INDEX TO GEOPHYSICAL ABSTRACTS 168-171, 1957

AUTHOR INDEX

A

Abad, L. F. See Alcaraz, Arturo.

Abramson, N. H. Theoretical investigations of the four-electrode crevasse detector. 171-122

Adachi, Ryutaro. Fundamental relations on the seismic prospecting. 169-287

Adachi, Ryutaro. On a proof of fundamental formula concerning refraction method of geophysical prospecting and some remarks. 169-288

Ádám, A. A new telluric measuring instrument. 171-50

Adams, J. A. S. See Rogers, J. J. W.

Adcock, C. M. See Warman, H. R.

Afanas'yev, G. D. On the Cenozoic igneous activity of the Caucasus and some results of absolute age determinations on Caucasus rocks by the potassium-argon method. 171-45

Aggarwala, B. D., and Saibel, Edward. A hypothesis of formation of mountains and continents. 169-146

Agich, F. J. Exploration for reefs by geophysical methods. 168-113

Agocs, W. B., and Hartman, R. R. Airborne magnetometer profile from Olympia, Wash., to Laramie, Wyo. 169-242

Ahrens, L. H. Radioactive methods for determining geological age. 168-1

See also Russell, R. D.

Akamatu, Kel. Tomoda's method for calculating the correlation coefficients as applied to microtremor analysis. 171-298

Thermal process near the earth's crust. 171-69

See also Tomoda, Yoshio.

Akimoto, Syun-iti. Magnetic properties of ferromagnetic oxide minerals as a basis of rock-magnetism. 171-255

Akimoto, Syun-iti, Nagata, Takesi, and Katsura, T. The TiFeO3-TiFeO5 solid solution series. 168-233

See also Aramaki, Shigeo, and Nagata, Takesi.

Akkopyan, Ts. G. The influence of local topography on the Zs field in connection with the kind of magnetization of the effusive rocks. 168-246

Aksenovich, G. I., Gal'perin, E. I., and Zayonchkovskiy, M. A. Special features of the equipment for deep seismic sounding and the results of its use. 169-279

Alberding, H. Application of principles of wrench-fault tectonics of Moody and Hill to northern South America. 170-159

Albertinoll, P. See LeFèvre, Colette.

Albrecht, O. On the gravity measurements in Baden-Württemberg. 169-169

See also Macdonald, G. A.

Aldrich, H., Jr. Frost penetration below highway and airfield pavements. 169-199

Aldrich, L. T., Wetherill, G. W., and Davis, G. L. Occurrence of 1,350 million-year-old granitic rocks in western United States. 169-24

See also Tilton, G. R., and Wetherill, G. W.

Aleksyev, A. S., and Tsepelev, N. V. The intensity of reflected waves in the stratified heterogeneous elastic medium. 168-61

381
Alexander, N. S., and Onwumechili, C. A. Variation of the horizontal force near the magnetic equator. 170-232

Alexeyev, F. A. See Flarov, G. N.

Al'pin, L. M. Asymmetric (angular) electrical surveying. 168-377

Alvir, A. D. A cluster of little known Philippine volcanoes. 168-383

Amadei, Gaetano. See Tribaldo, Giuseppe.

Ambroggi, R., and de Gélos, E. Effect of the Orléansville earthquake on the ground water layer of the Souss. 171-52

Anderson, E. C. See Arnold, J. R.

Andreasen, P. See Espersen, J.

Andreyev, B. A. See Abelsky, M. E.

Andreyev, S. S. Investigations of the deep structure of the crust of the earth, using the converted wave PS, recorded during earthquakes. 169-68

Seismic characteristics of the Russian Platform. 169-38

Andreyev, S. S., and Shebalin, N. V. On the use of short-period seismographs for distinguishing converted waves on the records of distant earthquakes. 171-77

Angenheister, Gustav. On the magnetization of the basalts of the Vogelsberg. 170-251

The present state of paleomagnetic research. 170-265

Antevs, Ernst. Geological tests of the varve and radiocarbon chronologies. 169-6

Aoki, Harumi. See Iida, Kumizi.

Aramaki, Shigeo, and Akimoto, Syun-iti. Temperature estimation of pyroclastic deposits by natural remanent magnetism. 171-256

Arans, Francesco, and Uras, Ivo. Some results of an analysis of the natural radioactivity of the coals from Sulcis. 170-265

Armstrong, D. Dating of some minor intrusions of Ayrshire. 171-271

Arnold, J. R., and Anderson, E. C. The distribution of carbon-14 in nature. 170-220

Arnold, Kurt. An expansion series for tangents to the plumb line, determined from surface values. 170-166

Arnov, L. Ye. See Enzenshteyn, B. S.

Asada, Akie. See Noritomi, Kazuo.

Asami, Elizo. A palaeomagnetic consideration on the remanent magnetism of the basalt lavas at Kawajiri-misaki, Japan. 171-270

Aswathanrayana, U. See Mahadevan, C., and Sastry, A. V. R.

Atkins, A. R. See Gane, P. G.

Ault, W. U. See Kulp, J. L.

Aurand, K., Jacob, W., and Schraub, A. Investigations on the radon decay products in the Gasten thermal water. 169-263

Avtov, P. Ya., and Dal'yan, I. B. Experiences in rotary drilling of wells in prospecting for water, using geophysical well logging methods. 169-115

B

Saskatchewan: Canada Geol. Survey 171–295
Airborne magnetic profile, Washington to Wyoming: Agocs 169–242
Airborne magnetic surveys, corrections for magnetic disturbances: Pudovkin 168–250
recent developments: Tarbox 168–247
Airborne radioactivity survey, Australia, Eyre Peninsula: Seedsman 168–274
Interpretation: Kellogg 168–275
Alaska, earthquakes, 1954: Murphy 168–16
earthquakes, direction of faulting: Hodgson 168–31
Alaska—Continued
Taku glacier, regimen and movement:
Nielson 168–138
Algeria, age, strandline at Tipasa: Stearns 170–8
earthquake, Oran: Ambroggi 171–52
electrical surveys, Hodna Basin: Migaux 168–93
gravity survey, eastern: Lagrula 169–167
seismic surveys, Bay of Algiers: Muraour 169–307
Alps, crustal shortening in: Hospers 168–200
electrical resistivity surveys: Gassmann 169–104
gravity anomalies: Hospers 168–200
radioactivity of air, northern: Reiter 171–307
size of root: Hospers 168–200
Anatolian rocks, radioactivity of, Black Forest, Germany: Hsümann 169–287
Andaman Islands, geomagnetic importance:
Malurkar 168–212
Andesite, electrical conductivity, variation with temperature: Noritomi 168–121
radioactivity, Sulec basin, Sardinia: Aramu 170–265
thermal conductivity: Yoshisawa 169–191
Anhydrite, deformation: Handin 170–295
elastic constants: Hamelster 170–87
Antarctica, ice thickness, Queen Maud Land:
Robin 169–151
magnetic observations: Slautclajtis 169–221
Appalachian geosyncline, development in Maritime area, Canada: Cameron 171–162
Argon, activation energy, isolated from micas: Gerling 168–143
atmosphere, amount of radiogenic: Polanski 170–217
origin: Nicolet 169–205; Polanski 170–217
isotopes, meteorites: Gentner 168–201;
Reynolds 171–8
retentivity in minerals: Carr 170–27, 171–37; Gentner 171–41; Gerling 171–43;
Reynolds 171–39; Stevens 169–23;
Wasserburg 171–40;
Wetherill 171–38
specific gamma activity: Wetherill 171–38
Arizona, age, granitic rocks: Aldrich 169–24
magnetization, Triassic rocks: Klintzinger 170–256
Meteorite Crater, origin: Namba 169–329
sedimentary rocks, Monument Valley: Pakiser 168–296
Asia, central, crustal structure Tien Shan:
Gamburtsev 168–197; Krestnikov 171–63
seismicity, Tien Shan: Krestnikov 171–53
SUBJECT INDEX

A

Asia—Continued

sP phase in records of earthquakes: Vvedenskaya 168–47
gravity observations, Karakoram region: Marussi 169–170
Assam, earthquake of August 15, 1950, damage: Poddar 170–40
Atlantic Ocean, bottom topography: Hill 170–213
crustal structure: Hill 170–213; Shurbet 168–155
gravity observations: Shurbet 168–155, 169–171; Worzel 170–188
magnetic secular variation, northern part: Mendonca Dias 168–216
magnetic surveys: Hill 170–213
seismic surveys: Hill 170–213; Willmore 171–333
submarine relief, caused by subaerial erosion: Malaise 170–298
uranium in waters: Rona 168–264
Atmosphere, argon content: Nicolet 169–205; Polanski 170–217
beryllium-10 in: Peters 168–202
carbon isotopes: Rafter 171–215
helium isotopes: Damon 169–207
nitrogen: Parwel 169–208
oxygen isotopes: Dole 171–226
radioactivity, northern Alps: Reiter 171–307
radon content: Behounek 168–266
Australia, age, Broken Hill leads; Russell 170–21
age, glacial varves, Tasmania: Gill 168–8
old shorelines and terraces, Victoria: Comm. Inv. and Correlation Eu-
static Changes of Sea Levels 168–9
Quaternary sea levels: Gill 170–9
strandline changes: Gill 171–21
airborne radioactive survey, Eyre Peninsula: Seedsman 169–274
crustal structure: Bullen 168–17; Doyle 170–211
earthquake, March 26, 1939: Bullen 168–17
March 1, 1954: Bolt 170–38
gravity measurements: Cook 169–157
magnetic anomalies, Kurranjong-Bilpin district: Crook 171–267
magnetic surveys, Kadina-Wallaroo areas: Pegum 169–248
Yorke Peninsula: Seedsman 171–279
radioactivity surveys, for copper: Woodmansee 170–278
Northern Territory: Daly 170–277
Yorke Peninsula: Woodmansee 170–278
seismic recordings of atomic explosions: Doyle 170–211
seismic survey, Victoria: Garrett 171–332
seismic wave velocities: Doyle 170–211
Austria, Bad Gastein thermal waters, radioactivity: Aurand 168–203
Vienna-Kolnitz observatory: Toporzer 168–224

B

Azerbaijan S. S. R., earthquakes, Shemakha region: Kuznetsov 169–39

Baffin Island, glaciological studies, Highway glacier: Ward 168–139.

Bahama Islands, gravity observations: Shurbet 168–155
Barium, in stone meteorites: Hamaguchi 171–9
Baltic Sea, uranium content of waters and bottom sediments: Koczy 168–262
Baltic Shield, age: Gerling 170–32
Basalt, elastic wave velocity, effect of pressure: Volarovich 170–86
magnetization, Coiron plateau, France: Boer 171–272
Iceland: Elinarson 180–253
Vogelberg, Germany: Angen Helster 170–251
Belgian Congo, age, Katanga yttrocrasite: Ledent 169–21
age, Kalongwe and Luishya pitchblendes: Ledent 169–20 geophysical explo-
ration: Evrard 169–133
Belorussian S. S. R., geophysical exploration: Ryng 171–139
Beryllium-10, in atmosphere and on earth: Peters 168–202
Beta counters, for field use: Katayama 168–272
Blottite, artificial coloration by alpha-par-
ticles: Deutsch 171–35
suitability for argon age determinations: Gerling 171–43
Bismuth, branching ratio of 212: Senftle 168–258, 171–303
Boron, neutron logging for: Ivanova 168–267
Brazil, geophysical exploration 1955, by Petrobras: Link 169–134

C

Calcium, in meteorites: Herzog 171–47
California, age, Sierra Nevada batholith: Reynolds 171–39
Sutter Buttes volcanic rocks: Curtis 168–11

Catalina Island, earthquakes: Kuznetsov 169–39
gravity observations, Karakoram region: Marussi 169–170
Assam, earthquake of August 15, 1950, damage: Poddar 170–40
Atlantic Ocean, bottom topography: Hill 170–213
crustal structure: Hill 170–213; Shurbet 168–155
gravity observations: Shurbet 168–155, 169–171; Worzel 170–188
magnetic secular variation, northern part: Mendonca Dias 168–216
magnetic surveys: Hill 170–213
seismic surveys: Hill 170–213; Willmore 171–333
submarine relief, caused by subaerial erosion: Malaise 170–298
uranium in waters: Rona 168–264
Atmosphere, argon content: Nicolet 169–205; Polanski 170–217
beryllium-10 in: Peters 168–202
carbon isotopes: Rafter 171–215
helium isotopes: Damon 169–207
nitrogen: Parwel 169–208
oxygen isotopes: Dole 171–226
radioactivity, northern Alps: Reiter 171–307
radon content: Behounek 168–266
Australia, age, Broken Hill leads; Russell 170–21
age, glacial varves, Tasmania: Gill 168–8
old shorelines and terraces, Victoria: Comm. Inv. and Correlation Eu-
static Changes of Sea Levels 168–9
Quaternary sea levels: Gill 170–9
strandline changes: Gill 171–21
airborne radioactive survey, Eyre Peninsula: Seedsman 169–274
crustal structure: Bullen 168–17; Doyle 170–211
earthquake, March 26, 1939: Bullen 168–17
March 1, 1954: Bolt 170–38
gravity measurements: Cook 169–157
magnetic anomalies, Kurranjong-Bilpin district: Crook 171–267
magnetic surveys, Kadina-Wallaroo areas: Pegum 169–248

radioactivity surveys, for copper: Woodmansee 170–278
Northern Territory: Daly 170–277
Yorke Peninsula: Woodmansee 170–278
seismic recordings of atomic explosions: Doyle 170–211
seismic survey, Victoria: Garrett 171–332
seismic wave velocities: Doyle 170–211
Austria, Bad Gastein thermal waters, radioactivity: Aurand 168–203
Vienna-Kolnitz observatory: Toporzer 168–224

Azerbaijan S. S. R., earthquakes, Shemakha region: Kuznetsov 169–39

Baffin Island, glaciological studies, Highway glacier: Ward 168–139.

Bahama Islands, gravity observations: Shurbet 168–155
Barium, in stone meteorites: Hamaguchi 171–9
Baltic Sea, uranium content of waters and bottom sediments: Koczy 168–262
Baltic Shield, age: Gerling 170–32
Basalt, elastic wave velocity, effect of pressure: Volarovich 170–86
magnetization, Coiron plateau, France: Boer 171–272
Iceland: Elinarson 180–253
Vogelberg, Germany: Angen Helster 170–251
Belgian Congo, age, Katanga yttrocrasite: Ledent 169–21
age, Kalongwe and Luishya pitchblendes: Ledent 169–20 geophysical explo-
ration: Evrard 169–133
Belorussian S. S. R., geophysical exploration: Ryng 171–139
Beryllium-10, in atmosphere and on earth: Peters 168–202
Beta counters, for field use: Katayama 168–272
Blottite, artificial coloration by alpha-par-
ticles: Deutsch 171–35
suitability for argon age determinations: Gerling 171–43
Bismuth, branching ratio of 212: Senftle 168–258, 171–303
Boron, neutron logging for: Ivanova 168–267
Brazil, geophysical exploration 1955, by Petrobras: Link 169–134

Calcium, in meteorites: Herzog 171–47
California, age, Sierra Nevada batholith: Reynolds 171–39
Sutter Buttes volcanic rocks: Curtis 168–11
earthquake, Dec. 14, 1850: Gianella 168–49
Dec. 21, 1954, engineering study: Steinbrugge 169–58
Gravity anomaly, Great Valley: Ivanhoe 168–155
gravity map, Los Angeles basin: McCulloh 170–197; Rosenbach 170–172
heat flow, Grass Valley: Clark 169–185
isostatic effect of Sierra Nevada: Ivanhoe 168–156
radioactivity surveys, oil fields: Kellogg 170–275
INDEX TO GEOPHYSICAL ABSTRACTS 168–171, 1957

California—Continued
San Andreas fault, northward continuation: Shepard 170–158
seismicity: Byerly 169–33

age, lead mineralization, Thunder Bay: Farquhar 170–22
Paleozoic igneous rocks: Fairbairn 168–13
pitchblende, Goldflelds: Russell 169–15
Wisconsin glaciation: Dreimanis 170–17
airborne gravity surveys: Lundberg 169–153
earthquake, May 15, 1909: Kupsch 171–54
earthquakes, British Columbia: Hodgson 168–31
geophysical exploration for nickel: Lantersbach 168–121
gravity and isostasy: Innes 169–172
gravity surveys: Dyer 168–159; Miller 168–157; Saxov 168–158
heat flow in permafrost, Northwest Territories: Misener 171–196
magnetic anomalies, Lac la Rouge area: Pearson 171–280
magnetic field of earth, irregular activity: Whitham 170–258
tectonics, Maritime area: Cameron 171–162
temperature measurements, Resolute Bay: Cook 169–189
Carbon, isotopes, atmosphere: Craig 170–218; Patterson 170–6; Rafter 171–215
isotopes, distribution, biosphere: Craig 170–218
hard water: Münnich 168–204
metamorphic rocks, northern Sweden: Gavelin 171–216
modern material: Revelle 170–219
ocean waters: Craig 170–218; Rafter 171–215
Swedish Precambrian rocks: Landegren 170–221

Carbon dioxide, exchange time between atmosphere and sea: Arnold 170–220; Brannon 171–217; Craig 170–218; Rafter 171–215; Revelle 170–219
Caribbean Sea, age of core from: Volchok 169–12
crystal structure: Ewing 170–212; Of fcer 169–198
wrench-fault tectonics: Alberding 170–159
Central America, volcanic activity 1955–56: Roy 170–505
Cerium-142, natural radioactivity: Riezler 171–301

Chile, earthquake, Dec. 7, 1953: Ingram 170–51
China, earthquake: Shepard 170–158
Chlorine-36, for geological dating: Schaeffer 171–218
pitchblende: Kuroda 169–206
rocks: Schaeffer 171–218
Chromium, gravity surveys for: Davis 171–191
Coal, elastic waves: Volarovich 169–93
groundwater exploration for, Peel basin, Netherlands: Riel 169–140
nitrogen isotopes: Parwel 169–208
radioactivity, effect of intrusions: Shibata 168–261

Corsica, submarine topography off west coast: Bourcart 170–300
Crust, anorthositic layer: Michot 168–119
buckling: de Sitter 170–152
deformation due to earth tides: Jobert 169–184
differentiation during geologic time: Fischer 171–205
Crust—Continued

discontinuity at base, nature: Robertson 168–188
dynamics: Hiesemann 168–131; Žatopek 171–60
electrical conductivity, Japan: Rikitake 168–221
energy sources: Lebedev 168–173
forces: Vening Meinesz 171–157
insular type: Biby 169–201
nature: Haughton 171–146
origin: Wilson 168–132
plastic deformation in: Paterson 168–304
reflection from base, northeastern Hungary: Gálf 168–195
reflections from discontinuities: Dohr 171–210
rheological behavior: Scheldegger 170–149
rigidity, Shetland Islands: Tomashek 171–90
sical discontinuity: Michot 168–189
slow movements preceding earthquakes: Ostrvistky 168–37
structure, anorthositization in: Michot 168–189
Atlantic Ocean: Shurbet 168–155
Australia: Bullen 168–17
Bavarian Alps: Reich 171–211
California: Press 168–192; Tsuboi 168–191
Caribbean region: Ewing 170–212; Officer 169–198
Caribbean region: Ewing 170–212; Officer 169–198
effect on tidal deformation: Jobert 171–153
Eniwetok: Raitt 170–210
France, from Rochilles explosions: Bernard 168–193
from PS waves: Andreyev, 169–68
Germany Dohr 170–209, 171–210; Mühlen 168–194; Reich 171–211; Wolff 171–141
structure, Greenland: Holtzscheler 168–141
New Zealand: Eiby 169–201, 203
seismological data: Jung 169–190
Turkmen S. S. E.: Kosminskaya 171–209
West Indies: Shurbet 168–170
thickness, Alps: Gutenberg 171–208
Appalachian Mountains: Gutenberg 171–208
Atlantic: Gutenberg 171–208
Australia: Doyle 170–211
California: Gutenberg 171–208; Press 169–199
Canadian shield: Gutenberg 171–208
Europe: Gutenberg 171–208
mountain roots: Gutenberg 171–208
Transvaal: Gane 168–195
Crustal movements, causes, Hungary: Eggyed 171–160
observations, Kyūto: Takada 171–163
Cuba, gravity surveys, Camaguey Province: Davis 171–101
Oriente Province: Shurbet 168–160

Curium-247, half-life: Diamond 168–256
possible existence in nature: Diamond 168–256
Czechoslovakia, earth currents from electric trains: Pěcova 168–15
electrical surveys, Danube River: Kráľovič 171–126
geophysical exploration for nickel: Lauterbach 168–121
isostatic uplift, Carpathian mountains: Vyskocil 169–147
magnetic maps, 1950.0: Bouška 171–240
tectonic movements in: Vyskocil 169–147

D

Deep-sea cores, temperature and age analysis: Emiliani 168–205
Deflection of vertical, accuracy of gravimetrically computed: Kaula 170–169
Hungary, relation to gravity anomalies: Renner 171–151
Deformation, active, relation to denudation and other phenomena: Wegmann 170–157
by combined torsion and compression: Volarovich 169–312
by tides, effect of crustal structure: Jobert 171–158
crust, nature: de Sitter 170–152
experimental, effect of gamma radiation: Handin 170–297
floating ice shelves: Weertman 170–162
plastic, Liiders' bands: Paterson 168–304
rocks, experiments: Baksy 168–306; Handin 170–295
under low stresses: Nishihara 170–296
Denmark, earthquake of June 4, 1954: Jensen 171–55
electrical resistivity surveys: Sorgenfrei 170–106
gravity surveys, northern Jutland: Saxov 170–189
Density, determination by radioactivity logging: Ochkur 170–271
determination underground by gravimeter and torsion balance: Riche 170–177
mantle: Bullen 168–187
methods of determination: Whetton 169–165
rocks, laboratory measurements: Hamelster 170–69
soils, determination by radioactivity: Wendt 171–319
variation in dolerite sill: Jaeger 171–252
Deuterium, inland waters, Hungary: Cziki 170–223
thermal waters: Craig 171–228
Dolomite, elastic wave velocity, effect of pressure: Volarovich 170–86
experimental deformation: Handin 170–295
strength: Handin 170–295
INDEX TO GEOPHYSICAL ABSTRACTS 168–171, 1957

E

Earth, age: Houtermans 169–3; Keller 171–2; Patterson 171–5; Picciotto 171–3
axis, variations: Schwedler 170–67
evolution: Kober 169–192
ellipticity of equator: Wolf 169–144
goethothermal behavior: Goguel 171–193
internal constitution: See Internal constitution
origin: Reber 171–200
rotation: Jobert 168–59; Stoyko 168–56
spheroidal oscillations: Jobert 169–92
thermal history: Lynbimova 168–174
Earth currents, application to prospecting: Kantas 171–124; Kunetz 171–123
effect of narrow anticlines: Utzman 170–35
Japan, Khalil: Namba 169–27
measuring apparatus, Sopron, Hungary: Adam 171–50
simultaneous measurements in China and Hungary: Kantas 171–51
storms: Gonzalez-Miranda 169–25
surveys, Sicily: Beneo 170–114
statistical interpretation: Kunetz 170–90
Earth tides, amplitude ratio, Budapest: Lassovsky 168–55
corrections to gravity measurements: Watermann 169–166
deformation coefficient: Lassovsky 171–91; Tomaschek 171–90
displacement of ground: Ichinohe 169–75
effect of water level, Lake Tanganyika: Melchor 169–57
instruments, München: Ellenberger 169–74
observations, Japan: Ichinohe 169–75; Nishimura 170–66
observations, Shetland Islands: Tomaschek 171–90
problems in research: Tomaschek 169–73, 171–89
Earthquake engineering, world conference on: World Conference Earthquake Engineering Proc. 169–54
Earthquakes—Continued
California, Dec. 14, 1950: Glanella 170–49

causes: Aki 171–60; Hiller 171–68
Central Asia, April 15–20, 1955: Rozova 169–49
Tien Shan area: Krestinkov 171–53
Chile, Dec. 7, 1953: Ingram 170–51
crustal strain accompanying: Oszawa 171–73
crustal strain before, observation: Sassa 171–84
deep focus, mechanism: Honda 169–69
depth determination: Kondorskaya 168–46; Vedenskaya 168–47; Wildelek 170–60; Benck 169–62
Denmark, June 4, 1954: Jensen 171–55
dynamic fluid pressures developed during: Housner 168–26
effects on structures: Borges 169–61; Hatanaka 171–71; Housner 170–57; Kobori 171–72; Medvedev 168–23, 24, 25; Tanabashi 171–70
energy, calculation: Bath 169–65; Dibble 169–57
classification by: Bune 169–27
epicenter location: Coulomb 171–75; Sul–tanova 171–76; Wieldelek 170–60
Finland, 1728: Panaenko 171–56
frequency: Tomoda 171–80
Georgian S. S. R., May 7–8, 1940: Byus 169–41
Greece, 1950–53: Galanopoulos 171–57
causes: Galanopoulos 171–58; Trikka–inos 170–39
Hawaiian Islands; 1954: Murphy 168–16
Hungary, Feb. 20, 1953: Kurnik 168–18
Jan. 12, 1956: Bizetscany 171–61
Carpathian region: Zatopek 171–60
research: Simon 171–59
India, June 26, 1941, Andaman Islands: Jhingran 168–20
Indonesia, Nov. 2, 1954: Ritsema 170–41
intensity: Hersberger 168–29; Puchkov 168–28; Roberts 169–30
Israel: Shalem 169–35
Italy, Dec. 25, 1952, Tyrrhenian Basin: Girlanda 170–42
Earthquakes—Continued

Japan, Dec. 7, 1944, damage to buildings:
Ooba 171–74

ground movements before: Hosoyama 171–83; Ozawa 171–73; Sassa 169–70

stresses producing: Honda 170–231

uplift of land: Sugimura 169–204

Kamchatka, 1951: Gorshkov 169–48

Nov. 4, 1952: Hodgson 168–31

Kirgiz S. S. R., 1820 to date: Rozova 171–62

1929-54: Rozova 169–42

April 15-20, 1955: Rozova 169–49

Naryn River valley: Rozova 169–43

Lebanon, March 16, 1956: L'Observatoire de Ksara 169–36

Macedonia: Mihailović 169–34

magnitude, equation for Japan: Tsuboi 171–81

equation for Praha: Vanek 171–79

proposed new term: Roberts 168–30

relation to energy: Koning 169–50

relation to orogenesis: Koning 169–50

relation to volcanic activity: Bruet 171–67

response spectrum techniques in studying: Hudson 169–57

slow movements of crust preceding: Ostrovskiy 168–37

Spain, relation to structure: Rey Pastor 170–46

Ojos, 1950: Rey Pastor 170–46

stress distribution: Ritsema 168–33

strong-motion seismographs for: Cloud 169–56; Takahashi 169–60

Earthquakes—Continued

Gissar Valley: Gubin 168–39; Vasil'yeva 169–49

Khalt zone: Pasechnik 169–46

Tennessee, 1901–23: Moneymaker 169–32

tilting motion accompanying: Hosoyama 171–53

Turkey, Nov. 10, 1935: Stark 161–64

Turkmen S. S. R., Ashkhabad region: Medvedev 168–38; Rustanovich 169–44

U. S.: 1954: Murphy 168–16

U. S. R.: Andreyev 169–38; Gorshkov 170–47; Kondorskaya 171–78

western United States: Byerly 169–33

world, 1954: Murphy 168–16

East Germany, petroleum exploration: Bjalow 170–138

Egypt, age of feldspar from: Schurmann 171–49

Elastic constants, anhydrite: Hameister 170–87

conglomerate: Hamelster 170–87

gypsum: Hamelster 170–87

limestone: Hamelster 170–87

sandstone: Hamelster 170–87

shale: Hamelster 170–87

Elastic properties, correlation with electrical: Polak 169–122

Paleozoic rocks, Tatar A. S. S. R.: Kri

nari 171–112

Elastic waves, absorption: Balakri

na 168–74; Rzinichenko 171–98

amplitude, near source of shock: Vančk 168–62

attenuation in rocks: Krishnamurthi 169–90

compressional, velocities in rocks under compression: Tocher 168–71

reflection and transmission coefficients at plane boundary: Hardtwig 171–109

diffraction, experimental study: Mogi 168–72

dissipation by curved boundaries: Skurli

din 168–50

dynamic peculiarities in vertically strati

fied media: Berson 171–107

dynamic traveltime curves: Fedotov 171–106

energy, visco-elastic medium: Ida 170–76

energy flux, anisotropic media: Synge 169–81

generation, by diocation: Keyll-Borok 170–72

by impulsive displacements in cavity: Verma 171–82

from line sources: Honda 171–73; Takeuchi 170–75, 171–96

Love, nomograph for determination of phase velocity: Sato 171–100

M , dispersion in medium with double sur

face layers: Nagamune 169–80
Elastic waves—Continued
model experiments: Carabelli 171-104;
Ivakin 168-63; Manukhov 168-67;
Press 171-101
near source, small-scale field investiga-
tion: Mason 169-87
propagation, effect of thin layer: Manuk-
hov 168-67
from different types of exciting forces:
Ogurtsov 168-60
in heterogeneous medium: Robinson
171-93
in layered media: Carabelli 171-104;
Ewing 170-71; Manukhov 168-67;
Petrashe 168-65, 66
in surface layer: Takeuchi 171-94
in vertically stratified media: Berzon
171-107
on elastic plates: Yamaguchi 169-83
on water-solid interface: Sato 171-97
over surface of elastic solid: Takeuchi
171-96
pressure-generated in cavity: Chakra-
borty 169-79
Rayleigh, attenuation with depth: Stone-
ley 169-85
propagation in internal layer: Pech 171-
99
reflected, angles greater than critical:
Xepin’yeva 171-108
curvilinear boundary: Alekseyev 168-
271
solid-surface interface: Nafe 170-80
surface amplitude: Knopoff 171-102
shape, effect of reflection and refraction:
Chekin 170-81
Stoneley, velocity at fluid-solid interface:
Strick 168-69
Stoneley type, range of existence in inter-
val stratum: Chopra 169-84
surface definition: Sat6 169-82
from external tangential force: Kobay-
ashi 171-95
transmission at solid-solid interface:
Nafe 170-80
two-dimensional, generation: Honda 170-
74
ultrasonic, propagation: Balakrishna
168-74; Tsareva 168-75
velocity, anisotropy: Tocher 168-71
calculated from specific heat: Noritomi
169-183
coal: Volarovich 169-98
effect of compression: Sollogub 169-88;
Tocher 168-71
effect of moisture content: Tsareva 168-
75
effect of pressure: Tsareva 168-75;
Volarovich 169-93, 170-96
factors affecting: Sollogub 169-98
in ocean sediments: Laughton 169-89
mafic igneous rocks: Hughes 168-73
relation to grain size: Balakrishna 168-
74
sand: Tsareva 168-75
Elastic waves—Continued
velocity—Continued
variation with pressure: Hughes 168-
73
with temperature: Hughes 168-73
elasticity, calculation of velocity from:
Nishitake 169-195
geological applications: Jaeger 169-77
rocks, effect of temperature: Volarovich
170-68
solution of problems by Mellin contour
integrals: Petrashev 168-64
strength and deformation: Jaeger 169-77
Electrical conductivity, anisotropy: Noritomi
169-121
drill cores, electromagnetic determination:
Malmqvist 170-259
effect of temperature: Noritomi 169-121
granite: Noritomi 169-121
Stevens method of determining: Belluigi
169-98
Electric current distribution, in earth’s in-
terior, and geomagnetic field: Bartels 171-
259
Electrical exploration, asymmetric electrode
configurations: Al’pin 168-77
automatic measuring equipment: Karande-
yev 168-100
bilateral equatorial electrode arrange-
ments: Berdichevsky 168-78
Buchheim method: Belluigi 170-94
by industrial alternating currents: Yoffe
179-98
detection of crevasses, theoretical inves-
tigations: Abramson 171-122
determination of capacity of bore hole:
Gorelik 169-106
determination of depth to saturated aquifer:
Friesche 170-129
determination of underground stream flow:
Gorelik 171-121
derivation from single pole method: Bel-
uigi 168-80
electrode configurations: Al’pin 168-77;
Belluigi 168-80
equivalence: Belluigi 168-79
for controlling cement injection: Fritsch
168-100
for ground water, U. S. S. R.: Demidovich
169-105
for ore deposits: Bukhnikashvill 168-82,
169-99
for petroleum: Migaux 168-93
for pyrite deposits: Ovchininokov 170-92
ice, apparatus for: Lefevre 170-124
importance of geologic factors in inter-
pretation: Hackett 169-107
induced polarization, for ground water:
Vacquier 170-101
induced polarization, model experiments:
Rysa 170-93
in geologic mapping, Altai Mountains:
Veshev 170-170
in presence of screening layer: Ovchini-
nokov 170-92
interpretation by conformal mapping:
Kunets 168-81
Electrical exploration—Continued

inverse problem, analogy to aerodynamics: Chetayev 170-102
method of calculation: Bellugi 160-97
Longcolog: Lee 160-108
methods, U.S.S.R.: Hiersemann 170-119
model experiments: Cagniard 171-120
resistivity, depth calculations: Kataoka 170-103
Sandexsurvey: Lee 160-108
self-potential, effect of topography: Shibato 168-95
in closed polygons: Bukhnikashvili 169-96
in regions of complex relief: Chetayev 171-117
interpretation: Chetayev 171-117
textbook: Semenov 169-94
simultaneous resistivity and self-potential: Shapiro 169-101
telluric, effect of narrow anticlines: Utzmann 170-35
textbook of: Yaknbovskiy 170-89
Electrical field, alternating current in Infinite cable: Barsukov 170-96
natural, over sulfide ores: Urazayev 168-83
oblate ellipsoid: Kolbenheyer 171-116
point source, effect of cylinder on: Dyakonov 169-95
point source on surface with hemispheroidal indentations: Khalfin 168-76
polarized sphere near contact: Novozhilova 171-115
response to step function dipole current source: Bhattacharyya 171-157
spherical body: Krajcovic 171-114
vertical disturbing layer: Petrucci 170-91
Electrical logging, choice of program: Martin 170-126
combined induction and laterolog technique: Martin 170-126
comparison with core, German coal field: Schaub 168-107
correlation with radioactivity logs: Burge 170-127
disturbances caused by magnetization: Pigrov 169-119
effect of chemical composition of electrolytes on $\sigma P$: Gondouin 171-133
exploration or development programs including: Chombart 170-125
for aquifers, Illinois: Pryor 169-120
formation evaluation by: Pirson 169-112
galvanic couple in: Meyer 171-135
guard, theory: de Witte 168-101
guard electrode response curves: de Witte 168-101
heterogeneous carbonate reservoirs: Winn 171-134
in gas drilled holes: Hiller 168-104
in mining problems: Rossof 168-105
in search for water: Roseff 168-105
induction: Dumanoir 171-132

Electrical logging—Continued

Indiana, Sullivan County: Nelson 171-136
interpretation: Blum 168-102; Chombart 169-110, 170-125; Dumanoir 171-132; Eydaman 168-103; Martin 169-111; Winn 170-273
Japanese coal fields: Nakabayashi 169-116
Kazakh S. S. R., for water: Avrov 169-115
letter symbols for: Martin 169-111
Mauritania, French West Africa: Elouard 170-123
microlaterolog, principle and technique: Martin 170-126
mineral content of water: Cheremenskiy 169-118
Oklahoma: True 169-144
porosity determinations from: Miller 169-112; de Witte 169-109
relations of mud, mud cake, and mud filter resistivities: Lamont 171-131
separation of sulfides: Meyer 171-135
U. S. S. R.: Boydachenko 169-117; Fedynskiy 168-105; Voskoboynikov 169-269
Electrical polarization, induced, disseminated ores: Buechheim 170-130
induced, graphitic rocks: Schrage 170-131
sulfide ores: Schrage 170-131
theoretical study: Frische 170-129
Electrical potential, distribution on boundary of semispace: Bellugi 169-98
ellipsoidal bodies: Bulashevich 168-84
Greenland ice cap: Martin 171-165
Electrical properties, correlation with elastic: Polak 169-122
effect of severe storm: Burr 168-109
ground, relation to lightning strikes: Frisch 169-126
induced polarization, sedimentary rocks: Rokitanskiy 169-125
Electrical resistivity, effect of alternating current: Enenshteyn 170-132
errors in calculations: Tarczy-Hornoch 170-144
field measurements of: Enenshteyn 170-132
instruments: Gassmann 169-104
interpretation: Dyke 168-97; Kolbenheyer 171-114; Krajcovic 171-114
metalliferous synthetic cores: Mandel 169-123
model experiments: Goudswaard 171-119
pyrrhotite, relation to temperature: Taknaka 168-110
rocks, related to porosity: Komarov 168-108
Electrical self-potential, effect of weather: Semenov 171-118
origin: Okabe 170-115
over ore deposits: Ohashi 168-85
variable: Semenov 171-118
INDEX TO GEOPHYSICAL ABSTRACTS 168-171, 1957

**Electrical surveys, Aletsch glacier:** LeFevre 171-130

**Algeria, Hodna Basin:** Migaux 168-9

**Czechoslovakia, Danube River:** Krajcovic 171-126

**Denmark:** Sorgenfrei 170-106

**France, Alsace:** Migaux 168-93

**Bresse:** Migaux 168-93

**Doubs:** Glangeaud 168-99

**Jura:** Reussner 168-98

**Roches-Gagneaux:** Breusse 168-94

**France, Bresse:** Migaux 168-93

**Doubs:** Glangeaud 168-99

**Jura:** Reussner 168-98

**Roches-Gagneaux:** Breusse 168-94

**French Equatorial Africa:** Migaux 168-93

**Mauritania:** Blanchot 170-122; Elouard 170-121, 123

**Germany, Lusatia masif:** Lehmann 168-251

**Siegerland mines:** Schmidt 168-96

**Gold Coast:** Gay 169-245

**Illinois, near Shelbyville:** Hackett 169-107

**India, dam and bridge sites:** Kailasam 170-107

**India, Kamptee coalfield:** Kailasam 170-107

**Purna Valley:** Kailasam 170-107

**Italy, Agnone folio:** Manfredini 170-110

**Orbetello folio:** Manfredini 170-109

**Palermo vicinity:** Manfredini 170-113

**Rome:** Manfredini 170-108, 111

**Sicily:** Beneo 170-114; Migaux 168-93

**Japan, Aichi:** Honma 171-127

**Aomori:** Kunori 170-117

**Besshi mine:** Okabe 170-115

**Gifu:** Kaneko 170-116

**Kochi:** Suyama 170-118

**Nishinouraya:** Shibato 168-90

**Shizuoka:** Honma 171-128

**Madagascar:** Migaux 168-93

**Morocco, Rharb:** Migaux 168-93

**New Zealand, Balclutha:** Hatherton 171-129

**Swiss Alps:** Gassmann 169-104

**Sweden:** Sorgenfrei 170-106

**Uganda, Lake George:** Dyke 168-97

**Yugoslavia, Goliya Mountain:** Grujic 168-254

**Electrofiltration potential, effect of pumping:** Gorelik 169-106

**Electromagnetic exploration, airborne methods:** Tornqvist 170-99

**alternating field in:** Barsukov 170-97

**amplitude and phase measurements:** D'yakonov 168-58

**around drill holes:** Veksler 171-125

**calibration of instruments:** Barsukov 170-100

**comparison of methods:** Byers 170-105

**field over vein:** Ivanov 169-102

**frequency selection:** Kamenskii 170-95

**importance of phase structure:** Ivanov 169-103

**laboratory experiments:** Kyono 170-104

**model studies:** Luk'yev 168-91

**Electromagnetic field, over cylindrical heterogeneities:** Nikitina 168-90

**phase structure:** Ivanov 168-87

**Electromagnetic field—Continued**

**transient, in two layer medium:** Chetayev 168-86

**vertical magnetic dipole on surface of two-layer ground:** Pavinskiy 168-89

**Electromagnetic surveys, airborne, recent developments:** Tarbox 168-247

**anomalies, errors:** Ivanov 168-87

**Japan, Kitatoyotsu district:** Murozumi 168-252

**phase compensation equipment:** Ivanov 168-87

**Saskatchewan, Flin Flon area:** Byers 170-105

**Electromagnetic waves, transient, propagation in medium of finite conductivity:** Bhattacharyya 168-92

**Elements, order of formation:** Kober 169-192

**El Salvador, active volcanoes:** Meyer-Abich 168-810

**fumaroles and thermal springs:** Grebe 169-339

**geothermal power possibilities:** Grebe 169-332

**Solfatara and fumarole fields:** Grebe 169-322

**volcanic eruptions, Boqueron, 1917:** Roy 170-304

**Energy, crust, source:** Lebedev 168-173

**earthquakes:** Bath 169-65; Dibble 169-66; Taubol 171-82

**explosions, calculated from instrumental magnitude:** Dibble 169-66

**solar, as source of endogene reactions:** Lebedev 168-173

**Engineering, electrical methods in:** Fritsch 169-100

**England, earthquake, Feb. 11, 1957:** Dollar 169-131

**Equation of state, solid bodies:** Davydov 169-194

**Equator, ellipticity:** Wolf 169-144

**Europe, central, free-air gravity map:** Schloesener 169-180

**gravity network, standardization:** Kneissl 169-178

**International gravity network, German portion:** Kneissl 168-161

**surveys:** Kneissl 170-183

**western, magnetic secular variations:** Mendonça Dias 168-216

**Eustasy, Australia, role of carbon-14 dating:** Comm. Inv. and Correlation Eustatic Changes of Sea Levels 168-9

**Faults, deep, relation of sedimentation, folding, volcanoes in, and mineral deposits:** Pyeue 168-133

**lithospheric:** Vecchia 171-159

**location by radioactivity measurements:** Vankova 168-276; Williams 169-278
Faults—Continued
movements on, earthquakes: Gianella 170–49; Hodgson 168–31, 32, 169–51; Ingram 170–51; McIntyre 169–52; Muhlbauer 170–54; Ritsema 168–33; Scheidagger 169–53; Tocher 171–66
regional, geologic and geophysical aspects: Vecchia 171–159
San Andreas, California, northward continuation: Shepard 170–158
seismic method of tracing: Dyachkova 169–311
transcurrent, New Zealand, Mt. Miroros: Cotton 171–161
Figure of the earth, compatibility term in theoretical determination: Ertel 171–150
mean curvature of principal sections: Bragard 170–145
representation by spherical harmonics: Nakamura 169–143
Finland, earthquakes, 1728: Panssenko 171–56
goalophysical exploration, Orijarvi region: Tuominen 170–137
Folding, relation to deep faults: Peyve 168–133
Fracturing, mechanics of: Hubbert 171–342
France, age, Espaly zircons: H6e 169–18
age, Grand Paradis massif: Pangaud 170–24
Saint Barthémy migmatites: Roques 169–19
Vosges granites: H6e 169–17, 171–35
crustal structure, Rochilles explosions: Bernard 168–193
electrical surveys, Alsace: Miguax 168–93
Bresse: Miguax 168–93
Jura: Glangeaud 168–99; Reussner 168–98
Roches-Gagneaux: Breusse 168–94
gravity map: Coron 171–179
gravity surveys, Pontoise: Feuger 171–183
Rocroi massif: Waterlot 170–191
southern basin subalpine zone: Orgeval 170–190
magnetic surveys, Rocroi massif: Waterlot 170–191
magnetization, Colron basaltis: Boer 171–272
volcanic rocks, Estrel: Roche 170–249
Rutten 170–250
radioactivity, sediments of La Mure dome: Sarrot-Reynaud 169–258
seismic surveys: Glangeaud 168–93
uranium content of water, Vosges: Ju- rain 171–308
French Equatorial Africa, electrical surveys, Gabon: Miguax 168–98
geophysical exploration for petroleum, Gabon: Chronicle des Mines d’Outre-Mer 171–140; Hourcq 169–32
French West Africa, geophysical exploration for water, Mauritanie: Blanchot 170–122; Elouard 170–21, 123
isostatic compensation: Crenn 170–216
Punauxles, Sheveluch volcano, Kamchatka: Basharina 168–317

G
Galvanometer, high-frequency: Borisевич 170–143
Gamma rays, absorption, in sedimentary rocks: Polak 169–254
Geodesy, compatibility term for higher: Ertel 171–150
Geoid, calculation from gravity observations: Levallois 170–146
computed at Ohio State: Helskanen 171–149
determinations by differences in vertical gravity gradients: Bragard 170–145
Europe, orientation of: Lieberman 170–147
Geophones, theory and testing: Datskevich 168–284
Geophysical case history, Anderson Ranch field, New Mexico: Swenumson 171–339
organic rocks, central northern Texas: Van Siclen 170–292
Geophysical exploration, 1956; Holmer 169–129
automatic data reduction in: Olsen 168–127
Belgian Congo: Evrard 169–133
Belorusssia S. S. R.: Ryng 171–139
Brazil, 1955, by Petrobras: Link 169–134
Cameroon, Africa: Hourcq 168–131
drill hole methods: Dakhov 169–128
Meyer 170–135
evaluation of methods, Siegerland siderite mines, Germany: Closs 168–122
Finland, Orijarvi region: Tuominen 170–137
for minerals, current status: Westphal 170–133
potentialities: Hedstrom 171–138; Latfargues 170–134
U. S. S. R.: Krasulin 168–117
for petroleum, Indian: Evans 169–138
present status: Green 169–142
for reefs: Agnich 168–113
Geophysical exploration, for salt domes: Eby 168–129
for uranium: Broding 168–125; Lenoble 168–124
France, for uranium: Lenoble 168–124
geologic data in interpretation: Skeels 168–114
Germany, 1951–54: Bentz 168–115
Siegerland siderite deposits: Closs 168–122; Thienhaus 168–123
helicopters: Tarbox 168–129
Hungary: Kertal 169–137
Geophysical exploration—Continued
in geologic mapping, U. S. S. R.: Molseyenko 170–139
Madagascar: Hourcq 169–139
Mauritania, French West Africa: Blanchot 170–122
methods: Itenberg 169–127
Mexico, for petroleum: Figueroa Huerta 168–116
offshore development: Cortes 168–112
Pakistan: Kazmi 171–139
polymetallic ores: Meyer 170–135; Semenov 171–144
recent advances: Bennett 170–136
research developments, 1956: Dobrin 169–130
Ruanda Urundi: Evrard 169–133
Spain, by Valdebro: Gavala 169–141
textbook: Itenberg 171–137
types of oil traps found: Morrisey 168–128
Ukraine, for iron ore: Krutikhovskaya 171–281
United Kingdom: Warman 169–135
U. S. Geological Survey: Balsley 168–126
U. S. S. R., for oil and gas: Fedynskiy 168–118
for polymetallic ores: Semenov 171–144
Geophysical measurements, accuracy of calculated values: Tarczy-Hornoch 170–144
Geophysical surveys, Carpathian Basin, Hungary, regional structure from: Scheffer 171–142
East Germany: Bujalow 170–138
Gabon, French Equatorial Africa: Chronique des Mines d’Outre-Mer 171–140
Netherlands, Peel coal basin: Riel 169–140
New Zealand volcanic and thermal areas: Healy 168–326
Rhenish Schiefergebirge, Germany: Wolff 171–141
Geophysics, classification: Brauch 170–140
documentation: Branch 170–140
textbook: Bonckhovskiy 171–145
Georgian S. S. R. earthquakes, May 7–8, 1940: Byus 169–41
magnetic anomalies: Nodia 169–247
radioactivity of hot springs: Balavadze 169–262
seismicity, Greater Caucasus: Byus 169–40
International European network: Kneisal 168–161
Starnberger See: Graf 171–168
groundwater surveys, Alps foreland, interpretation: Closs 171–181
Baden-Württemberg: Albrecht 169–169
Bayern levelling network: Watermann 169–170
magnetic surveys, Hess: Kutscher 169–244
Lausitz massif, lamprophyre dikes in: Lehmann 168–251
Siegeland siderite deposits: Schmidt 168–96
explosion seismic results, Magdeburg church razing: Martin 170–293
geophysical exploration, 1951–54: Bentz 169–326
nickel: Lauterbach 168–121
groundwater surveys, Rhenish Schiefergebirge: Wolff 171–141
Geophysical exploration, multiple reflections in: Bortfeld 168–300
radioactivity of crystalline rocks, Black Forest: Husmann 169–257
seismic exploration, multiple reflections in: Bortfeld 168–300
geothermal behavior of the earth: Goguel 171–193
Geothermal conditions, Walraken, New Zealand: Healy 168–327
Geothermal gradient, anomalies, use in prospecting for steam deposits: Contini 170–202
effect of surface temperature variations: Goguel 170–200
in permafrost: Goguel 170–200
Ukraine: Gandzuky 171–198
Geothermal power, possibilities in El Salvador: Grebe 169–332
radioisotope logging of boreholes for, Italy: Rossi 169–272
Germany, age, Hechstberg pegmatite: Gentner 171–41
age, Eifelmaar volcanic rocks: Straka 169–10
Lausitz granite: Schümann 171–49
crustal structure: Dohr 170–209; Muhlen 168–194; Reich 171–211; Wolff 171–141
earth tide instruments at Munich: Ellenberger 169–74
electric log compared with lithology, Lower Rhine coal basin: Schaub 168–107
geophysical surveys, Lausitz massif, lamprophyre dikes in: Lehmann 168–251
Starnberger See: Graf 171–168
gravity surveys, Alps foreland, interpretation: Closs 171–181
Baden-Württemberg: Albrecht 169–169
Bavarian levelling network: Watermann 169–170
magnetic surveys, Hess: Kutscher 169–244
Lausitz massif, lamprophyre dikes in: Lehmann 168–251
near Schönbrunn: Grabe 171–296
magnetization, Miocene igneous rocks: Vogelsang 171–263
Vogelsberg basaltic: Angenheister 170–251
radioactivity of crystalline rocks, Black Forest: Husmann 169–257
seismic exploration, multiple reflections in: Bortfeld 168–300
Geotectonics, compared to moon tectonics: Biilow 170–154
Seismology, development: Cameron 171–162
geochemical history: Vening Meinesz 171–157
Geotectonic significance of rhyolites: Hiersemann 171–153
Geotectonics, compared to moon tectonics: Biilow 170–154
orocline concept: Carey 170–150
philosophical aspects: Sonder 170–151
present status, Russia vs. other countries: Chail 170–148
role of solar energy: Lebedev 168–173
Germany—Continued
seismic surveys, Schleswig - Holstein: Hecht 168-302
Siegerland siderite deposits: Helbig 168-298
southern: Breyer 168-301
seismic velocities, Alpine foreland Molasse formations: John 171-334.
Siegerland siderite deposits, geophysical study: Closs 168-122; Thienhaus 168-123
structural elements, northwestern Brinck meier 169-136
Glacial chronology, carbon-14 dating: Antevs 169-6; Dreimanis 170-17; Elson 171-22; Emiliani 168-205; Gross 171-15; Karistrom 169-8; Leighton 169-7; Lundqvist, G. 168-6; Lundqvist, J. 168-7; Rigg 169-9; Wright 171-20
Glaciers, arctic and subarctic: Sharp 171-164
behavior of ice: Bull 170-161
electrical measurements: LeFèvre 170-124
formation of pressure waves: Haefeli 170-276
mean shear stress, Highway glacier, Baffin Island: Ward 168-139
mechanism of sliding: Weertman 170-164
movement, Switzerland, Rhône glacier: Haefeli 169-150.
regimen and movement, Taku: Nielsen 168-138
recession, northwestern United States: Johnson 168-142.
thickness determined by gravity measurements: Bull 168-149
velocity of flow, Highway glacier, Baffin Island: Ward 168-139
Gold Coast, electrical surveys for water: Gay 169-245
magnetic surveys, north of Nanwa gold mine: Gay 169-245
Granite, electrical conductivity, variation with temperature: Noritomi 169-121
Gravimeters, accuracy for long-distance measurements: Graf 169-152
altimeter combined with: Yurkova 169-154
CH3: Popov 170-179
marine: Graf 171-168
Nørgaard, effect of compressibility of compensating liquid: Bulanzehe 168-151
North American, accuracy of in Japan: Matsuda 168-154
quartz fiber, temperature coefficient: Popov 171-170
tidal, improved design: Clarkson 168-150
use as torsion balance: Gabriel 169-155
variation in temperature within Dewar vessels: Gabriei 171-172
Gravimeters—Continued
Worden, accuracy: Bonini 169-156
calibration: Caputo 171-171
pressure, effect: Caputo 170-180
temperature, effect: Caputo 170-180
Gravimetry, textbook on: Abel'sky 171-167
Gravity, accuracy of observations with Cambridge apparatus: Gilbert 170-186
analytic continuation: Kuzivanov 169-159
comparison of measurements with Worden and Cambridge instruments: Cook 169-157
corrections for mining galleries: Kazinsky 168-148
deflections of vertical from, accuracy: Kaula 170-169
deflections of vertical, New Britain: Kaula 170-187
density determination by underground measurements: Rische 170-177
density determination for interpretation: Whetton 169-165
determination for orthometric height computation: Mül ler 168-130
determination of glacier thickness: Bull 168-149
elevation corrections, Caucasus Mountains: Ochapovskiy 168-178
errors in calculation from pendulum data: Târzîy-Hortoch 170-144
gradient, effect of spherical masses on: Norinelli 171-173
measurement at sea: Romuyk 170-167, 168
residual, determination: Tribalto 170-171
second derivative, graphical determination: Tyapkin 171-175
second-derivative interpretation by: Rosenbach 170-172
secular changes, Japan: Ichinone 171-178
third derivative, measurement by torsion balance: Kilchling 170-181
third vertical derivative, above simple masses: Hergerdt 170-170
tidal correction: Watermann 169-166
tidal variations: Ichinone 169-75, 171-178; Nishimura 170-66
vertical gradient, corrections in Caucasus Mountains: Ochapovskiy 168-168
field determination: Thysen-Bornemisza 170-182
Gravity anomalies, along faults: Vecchia 171-159
Alps, size of root and crustal shortening: Hoppers 168-200
California, Great Valley: Ivanhoe 168-156
depth determinations from: Kudryavtsev 169-160; Petrov 171-174
effect of elevation factor: Ivanhoe 170-174
free air, central Europe: Schlesener 169-180
from undulations in boundary between two media: Vyskočil 168-146
### Gravity anomalies—Continued

- **Germany, northwest**: Brinckmeler 169–136
- **Hungary**, compared to plumb-line deviations: Renner 171–151
- **instrument to simulate**: Gerrard 169–161
- **island arcs**: Jung 168–190
- **isostatic, Sahara**: Lagrula 170–215
- **interpretation**: Bulakh 170–173; Hammer 168–145; Mikov 169–240; Petrov 171–174; Rosenbach 170–172; Roze 169–237; Tomoda 171–176
- **Quebec**: Innes 169–172
- **reduction to new surface**: Kuzivanov 168–147
- **regional**: Egyed 168–145
- **residual, calculation**: Egyed 168–145
- **Sicily**: Vecchia 169–175
- **statistical analysis**: Grant 169–158
- **types, Caucasus**: Balavadze 171–177
- **Gravity map, France**: Coron 171–179
- **Atlantic Ocean**: Shurhet 168–155, 169–171; Worzel 170–188
- **Gravity observations, absolute, Hammerfest-Munich calibration line**: Jeistrup 169–168
- **Australia**: Cook 169–157
- **Bahama Islands**: Shurbet 168–155
- **calculation of geoid from**: Levallois 170–146
- **determination of deformation coefficient from**: Lassovsky 171–91
- **German network, 1955**: Watermann 169–181
- **Germany, international European network**: Kneissl 168–161
- **Sarnberger See**: Graf 171–168
- **Great Britain**: Cook 169–157
- **Himalayan region**: Marussi 168–170
- **Italy, Rome**: Morelli 170–184
- **Karakorum expedition**: Caputo 170–185
- **Latin America**: Salgueiro P. 171–193
- **Po Basin**: Rocci 168–164
- **Pontine Plain**: Tribalto 170–171
- **Rome area**: Zaccara 170–112
- **Rome f o l i o**: Maino 170–194
- **Japan, Kwantō district**: Tsuboi 168–195
- **Kyūshū**: Tsuboi 168–166
- **Mihara volcano, 1956**: Yokoyama 171–184
- **Zumma prefecture**: Ogawa 168–167
- **Lebanon**: Plassard 170–196
- **limiting factors in Hungary**: Szénás 168–162
- **methods**: Thyssen-Bornemisza 170–182
- **Ohio**: Heiskanen 169–174
- **Ontario, southwestern**: Dyer 168–159
- **Sudbury basin**: Miller 168–157
- **v i c i n i t y of Ottawa**: Saxov 168–158
- **Texas, San Luis Pass dome**: Nettleton 168–169
- **underground**: Kazinskiy 168–165
- **platform**: Nevolin 171–187
- **U. S. S. R., Caspian Sea**: Lozinskaya 168–153
- **Ukraine**: Sumi 168–172
- **Venezuela, Cordillera de la Costa**: Smith 170–198

### Gravity surveys—Continued

- **Denmark, Jutland**: Saxov 170–189
- **European network, standardization**: Kneissl 169–178
- **Europe, international network**: Kneissl 170–183
- **for chromite, Cuba**: Davis 171–191
- **for pyrite**: Katskov 170–195
- **France, Poitou**: Feuגני 171–183
- **Rocroi massif**: Waterlot 170–191
- **southern basin of Subalpine zone**: Orgeval 170–190
- **Germany, Alps foreland, interpretation**: Class 171–181
- **Baden-Württemberg**: Albrecht 168–169
- **Bavarian levelling network**: Watermann 168–179
- **Gulf of Mexico, southeast of Galveston**: Nettleton 170–192
- **Indonesia, Timor Island**: Ritsema 169–173, 171–227
- **Italy, Adriatic Sea**: Morelli 168–163; Sans Huelin 171–180
- **Frosinone and Caserta**: Tribalto 170–185
- **textbook**: Lakavchenko 171–190
- **Tien Shan**: Gamburtsev 168–197
- **Uganda**: Harris 169–177
- **value in Appalachian region**: Pohly 169–182
- **Venezuela, Cordillera de la Costa**: Smith 170–198
- **Yugoslavia**: Sušić 168–172

### Gravity surveys

- **Denmark, Jutland**: Saxov 170–189
- **European network, standardization**: Kneissl 169–178
- **Europe, international network**: Kneissl 170–183
- **for chromite, Cuba**: Davis 171–191
- **for pyrite**: Katskov 170–195
- **France, Poitou**: Feu neger 171–183
- **Rocroi massif**: Waterlot 170–191
- **southern basin of Subalpine zone**: Orgeval 170–190
- **Germany, Alps foreland, interpretation**: Class 171–181
- **Baden-Württemberg**: Albrecht 168–169
- **Bavarian levelling network**: Watermann 168–179
- **Gulf of Mexico, southeast of Galveston**: Nettleton 170–192
- **Indonesia, Timor Island**: Ritsema 169–173, 171–227
- **Italy, Adriatic Sea**: Morelli 168–163; Sans Huelin 171–180
- **Frosinone and Caserta**: Tribalto 170–185
- **textbook**: Lakavchenko 171–190
- **Tien Shan**: Gamburtsev 168–197
- **Uganda**: Harris 169–177
- **value in Appalachian region**: Pohly 169–182
- **Venezuela, Cordillera de la Costa**: Smith 170–198
- **Yugoslavia**: Sušić 168–172

### Gravity ties

- **Pakistan-India**: Marussi 169–170
- **Rome-Pakistan**: Marussi 169–170
- **Rome-Washington**: Morelli 170–184
Gravity variometers, balancing: Kazinskiy 170-173
Great Britain, geophysical exploration for oil: Warman 169-135
gravity measurements: Cook 169-157
Shetland Islands, earth tides: Tomasek 171-190
Greece, earthquakes, 1950-53: Galanopoulos 171-57
earthquakes: Galanopoulos 171-57, 58; Trikkalinos 170-39
recent tectonic movements: Trikkalinos 170-39
strain relief: Galanopoulos 171-57, 58
Greenland, crustal structure: Holtzscherer 168-141
seismic surveys, ice cap: Holtzscherer 168-141
temperatures in icecap: Heuberger 168-140; Loewe 171-166
Guatemala, active volcanoes; Meyer-Abich 168-310
Gulf Coast, salt dome reservoirs: Eby 168-120
Gulf of Mexico, gravity survey, southeast of Galveston: Nettleton 170-192
uranium in waters: Kona 168-264
Gypsum, elastic constants: Hameister 170-87
Hawaii, earthquakes 1954: Murphy 168-16
submarine geology: Hamilton 170-299
volcanic activity, 1949-52: Macdonald 168-311
1952: Macdonald 168-312
Heat, radiative transfer in earth: Clarke 171-192; Lyubimova 170-199
transfer in non-opaque media: Clarke 171-192
Heat conduction, borehole containing flowing liquid: Kozlowski 169-184
thick intrusive sheets: Jaeger 169-183, 220
Heat flow, California, Grass Valley: Clark 169-185
permafrost, Resolute Bay, N. W. T.: Goguel 170-200; Lachenbruch 171-195; Misener 171-196
Hungary, Transdanubian coal basin: Boldizsér 168-178, 169-187
New Zealand, Wairakei geothermal area: Healy 168-327; Studt 170-201
U. S. S. R., Caucasus: Dubinsky 169-186
Donbas: Dubinsky 169-186
Helium, escape from atmosphere: Cook 168-265; Nicolet 170-222
isotopes, atmosphere: Damon 169-207
isotopes, mass spectrometer for determining: Nier 171-219
meteorites: Fireman 169-2; Gentner 168-201; Reynolds 171-8
radioactive, determination in zircon: Damon 171-26
source of: Cook 168-265
retentivity in minerals: Damon 171-26
High pressure and temperature apparatus: Griggs 168-305
Hot springs, annual variations: Conrad 168-180; Murota 169-327
Austria, Bad Gastein: Aurand 169-263
effect of polar movement: Conrad 168-180
El Salvador: Grebe 169-339
Georgian S. S. R.: Balavadze 169-262
isotopic geochemistry: Craig 171-228
Japan, Aso volcano: Murota 169-327
Kamchatka, Karymshchina Valley: Sirin 168-318
radioactivity, Austria, Bad Gastein; Aurand 169-263
Georgian S. S. R.: Balavadze 169-262
Hungary, Carpathian Basin, structural elements: Scheffer 171-142
Carpathian region crustal dynamics: Zátopek 171-60
crustal movements: Egyed 171-160
crustal structure: Bízsrostény 171-61; Gáli 171-212, 213
deflections of vertical, relation to gravity anomalies: Renner 171-151
deuterium content, natural waters: Cziki 170-223
earth current apparatus at Sopron: Ádám 171-50
earth current measurements at Sopron: Kántás 171-51
earth tide amplitude at Budapest: Lassovsky 168-55
earthquake, Feb. 20, 1951: Kárnuk 168-18
Jan. 12, 1956: Bízsrostény 171-61
earthquake research, historical review: Simon 171-59
geomagnetic secular variation in Carpathian basin: Bartha 171-242
gyrophysical exploration, factors limiting: Sáznára 168-162
gyrophysical exploration, historical review: Kertal 169-137
heat flow, Transdanubian coal basin: Boldizsér 168-178, 169-187
seismic surveys: Gáli 168-195, 171-212
temperatures, Transdanubian coal basin: Boldizsér 168-178, 169-187
Hydrogen, isotopes, artificially produced: Begemann 171-220, 222
natural waters, Hungary: Cziki 170-223
tektites: Friedman 171-221
I
Ice, deformation of floating: Weertman 170-162
electrical surveys: Lefèvre 170-124
flow and recrystallization: Steinmann 198-148
longitudinal wave velocity: Holtzsherer 168-141
potential differences: Martin 171-165
slope, thickness relations, Greenland: Bull 170-161
temperatures, Greenland: Heuberger 168-140; Loewe 171-166
Ice—Continued
thermal measurements: Heuberger 168–110
thickness, Antarctica: Robin 169–151
Ice sheet, temperature distribution: Robin 169–149
Iceland, magnetization in basalts: Einarsson 170–252, 253
Idaho, airborne magnetic profile: Agocs 169–242
Illinois, electrical exploration for ground water: Hackett 169–107; Pryor 169–120
Inclination, azimuthal measurement: Bonschokovsky 171–132
India, Alibag Magnetic Observatory, description: Indian Journal of Meteorology and Geophysics 168–214
Colaba Magnetic Observatory, description: Indian Journal of Meteorology and Geophysics 168–215
earthquake, June 26, 1941, Andaman Islands: Jhingran 168–20
electrical surveys, engineering and mining problems: Kallasam 170–107
exploration for petroleum, Upper Assam: Evans 169–138
magnetic observations on west coast, 1538–1539: Custodio de Morais 168–215, 169–222
radioactivity, charnockites: Mahadevan 170–228; Sastry 170–267
gneisses: Sastry 170–227
off-shore sediments, Bay of Bengal: Sastry 171–310
seismic surveys, off west coast: Nanda 169–200
Indian Ocean, magnetic observations at Heard Island: Ingal 171–214
Indiana, electrical logging, Sullivan County: Nelson 171–136
seismic survey, north of glacial boundary: Wayne 171–340
Indonesia, age determinations: Schurmann 171–49
earthquake November 2, 1954, Sumbawa Island: Ritsema 170–41
gravity survey, Timor Island: Ritsma 169–173; 171–227
magnetic surveys of Timor: Peloschek 170–260
radioactivity surveys, Timor: Peloschek 170–260
See also Core, Crust, and Mantle
Isostasy—Continued
therories: Jung 168–190; Lysstikh 170–214; Strasser 171–107
Isotopes, argon, meteorites: Gentner 168–201; Reynolds 171–8
argon, reliability of calculations based on: Polishani 170–217
beryllium, in atmosphere and on earth: Peters 168–202
carbon, atmosphere: Rafter 171–215
ground water: Műnlich 168–204
metamorphic rocks, Sweden: Gavelin 171–216; Landegren 170–221
modern material: Revelle 170–219
natural distribution: Craig 170–218
oceanic materials: Arnold 170–220
ocean waters: Rafter 171–215
transfer and distribution: Craig 170–218
chlorine, pitchblende: Kuroda 169–216
rocks: Schaeffer 171–218
deuterium, natural waters: Cziki 170–223
thermal waters: Craig 171–228
helium, abundance ratios: Nier 171–219
atmosphere: Damon 169–207
escape from atmosphere: Nicolet 170–222
meteorites: Gentner 168–201; Reynolds 171–8
hydrogen, artificially produced: Beegemann 171–222, 222
natural waters: Cziki 170–223
tektites: Friedman 171–221
lead, geochemical implications: Shaw 170–222
galenas from Australia: Russell 170–21
galenas from Germany: Paul 171–224
galenas from Ontario: Farquhar 170–22
interpretation: Russell 171–31
meteorites: Edwards 171–223; Russell 168–203
neon, Nuevo Laredo meteorite: Reynolds 171–8
nour, air: Parwel 169–208
caliche: Parwel 169–208
calcoal: Hoering 171–225; Parwel 169–208
gas: Hoering 171–225
peat: Hoering 171–225
petroleum: Hoering 171–225
rocks: Hoering 171–225
sal ammoniac: Parwel 169–208
wood: Parwel 169–208
oxygen, atmosphere: Dole 171–222
cycle in nature: Dole 171–222
fresh waters and ice: Epstein 171–227
minerals: Hoekstra 171–229
paleotemperature determinations by: Teys 171–230
thermal waters: Craig 171–228
radium, Colorado Plateau uranin ores: Senftle 169–210
reference samples: Dibeler 171–214
sulfur, determination: Rafter 171–231
minerals: Kulp 171–232
relation to mineral paragenesis: Jensen 169–209
SUBJECT INDEX

Isotopes—Continued
thorium, sea water: Koczy 169–263
tritium, abundance in nature: Begemann 171–222
uranium, in Colorado Plateau uranium ores: Senftle 169–210
xenon, meteorites: Reynolds 171–8
zinc, abundance ratios: Blix 169–211
Israel, earthquakes: Shalem 169–35
Italy, age, Grand Paradis massif: Pangaud 170–24
Feb. 1955, Pedora: Cucuzza-Silvestri 170–43
electrical surveys, Agnone: Manfredini 170–110
near Rome: Zaccara 170–112
Orbetello: Manfredini 170–109
Palerno vicinity: Manfredini 170–113
Rome: Manfredini 170–108, 111
Sicily: Beneo 170–114; Migaux 168–93
syncreton foundation: Manfredini 170–108
gravity survey, Adriatic Sea: Morelli 168–163; Sans Huelin 171–180
Caserta: Tribalbo 170–193
Prosioone: Tribalbo 170–193
near Rome: Zaccara 170–112
Pontine Plain: Tribalbo 170–171
Po Basin: Rocco 168–164
Rome: Maino 170–194
Sicily: Beneo 170–114; Vecchia 169–175
radioactivity, Adamello granodiorite: Merlin 169–259
radioactivity, coals and rocks, Suelis basin, Sardinia: Aramu 169–205
radioactivity logging of steam boreholes: Rossi 169–272
seismic surveys, Po plain: Quarta 170–291; Rocco 168–164
Torrente Furha: Manfredini 170–294
Solfatara di Pozzunoi: Sicard 169–338
Stromboli, lava flow of March 22, 1955: Cavallaro 169–333
volcanic activity, Stromboli: Die Umschau 168–313

J
Jadeite, stability relations at high pressures and temperatures: Robertson 168–188
Japan, Aso volcano, hot springs: Namba 169–323
variation of water head: Murota 169–324
changes in sea level: Sugimura 169–204

K
Kamchatka, earthquakes, 1951: Gorshkov 168–48
direction of faulting: Hodgson 168–31
fumaroles, Sheveluch volcano: Basharin 168–317
hot spring, Karymshchina Valley: Sirin 168–318

Japan—Continued
earthquakes, land movements, Kwantō: Sugimura 169–204
mechanism at focus: Hodgson 168–81; Honda 170–55
tilting of ground before: Sassa 169–70
earth-tide observations: Nishimura 170–66
electric logging, coal fields: Nakabayashi 169–116
electrical surveys, Aichi: Honma 171–127
Aomori: Kunori 170–117
Besshi mine: Okabe 170–115
Chiba: Tateishi 171–336
Gifu: Kaneko 170–116
Kochi: Suyama 170–118
Kitatoyokesu district: Murozumi 168–222
Nishimurayama district: Shibatō 168–95
Shizuoka: Honma 171–128
geotectonic development, Hokkaido: Minato 168–136
gravity surveys, Kwantō: Tanbo 168–165
Kyūshū: Tanbo 168–166
Mibara: Yokoyama 171–184
Zumma: Ogawa 168–167
magnetic anomalies, Yatusiro Bay: Murozumi 169–246
magnetic surveys, Kitatoyokesu district: Murozumi 168–252
Kumamoto: Nakamura 169–223
magnetization of volcanoes: Minakami 169–235
mante, electrical conductivity: Rikitake 168–221
micro-tremor measurements in seismic regions: Kanai 171–297
radioactivity, graphite in Online coal field: Kubo 169–261
hot springs: Okabe 169–264
Saga coalfield: Shibata 168–321, 169–270
volcanic gases: Iwasaki 168–266
radioactivity surveys, airborne: Sato 170–276
radon in hot springs: Kaku 169–265
seismic survey, Chiba district: Ninagawa 169–308
seismic wave velocities: Utsu 169–71
volcanic activity 1949–53: Minakami 168–314, 315
1951–53: Minakami 169–318
Aso: Namba 169–321, 322
Kuju: Namba 169–321, 322

K
Kamchatka, earthquakes, 1951: Gorshkov 168–48
direction of faulting: Hodgson 168–31
fumaroles, Sheveluch volcano: Basharin 168–317
hot spring, Karymshchina Valley: Sirin 168–318
Kamchatka—Continued
volcanic activity, Koshelev, 1953: Naboko 169–336
northern part, 1954: Piyp 168–316
volcanic eruptions, Bylinkina: Gorshkov 169–335
Klyuchevskaya: Piyp 170–301
volcanic tremor, Bylinkina: Gorshkov 169–335
volcanoes, Tolmachev Dol: Svyatlovskiy 168–319
Kansas, airborne magnetic profile, Nebraska state line: Merriam 169–243
Karelo-Finnish S. S. R., age determinations: Hantzschel 168–2
Kazakh S. S. R., geophysical logging, exploration for water: Avrov 169–115
Kentucky, magnetic surveys, western fluor spar district: Warren 168–253
Kilauea, energy, annual variation: Namba 169–330
Kirgiz S. S. R., earthquakes, 1620 to date: Rozova 171–62
Alay Kel', April 1955: Rozova 169–49
Frunze region: Rozova 169–42
Naryn River valley: Rozova 169–43
Kurile Islands, earthquakes, direction of faulting: Hodgson 168–31
volcanoes, Simushir: Korsunskaya 168–320
L
Latin America, gravity determinations: Salgueiro P. 171–185
Lead, isotopes, origin and history: Russell 171–31
isotopes, galena from Germany: Paul 171–224
galena from Broken Hill, Australia: Russell 170–21
galena from Thunder Bay, Ontario: Farquhar 170–22
isotopic analysis, meteorites and rocks: Edwards 171–223
source of deposits: Shaw 170–224
Lebanon, earthquake of March 16, 1956: Observatoire de Ksara 169–106
gravity surveys: Plassard 170–196
Limestone, deformation: Handin 170–296
elastic constants: Hamelster 170–87
elastic wave propagation: Balakrishna 168–74; Hamelster 170–87
radioactivity, Sulcis basin, Sardinia: Ama
tu 170–265
strength: Handin 170–296
Lithium-6, meteorites: Fireman 169–2
Louisiana, age of Quaternary deposits: Brann
don 169–11
Lüders' bands, and plastic deformation in crust: Paterson 168–304
Madagascar—Continued
geophysical exploration for petroleum: Houreg 169–139
volcanoes, Karthala: Besairie 171–946
Macedonia, seismicity: Mihaliov 169–34
Magmatic rocks, radioactivity, Black Forest, Germany: Husmann 169–257
Magnetic anomalies, along faults: Vecchia 171–159
depth determinations from: Kudryavtsev 169–160; Roze 169–238; Stupak 169–239
effect of topography: Akopyan 168–246
interpretation: Baranov 169–241; Blin
trubas 171–275, 277; Henderson 171–276; Kalashnikov 169–227; Mikov 169–240; Roze 169–237; So
kolov 170–257; Vyskočil 171–278
source, under continents: Serson 169–224
under oceans: Serson 169–224
three-dimensional bodies, graphical calculation: Henderson 171–276
Magnetic charts, accuracy: Serson 169–224
Magnetic coercive force, magnetometer for measurement: Kalashnikov 168–228
Magnetic declination, India, 1538–39: Cus
tódio de Morais 168–215
Magnetic dipole, vertical, field over two-layer medium: Kozulin 169–236
Magnetic field, conducting fluid sphere with volume currents: Chopra 171–234
effect of internal motions on decay: Chandrasekhar 168–206
Incompressible fluid sphere, toroidal oscillation: Jensen 168–209
Magnetic field of the earth, Andaman Island region: Malurkar 168–212
Antarctic regions: Slauticajs 169–221
contrast between $S$ and $L$ at Huancayo: Bartels 171–245
Czechoslovakia, 1950.0: Bouška 171–240
decay: Chandrasekhar 168–206
deep, and electrical conductivity: Bartels 171–239
diurnal variations, Japan: Rikitake 168–221
near equator: Alexander 170–232
Peru: Bartels 171–245
disturbances, after solar flares: Sipahloğlu 168–219
effect of altitude: Mauersberger 170–227
effect of internal structure: Egged 168–210
effect of oblateness of earth: Mauersberger 170–226
effect of solar eclipses on: Malurkar 171–243
effect on carbon-14 dating: Beiser 170–228; Elsasser 168–3
evidence for continental drift: Bradley 168–238; Quiring 171–264
external part: Mauersberger 170–214
extrapolation of components: Zmuda 170–230
Heard Island 1952: Ingal 171–241
Magnetic field of the earth—Continued

India, 1538–39 : Custódio de Morais 169–222

Intensity, past 15,000 years: Beiser 170–228

Intensity, relation to carbon-14 dating: Elsasser 168–3

secular variation: Fanselau 169–218; Gaibar-Puertas 171–237; Mauersberger 169–213

irregular activity, northern Canada: Whitham 170–258

mean energy density: Mauersberger 169–213

non-potential part: Mauersberger 169–215

oscillations, experimental investigations: Emsenhteyn 169–26

pulsations: Coulomb 171–246; Kato 170–231; Trolisayka 168–220

reversals, cause: Elsasser 170–225; Takeuchi 171–236

secular variation, Carpathian basin: Barta 171–242

causes: Barta 171–238; Egred 168–210; Fanselau 169–218; Gaibar-Puertas 171–237; Mendonça Dias 168–216

cycles: Hope 170–229

geologic evidence: Jaeger 169–220

north Atlantic: Mendonça Dias 168–216

penetration through mantle: McDonald 170–208

periods: Jensen 168–209

pulse-disturbance: Hope 169–219

rotation: Hope 169–219

Western Europe and North America: Mendonça Dias 168–216

westward drift: Hope 169–219

variations, relation to sunspots: Pramanik 168–233

Magnetic field, westward drift: Hope 170–229

Magnetic hysteresis, rocks and minerals, at high temperature: Deutsch 168–241

Magnetic maps, north polar region: Die Umschau 169–217

Magnetic observatory, Alibag: Indian Journal of Metrology and Geophysics 168–214

Colaba: Indian Journal of Meteorology and Geophysics 168–213

Heard Island: Ingall 171–241

Magnetic permeability, drill cores, electromagnetic determination: Malmqvist 170–239

Magnetic pole, secular motion of: Hope 169–216

Magnetic profile, airborne, Kansas-Nebraska state line: Merriam 169–243

Magnetic properties, ferromagnetic minerals: Akimoto 171–255; Nagata 171–258

ferrimagnetic oxides: Gorter 171–248

heterogeneously magnetized prisms: Kalashnikov 169–227

reflection microscopy in studying: Millman 171–257

rocks of Czechoslovakia: Bucha 170–235

sedimentary rocks, Turkmen S. S. R.: Krhmov 169–234

stratigraphic correlation by: Krhmov 169–234

TiFe₂O₅–Ti₂FeO₅ series: Akomoto 168–223

universal torsion magnetometer for measurement of: Kalashnikov 168–228

use in determining composition: Parry 171–259

Magnetic recording, characteristics: Kaufman 169–283

direct vs. FM: Erath 170–248

techniques and uses: Dunlap 168–289; Waldie 168–290; Wilson 169–252; Vetterlein 168–291

using mu-metal: Badger 169–284

Magnetic storms, Dst field June 18–19, 1936: Rikitake 171–244

relation to cosmic ray intensity: Kitanura 168–217

recurrence tendency and solar activity: Naqvi 168–222

Magnetic surveys, airborne, effect of irregular magnetic activity: Whitham 170–258

airborne, interpretation: Henderson 171–276

recent developments: Tarbox 168–247

with nuclear magnetometer: Hunter 168–248

Atlantic Ocean: Hill 170–213

Australia, Kadina-Wallaroo areas: Pegum 169–248

Kurrajong-Billip district: Crook 171–267

Yorke Peninsula: Seedsman 171–279

France, Rocroi massif: Waterlot 170–191

Germany, diabase dikes near Schönbrunn: Grab 171–296

Hesse: Kutscher 169–244

Lausitz massif: Lehmann 168–251

Gold Coast: Gay 169–245

Indonesia, Timor: Peloschek 170–260
Magnetic surveys—Continued
interpolation of data from: Zmuda 168-249
Japan: Bay of Yatusiro: Nakamura 169-246
Kitatoyotsu district: Murozumi 168-252
Kumamoto prefecture: Nakamura 169-223
Mihara: Minakami 168-318
Kentucky, western fluorspar district: Warren 168-253
Russian platform: Nevolin 171-187
Saskatchewan, Lac la Ronge area: Pearson 171-220
Switzerland, Lake of Constance: Burmeister 168-227
Yugoslavia, Golija Mountain: Grujic 168-254
Magnetic susceptibility, correlation by: Komarov 168-234; Taychenov 171-251
disseminated materials, Maxwell formula: Silcher 171-250
eruptive rocks, Urals: Komarov 169-226
logging apparatus: Veshev 171-274
magnetometer for measurement: Kalashnikov 168-228
pyrrhotite, Japanese mines: Takenaka 168-231
sedimentary rocks: Taychinov 170-237
variation in dolerite sill: Jaeger 171-252
Magnetization, age determination by: Komarov 168-234
Barnett formation, Texas: Howell 169-221
basalt, Iceland, stratigraphic correlation by: Einarsson 170-253
Japan: Asami 171-270
Montagnes du Coiron, France: Boer 171-272
Oregon: Cox 169-233
Vogelsberg, Germany: Angenheister 170-251
behavior of different types: Petrova 171-254
blue sandstones: Doell 171-262
continental movement indicated by: Blackett 170-234; Bradley 168-238; Dje Umschau 168-239; Du Bois 170-247; Graham, J. 168-235; Graham, K. 170-255; Irving 170-240, 243; Jaeger 168-237; Runcorn 169-230; Quiring 171-264
continental rocks: Sersson 169-224
correlation by: Komarov 168-234
crystallization: Doell 171-262
dating of rocks, Ayrshire: Armstrong 171-271
determination of secular variation from: Jaeger 169-220
Adirondack rocks: Balsley 171-253
Carboniferous glacial varves, Australia: Irving 170-243
Magnetization—Continued
direction, Carboniferous rocks: Clegg 170-253
Deccan Traps: Clegg 170-248
effect of weathering: Nairn 170-242
Eocene basalts, Oregon: Cox 169-233
Jurassic rocks, England: Belshe 170-245, 246
Permian lavas, Oslo graben and Estørel, France: Rutten 170-250
Pilansberg dikes: Gough 168-244
ferromagnetic limonites: Nagata 168-232, 171-258
ferromagnetic oxides: Akimoto 171-255
field mapping by: Einarsson 170-240
gneisses, Adirondack Mountains: Balsley 171-273
igneous rocks, Eifelian conglomerates in the U.S.B.: Komarov 169-254
intensity, effect of heating: Belshe 170-245
Japanese volcanoes: Minakami 169-235
Miocene igneous rocks, Germany: Vogelsang 171-263
oceanic rocks: Sersson 169-224
open and closed circuits: Kalashnikov 169-228
Permian lavas, Oslo graben and Estørel, France: Rutten 170-230
Pilansberg dikes, South Africa: Gough 168-244
prismatic bodies: Kalashnikov 169-228; Mokhova 170-236
pyrrhotite: Saito 168-230
recent sediments, experimental studies: Griffiths 171-261
red beds: Graham 171-249
relation to geologic age: Komarov 169-226
remnant, data on history of earth's field: Blackett 170-234
determination of initial: Bol'shakov 171-253
effect of heterogeneity on: Kalashnikov 169-227
in petrologic studies: Jaeger 168-237
instruments for determining: Plonkovskiy 168-229
magnetometer for measurement of: Kalashnikov 168-228
statistical analysis: Watson 168-242, 243
Magnetization—Continued
remanent—Continued
stratigraphic correlation: Jaeger 168–237
reversed, magnetic methods in studying:
Parry 171–259
origin: Asami 171–270; Balsley 171–273;
Blackett 170–234; Deutsch 168–241; Nagata 171–258
relation to rock fabric: Vogelsang 171–263
Sawatch formation, Colorado: Howell 169–231
sedimentary rocks: Taychinov 170–237
stability: Bol’shakov 170–238; Deutsch 168–241; Petrova 169–229
stress-induced: Graham 170–239
thermomagnetism: Nagata 171–258
Triassic rocks, Arizona: Kintzinger 170–256
viscous: Brynjolfsson 171–268
volcanic rocks, France, Estérel: Roche 170–249
Japan: Nagata 171–269
Magnetometer, absolute horizontal intensity,
improved photoelectric: Schmidt 168–22G
BMZ, temperature correction for measurements with: Haaz 171–247
induction coefficient, magnets of QHM: Wijk 168–225
LaCour, baseline corrections at Swider and Hol, Poland: Przybyszewski 170–233
nuclear precession: Hunter 168–248
temperature coefficients, magnets of QHM: Wijk 168–225
torsion, for measuring vertical component: Haaleck 168–245
torsion-ribbon: Fanselau 169–225
universal torsion, for measuring magnetic properties: Kalashnikov 168–228
Magnetostriction, effect on magnetization:
Maine, aeromagnetic maps: Balsley 171–282
age, Paleozoic igneous rocks: Fairbairn 168–13
Manitoba, aeromagnetic maps: Canada Geol. Survey 171–288
age, Huron Claim: Kulp 169–14
lepidolites: Hänisch 168–2
Mantle, composition: Hurley, 169–197
convection: Havemann 170–156; Lyustikli 170–207
density: Bule 168–187
dynamics: Hiersemann 168–131
effective thermal conductivity: Clarke 171–192
electrical conductivity: McDonald 170–208; Rikitake 168–221
fayalite and forsterite stability: MacDonald 168–186
Mexico, eruption of San Benedicto Island (Bárgeona): Richards 168-323
geophysical exploration for petroleum: Figueroa Huerta 168-116
Paricutin, 1949-52 activity: Foshag 168-322
submarine eruption off Lower California: Gonzalez-Reyna 168-321
Michigan, airborne gravity surveys: Lundberg 169-153
Microseisms, 11-18-second period, origin: Oliver 169-249
Aberdeen, Dec. 9, 1945: Geddes 169-250
Algiers, 1954-55, relation to cold fronts: Lacaze 168-255
amplitudes, as warning of cyclone development: Upton 170-263
Australia, amplitudes, Brisbane: Upton 170-263
beat phenomena: Jensen 170-262
correlation coefficients in studies: Akamatu 171-298
nature: Geddes 169-250
origins: Domm 170-261
wave motion: Leet 169-67
Microtremor, measurements in Japanese seismic regions: Kanai 171-297
Mines, geophysical surveying: Close 168-122
Minnesota, aeromagnetic maps: Menschke 171-283
Model studies, elastic wave propagation: Carabelli 171-104; Ivakhin 168-63;
Manukhov 168-67; Press 171-101
electrical exploration: Cagniard 171-120;
Gondwaard 171-119
electromagnetic exploration: Luk'yanov 168-91
Induced polarization: Ryss 170-93
oreogenesis: Bucher 170-173
rock deformation: Balkay 168-306;
Handin 170-295; Volarovich 169-312
seismic wave propagation: Hall 168-280;
Ivakhin 171-103; Kato 169-91, 170-84, 85;
Press 169-291; Takagi 170-82, 83
Montana, aeromagnetic maps: Balsley 171-284
age of Boulder batholith: Knopf 168-12
Moon, tectonics: Bilow 170-154
Morocco, carbon-14 dating of strandline at Tangier: Stearns 170-8
effect of earthquake on ground water level: Ambroggi 171-52
electrical surveys, Rharb: Migaux 168-93
Mudstone, elastic constants: Hamelster 170-87
N
Nebraska, airborne magnetic profile, Kansas state line: Merriam 169-243
Neon, isotopes, Nuevo Laredo meteorite: Reynolds 171-8
Netherlands, geophysical surveys, Peel coal basin: Riel 169-140
Nevada, earthquakes, Dec. 16, 1954; Tocher 171-66
seismicity: Byerly 169-33
New Britain, deflections of vertical: Kaula 170-187
volcanic eruptions, Mt. Langila: Taylor 171-346
New Brunswick, aeromagnetic maps: Canada Geol. Survey 171-289
age, Paleozoic igneous rocks: Fairbairn 168-13
New Guinea, eruption of Mt. Lamington, 1951-52; Taylor 168-326
volcanic activity, 1949-53: Taylor 168-309
1951-53: Taylor 169-317
1952-53: Best 168-324
New Hampshire, aeromagnetic maps: Bromery 171-285
age determinations: Fairbairn 168-13;
Lyons 171-32
New Hebrides, volcanic activity, 1949-53: Taylor 168-309
1951-53: Taylor 169-317
New Jersey, aeromagnetic maps: Henderson 171-286
New Mexico, age, granitic rocks: Aldrich 169-24
seismic surveys, Anderson Ranch field: Swenumson 171-339
New York, aeromagnetic maps: Henderson 171-286
New Zealand, age, fossiliferous concretion: Pantin 170-14
age, Quaternary sediments, Wanganui district: Fleming 170-13
raised beach near Greymouth: Comm. Inv. and Correlation Eustatic Changes of Sea Levels 168-9
recent ashfalls at Lake Taupo: Baumgart 168-5
age determinations, Wellington carbon-14 laboratory: Ferguson 170-11
crustal structure: Eiby 169-201, 203
earth movements, Wellington area: Stevens 168-22
earthquake risk, Wellington district: Lensen 170-58
electrical resistivity surveys, Balelutha: Hatherton 171-129
dynamical surveys, volcanic and thermal areas: Healy 168-326
géothermal conditions at Wairakei: Healy 168-327
gravity measurements: Cook 169-157
heat flow in Wairakei geothermal area: Studt 170-201
mechanics of mountain building: Cotton 168-137
Ngauruhoe eruption, January 1956: Gregg 170-302
radon and thoron emanation, Wellington: Rosen 170-269
New Zealand—Continued
seismic wave velocity, Wellington area: Eiby 169–202
transcurrent drift tectonics, Mt. Miro-
roa: Cotton 171–161
volcanic activity, 1949–53; Healy 168–326
Nickel, geophysical exploration for: Lauter-
bach 168–121
Nigeria, age of galena and monazite: Schiir-
mann 171–49
eruption, Cameroon Mountain, 1954: de
Swardt 168–328

caliche: Parwel 169–208
North America, gravity measurements: Cook 169–157
North Carolina, earthquakes, 1774–1956: MacCarthy 171–65
tectonic implications: MacCarthy 169–31
Northwest Territory, aeromagnetic map: Canada Geol. Survey 171–201
temperature measurements, Resolute Bay: Cook 169–189
Norway, age, euzenite, Kalsstad: Kulp 169–14
age, Hobol pegmatite: Gentner 171–41
minerals, Romteland: Kulp 169–14
ground temperatures near Oslo, 1955–56; Mourn 171–197
magnetization, Oslo graben lavas: Rutten 170–250
Nova Scotia, aeromagnetic maps: Canada Geol. Survey 171–282
age, Paleozoic igneous rocks: Fairbairn 168–13
Ocean bottom, investigation by, high-resolution echo-sounding techniques: Knott 171–343
nature: Haughton 171–146
Ohio, gravity survey: Heiskanen 169–174
Oklahoma, earthquake, April 169–172; Miller 168–21
Ontario, aeromagnetic maps: Canada Geol. Survey 171–293
age, lead mineralization, Thunder Bay: Farquhar 170–22
Wisconsin glaciation: Dreimanis 170–17
airborne gravity surveys: Lundberg 169–153
gephysical exploration for nickel: Lauter-
bach 168–121
gravity survey, southwestern: Dyer 168–
159
Sudbury basin: Miller 168–157
vicinity of Ottawa: Saxov 168–158
Oregon, magnetization, Siletz River basin: Cox 169–233
seismicity: Byerly 169–33
Orogenesis, field and experimental evidence: Bucher 171–155
mechanics, Alpine system: Glangeaud 170–
100
New Zealand: Cotton 168–137
model experiments: Bucher 170–153
random drag force as cause: Scheidegger 171–154
seismic evidence on: Koning 169–50
sequence of events: Gidon 171–156; Wil-
son 168–132
Orogenic movements, recent, Greece: Trik-
kalinos 170–39
Orthometric heights, determination of grav-
ity values for computation: Müller 168–130
Oxygen, isotopes, atmosphere: Dole 171–
226
isotopes, cycle in nature: Dole 171–226
fresh water and ice: Epstein 171–227
minerals: Hoekstra 171–229
paleotemperature determinations: Tey
171–230
thermal waters: Craig 171–228
Pacific Ocean, age of deep-sea red clay core: Volchok 169–12
crustal structure: Raitt 168–196, 170–210
earthquakes, direction of faulting: Hodg-
son 168–31, 32
fracture zones in north: Paterson 168–304
gravity measurement, northeastern: Har-
ison 171–188
seismic wave velocities: Raitt 168–196
uranium in waters: Rona 168–264
Pakistan, geophysical exploration: Kazmi 171–143
Paleomagnetism. See Magnetic field of the earth and Magnetisation
Paleotemperature measurements: de Vries 170–7; Emiliani 168–205; Tey
171–230
Panama Canal Zones, earthquakes 1954: Murphy 168–16
Papua, volcanic activity, 1951–53: Taylor 169–317
Permafrost, effect of ocean on temperatures: Lachenbruch 171–195
heat flow in, Resolute Bay, N. W. T.: Goguel 170–200; Lachenbruch 171–
195; Misener 171–196
Peru, contrast between Huancayo Magnetic Observatory: Bartels 171–245
Ubinas volcano: Spann 168–329
Petroleum, direct location: Lee 169–108
gephysical exploration: Bennett 170–136; Bentz 168–115; Bujolow 170–138;

Permian: Rutten 170–250
Quaternary: Elnarsson 170–253
Tertiary: Angenheister 170–251
Triassic: DuBols 170–266
Polyorphism, types: Holser 170–296
Porosity, determination by continuous ve-
locity log: Denton 168–287
determination from resistivity: Komarov
168–108
Portugal, radioactivity of granitic rocks,
Hesperic Massif: Morais 169–256
isotopes, crystalline rocks, Black Forest,
Germany: Husmann 169–257
radioactivity K-capture constant: Gerling
171–42
Potassium-argon-calcium branching ratio:
Herzog 171–47
Puerto Rico, earthquakes, 1954: Murphy
168–16
Pyrrhotite, electrical resistivity, relation to
temperature: Takenaka 168–110
magnetic properties: Saifō 168–230;
Takenaka 168–110
Quartz, stability in earth: MacDonald 168–186
Quartzite, ultrasonic wave propagation:
Balakrishna 168–74
Quebec, aeromagnetic maps: Canada Geol.
Survey 171–294
age, Paleozoic igneous rocks: Fairbairn
168–18
gravity and isostasy: Innes 169–172
R
Radioactivity, air, northern Alps: Reiter
171–307
air, world-wide: Israel 171–300
anatectic rocks, Black Forest, Germany:
Husmann 169–257
andesite, Sulcis coal basin, Sardinia:
Aramu 170–265
background: Neber 169–252
bismuth-212: Senftle 168–258, 171–303
bottom sediments, Baltic Sea: Koczy
168–262
Bay of Bengal: Sastry 171–310
Pacific: Arrhenius 170–264
cerium-142: Riezler 171–301
charnockites, India: Mahadevan 170–268;
Sastry 170–267
charnockite-gneiss hybrids, southern In-
dia: Sastry 170–267
Chattanooga shale: Bates 171–309
coal, effect of intrusions: Shibata 168–261
coals, Sulcis basin, Sardinia: Aramu 170–265
determining bulk density of soils: Wendt
171–319
determining ore grade in situ: Hohne
168–274
equipment for measuring, in exploration:
Berbesker 168–273; Katayama
168–272
fault location by: Vašková 168–276;
Williams 169–273
gneiss, Black Forest, Germany: Husmann
169–257
southern India: Sastry 170–267
granite, effect of weathering: Smith 168–259
Japan, Omine coal field: Kubo 169–261
New Hampshire: Smith 168–259
granite, statistical study: Smith 168–259
granitic rocks, Hesperic Massif, Portugal:
Morais 169–256
granodiorite, Adamello (Italy): Merlin
169–259
graphite, Japan, Omine coal field: Kubo
169–261

168–262
Japan: Kaku 168–265; Okabe 168–264
identification of earth materials by: Baker
171–311; Muench 171–313
India, rocks of southern part: Mahadevan
170–266
Japan, coalfield rocks: Shibata 168–261,
169–270
Radioactivity—Continued
limestone, Sulcis coal basin, Sardinia: Aramu 170–265
magmatic rocks, Black Forest, Germany: Husmann 169–257
mantle: Hurley 169–197
potassium-40: Gerling 171–42
relation to permeability, Denver-Julesburg basin: Rabe 171–817
relation to petrogenesis: Mahadevan 170–268
river water, Baltic region: Koczy 168–262
rocks, use of liquid emulsions in determination: Picciotto 169–253
salt series, Poland: Przewlocki 169–260
sea water, Baltic region: Koczy 168–262, 263
sedimentary rocks, La Mure dome, France: Sarrot-Reynauld 169–258
thermal waters, Bad Gastein, Austria: Aurand 169–263
thorium-232: Senftle 168–258
trachyte, Sulcis coal basin, Sardinia: Aramu 170–265
volcanic gases, Japan: Iwasaki 169–266
volcanic rocks, distribution: Rogers 169–255
Radioactivity logging, applications: Bright 169–267
calibration and conversion techniques: Mercier 170–274, 171–315
correlated with electric logging: Burge 170–127
density determination: Baker 171–316; Ochkur 170–271
Denver-Julesburg basin: Rabe 171–517
distinguishing oil- and water-bearing strata: Kucharenko 171–318
effect of radon in drill hole: Hilpert 170–272
exploration or development programs: Chombart 170–125
gas detection: Grosmanin 171–314
geothermal borings, Italy: Rossii 169–272
interpretation: Chombart 169–110, 170–125
Kazakh S. S. R., for water: Arrov 169–115
neutron, for boron: Ivanova 168–267
distinguishing oil and gas zones: Swift 168–269
present state: Dakhnov 169–268
principles: Bright 169–267; Przewlocki 168–270
scintillation equipment: Bespalov 168–268
selective gamma-gamma: Voskoboynikov 170–270
petroleum: Flerov 168–271
techniques: Fedynskiy 168–106
Radioactivity surveys, airborne, for petroleum: Kellogg 170–275
airborne, Japan: Sato 170–276
Radioactivity surveys—Continued
Australia, Crocker Well East: Webb 171–320
copper: Woodmanase 170–278
Northern Territory: Daly 170–277
Yorke Peninsula: Woodmanase 170–278
California oil fields: Kellogg 170–275
Indonesian Timor: Poleschek 170–70
location of faults: Vaňková 168–276; Williams 169–273
mine development: Webb 171–320
Poland, salt mines: Przewlocki 169–260
Radiogeology, textbook: Voitkevich 169–251
Radium, lavas of Klyuchevskaya: Shavrova 168–260
Radon, determination of small amounts mixed with thoron: Smitsyna 171–306
emanation from ground, Wellington, New Zealand: Rosen 170–269
in atmosphere: Behounek 168–266
Reefs, seismic exploration: Agnich 168–113
Rheology, geotectonic significance: Hersonmann 171–153
Rhode Island, ages of granitic rocks: Quinn 171–33
Rigidity, core: Press 168–184
crust, Shetland Islands: Tomaschek 171–90
Rock bursts, experimental investigations: Volchov 169–313, 314
Rotation of earth, movement of axis: Inglis 169–76
periods of oscillations: Jobert 168–59
velocity, variations: Stoyko 168–56
Ruanda Urundi, geophysical exploration: Evard 169–133
Rudibium, half-life of isotope 87: Herzog 171–47; Huster 171–302; Schumacher 171–6
meteorites: Herzog 171–47; Schumacher 171–6
Sahara, isostatic compensation: Lagrula 170–215
Salt dome, reservoirs, of world: Eby 168–120
Sandstone, deformation: Handin 170–295
elastic constants: Hameister 170–87
elastic wave velocity, Swiss Molasse: Rothlisberger 170–70
strength: Handin 170–295
thermal conductivity: Yoshizawa 169–191
scintillation counters, stability requirements: Youmans 171–312
Sea level, changes, southern Japan: Sugimura 169–204
Sedimentary rocks, correlation by magnetic properties: Krabrov 169–234; Tsychnov 171–251
gamma ray absorption in: Polak 169–254
Sedimentation, rate, from Be50: Peters 168–202
rate, from ionium age determinations: Volchok 169–12
relation to deep faults: Peyve 168–133
Seismic exploration, accessory equipment
for: Khurges 169–286
average velocity determination: Murusidze 168–292
charging coefficient: Danchev 169–289
corrections for lateral effects: Opatz 169–298
corrections for refraction effects: Glotov 171–330
drill hole observations: Yurchenko 169–304
dynamic properties of refracted waves: Berzon 169–302
effect of shot hole conditions: Posgay 171–321
effective velocities of reflections: Skorupa 169–301
equipment for deep sounding: Aksenovich 169–279
electrical recording: Hadley 171–329
form of traveltime curve: Adachi 169–287
four-channel electronic oscillograph: Lin'kov 168–285
geologic information: Hale 169–275
geophone, fixed in cable: Waldie 169–278
in search for uranium: Peter 168–297
interpretation, least squares method: Scheidegger 168–293
modern methods: Hammer 168–143
limiting factors, Hungary: Szenas 168–162
low-noise transistorized preamplifier for:
Sacks 170–285
magnetic tape recording: Badger 169–284;
Dunlap 168–289; Erath 170–284;
Kaufman 169–283; Waldie 168–290;
Wilson 169–282; Vetterlein 168–281
marine equipment: Goedicke 168–278
multichannel oscillographic recording:
Lin'kov 168–286
multiple, recording: Ryabinkin 169–295
multiple geophones, analysis: Voyutskiy 168–281
underground: Celminš 168–282
multiple reflections, effective velocities:
Berzon 168–299
northwest Germany: Bortfeld 168–300
nomogram for effective velocities: Raykher 171–328
offset profiles on: Gates 170–282
presentation of data: Burg 169–276
recent developments: Salvatori 168–277
recording techniques: Anstey 169–285;
Palmer 169–281
recording by profile printer: Palmer 169–281
reef recognition criteria: Agnich 168–113
reflection, determination of reflecting hori-
zons: Graeser 169–300
underground, energy spectrum: Helbig 168–298
velocity calculations: Tarczy-Hornoch 170–144

Seismic exploration—Continued
refraction, accuracy: Khailevin 168–295
delay-time analysis: Pakiser 168–296
direct interpretation: Weber 168–294
effect of shot hole depth: Posgay 171–321
errors in depth calculation: Shima 170–285
for ancient channels: Pakiser 168–296
instrument, for engineering problems:
Manfredini 170–287
interpretation: Weber 169–299
in vertically-stratified medium: Berzon 169–292
transverse profiles: Gurvich 171–322
transverse waves: Yepinat'yeva 169–294
Wiechert-Herglotz method: Gershank 171–326
Russian instruments for: Slutskovskiy 169–277
shooting methods: Posgay 171–321
structure of background noise: Horton 169–290
sonar method: Ziets 169–306
tracing faults: Dyachkova 169–311;
Starudubrovskaya 170–279
traveltime of refracted waves: Adachi 169–288
underground, multiple geophones: Cel-
minš 168–282
universal filter systems, theory: Gol'ts-
man 170–286
use of converted refracted waves: Vas-
il'yev 170–281
use of transformed wave: Korovnichenko 171–325
use of transverse waves: Volin 169–292;
Yepinat'yeva 169–294
U. S. S. R., difficulties: Berzon 171–337
under winter conditions: Orekhovskiy 169–310
well velocity surveys, interpretation:
Walling 169–297
wells shot for velocity, 1955–56: Gatlher 168–279
Seismic logging, applications: Breck 170–
290; Denton 168–287
clamping brace for seismograph: Kha-
levin 170–289
circuit of probe: Mozhenko 168–280
ultrasonic, equipment: Riznichenko 168–
288
Seismic loading, statistical estimate: Borges 168–83
Seismic surveys, Algeria, Bay of Algiers:
Muraour 169–307
Antarctica, Queen Maud Land: Robin 169–151
Arizona, Monument Valley: Pakiser 168–
296
Atlantic Ocean: Hill 170–213; Willmore 171–333
Australia, Victoria: Garrett 171–332
Belgian Congo: Evrard 169–133
France, Doubs department: Glangeaud 168–99
**Seismic surveys—Continued**

Temperature distribution, cooling intrusive sheets: Jaeger 169-220
ice sheets: Robin 169-149
liquid flowing through boring: Kozlowski 169-184
Temperature measurements, near-surface, to obtain geologic information: Kappelmeyer 171-194
Tennessee, earthquakes, 1901-25: Money maker 169-32
Texas, gravity survey, San Luis Pass dome: Nettleton 169-178
seismic surveys, organic reefs: Van Siclen 170-292

Thermal conductivity, andesite: Yoshizawa 169-191
frozen soils, probe for in situ measurements: Lachenbruch 171-199
grandiorite, Grass Valley, California: Clark 169-185
interior of earth: Clark 171-192; Preston 168-177
mantle: Clarke 171-192
marl, Hungary: Boldissár 169-187
method of measurement: Yoshizawa 169-191
porphyrite, Grass Valley, California: Clark 169-185
sandstone: Yoshizawa 169-191
Transdanubian coal basin: Boldissár 168-178
Thermal diffusivity, soil: Singer 168-179
Thermal effects of ocean on permafrost: Lachenbruch 171-195
Thermal history of the earth, importance of curium: Diamond 168-256
Thermal regime in earth, effect of heat exchange by radiation: Lyubimova 170-199
Thermal springs, annual variations: Conrad 168-180
polar movement, effect of: Conrad 168-180
isotopic geochemistry: Craig 171-225
radioactivity, Bad Gastein, Austria: Aurand 169-263
Thermometric prospecting method: Contin 170-202
Thorium, crystalline rocks, Black Forest, Germany: Husmann 168-257
isotopes in minerals: Rona 171-304
isotopes in sea water: Koczy 168-263
half life of isotope 232: Picciotto 168-257; Senftle 168-258
Thoron, determination of small amounts mixed with radon: Sinitzyna 171-305
emanation from ground, Wellington, New Zealand: Rosen 170-269
Torsion balance, Ervös model E-54: Rybár 171-169
density determination by underground measurements: Rische 170-177
Transvaal, crustal thickness: Gane 168-198
seismic wave velocities: Gane 168-198
Tritium, abundance in nature: Begemann 171-222
artificially produced, distribution: Begemann 171-220
in meteorites: Fireman 169-2
ground water study by means of: Begemann 171-222
Turkey, earthquakes of July 16, 1955: Stark 171-64
Turkmen S. S. R., earthquakes, Ashkhabad region: Medvedev 168-38
Uganda, electrical surveys, Lake George region: Dyke 168-97
Ukraine, geothermal gradients: Gandzyuk 171-198
Ukrainian S. S. R., geophysical exploration for iron ore: Krutikhovskaya 171-281
gravity surveys: Shereshevskaya 171-186
seismic surveys, Precarpathian depression: Sollogub 171-338
United States, earthquakes 1954: Murphy 168-16
Universe, age: Picciotto 171-3; Schumacher 169-4
Uranium, crystalline rocks, Black Forest, Germany: Husmann 169-257
geophysical exploration: Eroding 168-125
river and sea waters, Baltic region: Koczy 168-262
sea water: Kona 169-264
spring waters, Vosges, France: Jurain 171-308
stone meteorites: Ebert 171-12; Hamaguchi 171-9; Hernegger 171-11
seismic exploration methods: Peter 168-297
Uranium-thorium ratios in minerals: Hurley 171-305
U. S. Coast and Geodetic Survey, strong-motion program: Cloud 169-56
U. S. S. R., age, Cenozoic igneous rocks: Polevaya 170-33
Mesozoic rocks: Gerling 171-42; Polevaya 170-33
Paleozoic rocks and minerals: Gerling 171-42; Polevaya 170-33
pegmatite from northern Karelia: Zykov 169-16
Precambrian igneous rocks, Baltic shield: Gerling 170-52
structure: Gerling 171-42; Hantzsche 168-2
Ukraine shield: Gerling 170-52; Polevaya 170-33; Vinogradov 170-4
rocks of Caucasus massifs: Afanas'yev 171-45
crustal structure, Turkmen S. S. R.: Kosminskaya 171-209
earthquakes, Ashkhabad region: Mededev 168-38; Rustanovich 169-44
Khirgis S. S. R.: Rozova 169-42, 45, 49; 171-62
Kurile Islands: Hodgson 168-31
mechanism at focus: Gotsadze 170-50
Russian platform: Andreyev 169-38
Shemakha region: Kuznetsova 169-39
Tadzhik S. S. R.: Bonchkovskiy 168-36; Bune 169-45; Guben 168-39;
Faschnik 169-46; Vasyll'eva 169-47
electric logging, Moscow coal basin: Boydachenko 169-117
techniques: Fedynskiy 168-106
U. S. S. R.—Continued
electrical surveys, Altai Mountains: Veshev 170-170
for ground water: Demidovich 169-105
methods: Hiersemann 170-119
geophysical exploration for metallic ore: Krasulin 168-117; Semenov 171-144
geophysical exploration for petroleum: Fedynskiy 168-118; Mirtsching 168-119; Ryng 171-139
geophysical logging for coal: Vokoboynikov 169-269
for water: Avrov 169-115
geophysical surveys in geologic mapping, Nerchinskaya Zavod: Moiseyenko 170-139
geothermal measurements: Dubinskly 169-186
Ukraine: Gandzyuk 171-198
gravity anomalies, Russian platform: Nevolin 171-157
gravity corrections, Caucasus Mountains: Ochapovskiy 169-168
geophysical surveys, Lozinskaya 168-153
Ukraine: Shereshevskaya 171-186
magnetic anomalies, Caucasus Mountains: Akopyan 168-246
Russian platform: Nevolin 171-187
radioactivity logging: Bula'sheevich 169-271; Fedynskiy 168-106; Flerov 168-271
radioactivity surveys for petroleum: Flerov 168-271
seismic activity: Gorshkov 170-47
seismic surveys, Carpathian foreland: Dyachkova 169-311; Sollogub 171-338
transformed waves: Berson 171-337
Turkmen S. S. R.: Kosminskaya 171-209
Ural-Emb region: Kuznetsova 169-309
seismic travel times, regional peculiarities: Kondorskaya 171-78
seismological stations, basic equipment: Kirnos 170-59
volcanic eruptions, Caspian Sea: Zubenko 169-337
Kurile Islands: Korsnnskaya 168-320
Kamchatka: Naboko 169-336; Piyp 168-316, 170-301; Svyatlovskiy 168-319
Venezuela, gravity survey, Cordillera de la Costa: Smith 170-198
Vermont, age, Paleozoic igneous rocks: Fairbairn 168-13
Virgin Islands, gravity observations: Shurbet 168-155
Volcanic activity, 1955; Lotze 169-30
Alaska, 1949-53; Powers 168-308
Australian possessions, 1949-53; Taylor 168-309
Hawaii, 1949-52: Macdonald 168-311
1952: Macdonald 168-312
Volcanic activity—Continued

Italy, Stromboli: Die Umschau 168-313
Japan, Kujju: Namba 169-321
1949-53: Minakami 168-314, 315
1951-53: Minakami 169-318
Kamchatka, 1954: Piyп 168-316
Koshelev volcano, Kamchatka: Naboko 169-326
1952-53: Best 168-324
New Hebrides Islands, 1951-53: Taylor 169-317
New Zealand, 1949-53: Healy 168-326
Papua, 1951-53: Taylor 169-317
Philippines, 1949-53: Alcaraz 168-330
Solomon Islands, 1951-53: Taylor 169-317

Volcanic arcs, chemical and physical relations: Matschinski 168-307
Volcanic eruptions, Japan, Aso, periodicity: Namba 169-322

Barcena (San Benedicto Island), Mexico: Richards 168-323
Buzovninskaya Sopka, Caspian Sea: Zubenko 169-337
Cameroon Mountain, Nigeria: de Swardt 168-328
Catamaran, Philippines, 1948: Pelaez 168-332
Didicas, Philippines, 1952: Alcaraz 168-331
energy released: Yokoyama 171-344
Hibok-Hibok, 1948: Pelaez 168-332
1951: Macdonald 168-320
Klyuchevskaya, Kamchatka: Piyп 170-301
Kujju, Japan, periodicity: Namba 169-322
Lake Taupo, New Zealand: Baumgart 168-5
Mt. Lamington, New Guinea: Taylor 168-325
Mt. Langila, New Britain: Taylor 171-346
Myojin, Japan: Minakami 168-315
New Britain, lunar-solar effect on: Taylor 171-346
Osawa, Japan: Minakami 168-315
Paricutin, 1949-52 activity: Foshag 168-322
prediction: Murota 169-327
relation to earthquakes: Namбa 169-328
Santorin: Galanopoulos 171-17
Soufriere de la Guadeloupe, October 1956: Barrabee 168-335, 334
Stromboli, 1955 March 22: Cavallaro 168-333
submarine, Lower California: Gonzales Reyna 168-321
Volcanic explosions, compared to gas rush in coal mines: Namba 169-325
process: Namba 169-326
Volcanic fissures, cause: Vlodavets 168-331
Volcanic gases, radioactivity, Japan, Iwasaki 168-268
Volcanic tremor, related to eruption of By-linkina, Kamchatka: Gershkov 169-335

Volcanic tremor—Continued
period and amplitude, Mihara: Sakuma 169-334
Volcanism, island arcs: Jung 168-190
relation to deep faults: Peyve 168-133
Volcanoes, active, El Salvador, description: Meyer-Abich 168-310
Guatemala, description: Meyer-Abich 168-310
Boqueton, El Salvador, 1917 eruption: Roy 170-304
Central America, 1955-56 activity: Roy 170-303
Etna, earthquake swarm at Pedara, Feb. 1955: Cuccuза-Sivestrei 170-43
Japan, Aso, crater shape: Namba 169-323
variation of water head: Murota 169-324
magnetisation: Minakami 168-235
Kamchatskaya, Tolmachev Dol: Syvatlovskiy 168-319
Klyuchevskaya, radium content of lavas from: Shavrova 168-320
Kurile Islands, Simushir: Korsunskaya 168-320
Madagascar, Karthala: Besairie 171-345
Mihara, Japan, gravity survey 1956: Yokoyama 171-184
Ngauruhoe, eruption of Jan. 1956: Gregg 170-302
Peru, Ubinas, description: Spanн 168-329
Philippines, little-known cluster on Luzon: Alvir 168-333
relation of lava composition to structure: Vlodavets 169-319
Sheveluch, fumaroles: Basharina 168-317
Stromboli, activity: Die Umschau 168-313

W
Washington, age, Glacier peak eruption: Rigg 169-9
post-glacial peak deposits: Rigg 169-9
airborne magnetic profile: Jakeсs 169-242
earthquakes, direction of faulting: Hodgson 168-31
geophysical exploration for nickel, Chelan County: Lauterbach 168-121
seismicity: Byerly 169-33
West Indies, crustal structure: Shurbet 168-170
eruption, Soufriere de la Guadeloupe, October 1956: Barrabee 168-333, 334
graph observations: Shurbet 168-170
Wrench-fault tectonics, northern South America: Alberding 170-159
Wyoming, age, granitic rocks: Aldrich 169-24
lepidolites: Hantzschel 168-72
airborne magnetic profile: Jakeсs 169-242

X
Xenon, Nuevo Laredo meteorite: Reynolds 171-8
Y
Yugoslavia, electrical surveys, Golija Mountain: Grujić 168-254
gravity surveys for oil: Šumi 168-172
gravity value, Beograd: Prosen 168-171

Yugoslavia—Continued
magnetic surveys, Golija Mountain: Grujić 168-254

Z
Zinc, isotopic abundance ratios: Blix 169-211
Geophysical Abstracts 168-171
January-December 1957

G E O L O G I C A L S U R V E Y B U L L E T I N 1 0 6 6

Abstracts of world literature contained in periodicals, books, and patents

UNITED STATES GOVERNMENT PRINTING OFFICE, WASHINGTON : 1958
## CONTENTS

(The letters in parenthesis are those used to designate the chapters for separate publication)
