TABLE 23.—*Analyses of sandstone from the Shinarump and Moss Back members of the Chinle formation*

[Semiquantitative spectrographic determinations made by the rapid visual-comparison method. Comparisons of similar data with those obtained by quantitative methods show that the assigned semiquantitative class interval includes the quantitative value in about 60 percent of the determinations. These analyses were done on a custom basis as a special study by R. G. Havens, This involved a reexamination of spectrograms for elements reported as zero or trace. Determinations shown within parentheses are the result of reexamination of spectrograms, but are below the safe limit for element sensitivity. Analysts: Spectrographic, J. Hamilton, R. G. Havens, P. R. Barnett; Colorimetric; J. E. Wilson (As); J. S. Wahlberg (Zn) G. T. Burrow (Se); Fluorimetric, M. T. Finch, J. E. Wilson, R. P. Cox, H. H. Lipp; Radiometric: D. L. Shafer, S. P. Furman]
