EXPLANATION

- Dunlap formation
  - Interbedded sandstone, sandy limestone, and conglomerate
- Cinnabar
  - Fault, showing dip
    - Dashed where approximately located
      - U, upthrown side; D, downthrown side
  - Rake of strata on fault
  - Strike and dip of beds
  - Strike of vertical beds
  - Limit of slope
  - Limit of surface workings
  - Dump
  - Head of winze
  - Ore chute
  - Chevrons point down inclined, 3-foot vertical interval
  - Limit of underground workings
  - Tram line

PLAN OF NORTH ADIT

- Crushed sandy limestone
- Small pods and stringers of crystalline cinnabar
- Stringers of cinnabar
- Inaccessible winze, Cinnabar reported here
- Local shearing in bedding planes
- Slope follows up dip of fault

PLAN OF SOUTH ADIT

Geology by D.A. Phoenix and J.B. Cathcart, October 1942
