

**A U.S. GEOLOGICAL SURVEY  
DATA STANDARD**

**Codes for the Identification of  
Hydrologic Units in the  
United States and the  
Caribbean Outlying Areas**

This report describes one of a series of data standards adopted and implemented by the U.S. Geological Survey for the standardization of data elements and representations used in automated Earth-science systems. Earth sciences are those scientific disciplines especially required to carry out the mission of the Geological Survey and are concerned with the material and morphology of the Earth and physical forces relating to the Earth. These disciplines include geology, topography, geography, and hydrology.

The Geological Survey has assumed the leadership in developing and maintaining Earth-science data element and representation standards for use in the Federal establishment under the terms of a Memorandum of Understanding signed in February 1980 by the National Bureau of Standards of the Department of Commerce and the Geological Survey, a Bureau of the Department of the Interior. As such, in addition to developing and maintaining standards, the Geological Survey reviews and processes all requests referred by the National Bureau of Standards for exceptions, deferments, and revision of standards applicable to Federal Earth-science information systems; assists the National Bureau of Standards in assessing the need, impact, benefits, and problems related to the implementation of standards being considered for development, or developed, for use in the Earth sciences; and works with other agencies in developing new data standards in the Earth sciences.

The standard described in this report has been specifically approved for use within the U.S. Geological Survey. If the standard has been approved for use throughout the Federal establishment, it is also published by the National Bureau of Standards as a Federal Information Processing Standard.

**Name of Standard:** Codes for the Identification of Hydrologic Units in the United States and the Caribbean Outlying Areas

**Date of Approval:** July 1981

**Maintenance Organization:** U.S. Geological Survey  
Water Resources Division  
Office of Water Data Coordination  
417 National Center  
Reston, VA 22092

Questions concerning the list of entities and codes should be addressed to the Office of Water Data Coordination, which will make all necessary amendments to the standard.

**Implementation:** All Geological Survey data standards are effective immediately upon the date of approval. Their use is mandatory for all new and developing systems within the Geological Survey that utilize data elements and representations described by the standards. All existing data systems will be modified in accordance with the standards at such time that future redesign and modifications to the systems take place.

Additional information about Geological Survey data standards and copies of published standards may be obtained from:

# Codes for the Identification of Hydrologic Units in the United States and the Caribbean Outlying Areas

## INTRODUCTION

This report presents and describes codes used for the identification of hydrologic units in the United States and the Caribbean outlying areas. The codes identify a hydrologic system that divides the United States and the Caribbean into 21 major regions. These regions are further subdivided into approximately 2,150 units that delineate river basins having drainage areas usually greater than 700 square miles. The codes provide a standardized base for use by water-resources organizations in the storage, retrieval, and exchange of hydrologic data; the indexing and inventorying of hydrologic data and information; the cataloging of water-data acquisition activities; and a variety of other applications.

## DEVELOPMENT OF THE CODES

In 1974, a new set of maps (State Hydrologic Unit Maps) depicting approved boundaries and codes of river basins of the United States was produced by the U.S. Geological Survey (USGS) in cooperation with the U.S. Water Resources Council (WRC). These maps present information on drainage, culture, hydrography, and hydrologic boundaries of (1) WRC **regions**, (2) WRC **planning subregions**, (3) National Water Data Network **accounting units**, and (4) **cataloging units** of the USGS "Catalog of Information on Water Data." These four levels of subdivisions, used for the collection and organization of hydrologic data, are "hydrologic units." The codes associated with these units are "hydrologic unit codes."

The hydrologic unit boundaries, codes, and names were reviewed extensively by all principal Federal, regional, and State water-resources agencies during a formal review process established for the State Hydrologic Unit Maps. The formal review process consisted of a field review by the 4 regional and 46 district offices of the USGS Water

Resources Division, in conjunction with their principal regional, State, and local cooperators, followed by review and approval by the National Planning and Assessment Committee (NPAC) of the WRC. NPAC consisted of members from all principal Federal agencies involved with water-resources planning. Approval by the NPAC constituted approval by the Council of Representatives of the WRC, which had delegated this authority to the NPAC.

## DESCRIPTION OF THE CODES

All hydrologic units have been identified by a unique hydrologic unit code consisting of from two to eight digits based on the four levels of classification in the hydrologic unit system.

The first level of classification divides the Nation into 21 major geographic areas or **regions**—18 in the conterminous United States and one each in Alaska, Hawaii, and the Caribbean (fig. 1). These geographic areas (hydrologic areas based on surface topography) contain either the drainage area of a major river, such as the Missouri Region, or the combined drainage areas of a series of rivers, such as the Texas-Gulf Region, which includes a number of rivers draining into the Gulf of Mexico.

The second level of classification divides the 21 regions into 222 **planning subregions**. A planning subregion includes the area drained by a river system, a reach of a river and its tributaries in that reach, a closed basin or basins, or a group of streams forming a coastal drainage area.

The third level of classification subdivides many of the planning subregions into **accounting units**. These 352 hydrologic accounting units nest within or are equivalent to the planning subregions. The accounting units are used by the USGS for designing and managing the National Water Data Network.

FIGURE 1. - Map of water-resources regions showing accounting units of the National Water Data Network.

The fourth level of classification is the **cataloging unit**, the smallest element in the hierarchy of hydrologic units. A cataloging unit is a geographic area representing part or all of a surface drainage basin, a combination of drainage basins, or a distinct hydrologic feature. These units subdivide the planning subregions and accounting units into smaller areas (approximately 2,150 in the Nation) that are used for cataloging and indexing water-data acquisition activities.

An eight-digit code is used to allow each of the four levels of classification to be uniquely identified within four two-digit fields. The first two digits identify the water-resources region; the planning subregion is identified by the first four digits; the accounting unit is identified by the first six digits; and the addition of the cataloging unit number completes the eight-digit code. An example is given below using hydrologic unit code 01080204:

01 – the region  
0108 – the subregion  
010802 – the accounting unit  
01080204 – the cataloging unit

A 00 in the accounting unit field of two digits indicates that the accounting unit and the subregion

are one and the same. Likewise, if the cataloging unit code is 00, it is the same as the accounting unit.

## HYDROLOGIC UNIT NAMES

In addition to hydrologic unit codes, all hydrologic units have been assigned names corresponding to the principal hydrologic feature(s) within the unit or, in the absence of such, to a principal geographic or physical feature within the unit. In the absence of such features, the assigned name may reflect a cultural or political feature within the unit. All regions and subregions are uniquely named; however, the accounting units are uniquely named only within each region, and the cataloging units are uniquely named only within each accounting unit. Duplication of some names at the cataloging-unit level is unavoidable because a large number of streams found throughout the Nation share the same names.

A complete list of all hydrologic unit codes, along with their names and the names of the States or outlying areas in which they reside, follows.

BOUNDARY DESCRIPTIONS AND NAMES OF REGIONS, SUBREGIONS,  
ACCOUNTING UNITS AND CATALOGING UNITS

REGION 01   NEW ENGLAND REGION -- THE DRAINAGE WITHIN THE UNITED STATES  
THAT ULTIMATELY DISCHARGES INTO: (A) THE BAY OF FUNDY;  
(B) THE ATLANTIC OCEAN WITHIN AND BETWEEN THE STATES OF  
MAINE AND CONNECTICUT; (C) LONG ISLAND SOUND NORTH OF THE  
NEW YORK-CONNECTICUT STATE LINE; AND (D) THE RIVIERE ST.  
FRANCOIS, A TRIBUTARY OF THE ST. LAWRENCE RIVER. INCLUDES  
ALL OF MAINE, NEW HAMPSHIRE AND RHODE ISLAND AND PARTS OF  
CONNECTICUT, MASSACHUSETTS, NEW YORK, AND VERMONT.

SUBREGION   0101 -- ST. JOHN: THE ST. JOHN RIVER BASIN WITHIN THE  
UNITED STATES. MAINE.

ACCOUNTING UNIT 010100 -- ST. JOHN. MAINE.

CATALOGING UNITS   01010001 -- UPPER ST. JOHN. MAINE.  
                          01010002 -- ALLAGASH. MAINE.  
                          01010003 -- FISH. MAINE.  
                          01010004 -- AROOSTOOK. MAINE.  
                          01010005 -- MEDUXNEKEAG. MAINE.

SUBREGION   0102 -- PENOBSCOT: THE PENOBSCOT RIVER BASIN. MAINE.

ACCOUNTING UNIT 010200 -- PENOBSCOT. MAINE.

CATALOGING UNITS   01020001 -- WEST BRANCH PENOBSCOT. MAINE.  
                          01020002 -- EAST BRANCH PENOBSCOT. MAINE.  
                          01020003 -- MATTAWAMKEAG. MAINE.  
                          01020004 -- PISCATAQUIS. MAINE.  
                          01020005 -- LOWER PENOBSCOT. MAINE.

SUBREGION   0103 -- KENNEBEC: THE KENNEBEC RIVER BASIN,  
INCLUDING PART OF MERRYMEETING BAY. MAINE.

ACCOUNTING UNIT 010300 -- KENNEBEC. MAINE.

CATALOGING UNITS   01030001 -- UPPER KENNEBEC. MAINE.  
                          01030002 -- DEAD. MAINE.  
                          01030003 -- LOWER KENNEBEC. MAINE.

SUBREGION   0104 -- ANDROSCOGGIN: THE ANDROSCOGGIN RIVER BASIN,  
INCLUDING PART OF MERRYMEETING BAY. MAINE,  
NEW HAMPSHIRE.

ACCOUNTING UNIT 010400 -- ANDROSCOGGIN. MAINE, NEW HAMPSHIRE.

CATALOGING UNITS   01040001 -- UPPER ANDROSCOGGIN. MAINE,  
  NEW HAMPSHIRE.  
                          01040002 -- LOWER ANDROSCOGGIN. MAINE,  
  NEW HAMPSHIRE.
