Failures to attain former level; leaking in formation?

- Y-1 opened, leaking between casings
- Cement forced between casings, closed leak

Drilled to -31 ft cemented

Cold water pumped into casing to 100 ft

Gage pressure, 29.5 lb/in² (hot)

Pumping of cold H₂O

P-decreased from 30 to 24 lb/in²

Uncertain reliability, probably because of competing effects from both holes Y-1 and Y-1x (see fig. 8)
