(Includes some quartz diorite)
 - Gabbro
(Includes some diorite)
 - Norite
(Includes some peridotite and gabbro)
 - Albite-granite gneiss
(Includes some gneiss, diorite, and albite diorite)
 - Amphibolite
(Includes coarse-grained amphibolite, gneissic fine-grained amphibolite, and hornblende-quartz diorite)

- Fault
- Inferred fault
- Dike
- Strike and dip of foliation or bedding
- Outline of areas represented on plates 21 and 22
