EXPLANATION

Vein
Dashed where approximately located; dotted where concealed

Weak radioactivity
Approximately 3 to 5 times background

Moderate radioactivity
Approximately 5 to 15 times background

Strong radioactivity
Approximately 15 to 50 times background

Readings are by a gamma scintillation detector held 2 to 3 feet above the source of radioactivity. A dot within the symbol indicates that the reading was obtained when the detector was brought into direct contact with the source. A heavy symbol indicates that the area was more than 50 square feet.

Sampling data is recorded at least at 50 feet.
