

EXPLANATION

— Magnetic vertical intensity profile measured at surface with U.S.G.S. Askania magnetic balance

- - - - - Magnetic total intensity profile measured approximately 300 feet above surface with U.S. G.S.-N.O.L. AN/ASQ-3A airborne magnetometer

— Magnetic total intensity profile measured approximately 600 feet above surface

..... Magnetic total intensity profile measured approximately 900 feet above surface

The arbitrary magnetic datum for the aeromagnetic profiles is slightly different for each profile, and is independent of the magnetic datum used for the ground survey
