INDEX OF METALLIC AND NONMETALLIC MINERAL DEPOSITS OF ALASKA COMPILED FROM PUBLISHED REPORTS OF FEDERAL AND STATE AGENCIES THROUGH 1959

By **EDWARD H. COBB** and **REUBEN KACHADOORIAN**

INTRODUCTION

Since World War II the U.S. Geological Survey has been receiving an increasing number of requests from private and public sources concerning the mineral resources of Alaska. To help fill these requests in part, a card index of data on the occurrences of valuable or potentially valuable minerals was compiled and placed in 11 depositories for consultation by the public. To increase the availability of these data, this index has been prepared for publication in the bulletin series of the Geological Survey.

This index contains page references to data on mines, prospects, and reported occurrences of valuable or potentially valuable minerals in Alaska, exclusive of mineral fuels, fissionable materials, and bulk construction materials, such as sand and gravel.

REPORTS CITED

This index comprises references to reports published before January 1, 1960, by the U.S. Geological Survey, the U.S. Bureau of Mines, and the Territory of Alaska Department of Mines (now the Division of Mines and Minerals in the Alaska Department of Natural Resources). Abbreviated references and page numbers are listed in the "Quadrangle index;" complete references used in the index are given under the "List of reports cited." Recurring statistical reports, such as the annual Minerals Yearbook of the U.S. Bureau of Mines and the biennial Report of the Commissioner of Mines to the Governor of Alaska, have not been included, as these reports, in general, contain relatively small amounts of scientific or technical information on individual properties and mineral occurrences. Also omitted are preliminary reports that have been placed only in open files of the Geological Survey, for such reports are normally superseded by formal reports within a few years. References to the five Special Publica-

tions of the Geological Survey that deal with Alaska subjects have been omitted.¹ These reports were published between 1898 and 1901, and they contain very little information not included in other reports.

METHODS OF COMPILATION AND ACKNOWLEDGMENTS

The card index was compiled by systematically searching the source publications for references to mines, prospects, and other mineral occurrences and entering page references to each occurrence on worksheets, from which the data were transferred to index cards. In 1954, 11 copies of the card index were prepared and placed in selected Geological Survey offices and the Juneau office of the Territory of Alaska Department of Mines, where they were available for consultation by interested persons. As users of the card files found errors and reported them to the compilers, the master file, from which this bulletin was prepared, was corrected. Donald M. Ford, D. Shannon Ryan, and Frank J. Markewicz assisted in the compilation. Checking within the Geological Survey was done mainly by Cobb, Donald W. Radbruch, Laing J. DeWitt, and Ruth E. Twitchen. In addition, Jean L. Crosby, mineral analyst, Alaska Division of Mines and Minerals, checked a set of cards against original references. Reports published since April 30, 1953, were indexed and the data added to the master file by Cobb. The compilers wish to acknowledge also the aid of Helmuth Wedow, Jr., in devising a system of binomial coordinates for locating geographic features.

ARRANGEMENT OF INDEX

The primary breakdown of this index is by area; the areal units are the quadrangles into which the Geological Survey has subdivided Alaska for topographic mapping at a scale of 1:250,000 (pl. 1). Names of mines and other mineral occurrences are listed alphabetically under each quadrangle with no further breakdown. Proper names applied to mines and claims and the names of property owners and operators are given for those occurrences for which such names appear in the reports examined. If an occurrence is unnamed, but is on or near a named geographic feature, the name of that feature is shown in parentheses in lieu of a proper name. In general, all references to placer operations on one stream are entered together under the name of the stream. For an occurrence which has no proper name or recorded owner or operator, and is not near a named geographic feature, no name has been applied; a list of the commodities present follows a series of dashes in parentheses. References to a single occurrence are listed only once, even though it may have

¹ Listed in "Publications of the Geological Survey," May 1958, p. 244.

been known by several names and may have had several owners or operators. All applicable names appear in the alphabetical list with a reference to the name under which the page references are listed. Conversely, the name under which references are listed is followed by a note giving other names under which the occurrence appears in the literature. Minor obvious variations in spelling have been ignored, as, for example, Saltchuck and Salt Chuck. If a mine and an operator have the same name except for a few additional words in the operator's name, the additional words appear in parentheses after the mine name, as, for example, Nabesna (Min. Corp.).

COORDINATE SYSTEM

A simplified binomial coordinate system was devised to locate occurrences on maps of the Alaska Reconnaissance Topographic Series. These coordinates are given in parentheses after the name of each occurrence for which page references are listed. The first number is the perpendicular distance in inches from the west boundary of the map to the location of the occurrence. The second number is the distance from the southwest corner of the map along the west boundary to its intersection with a perpendicular from the occurrence. Thus, an occurrence with coordinates (7.5, 9.6) would be 7.5 inches from the west boundary along a line, normal to the boundary, 9.6 inches above the southwest corner of the map (fig. 1A). If an occurrence covers an area (for example, a stream on which there has been extensive placer mining), coordinates include the extreme limits of the area. Thus, a stream with coordinates (6.1-12.2, 4.4-9.5) would be in the area between lines normal to the west boundary 4.4 and 9.5 inches above the southwest corner of the map and between 6.1 and 12.2 inches east of the west boundary (fig. 1B).

Some occurrences cannot be located closely enough to assign accurate coordinates. In such instances the coordinates of the area in which the occurrence lies are given to the nearest inch, or there is merely a note that the occurrence is in some part of the quadrangle.

Coordinates given in this index are for use with maps of the Alaska Reconnaissance Topographic Series. As these maps are superseded by maps of the new Alaska Topographic Series (scale 1:250,000), locations should still be close; though refinements in mapping may result in some significant changes in planimetry, especially in areas far from population centers and old mining camps. If the west boundary of any quadrangle is changed when a new edition is issued, the amount of change will have to be added to, or subtracted from, the first figure of the coordinates to determine the approximate location of an occurrence.

COMMODITY LISTING

Mineral commodities in each mine, prospect, or occurrence are listed, in capital letters, after the coordinates. The commodity name used is generally that of the valuable element present in each mineral if treatment of ore results in the production of an element; otherwise the name of the mineral or rock is given. Exceptions are chromite rather than chromium, and barium rather than barite or witherite.

In this index sulphosalts of antimony have not generally been considered as ore minerals of antimony. Sulfides such as pyrite and chalcopyrite, with a few exceptions, have not been listed for their sulfur content, because the data are generally too inconclusive to give any basis for a decision as to the possible value of the sulfide content

of a mineral deposit except in terms of the metallic component. All platinum-group metals are listed as platinum, though very few, if any, of the Alaska deposits have yielded a product of essentially pure platinum. Likewise, no attempt has been made to list rare-earth metals by name; all are lumped under the name "rare earths."

If sufficient data are given in descriptions of an occurrence to determine the economically most important mineral commodity in a deposit, that commodity is listed first and the others follow in descending order of importance. If data are lacking or are contradictory, commodities are listed alphabetically.

70. The Mount McKinley region, Alaska, by A. H. Brooks, with descriptions of the igneous rocks and of the Bonnifield and Kantishna districts, by L. M. Prindle. 1911. 234 p.

- 87. Geology and ore deposits of Copper Mountain and Kasaan Peninsula, Alaska, by C. W. Wright. 1915. 110 p.
- 251. Geology and mineral deposits of Jumbo Basin, southeastern Alaska, by G. C. Kennedy. 1953. 46 p.
- 268. The central Kuskokwim region, Alaska, by W. M. Cady, R. E. Wallace, J. M. Hoare, and E. J. Webber. 1955. 132 p.
- 293. Quaternary and engineering geology in the central part of the Alaska Range. Contains: (a) Quaternary geology of the Nenana River valley and adjacent parts of the Alaska Range, by Clyde Wahrhaftig; (b) Engineering geology along part of the Alaska Railroad, by Clyde Wahrhaftig and R. F. Black. 1958. 118 p.
- 302-A. Phosphate deposits in northern Alaska, by W. W. Patton, Jr., and J. J. Matzko. 1959. p. 1-17.

BULLETINS

- 180. The occurrence and distribution of corundum in the United States, by J. H. Pratt. 1901. 98 p.
- 213. Contributions to economic geology, 1902; S. F. Emmons and C. W. Hayes, geologists in charge. 1903. 449 p. Contains: Placer gold mining in Alaska in 1902, by A. H. Brooks, p. 41-48; The Glenn Creek gold-mining district, Alaska, by A. J. Collier, p. 49-56; The Chistochina gold field, Alaska, by W. C. Mendenhall, p. 71-75; Stream tin in Alaska, by A. H. Brooks, p. 92-93; Copper deposits of the Mount Wrangell region, Alaska, by W. C. Mendenhall and F. C. Schrader, p. 141-148.
- 225. Contributions to economic geology, 1903; S. F. Emmons and C. W. Hayes, geologists in charge. 1904. 527 p. Contains: The Juneau gold belt, Alaska, by A. C. Spencer, p. 28-42; Placer mining in Alaska in 1903, by A. H. Brooks, p. 43-59; The Porcupine placer mining district, Alaska, by C. W. Wright, p. 60-63; Gold placers of the Fairbanks district, Alaska, by L. M. Prindle, p. 64-73; The Kotzebue placer gold field of Seward Peninsula, Alaska, by F. H. Moffit, p. 74-80; Tin deposits of the York region, Alaska, by A. J. Collier, p. 154-167.
- 229. The tin deposits of the York region, Alaska, by A. J. Collier. 1904. 61 p.
- 236. The Porcupine placer district, Alaska, by C. W. Wright. 1904. 35 p.
- 247. The Fairhaven gold placers, Seward Peninsula, Alaska, by F. H. Moffit. 1905. 85 p.
- 250. The petroleum fields of the Pacific Coast of Alaska, with an account of the Bering River coal deposits, by G. C. Martin. 1905. 64 p.
- 251. The gold placers of the Fortymile, Birch Creek, and Fairbanks regions, Alaska, by L. M. Prindle. 1905. 98 p.
- 259. Report on progress of investigations of mineral resources of Alaska in 1904, by A. H. Brooks and others. 1905. 196 p. Contains: Placer mining in Alaska in 1904, by A. H. Brooks, p. 18-31; Methods and costs of gravel and placer mining in Alaska, by C. W. Purington, p. 32-46; Economic developments in southeastern Alaska, by F. E. and C. W. Wright, p. 47-68; The Treadwell ore deposits, Douglas Island, by A. C. Spencer, p. 69-87; The Cape Yaktag placers, by G. C. Martin, p. 88-89; Gold placers of Turnagain Arm, Cook Inlet, by F. H. Moffit, p. 90-99; Gold deposits of the Shumagin Islands, by G. C. Martin,

- p. 100-101; Auriferous quartz veins on Unalaska Island, by A. J. Collier, p. 102-103; Rampart placer region, by L. M. Prindle and F. L. Hess, p. 104-119; Recent development of Alaskan tin deposits, by A. J. Collier, p. 120-127.
260. Contributions to economic geology, 1904; S. F. Emmons and C. W. Hayes, geologists in charge. 1905. 620 p. Contains: The occurrence and distribution of tin, by L. C. Graton and F. L. Hess, p. 161-187.
